ROYAL DISPENSARY for DISEASES of the EAR, Dean-street, Soho-square; under the patronage of

Her Most Gracious MAJESTY the QUEEN,
Her Majesty the QUEEN DOWAGER,
His Royal Highness PRINCE ALBERT, K.G.
His Majesty the KING of HANOVER, K.G.
His Majesty the KING of the BELGIANS, K.G.
His Royal Highness the Duke of CAMBRIDGE, K.G.
Her Royal Highness the Duchess of KENT,

President—His Grace the Duke of BUCCLEUCH, K.G.
Consulting Physicians—Sir Henry Halford, Bart. G.C.H.; Sir Matthew Tierney, Bart. K.C.H.
Director and Surgeon—John Harrison Curtis, Esq.

At the TWENTY-SEVENTH ANNUAL GENERAL MEETING of the Governors of this Charity, held as above, on Thursday, July 20, 1843,

His Grace the Duke of CLEVELAND, K.G., Vice-President, in the Chair,

Resolved, That the thanks of this Meeting be given to her Most Gracious Majesty the Queen, for her condescension in becoming the Patroness of the Institution.

Resolved, That the thanks of this Meeting be given to her Majesty the Queen Dowager, his Majesty the King of the Belgians, and other branches of the Royal Family, for their continued kind support and patronage, and in particular to his Royal Highness the Duke of Cambridge, for the interest he has ever taken in the Dispensary, and the valuable assistance he has recently rendered it.

Resolved, That the thanks of this Meeting be given to the Radcliffe Trustees for their munificent donation of 100*l.* in aid of the funds of the Charity.

Resolved, That the thanks of this Meeting be given to the Nobility and Gentry; also to the Right Honourable the Lord Mayor and the Sheriffs of London and Middlesex, who have favoured the Charity with their support, and to all others who have contributed to its funds.

Resolved, That the records of the proceedings of the Institution during the past year afford the most satisfactory proof of its increasing usefulness, as evidenced not only by the greater number of patients, but also by the larger proportion of those cured or relieved.

Resolved, That the facilities hitherto given for the admission of cases of accident, of the deaf and dumb, and of soldiers, sailors, and the police, be still continued to be afforded.

Resolved, That it appears highly desirable for the interests of humanity and of science that a building should be provided for the reception of the infant deaf, with a view to their cure by medical and surgical treatment, and for the accommodation of poor persons labouring under diseases of the ear, not residing in the metropolis.

Resolved, That the thanks of this Meeting be given to Sir Henry Halford, Bart. G.C.H., and Sir Matthew John Tierney, Bart. K.C.H., the consulting physicians: also to John Harrison Curtis, Esq., director and surgeon of the Institution, for his indefatigable discharge of his duties in those capacities, and for his great attention to the patients under his care.

CLEVELAND, Chairman.

This Charity was founded in 1816, under the patronage of their late Majesties George IV. and William IV., and their late Royal Highnesses the Dukes of York and Kent. Since its establishment upwards of 12,700 patients, including artisans, domestic servants, distressed foreigners, soldiers, sailors, and many of the police, have been cured or relieved.

Above 180 patients frequently attend the Dispensary in a single day, and while the poor are thus benefitted, the public derive great advantages from the opportunities afforded, on a large scale, for the introduction of new modes of treatment tending to the improvement of aural surgery.

Subscriptions received at the banking houses of Messrs. Robarts, Curtis & Co. Lombard-street; Coutts & Co. Strand; and Messrs. Drummond, Charing-cross; W. Cobbe, Esq., Treasurer; H. S. Smyth, Esq., at the Dispensary; and by J. Harrison Curtis, Esq., Surgeon to the Institution, 2, Soho-square.

HENRY S. SMYTH, Sec.

Royal Dispensary, Oct. 4, 1843.

Surgeon—FREDERICK SALMON, M.R.C.S., 12, Old Broad-street.

ANNUAL REPORT.

ON this the Seventh Anniversary of the foundation of the Infirmary, your Committee, in the discharge of the trust reposed in them, are impressed with an earnest desire that the Public should be made acquainted (so far at least as they can be, within the brief limits of an Annual Report), with the nature of its objects and the extent of its usefulness: for they are well assured of two truths—first, that in proportion as the Charity becomes more generally known, its revenues cannot fail to be greatly increased; secondly, that as the sphere of its operations is enlarged, so one wide field of misery and disease must, of a certainty, be narrowed and reduced.

The sufferings to which the Institution extends its healing hand, affect their victims with an unusual degree of mental and physical depression. It is a lamentable fact, which every day's experience verifies, that those who labour under these distressing diseases, frequently conceal their affliction, even from their dearest friends, until their disorders, which, if treated in an earlier stage, might have admitted of a safe and certain cure, have progressed to lingering wretchedness, terminating only in the grave. Neither is this false sensibility confined by any means to the wealthier portions of society; on the contrary, its prevalence among the poor engenders on their parts an insuperable repugnance to seek relief at our general Public Hospitals. And it is no detraction from the merits of those excellent Institutions, to say, that amidst the many more obtrusive shapes of human suffering and agony constantly seeking a refuge within their walls, sufficient attention can scarcely be bestowed on slow and shrinking ills like these, which have often been the chronic growth of years, and are frequently in their cure the tardy work of months.

It was to remedy this serious defect, to afford to the Poor afflicted with such diseases an Asylum which, in its name and in its plain pretensions, should invite their confidence, until then too commonly bestowed on ignorant empirics, who at once despoiled them of their hard earnings, and, by unskilful treatment, robbed them of their chances of recovery; it was to do thus much to the extent of its then most feeble means, that in the year 1835, this Institution was founded in one small incommodious chamber. Since that period, Two Thousand One Hundred and Fifty-four Poor have sought relief. Barely four years ago, the present Establishment, containing fourteen beds, was opened; yet in this brief space, Seven Hundred Patients, all requiring Operative Surgery, have been received; and your Committee have the heartfelt satisfaction of adding, that in no instance, out of this great amount, has any fatal consequence ensued.

That all this relief has been afforded, and all this good accomplished, with the utmost regard to economy and prudence in the management of the Charity, is sufficiently shown by the average amount of its annual expenditure, which has been less than Seven Hundred and Fifty Pounds. That the Infirmary solicits investigation and inquiry, is manifest from its practice being freely open to all Members of the Medical Profession. That no undue influence is, or can be, exercised in the admission of Patients, is evidenced by the fact, that suffering and necessity are the only credentials an applicant need prefer. That its worth is gratefully and deeply felt by those who have experienced the benefits it affords, is proved in a very marked and striking manner, by the existence of an Auxiliary Society, founded, and entirely supported, by those who have been relieved.

Your Committee venture to express a hope, that the example furnished in this noble and affecting mark of sympathy felt by the poor for the afflictions of their fellow creatures, will not be lost upon the rich. They trust that when they appeal, as they now do, to all who have any cause for bearing grateful hearts within their breasts, to lend some aid towards extending the blessings of this Infirmary to hundreds, whom it is unable to admit for want of room, and unable to assist for want of funds, they will not make appeal in vain.

The Judge upon the bench, the Advocate in his court of justice, the Legislator in parliament, the Scholar in his study, the Painter at his easel, the Clerk at his desk, the Shoemaker at his last, the Weaver at his loom, the poor young Sempstress in her many hours of daily labour, and her scanty share of rest, all in their turn are liable to be stricken down by these diseases, which have no fixed place in the great social scale, but are the common lot of all, though aggravated to an immense extent by poverty and want. Let no man sitting in a high place, say, "these are the unseemly visitations of the poor, and I am safe," for every day's experience shows that costly apparel covers such miseries quite as often as the humblest clothing. Neither let the subject be dismissed as unsuitable for conversation, since Heaven, for its own wise purposes, inflicts these evils every hour, where no intemperance or vice has called them into being.

We shall do well to remember, that the great Teacher of charity and benevolence did not disdain to lay his pure right hand upon the foulest leprosy, but sought it out and healed it. The Pharisee thanked God that he was not like unto other men, but men of a better leaven thank Him that they are, and that they know they are; and they do not turn away with a nice delicacy from an affliction they cannot brook to hear named to-day, but which they may be doomed to bear in all its bitterness to-morrow.

Donations and Subscriptions before announced, 602*l.* 17*s.* 6*d.*

The Committee have great pleasure in announcing the additional Donations and Subscriptions since last advertisement:—

Burer, Colonel	£2	2	0	Louch, John, Esq.	ad.	£3	3	0
Clarke, Charles, Esq.	an.	1	1	0	Louch, Henry, Esq.	ad.	2	2	0
Curtels, John, Esq.		12	12	0	Magendie, Rev. Henry		10	10	0
Drinkald, John, Esq.		10	10	0	Do. do.	an.	1	1	0
Duff, William, Esq.	an.	1	1	0	Marriott, Hen., Esq.	an.	1	1	0
Grimaldi, S., Esq.	an.	1	1	0	Proprietors of *Athenæum*		10	10	0
H. E. S. K.		5	0	0	Sebright, Miss	ad.	1	0	0
Jervoise, Rev. Sir S. Clarke, Bart.		5	0	0	Steadman, John, Esq.	an.	1	1	0
Johnstone, Andrew, Esq.		5	0	0	Tabor, Mrs.	ad.	10	10	0
					Wood, Alfred, Esq.	an.	1	1	0

The following form of Request is recommended to those charitable individuals who may feel disposed to assist the Infirmary by Will:—

"*I give and bequeath out of such part of my personal Estate as may lawfully be applied for that purpose, the sum of £ to the* 'INFIRMARY FOR THE RELIEF OF THE POOR AFFLICTED WITH FISTULA, AND OTHER DISEASES OF THE RECTUM,' *established in London, which sum shall be for the use and benefit of the said Infirmary: and the receipt of the person who shall be Treasurer thereof at the time when the above Legacy is paid, shall be a good discharge to my Executors for the same.*"

Subscriptions will be thankfully received by the Treasurer; at the Banking Houses of Jones, Loyd & Co.; Barnard Dimsdale & Co.; and Messrs. Ransom, Pall Mall East; by the Collector, Mr. W. H. Harben, 20, Great Marlborough-street; or by the Honorary Secretary, W. B. OGDEN,

8, St. Mildred's-court, Poultry.

PRESERVATION OF PLANTS.

HUMPHREYS'S COMPOUND to Promote the Beauty and Preservation of Plants. A few grains dissolved in water, at intervals, are effective. Applicable to all Greenhouse Plants, to Hyacinths, and other bulbs. By its use valuable exotics are so strengthened, that they may be preserved without a greenhouse.—Sold in bottles, 1*s.* 9*d.* each, by the leading Chemists and Seedsmen in Town and Country. Wholesale Agents, DAVY, MACKMURDO & Co., 100, Upper Thames-street, London.

HOWE, LEONARD & CO., AUCTIONEERS AND COMMISSION MERCHANTS, BOSTON, UNITED STATES.—Particular attention given to Sales of New and Old Books, Paintings, Engravings, and Fancy Goods; also any other description of Merchandize. Refer to John Miller, Bookseller, London; Goddard & Hill, Birmingham.

Just published, 1 vol. royal 8vo. cloth boards, price 7*s.*,

BOSSANGE, BARTHES & LOWELL'S GENERAL CATALOGUE of FOREIGN BOOKS for 1843.

This Catalogue contains all the best productions of French, Italian, and Spanish literature of the last century, and is the only one of any importance that has appeared in England for many years.

The prices have been marked generally at the rate of shillings for francs, for modern French works. With regard to Second-hand Books, their rarity, condition, and circumstances attending their purchase, preclude the same plan from being followed; but, in every instance, the most reasonable prices have been affixed.

For the convenience of Teachers and heads of families, the elementary part may be had separate, price 2*s.*

*** It is presumed that this Catalogue will be found useful to public libraries, and literary institutions, as it contains a copious index, and a detailed notice of the Transactions of many celebrated Learned Societies of Europe, and all the most important Works now publishing under the sanction of the French Government, and of various Antiquarian and Historical Societies of that country. 14, Great Marlborough-street.

This day is published, in royal 4to. with 17 Plates and 38 Woodcuts, price 25*s.*

PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY, ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh.

In 1 vol. 8vo. price 8s. the 3rd edition, illustrated by coloured Plates,

CONSUMPTION CURABLE, and the manner in which Nature as well as Remedial Art operates in effecting a healing Process in Cases of Consumption, explained and illustrated by numerous remarkable and interesting Cases.

By FRANCIS H. RAMADGE, M.D.

Fellow of the College of Physicians, &c.

"The author's treatment is so simple, so accordant with physiological and pathological laws, so free from charlatanism and imaginative dreams, that I not only feel a high predilection for it, but think it worthy to be recommended to the impartial and careful examination of my professional brethren."—*Preface to the German Translation, by Dr. Hohnbaum.*

London: Longman & Co.

Second Edition, price 4s. 6d.

THE PAPAL and HIERARCHICAL SYSTEMS COMPARED WITH THE RELIGION OF THE NEW TESTAMENT.

"A wonderful and horrible thing is committed in the land: the prophets prophesy falsely, and the priests bear rule by their means, and my people love to have it so; and what will ye do in the end thereof?"—*Gen. v. 30-31.*

"In this volume the religion of the New Testament is finely contrasted with Romanism, and its tendencies as they are now manifesting themselves in the Episcopal churches of England and America. The author enters upon the discussion in the liberal spirit of an enlightened Christian. He is altogether free from polemical bitterness, and far superior to the arts of sophistry. He makes error hideous by the simple exhibition of its characteristic features, and truth lovely by displaying it in its own light. * * The chapters 'On Divine Worship' and 'On the Christian Ministry,' disclose views at once scriptural and spiritual. If we do not go the whole length with our Christian brother, who appears to be a member of the Society of Friends, we can scarcely be said to differ from him. His spirit is the spirit of truth, and if he errs, it is on the side nearest the truth, and more in accordance with the genius of the New Testament than tendencies that lead in the opposite direction. * * We have read with inexpressible satisfaction the concluding chapter, 'On the Cardinal Doctrines of Justification and Sanctification.' So clear and scriptural are the views put forth, and so truly Protestant, that the author, by writing and publishing it, has conferred an inestimable benefit, and at a most seasonable time, upon the Christian church."—*Evangelical Magazine*, Aug. 1843.

"We have long wished to see some enlightened and gifted member of the Society of Friends fairly attacking the Puseyite heresy; for we know that in this case an attack would be made, not on the details, but on the *principles*, of that insidious system. Our wish has now been realized, for this able work must be the production of either a *bona fide* member of that estimable body, or of a person holding their sentiments. It is able, argumentative, eloquent, and in most particulars *conclusive*. We cordially thank the author, whoever he may be, for so valuable an addition to our Christian literature, and hope that all denominations will benefit by his labours."—*Christian Examiner*, April.

"The Author, whoever he may be, is an admirable writer. He seems not only to hold correct opinions, but possesses great facility in giving them forcible, lucid, and mild expressions: widely, too, as he may differ from others, his charity is unlimited for all—he is no sectarian in spirit."—*British Friend.*

"In contrasting the principal features which mark the views and practice of the Church of Rome with those which we believe to be inherent in pure Christianity, our author has produced an exceedingly able and eloquently-written volume; which, whilst it unfolds, in glowing and vigorous language, the objectionable features of the hierarchical system, does not exhibit the least appearance of jealousy or of ill-will towards any denomination of Christians."—*British Friend of India Magazine*, June, 1843.

"In the volume before us, the Papal and Hierarchical System is compared, or, more correctly speaking, *contrasted* with the Religion of the New Testament. The qualifications of the writer for the task he undertakes are eminently those which such a task requires. A calm temper, a charitable heart, a thorough appreciation of the spirituality of the Christian dispensation, are the moral characteristics which every page he has written proves to be his. Allied with these higher attributes, he exhibits peculiar intellectual aptitude for handling such a theme—clearness of perception, masculine powers of thought, a perfect subjection of his imagination to his reason, and a strong, homely, vigorous common sense, which brushes away fallacies as if they were but cobwebs. * * The book breathes throughout a spirit of elevated piety. * * We heartily commend it as a seasonable and able discussion of a subject which will, ere long, command the rapt attention of the civilised world."—*Nonconformist*, Sept. 6, 1843.

Cheap Edition of Dymond's Essays.

Complete in 1 vol. at 3s. 6d., originally published in 2 vols. at 21s.

The *Seventh* Thousand of this Edition.

ESSAYS on the PRINCIPLES of MORALITY, and on the Private and Political Rights and Obligations of Mankind. By JONATHAN DYMOND, Author of 'An Enquiry into the Accordancy of War with the Principles of Christianity,' &c.

In this work will be found some clear views on the popular questions of the day—the Education of the People, and the Connexion between Church and State.

Price 1s.

ESSAY on the ACCORDANCY of WAR with the PRINCIPLES of CHRISTIANITY. By JONATHAN DYMOND.

"No one can hope to overthrow the reasoning of Dymond, without denying the truth of the book (the Bible) from which he deduces his arguments."

Second Edition, with Additions and Corrections, price 4s. 6d.

THE WATER CURE. By E. S. ABDY, A.M., Fellow of Jesus College, Cambridge, and Author of 'A Journal, &c. in the United States.'

"For the best exposition of the *principles* of Hydropathy, as well as a most interesting record of facts illustrating its effects, see Mr. Abdy's able book."

Price 6d.

THE WATER CURE: "Its Safety and Rationality." By A. COURTNEY, Surgeon, R.N.

Eleventh Edition, enlarged, price 1s.

MERCY TO THE CHIEF OF SINNERS: a Narrative. By the Rev. W. BLOOD, A.M.

"We have read the above narrative with the greatest pleasure. Its style and object are of the same class with the well-known tract of the 'Dairyman's Daughter,' having the advantage of being more striking, and less diffuse; and thereby better calculated to win its way among those disinclined to read religious publications. While it rivets the attention, it pours into the mind a stream of sacred truth, drawn from the pure fountain of the Word of Life. While it illustrates, it corroborates by fact the testimony of the Holy Scriptures, and thus creates a thirst to possess and peruse that divinely-inspired volume."

New York Observer.

Elegantly bound in silk, price 2s. 6d.; or with the German, 3s.

THE PASTOR'S LEGACY; or, Devotional Fragments: from the German of Lavater.

"This is an exquisite little gem."—*Christian Examiner.*

London: CHAS. GILPIN, 5, Bishopsgate Without.

This day, price 6s.

THE EDINBURGH

MEDICAL and SURGICAL JOURNAL,

No. CLVII. OCTOBER, 1843; containing Communications from Dr. Craigie—Dr. T. B. Peacock—Prof. Christison—Mr. T. W. Jones—Dr. A. J. Hannay—Dr. H. Lonsdale—J. Thomson, Esq.—Dr. Alexander Watson—Dr. Thomas Stratton—Dr. Henry M'Cormack—Dr. J. James Stark.

The Number embraces Reviews of several important New Publications, and contains an ample Digest of Medical Intelligence.

Adam & Charles Black, Edinburgh; Longman & Co. London.

This day, 8vo. price 16s. 6d. cloth lettered, with numerous coloured Plates,

GUY'S HOSPITAL REPORTS,

New Series. Vol. I.

Also the Part for OCTOBER, price 2s. 6d.

It is proposed in this Series to devote a large portion of each Number to Reports of the most interesting cases occurring within the Hospital, illustrated by plates. These cases will be classified so as to present the history of any particular disease as it has occurred in the Hospital. To be continued in half-yearly Parts, price 6s.

The First Series is complete in Seven Volumes.

S. Highley, 32, Fleet-street, London.

Guy's Hospital Pharmacopœia, price 4s. 6d.

ELEMENTS of the GENERAL and MINUTE ANATOMY of MAN and the MAMMALIA. Chiefly after original Researches. By F. GERBER, Prosector in the University of Bern. To which is added an Appendix comprising Researches on the Anatomy of the Blood, Chyle, Lymph, Thymous Fluid, Tubercle, &c. By GEORGE GULLIVER, Esq. F.R.S. In 1 vol. 8vo. text, and an atlas of 34 plates, engraved by L. Aldous. 2 vols. 8vo., 1842, cloth boards, 24s.

Elements of Chemistry, including the Application of the Science in the Arts. By Thomas Graham, F.R.SS. L. & E., Prof. of Chemistry in the University College, London. 1 thick vol. 8vo. illustrated with Woodcuts, cloth boards, 1842, 1l. 6s. Part VI. and last, containing Organic Chemistry, 8vo. 9s.

Atlas Illustrative of the Anatomy of the Human Body. By J. Cruveilhier, Professor of Anatomy to the Faculty of Medicine, Paris. Drawn from Nature by M. E. Beau, with Description by M. G. Bonamy, M.D.

This Atlas will consist altogether of 200 Plates, small 4to., and is published in Numbers, each containing 4 Plates with Descriptions, to be continued Monthly until the completion. Price 2s. 6d. plain; coloured, 5s. (Parts I. to XV. are out).

Extract from a letter of Professor Cruveilhier to H. Baillière, dated Paris, June 10, 1841:—

"Je déclare que les Planches sont extrêmement remarquables par leur exactitude, et par les soins avec lesquelles elles sont exécutées. Je me propose d'y renvoyer toujours dans (la 2me édition de) mon Anatomie descriptive!"

(Signed) J. CRUVEILHIER.

Outlines of Comparative Anatomy. By Robert E. Grant, M.D. F.R.SS. L. & E., Prof. of Comparative Anatomy in the University College, London. 8vo. illustrated with 148 Woodcuts. London, 1835–41. In boards, 1l. 8s. Part VII. with title-page, just out, 1s. 6d.

Principles of Surgery. By James Syme, Prof. of Clinical Surgery to the University of Edinburgh, and Surgeon to the Queen. 3rd edition, much enlarged, and illustrated with 14 Plates on India paper, and 64 Woodcuts in the text, 1 vol. 8vo. 1l. 1s.

Icones Obstetricæ. A series of 60 Plates, illustrative of the Art and Science of Midwifery, in all its Branches. By A. L. Moreau, Professor of Midwifery to the Faculty of Medicine, Paris. Edited, with Practical Remarks, by J. S. Streeter, M.R.C.S. Complete in Ten Parts, 60 Plates, with Descriptions, in cloth boards, folio. London, 1841. Plain, 3l. 3s.; coloured, 6l. 6s.

Mr. H. Baillière's NEW CATALOGUE of FRENCH and GERMAN SCIENTIFIC WORKS will be ready on the 1st of November, and will be given gratis.

October 6, 1843.

FROM the last Official Stamp Returns just published, it appears that during the three months of April, May, and June, in the present year, the Stamps supplied to each of the undermentioned Journals gave them an average Publication of—

The GARDENERS' CHRONICLE; a Weekly Newspaper of Rural Economy and General News. The Horticultural Part edited by Professor LINDLEY. Price Sixpence stamped to go free by post. Published every Saturday.

The very extensive sale of the 'Gardeners' Chronicle,' amongst the higher classes of society, makes it an especially valuable channel for all Advertisements which are addressed to the intelligent and wealthy. Another advantage is, that the work from its nature is one not only of daily reference but permanent value, so that Advertisements are constantly under the eye of the Subscribers.

To enable all to avail themselves of the columns of the 'Gardeners' Chronicle,' the scale of Charges has been fixed as low as possible.

NEW WORKS
PRINTED for TAYLOR & WALTON,
28, UPPER GOWER-STREET;
AND SOLD BY ALL BOOKSELLERS.

New Edition of Liebig's Agricultural Chemistry.
Now ready, 3rd edition, revised and partly re-written, 1 vol. 8vo. 10*s.* 6*d.*

CHEMISTRY
IN ITS APPLICATIONS TO
AGRICULTURE AND PHYSIOLOGY.
By JUSTUS LIEBIG, M.D. Ph.D. F.R.S.
Professor of Chemistry in the University of Giessen.
Edited from the Manuscript of the Author,
by LYON PLAYFAIR, Ph. D.

New Work by Professor Liebig.
Now ready, in fcap. 8vo. 4*s.* 6*d.*

FAMILIAR LETTERS ON CHEMISTRY,
AND ITS RELATIONS TO
COMMERCE, MANUFACTURES, AND AGRICULTURE.
By JUSTUS LIEBIG, M.D.
Professor of Chemistry in the University of Giessen.
Edited by JOHN GARDNER, M.D., Member of the Chemical Society.

Now ready, Part I. (on Gas Illumination), price 2*s.* 6*d.* of

APPLIED CHEMISTRY
IN MANUFACTURES, ARTS, AND DOMESTIC ECONOMY.
Edited by E. A. PARNELL,
Author of 'Elements of Chemical Analysis';
Late Assistant Chemical Lecturer in the Medical School of St. Thomas's Hospital.
With numerous Wood Engravings, and other Illustrations.
To be continued in Monthly Parts, each 2*s.* 6*d.*
Among the subjects which will be introduced in the earlier numbers are—

Gas Illumination.	Coffee, Tea, and Chocolate.
General Principles of the Arts of Dyeing and Calico-Printing.	Caoutchouc.
	Borax.
	Preservation of Wood.
Manufacture of Sulphuric Acid.	Zinc.
Indigo.	Bichromate of Potash.

The articles on Dyeing and Calico-printing, and Dyeing Materials, will be illustrated with specimens of dyed and printed cottons, and those on Pigments, when practicable and necessary, with examples of the tints of such as are not commonly known.
*** *A Prospectus may be had of the Publishers, or through any Bookseller.*

New Edition, by Dr. Sharpey and Mr. Quain.
1 vol. 8vo., illustrated by very numerous Engravings on Wood, many for the first time contained in this Edition,

DR. QUAIN'S ELEMENTS OF ANATOMY,
FIFTH EDITION.
Edited by RICHARD QUAIN, Professor of Anatomy,
And WILLIAM SHARPEY, M.D., Professor of Anatomy and Physiology in University College, London.
*** The First Half of the Volume, cloth lettered, will be published early in October.

New Classical Dictionary.
Now ready, Part IV., price 4*s.*, of

A DICTIONARY OF GREEK AND ROMAN BIOGRAPHY AND MYTHOLOGY.
By various Contributors.
Edited by WILLIAM SMITH, Ph. D.
Editor of the 'Dictionary of Greek and Roman Antiquities.'
To be continued in Quarterly Parts, and to form two 8vo. vols.
Illustrated by numerous Engravings on Wood.
"There is no need of pronouncing any formal eulogium on this new Classical Dictionary, for, in fact, it is the only one with any pretensions to the name in our language; and, as such, it must form part of the library of every student who desires to become acquainted with the mind of antiquity."—*Athenæum.*

Lexicon to Æschylus.
1 vol. 8vo. price 15*s.* cloth,

A LEXICON TO ÆSCHYLUS,
Containing a Critical Explanation of the more difficult Passages in the Seven Tragedies.
By the Rev. WILLIAM LINWOOD, M.A. M.R.A.S.
Student of Christ Church, Oxford.
"We are surprised we have not had, before now, a Lexicon to Æschylus. The Lexicon of Wellauer is hardly anything more than an Index, and rarely gives an explanation of passages. The very recent publication of Mr. Linwood's Lexicon has not enabled us to examine it with that attention we could have wished; but we have referred to it in several cases, and have found his remarks characterized by good sense and sound scholarship. We have much pleasure in recommending the work to the notice of Students, who will derive very great assistance from it in the study of Æschylus. Three Indexes are given at the end of the work; one, of the most important various readings; a second, of the more difficult passages, of which a full explanation is given in the Lexicon; and a third, of some of the words and syntactical usages explained in the work."—*Classical Museum*, No. I.

BOOKS
TO BE PUBLISHED IN OCTOBER.

I.
Lord Jeffrey.
LORD JEFFREY'S CONTRIBUTIONS to the *EDINBURGH REVIEW*. 4 vols. 8vo.

II.
THOMAS MOORE'S POETICAL WORKS; containing the Author's recent Introductions and Notes. Complete in 1 vol. uniform with Lord Byron's Poems. Medium 8vo. with a new Portrait, by George Richmond, engraved in the line manner; and a View of Sloperton Cottage, the Residence of the Poet, by T. Creswick, A.R.A. 21*s.* cloth.

III.
A PICTORIAL TOUR in the MEDITERRANEAN; comprising Malta, Dalmatia, Turkey, Asia Minor, Grecian Archipelago, Egypt, Nubia, Greece, Ionian Islands, Sicily, Italy, and Spain. By J. H. ALLAN, Member of the Athenian Archæological Society, and of the Egyptian Society of Cairo. Imp. 4to. with upwards of 40 Lithographed Drawings, and 70 Wood Engravings. 3*l.* 3*s.* cloth.

IV.
Capt. Marryat's New Work.
NARRATIVE of the TRAVELS and ADVENTURES of MONSIEUR VIOLET, in California, Sonora, and Western Texas. Written by CAPT. MARRYAT, C.B. 3 vols. post 8vo.

V.
UNIFORM WITH THE ENGLISHMAN'S GREEK CONCORDANCE.
THE ENGLISHMAN'S HEBREW and CHALDEE CONCORDANCE of the OLD TESTAMENT; being an Attempt at a Verbal Connexion between the Original and the English Translations; with Indexes, a List of the Proper Names, and their Occurrences, &c. &c. 2 vols. royal 8vo. cloth, 3*l.* 13*s.* 6*d.*; large paper, 4*l.* 14*s.* 6*d.* *On Monday next.*
*** A Prospectus, illustrating the plan by extracts, may be had, *Gratis*, on application.

VI.
New Edition of Ure's Dictionary.
DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES; containing a clear Exposition of their Principles and Practice. A New Edition, corrected throughout. 8vo. with 1,241 Wood Engravings, 50*s.* cloth.

VII.
A TREATISE on PHOTOGRAPHY; containing the latest Discoveries appertaining to the Daguerréotype. Compiled from Communications by MM. Daguerre and Arago, and other Eminent Men of Science. By N. P. LERÉBOURS, Opticien to the Observatory, Paris, &c. Translated by J. EGERTON. Post 8vo. with Plate of Apparatus, 7*s.* 6*d.* cloth. *Ready.*

VIII.
LECTURES on POLARIZED LIGHT, delivered before the Pharmaceutical Society, and in the Medical School of the London Hospital. 8vo. illustrated by above 50 Woodcuts, 5*s.* 6*d.* cloth. *Ready.*

IX.
TAXIDERMY; or, the Art of Collecting, Preparing, and Mounting Objects of Natural History, for the use of Museums and Travellers. By MRS. R. LEE, (formerly Mrs. T. E. Bowditch,) Authoress of 'Memoirs of Cuvier,' &c. 6th edition, corrected, improved, and modernised. Fcap. 8vo. illustrated with Engravings on Wood.

X.
THE ROSE AMATEUR'S GUIDE; containing ample Descriptions of all the fine leading Varieties of Roses, regularly classed in their respective families; their History and Mode of Culture. By T. RIVERS, Jun. 3rd edition, corrected and improved. 8vo.

XI.
THE APPLICATION of GEOLOGY to AGRICULTURE, and to the Improvement and Valuation of Land; with the Nature and Properties of Soils, and the Principles of Cultivation. By NICHOLAS WHITLEY, Land Surveyor. 8vo.

XII.
A PRACTICAL TREATISE on ORGANIC DISEASES of the UTERUS; being the Prize Essay, to which the Medical Society of London awarded the Fothergillian Gold Medal for 1843. By JOHN C. W. LEVER, M.D. M.R.C.P. Assistant Accoucheur at Guy's Hospital, and one of the Lecturers on Midwifery at that Institution. 8vo.

XIII.
THE ELEMENTARY GRAMMAR of the GREEK LANGUAGE. By DR. RAPHAELL KUHNER, Co-rector of the Lyceum at Hanover. Translated by J. H. MILLARD, St. John's College, Cambridge, late Second Classical Master at Mill Hill Grammar School. 8vo.

XIV.
THUCYDIDES' HISTORY of the PELOPONNESIAN WAR. A new Recension of the Text; with a carefully amended Punctuation: and copious Notes, Critical, Philological, and Explanatory. With full Indices, both of Greek Words and Phrases explained, and matters discussed in the Notes. Illustrated by Maps and Plans, mostly taken from actual Survey. By the Rev. S. T. BLOOMFIELD, D.D. F.S.A. The Second and Concluding Volume. 8vo.

London; Longman, Brown, Green, and Longmans.

NEW BOOKS AND NEW EDITIONS
PUBLISHED BY
JOHN W. PARKER, West Strand.

LECTURES ON THE
PRINCIPLES and PRACTICE of PHYSIC, delivered at King's College, London. By THOMAS WATSON, M.D., Fellow of the Royal College of Physicians, and Physician to the Middlesex Hospital. 2 vols. 8vo. 34*s.*

TABLES of CHEMICAL EQUIVALENTS, HEIGHTS, MEASURES, &c. By W. T. BRANDE, F.R.S., Professor of Chemistry at the Royal Institution. On Five large Sheets, 3*s.* 6*d.*

By the same Author,
MANUAL of CHEMISTRY. 8vo. 35*s.*
DICTIONARY of MATERIA MEDICA and PHARMACY. 8vo. 15*s.*

Octavo, 4*s.*, the SECOND NUMBER of THE
CLASSICAL MUSEUM.—Contents:
Remarks on the Documents in the *De Corona* of Demosthenes. By Francis W. Newman.—A Memoir illustrative of the Geography of the Anabasis of Xenophon. By W. Francis Ainsworth. Part I.—Certain Points in the Chronology of Herodotus, illustrated from Niebuhr's *Kleine Schriften* and Dahlmann's *Herodot*. By the Rev. R. Scott, A.M.—On Aristotle's Definition of Tragedy. By Thomas Dyer.—Napoleon on the Capture of Troy.—Observations on the Xanthian Marbles. By Sir Edmund Head, Bart. A.M.—On the so-called Monument of Sesostris, in Asia Minor. By Dr. L. Schmitz.—On Mr. Frere's Translations of Aristophanes.—Notices of recent Publications.—Miscellanies.—Literary and University Intelligence.—Lists of recent Publications.

SELECT PRIVATE ORATIONS of DEMOSTHENES, with English Notes, for the use of Schools. By the Rev. C. T. PENROSE, Head Master of the Grosvenor College, Bath. [*Next week.*

REVIEWS

Memoirs and Recollections of the late Abraham Raimbach; including a Memoir of Sir David Wilkie. Edited by M. T. S. Raimbach.

Abraham Raimbach was one of the eminent line-engravers of his time. His skill on copper has given a wide range to some of the best modern creations of English Art, and his name is now inseparably allied with that of Sir David Wilkie. By him the 'Rent Day' and 'Distraining for Rent' have been made familiar to tens of thousands, who have never had the good fortune to get within the walls of Mulgrave Castle, or the rich retreat of Mr. Wells, at Redleaf. He was a true translator from canvas to copper—conveying the character, and, more marvellous still, the warmth of the original, while he left little to wish for but its colouring—which, if his art could have given, he would have been a matchless dealer in duplicates—an ingenious maker of fac-similes; and not as he was, a true translator.

The title of the book before us affords a very imperfect account of its actual contents. Mr. M. T. S. Raimbach is the editor, not the author, of the volume, and the bulk of the work is the Autobiography of his father—the notes and recollections of his own life, "written at the earnest and repeated request of his eldest son." Cowley has an essay entitled, 'Of Myself,' and Hume has called his delightful little sketch of his own career, 'My Own Life.' The Apology of Colley Cibber, and Bishop Burnet's History of his own Times, are equally definite and distinct: the titles tell you what the books actually are—a Biography or Autobiography—beyond the possibility of a doubt or the necessity of a second thought.

It would be unfair to expect that Mr. Raimbach should write as well as he engraved: not that he writes ill—for he writes sensibly and clearly. His book, however, is beset with a multiplicity of notes, which distract attention from the calm tenor of his story; and these not explanatory notes, for which there is every excuse, but notes, actually belonging by right of sentiment and allusion, to the text or body of the book. Within one hundred pages we have one hundred and thirty notes. The ancients wrote no notes, said Cumberland, the dramatist; neither did Lord Clarendon, was the ready reply. Waiving this, we shall endeavour to weave from the text and its accompaniments, a memoir of Mr. Raimbach.

Abraham Raimbach was born in Cecil Court, St. Martin's Lane, Feb. 16, 1776. His father, a native of Switzerland, came to England at the early age of twelve, and never afterwards quitted it. To show how limited was his use of the English language, his son supplies the following story:—

"I had, when a boy, exceeded my usual allowance of pocket-money, in the purchase of weekly periodicals, and had got into debt with my bookseller to the amount of a few shillings, but which, small as it was, I saw no immediate prospect of liquidating, unless by the discontinuing of my *numbers*. This, of the two, being decidedly, in my opinion, the worst alternative, the other was adopted, of disclosing the circumstance, and making an appeal to the bounty of my father. The appeal was admitted; and I was merely recommended not to run in debt, and never to *defray* any more expenses than were necessary. Of course *incur* was the word meant."

His mother's maiden name was Butler, the daughter of a Warwickshire farmer, a woman of great gentleness and good sense.

When an infant, Abraham's life was endangered by the negligence of his nurse, who let him fall from her arms out of a second floor window. "I was floated in a manner by my baby's long clothes, and my fall was broken by the leads of the first story. The servant girl rushed into the room where my mother was sitting, exclaiming that she had killed the child, quitted the house, and was never seen by her afterwards. I was not," he adds, "materially hurt." He was sent at an early age to Archbishop Tennison's Library School, at St. Martin's, where he had the late Charles Mathews for a schoolfellow; but what learning he took there, or what he went away with, he has omitted to mention. A fondness for pictures and prints came early upon him; then a certain degree of readiness in the practice of drawing was acquired; so that his father, seeing both his bias and perseverance, at once determined upon making his son an artist:—

"I do not know," he says, "how it happened that engraving was chosen as the most fitting department of art for me to pursue, unless it was suggested by the cleverness with which I used to dig, with a cobbler's awl, upon a marble, ground flat upon the pavement, the initial letters of my schoolfellows' names. I rather wonder that this did not lead to my being made a seal-cutter, or carver of stone. Engraving was, however, determined on; and, in the beginning of the year 1789, application was personally made by my father to the two most eminent men in the art, Mr. Sharp and Mr. Heath; the former of whom professed himself to be unwilling to take a pupil, as he had it in contemplation to go abroad (which, by the by, he never did); and the latter stated (what I believe was true enough) that he was already overstocked with pupils."

In this dilemma, as Sharp and Heath were at the head of their art, the father thought of a second and more novel application, and Mr. Heath was tried again:—

"A day or two afterwards, my father, in the simplicity of his heart, sent me to Mr. Heath, saying that he might perhaps take a fancy to me when he saw me. I did not at all relish this commission, which was to see Mr. Heath, and inquire whether he wanted a pupil. I was received with civility, or rather with kindness; though he appeared evidently surprised at the singularity of the message, which I delivered to him personally, in the passage of his house, No. 42, Newman Street."

As Reynolds received the name of Joshua from his father in the belief that some enthusiast would take a fancy to him for his name, so Raimbach may have received his scriptural designation of Abraham from the same wild and dreamy supposition, worthy of Lilly, or Lord Shaftesbury, or of Dryden, in one of his astrological moods. Heath, however, took no peculiar predilection to the name or appearance of the old Swiss emigrant's son, so Abraham was apprenticed to another engraver of the name of Hall, for the usual period of seven years:—

"I have never considered it," he says, "a matter to be regretted that the application to Sharp and Heath did not succeed, though their professional talents were doubtless greatly superior to those of Hall. So little is to be derived, in the acquirement of an art, from the skill and ability of a master, however distinguished he may be, that the degree of his eminence I take to be of very small importance to the pupil. In my own case, I am disposed mainly to limit the benefits of pupilage to the constant and regular habits of assiduous attention, induced by example and enforced by authority. Almost all beyond the mere routine the student must seek out for himself. The very best of teaching can do little more than indicate the means of success—the path which leads to distinction: it cannot convey originality, or the power of forming original or new combinations; and without these, or some such faculties, nothing beyond mediocrity can result. All true excellence in art is, in my humble opinion, to be chiefly attributed to an early conviction of the inadequacy of all means of improvement, in comparison with that of self-acquired knowledge."

Hall had been the pupil of Ravenet, a French engraver, settled in England, but Hall as much eclipsed Ravenet as Raimbach has since done Hall. We have thus three descents of excellence from the same master. Ravenet and Hall had a good deal of mechanical skill at a time when the line-engraver's art was at low-water mark in this country—indeed, at a time when the science and genius of engraving was looked upon as a trade which one articled apprentice was sure of acquiring as readily as another, and of practising with the same facility and skill. "I had no taste for *this thing*," has been the remark of one of our pre-eminent living engravers; "indeed I knew nothing about *the thing* 'till I was apprenticed to it." Fathers know better now-a-days—a true translator from Virgil must be a true poet—and he who is to transfer to copper the grace of a Reynolds or the characteristic excellence of a Wilkie, must work with the same feeling which inspired and produced the high qualities he has undertaken to represent in another material, or, as it were, in another language.

When Raimbach went to Hall he found him at work upon a portrait of Sheridan, by Sir Joshua Reynolds, a portrait in which "Brinsley" took more than a personal interest:—

"I have always been disposed to reckon among the chief advantages I derived from being placed with Mr. Hall the opportunity it afforded me of getting occasionally a glimpse of men distinguished in some way or other by talent or notoriety. Sheridan came twice or thrice, once with Joseph Richardson, author of *The Fugitive*, during the engraving of his portrait; and my memory dwells with pleasure to this hour on the recollection of his having said a few kindly and encouraging words to me, a boy, drawing at the time in the study. I was, however, most struck with what seemed in such a man an undue and unbecoming anxiety about his good looks in the portrait to be executed. The efflorescence in his face had been indicated by Sir Joshua in his picture, not, it may be presumed, *à bon gré* on the part of Sheridan, and it was strongly evident that he deprecated its transfer to the print. I need scarcely observe that Hall set his mind at ease on this point; but I could not but wonder that a matter that might be excused in the other sex should have had power to ruffle the thoughts of the great wit, poet, and orator, of the age."

The efflorescence on the face was overlooked by Sheridan when confined to the canvas, and the closet of a friend, but he was unwilling to go forth to the world, and on paper too, as a second Bardolph, though to our thinking Hall's engraving is more the portrait of a depraved man of genius than the original on the canvas.

Raimbach's first work has found a place within the walls of the National Gallery. Our readers will naturally wonder at this, and smile too, when they know in what way. His first work at Hall's was to etch the key to Copley's Death of Chatham—the picture now in the National Gallery, where Raimbach's explanatory key is hung, framed and glazed, for the special benefit of the curious. This reminds us of a pleasant story in no less a book than 'Joe Miller.' "A Welshman bragging of his family, said, his father's effigy was set up in Westminster Abbey: being asked whereabouts, he said, in the same monument with Squire Thynne, for he was his coachman."

In 1796, the term of his apprenticeship was out, but at no promising period, it would appear, for a young beginner who had to live by his profession:—

"Every thing connected with the Arts, of course, at the lowest ebb—so low, indeed, that I remember, during Mr. Pitt's administration, the members and associates of the Royal Academy were expressly exempted from the operation of some war-tax, then levied, in consideration of the abject and almost expiring state to which the fine arts had been reduced. I forget the name of the tax in question, but have a

Digitized by Google

distinct recollection of the fact stated, and, moreover, that it excited no feelings of dissatisfaction whatever in the community at large, so universally known was the destitute condition of the artists in general."

Booksellers like Cooke and Stockdale were then the Boydells of young beginners, so Raimbach sought employment from the then patrons of his art. Stockdale gave him the figure of a Maroon chief to engrave for Bryan Edwards's 'History of the Maroon War.' The engraving was made and paid for, but not without some altercation about the price. Raimbach charged six guineas, while Stockdale thought two sufficient. Here is Raimbach's note to Stockdale on the subject:—

"Sir,—I am very sorry that the note I sent to you yesterday should have occasioned any surprise, and I can assure you that I was myself much astonished when I understood that you expected to be asked no more than two guineas for the produce of three weeks' labour. With respect to the suspicion you entertain of my having consulted some very unconscionable engraver, I beg leave to inform you that I was regulated in my charge by one in whose favour I have heard you express yourself in strong terms of approbation. I should be sorry to forfeit the good opinion of any one, more especially of a gentleman who has hitherto behaved with more than common civility; but I must be allowed to say, that I would decline any man's favour who would wish to reduce the value of my labour to the level of blacking shoes, or sweeping the streets. If there should still exist a difference of opinion between us as to what ought to be the price of the plate, I am willing to abide by the decision of any engraver of real respectability that is unconnected with either party. I beg to decline the impressions, as I do not wish to receive any obligation that may be considered undeserved.—I am, Sir, Your obedient servant, A. Raimbach."

As a young man, with a name to make, Raimbach could not afford to issue a bad print, and though two guineas for three weeks' labour was sorry pay, the bookseller, in his turn, could not afford, perhaps, to pay a larger price. The altercation ended by Stockdale's paying *four* guineas.

Master of his own time, as he now was, his next step was to enter his name as a student of the Royal Academy. Here, while drawing from the models, he took care to observe what his superiors in Art were doing at the same time.

"Barry's drawings," he says, "had a rough grandeur of style, and were executed with the commonest materials: usually on a fragment of coarse paper, with the pen and ink which served the young men to write their names in the hall as they arrived. Stothard made slight and small sketches, that were replete with character and action. Flaxman's drawings from the academy figure were highly-wrought pure imitations of nature, viewed through the medium of his refined, antique, and cultivated mind."

To make ends meet, he put two strings to his bow, by becoming both miniature-painter and engraver. What he says about this temporary union is very sensible:—

"My miniature-painting commissions increasing, and those for engraving certainly not relaxing, I soon found that it would be necessary to decide upon giving up the one or the other as a profession. Though it may not be in accordance with the proverb, 'Two strings to your bow,' it is, I believe, generally admitted that one trade, well learned and steadily pursued, is better than two less known and irregularly followed. I did not, however, in my final determination in this momentous concern, act solely on my own judgment, but took the opinions of others whose judgment and experience were entitled to respect and consideration. The taste I had had of the business of portrait-painting, though it was but in a small way, most assuredly did not enchant me. The purchaser of an article, be it what it may, feels a right, in laying out his money, to have the commodity he pays for suited to his liking, if it be possible. Now, taste is so capricious, and personal vanity so difficult to satisfy, that it is no wonder that the self-respect and feelings of independence which, I presume, every man possesses in a greater or lesser degree, are liable to great mortification in the profession of portrait-painting. I, certainly, in my very humble efforts, found it so, and I am greatly mistaken if much abler men have not found it so too. Engraving, whatever may be its disadvantages, (and they are many) has not the fancies of individuals to humour or consult, but appeals at once to the public, or to that small part of the public that takes an interest in such trivialities. The opinions I had solicited concurred with my own feelings on the subject; and, thus fortified, I did not hesitate to adopt the course I have since unremittingly pursued, namely, to devote my whole attention to engraving. Looking back at past events, I do not know that I have any reason to regret the decision I then came to."

He gave up miniature-painting, and began working for Smirke and Forster's illustrated edition of the 'Arabian Nights.' By this engagement he realized the sum of 70*l.*, with which, in 1802, he set off to see Paris, and the glorious works of Art assembled there at the stern call of the great Napoleon. There are seventy pages of his Autobiography taken up with this seventy-pound tour. His remarks are often sensible, and to the point; but as he goes over no new ground, we prefer telling the story of his career in Art, as more interesting. In 1805 he married—his father presenting him with one of his houses in Warren Street, Fitzroy Square—the house in which he lived for twenty-six years, and where all his great works were executed. In 1805 he lost his father, and in 1807 his mother. In the same year he became acquainted with David Wilkie. This acquaintance soon ripened into friendship, and at last into the closest intimacy that Wilkie's retiring rather than distrustful nature ever allowed any one to form with him. In 1812 he became Wilkie's engraver, supplanting Burnet by a kind of joint-stock adventure, as he calls it, not without interest in the history of Art.

Before Raimbach's first Wilkie print, 'The Village Politicians,' had appeared, Mr. Burnet had engraved 'The Jew's Harp,' and 'Blind Fiddler,' on terms satisfactory at the first to Wilkie, and perfectly honourable to both Burnet and Boydell. 'The Blind Fiddler' was, in the language of the trade, a lucky hit. This was also a joint-stock adventure, Burnet's share being two-thirds, and Wilkie's one. But Wilkie sold his share, before publication, to Harrison, of Boydell's house, for the sum of fifty guineas. He would have made seven times the sum had he retained it. Acquiring a lesson from past experience, he now determined on publishing for himself, while Burnet, by steadily refusing to allow him more than a third share in any joint-stock adventure, their connexion in this way closed, and Raimbach was called in. As we have heard this affair, it ran as follows: Irritated with himself for selling the share in 'The Blind Fiddler,' and encouraged by the success of that plate, Wilkie demanded of Burnet a larger proportion than he could with safety or certainty allow. He required a half-share, setting his copyright against the labour of engraving. We now learn from the book before us, the terms on which he engaged with Raimbach. Mr. Cunningham has made no mention of them in his 'Life of Wilkie':—

"The mutual conditions of our engagement," Mr. Raimbach writes, "were promptly arranged upon the basis, with various modifications, of one-third share to Wilkie, and two-thirds to me; which terms were afterwards changed to one-fourth and three-fourths respectively, at the generous and unsolicited suggestion of Wilkie, who considered the first adopted proportions as bearing rather hard upon me, and throwing an undue advantage into his hands."

We now see that Mr. Burnet had offered higher terms than Wilkie afterwards accepted at the hands of Raimbach.

The first print, 'The Village Politicians,' went slowly off. Its history contains a lesson; for—

"Its success at first was not very encouraging; and though I will not say there was much reason for absolute despondency, yet certainly I found none at all for self-congratulation at the result. The printsellers, though compelled by the great popularity of Wilkie to deal in his prints, were nevertheless, naturally as traders, opposed to any enterprise originating out of the pale of their own (as they considered by right) exclusive domain. However, the sale kept creeping on by little and little, though checked perhaps by our having raised the price to non-subscribers, and for more than twenty years never came to a full stop. Two hundred and fifty proofs were printed, besides twenty-four before the insertion of the coat of arms, and the alteration of the etched letters of the title, making together two hundred and seventy-four, a number that for some years remained a complete drug on our hands; so much so, that we sent a large quantity on a venture to America, and never received any tidings of them more. A favourable change has since taken place, and proofs have brought, even at auctions, the extravagant sum of fourteen or fifteen pounds each."

In 1816, after the publication of his next great print, 'The Rent Day,' the painter and engraver set off on a tour through Holland. But Raimbach has left no recollections of Wilkie at this time. Continuing the history of their joint-stock adventure, he says, "of 'The Cut Finger,' the event scarcely justified our expectations, as its sale has been indifferent:" of 'The Errand Boy,' that "he failed in his mission," and of 'Blind-man's Buff,' that "it obtained a fair measure of success."

"A capital error on our parts regarding this print may be briefly noticed; namely, the printing of a very large number (five hundred) of proofs; though that quantity, great as it certainly is, does not reach half the amount that has been taken of impressions under that denomination, from various plates published by the printsellers. The value of proofs of Village Politicians and The Rent Day having doubled in the market, led us to believe that we might safely venture to increase in a proportionate degree the number of proofs of Blind-man's Buff, especially as our preliminary subscriptions were numerous and encouraging. The experiment, however, signally failed; the price continuing the same, or with a small unimportant advance, as at the first publication."

In 1828 they published the 'Distraining for Rent,' of which he says, "of all my larger prints from Wilkie, this has been the least successful." In 1834 'The Parish Beadle,' and in 1836 his last great work, 'The Spanish Mother and Child.' These, compared to 'The Rent Day' and 'Village Politicians,' were very unsuccessful speculations, and Mr. Raimbach has very fairly accounted for the declining condition of the Wilkie prints as pieces of mercantile speculation:—

"For the long term of more than twenty years the prints from Wilkie's pictures had enjoyed an almost unprecedented popularity; and it can scarcely be held as a matter of reproach to the public if, after so long a period of favour in one direction, the desire of some sort of change of object should be entertained. The great talents of Edwin Landseer had been already well appreciated, when his picture of the Monks of Bolton Abbey appeared, and placed his reputation on a still higher elevation. Seconded by Cousin's admirable mezzotinto from it, there followed a rush in the track thus so auspiciously commenced, and the new lights (as in Aladdin's lamp) were preferred to the old. However this state of matters may continue for a time, the sterling qualities of Wilkie are sure, in the long run, to establish themselves in permanent supremacy in his department of art."

Mr. Raimbach died on the 17th of January, 1843, after a very short illness, from water on the chest, within a month of the completion of his 67th year. In person he was short, and stoutly built, with an hereditary tendency to corpulency, encouraged and increased by his sedentary habits. He died in easy circum-

Digitized by Google

stances, if not rich. He never employed an assistant, but wrought long, patiently, and well. 'The Rent Day' cost him two years and a half of labour. So fearful and timid was he about his works, that he never took a plate to the printer unaccompanied by a friend. "He had been working in the dark so long," he said, "that he was afraid to look alone at what he had been about."

We shall again refer to this work, as the Notes, and the Memoir of Wilkie, in the Appendix, are far from devoid of interesting material for extract and remark.

The Influence of Respect for Outward Things: in Two Dialogues. Fox.

WHOEVER confines his observation of English affairs to the sphere of parliamentary politics, the daily press, the aristocratic literature of the day, or the records of sectarian polemics, will have but an imperfect and unfaithful notion of all that is passing in the world of opinion, and of the direction in which it is moving. In those sources of information we find "a brief abstract" of what occurs on the surface of society, the minor theories of fractions of the public mind, the daily oscillations of particular conventional ideas; but they show little of that deeper undercurrent of thought, which flows steadily, though slowly, beneath, and which is not the less influential and important because it has not yet taken a definite form, and acquired the art of expressing itself in words.

In the sources to which we have pointed may be discovered (to speak more particularly) whatever is accredited among the university-educated and the wealthier classes, the changes and modifications impressed by circumstances on the body of *ex traduce* doctrines, on the plausibilities and make-believes of systems which, having lost their applicability, have ceased to be useful, and operate chiefly in preserving alive arrangements that ought to have long been peaceably sleeping in the tomb of the Capulets. In the undercurrent, hidden from ordinary observation, lie the thoughts and aspirations of the self-educated classes, of those who have been taught by suffering, who, ignorant or regardless of books, and of the printed prejudices of their ancestors, are instructed by the direct contact of things, and whose learning consists rather in instincts and impulses, than in syllogisms and general propositions.

We have more than once alluded to this divergence of opinions between the upper and lower classes, and to the changes it is preparing; and the announcement will require frequent reiteration for years to come, before it is sufficiently impressed on the higher classes of Englishmen,—unless, indeed, events should act as flappers on their unwilling ears, and actions declare the fact, before it finds exposition through the medium of language.

Indications, it is true, of the under-current we speak of, do occasionally bubble up to the surface, and attract the attention of the more observant; sometimes it manifests itself in some isolated overt act, of a character sufficiently grave to alarm and to puzzle those whose interests are compromised; but hitherto there has been but little communication between the parties; and if it be true that one half of mankind knows not how the other half lives, it is not less ignorant how the other half thinks.

The existence and the growing importance of a new popular power are briefly and ably exposed by the author of the Dialogues before us.

"In opposition to every man's judgment, I assert that all opinion which is characterized by the corrective and beneficial influence of truth, is invariably formed in the depths of society; and that all forms of thinking originating in other quarters, in proportion as they are at variance with it, are necessarily and radically false and injurious. This power of forming and diffusing that opinion which is to regenerate every part of social organisation is the line of demarcation between ancient and modern times. It is a distinction of the utmost moment. A labouring population possessing a vast numerical superiority, free, growing in intelligence, trained in some degree in the discussion of human rights, impelled by the experience of suffering to unremitting inquiry into its causes, and adopting to some extent those elevated ideas of virtue which contact with the sterner realities of life elicits in nobler minds, is a new feature in the moral world, and renders all reasoning from the past to the present and future nugatory. The exquisite misery which distinguishes modern civilisation is destined to fulfil a high office, that of directing the whole current of mental activity to the solution of a problem so grand as to leave no man of ordinary benevolence the shadow of an excuse for the guilty presumption of thinking upon any subject wholly unconnected with it,—How to obtain the benefits which flow from the development of the human mind with the smallest admixture of incidental evil?"

In the few lines we have here quoted may be read a long train of consequences. It is surely no trifling evil that the great masses of the operative class of society should thus have an education apart from the rest of the community, that there should be two languages, each unintelligible to the speakers of the other; two public opinions in hostile opposition; and that, while the one is formed under the corrupting and blinding influence of luxury, the other should be exclusively derived from the suggestions of anxiety and of pain—of deep suffering for the present, and despair for the future. As to the "high office" of the latter teaching, we agree with our author, that it is pregnant with great social changes, which Providence, or the play of cause and effect, may turn to the ultimate benefit of society; but through what vicissitudes of fortune, what dislocation of classes and families, this remote consequence is to be reached, forms a consideration in which, according to our estimation, there is little consolatory for the present generation of men, or for their immediate successors.

When we say that the two currents of public opinion run thus distinct from each other, and that a wall of separation is built up between the two classes which respectively entertain them, we utter a proposition generally true; but, in admitting the fact, abstraction must be made of mutual actions and re-actions, which are constantly taking place, at the few points where the two bodies come into some slight degree of contact. Between what are familiarly termed the upper classes of society and the self-educated artisan classes, there exists a body, not numerically large, but active and stirring,—a body that, having partaken of some portions of the training by which the former was moulded, has also been placed in close contact with, or perhaps is a participator in, the social miseries so influential in forming the opinions of the latter. These men, though not wholly divested of the prejudices and conventionalities of their superiors, can yet penetrate beneath the surface of words, and arrive at the things which educate those below them. If they sometimes, and to a certain extent, think with the one class, they can also understand the other, and for the most part sympathize with it. On the other hand, although their notions may sometimes partake of the crudity of popular opinions, they still remain more capable of inducing and generalizing, than the masses; and they can invest their thoughts with the logical forms necessary for gaining the attention of the technical scholar.

Of the two great divisions of English society, it is evident that the education and the wealth of the Established Church approximate its numbers to the first, while the poverty and subjection of the sectarian religions, combining with the consequent humbler parentage of their ministers, as naturally ranges these ministers nearer to the ranks of the second. It is consequently among the sectarian clergy that we find the greater number of writers, who bring a good deal of metaphysical subtilty to bear upon the elemental truths developed by the lower classes, who startle the complacent no-thinkers and routinists by the boldness and ingenuity of their speculations, and who take the lead in the re-formation of printed opinion. The increasing number of such writers is a pretty accurate exponent of the general uneasiness at present so prevalent in society at large. It is in all likelihood from this body that has proceeded the little volume now under review, for it possesses all the attributes which should lead to such a conclusion.

Letters from New York.

[Second Notice.]

WE had some thoughts of considering, on this occasion, the state of periodical literature in America, and making Mrs. Child's book serve as an illustration; but it would not enable us to do justice to the subject, and we must therefore defer our purpose, and be content with the promised specimen of her own style:—

"It is curious to observe by what laws ideas are associated; how, from the tiniest seed of thought, rises the umbrageous tree, with moss about its foot, blossoms on its head, and birds among its branches. Reading my last letter, concerning the spiral series of the universe, some busy little spirit suggested that there should, somewhere in creation, be a flower that made music. But I said, do they not all make melody? The Persians write their music in colours; and perchance, in the arrangement of flowers, angels may perceive songs and anthems. The close relationship between light and music has been more or less dimly perceived by the human mind everywhere. The Persian, when he gave to each note a colour, probably embodied a greater mystery than he understood. The same undefined perception makes us talk of the harmony of colours, and the tone of a picture; it led the blind man to say that his idea of red was like the sound of a trumpet; and it led Festus to speak of 'a rainbow of sweet sounds.' John S. Dwight was inspired with the same idea, when he eloquently described music as 'a prophecy of what life is to be; the rainbow of promise translated out of seeing into hearing.' But I must not trust myself to trace the beautiful analogy between light and music. As I muse upon it, it is like an opening between clouds, so transparent and so deep, deep, that it seems as if one could see through it beyond the farthest star—if one could but gaze long and earnestly enough. 'Every flower writes music on the air'; and every tree that grows enshrines a tone within its heart. Do you doubt it? Try the willow and the oak, the elm and the poplar, and see whether each has not its own peculiar sound, waiting only for the master's hand to make them discourse sweet music."

Here Mrs. Child favours us with an anecdote which is altogether a mistake—we shall therefore pass on to other speculations:—

"There is something pleasant to my imagination in the fact that every tree has its own peculiar note, and is a performer in the great concert of the universe, which for ever rises before the throne of Jehovah. But when the idea is applied to man, it is painful in the extreme. The Emperor of Russia is said to have an imperial band, in which each man is doomed all his life long to sound one note, that he may acquire the greatest possible perfection. The effect of the whole is said to be admirable; but nothing would tempt me to hear this human musical machine. A tree is a unit in creation; though, like everything else, it stands in relation to all things. But every human soul represents the universe. There is horrible profanation in compelling a living spirit to utter but one note. Theological sects strive to do this continually; for they are sects because they magnify

Digitized by Google

some one attribute of Deity, or see but one aspect of the divine government. To me, their fragmentary echoes are most discordant; but doubtless the angels listen to them as a whole, and perhaps they hear a pleasant chorus. Music, whether I listen to it, or try to analyze it, ever fills me with thoughts which I cannot express—because I cannot sing; for nothing but music can express the emotions to which it gives birth. Language, even the richest flow of metaphor, is too poor to do it. That the universe moves to music, I have no doubt; and could I but penetrate this mystery, where the finite passes into the infinite, I should surely know how the world was created. Pythagoras supposed that the heavenly bodies in their motion, produce music inaudible to mortal ears. These motions he believed conformed to certain fixed laws, that could be stated in numbers, corresponding to the numbers which express the harmony of sounds. This 'music of the spheres' has been considered an idea altogether fanciful; but the immortal Kepler applied the Pythagorean theory of numbers, and musical intervals, to the distances of the planets; and a long time after, Newton discovered and acknowledged the importance of the application. Said I not, the universe moved to music? The planets dance before Jehovah; and music is the echo of their motions. Surely the ear of Beethoven had listened to it, when he wrote those misnamed 'waltzes' of his, which, as John S. Dwight says, 'remind us of no dance, unless it be the dances of the heavenly systems in their sublime career through space.' Have you ever seen Retzsch's illustration of Schiller's Song of the Bell? If you have, and know how to appreciate its speaking gracefulness, its earnest depth of life, you are richer than Rothschild or Astor; for a vision of beauty is an everlasting inheritance. Perhaps none but a German would have thus entwined the sound of a bell with the whole of human life; for with them the bell mingles with all of mirth, sorrow, and worship. Almost all the German and Belgian towns are provided with chiming bells, which play at noon and evening. There was such a set of musical bells in the church of St. Nicholas, at Hamburg. The bell-player was a grey-headed man, who had for many years rung forth the sonorous chimes, that told the hours to the busy throng below. When the church was on fire, either from infirmity or want of thought, the old man remained at his post. In the terrible confusion of the blazing city, no one thought of him, till the high steeple was seen wreathed with flame. As the throng gazed upward, the firm walls of the old church, that had stood for ages, began to shake. At that moment the bells sounded the well-known German Choral, which usually concludes the Protestant service, 'Nun danket alle Gott'—'Now all thank God.' Another moment and there was an awful crash! The bells, which had spoken into the hearts of so many generations, went silent for ever. They and the old musician sunk together into a fiery grave; but the echo of their chimes goes sounding on through the far eternity. They have a beautiful custom at Hamburg. At ten o'clock in the morning, when men are hurrying hither and yon in the great whirlpool of business, from the high church tower comes down the sound of sacred music, from a large and powerful horn appropriated to that service. It is as if an angel spake from the clouds, reminding them of immortality.

"You have doubtless heard of the mysterious music that peals over the bay at West Pascagoula. It has for a long time been one of the greatest wonders of the south-west. Multitudes have heard it, rising as it were from the water, like the drone of a bagpipe, then floating away—away—away—in the distance—soft, plaintive, and fairy-like, as if Æolian harps sounded with richer melody through the liquid element; but none have been able to account for the beautiful phenomenon. There are several legends touching these mysterious sounds. * * But in these days, few things are allowed to remain mysterious. A correspondent of the Baltimore Republican thus explains the music of the water spirits:—'During several of my voyages on the Spanish main, in the neighbourhood of "Paraguay," and San Juan de Nicaragua, from the nature of the coast, we were compelled to anchor at a considerable distance from the shore; and every evening, from dark to late night, our ears were delighted with Æolian music, that could be heard beneath the counter of our schooner. At first, I thought it was the sea-breeze sweeping through the strings of my violin, (the bridge of which I had inadvertently left standing); but after examination, I found it was not so. I then placed my ear on the rail of the vessel, when I was continually charmed with the most heavenly strains that ever fell upon my ear. They did not sound as close to us, but were sweet, mellow and aërial; like the soft breathings of a thousand lutes, touched by fingers of the deep sea-nymphs, at an immense distance. Although I have considerable "music in my soul," one night I became tired, and determined to fish. My luck in half an hour was astonishing; I had half filled my bucket with the finest white cat-fish I ever saw; and it being late, and the cook asleep, and the moon shining, I filled my bucket with water and took fish and all into my cabin for the night. I had not yet fallen asleep, when the same sweet notes fell upon my ear; and getting up, what was my surprise to find my "cat-fish" discoursing sweet sounds to the sides of my bucket. I examined them closely, and discovered that there was attached to each lower lip an excrescence, divided by soft, wiry fibres. By the pressure of the upper lip thereon, and by the exhalation and discharge of breath, a vibration was created, similar to that produced by the breath on the tongue of the jew's harp.' So you see the Naiads have a band to dance by. I should like to have the mocking bird try his skill at imitating this submarine melody. You know the Bob-o'link with his inimitable strain of 'linked sweetness, long drawn out'? At a farm house occupied by my father-in-law, one of these rich warblers came and seated himself on a rail near the window, and began to sing. A cat-bird (our New England mocking bird) perched near, and began to imitate the notes. The short, quick, 'bob-o'link,' 'bob-o'link,' he could master very well; but when it came to the prolonged thrill of gushing melody, at the close of the strain—the imitator stopped in the midst. Again the bob-o'link poured forth his soul in song; the mocking-bird hopped nearer, and listened most intently. Again he tried; but it was all in vain. The bob-o'link, as if conscious that none could imitate his God-given tune, sent forth a clearer, stronger, richer strain than ever. The mocking bird evidently felt that his reputation was at stake. He warbled all kinds of notes in quick succession. You would have thought the house was surrounded by robins, sparrows, whippowills, blackbirds, and linnets. Having shown off his accomplishments, he again tried his powers on the altogether inimitable trill. The effort he made was prodigious; but it was mere talent trying to copy genius. He couldn't do it. He stopped, gasping, in the midst of the prolonged melody, and flew away abruptly, in evident vexation. Music, like everything else, is now passing from the few to the many. The art of printing has laid before the multitude the written wisdom of ages, once locked up in the elaborate manuscripts of the cloister. Engraving and daguerreotype spread the productions of the pencil before the whole people. Music is taught in our common schools, and the cheap accordion brings its delights to the humblest class of citizens. All these things are full of prophecy. Slowly, slowly, to the measured sound of the spirit's music, there goes round the world the golden band of brotherhood; slowly, slowly, the earth comes to its place, and makes a chord with heaven. Sing on, thou true-hearted, and be not discouraged! If a harp be in perfect tune, and a flute, or other instrument of music, be near it, and in perfect tune also, thou canst not play on one without wakening an answer from the other. Behold, thou shalt hear its sweet echo in the air, as if played on by the invisible. Even so shall other spirits vibrate to the harmony of thine. Utter what God giveth thee to say. In the sunny West Indies, in gay and graceful Paris, in frozen Iceland, and the deep stillness of the Hindoo jungle, thou wilt wake a slumbering echo, to be carried on for ever through the universe. In word and act sing thou of united truth and love; another voice shall take up the strain over the waters; soon it will become a world concert;—and thou above there, in that realm of light and love, well pleased wilt hear thy early song, in earth's sweet vibration to the harps of heaven."

This, vague and dreamy as it is, is a favourable specimen of Mrs. Child's essay writing.

The Symbolism of Churches and Church Ornaments: a Translation of the First Book of the Rationale, &c. of Durandus; with an Introductory Essay, &c. By the Rev. J. M. Neale, and the Rev. B. Webb. Leeds. 1843.

We have in this 'Symbolism' an emanation of Camdenism, strongly sympathetic with Puseyism,—a *triplet* of very strange *isms* for the middle of the nineteenth century, when an attempt to resuscitate the mystical fancies of the 'sometime bishop of Mende,' with a view of their being adopted by our modern church builders, startles us almost as much as a proposal for a general crusade would do. But perhaps the reader may, before we proceed further, desire to be informed what he is to understand by Camdenism, to which we reply,—the peculiar architectural notions put forth, and the authority claimed in regard to all matters of Ecclesiology, by the Cambridge Camden Society,—to whom this volume is dedicated by "two of its Founders." We may accordingly consider the very long 'Introductory Essay' as expressing, in its general tenor at least, the views and sentiments of that body, and their aims are such as are calculated to excite no small anxiety and apprehension among the architectural profession.

As far as they have tended to put down the practice of church-wardenizing, and to bring the cheap and nasty church system into discredit, the exertions of the Camden Society—and they are by no means wanting in persevering zeal,—have been meritorious enough; but they are not disposed to stop there. On the contrary, they would now fain take to themselves supreme if not sole jurisdiction in whatever appertains to the Church, in its literal, as well as figurative and scriptural meaning. It is complained that architecture is now pursued too much like an ordinary profession; and if by this were meant merely too much as any other business for a livelihood, and with very little feeling for art, or appreciation of its powers, it must be confessed that the reproach is not unmerited, and the evil itself calls for correction. Yet very much more than feeling for and ability in their art is exacted by Camdenists from professional men—at least, if we may take Messrs. Neale and Webb as their representatives—since they will be satisfied with nothing less than a church architect being a church-man, and adding to his other qualifications that of "a directly religious habit of mind"; that, in building up a material church, he should have regard to the beauty and fabric of the spiritual one, and literally *edify* the devout by the mystic meaning everywhere impressed upon his own edifice. It is not sufficient for them, that an ecclesiastical structure should, besides being satisfactory as a piece of architecture, be of such character as to inspire a devotional frame of mind,—no matter whether that character be accomplished exactly in conformity with previous examples or not: merit of that kind avails nothing in their estimation if there be not "*Sacramentality*" also. "A catholic*k* architect," we are told, "must be a catholic*k* in heart: simple knowledge will no more enable a man to build up God's material, than his spiritual, temples." Hence even St. Paul's is now in danger of coming to be looked upon as a national scandal by Camdenists and Ecclesiologists, it being altogether deficient both in Symbolism and Spirituality.

The Camdenists—that is, the authors of the 'Introductory Essay,' out-Pugin Pugin himself, for even he does not go far enough for them; therefore, while they express cordial sympathy with him in other respects—sympathy with one who has not scrupled to speak of "the blasting influence of Protestantism"—they censure him

Digitized by Google

for not having attended to "sacramentality as a principle of ecclesiastical design."

They would certainly push matters to an inconvenient degree of strictness—to such as would tend to place church architecture upon a very different footing from what it has been since it ceased to be in the hands of ecclesiastics and religious communities, and to render it now altogether a separate branch of the general profession. As, at the present day, the clergy do not possess sufficient practical knowledge to take upon themselves the office of church builders, the alternative recommended is, that such persons alone should be employed in the latter capacity as shall devote themselves more especially to the study of ecclesiastical design, not as design in the usual artistic meaning of the term, but so as to attain to full intelligence of, and sympathy with, whatever relates to the more recondite mysteries and mysticism of "Catholic Architecture." They must consider themselves a sort of lay order, set apart for, and bound to the service of the church—must maintain a certain sanctity of character, and be anything but worldly-minded, renouncing the filthy lucre of other practice, and being proof against all the allurements of per-centage. Implicit obedience to the injunctions of the Cambridge Camden Society, as to a sort of holy Inquisition, would be expected as matter of course. Yet it is not likely that any, least of all any men of a higher order of talent, and who are attached to their art as such, will be found willing to put themselves under the protection of that body. Some, indeed, despairing of making their way in the usual course, may do so, nothing loth, in the hope of receiving whatever patronage and favours it may have to bestow; and if out of such men the Camdenists can make a school of artists capable of vying with those of olden times, they will so far accomplish a meritorious work. Perhaps they cannot find fitter instruments for their purpose than among the members of another society, calling themselves the "Freemasons of the Church," whose whereabouts is Warwick Court. These last have at least the recommendation of greater gravity and demureness than the profession generally affect, for their meetings assume somewhat of a religious character, being prefaced by prayers. Unluckily, however, they do not seem to have as yet attained to any great proficiency in "symbolism's sacramentality," since a design for a church, by one of the leading members among them, was sorely cut up not very long ago in the Camden Society's publication, the *Ecclesiologist*.

Not content with interdicting church architects from secular employment, the authors of the 'Essay' would impose further restrictions upon them, confining them, not only to pointed architecture, but each man to some one particular style of it! Even Mr. Welby Pugin would hardly relish being so "tethered" down, because, although he is intolerant of any other style than the pointed, he claims for himself at least the right of ranging through the whole extent of it, even to its very outskirts. If a man chooses of his own accord to devote his entire study exclusively to a single branch of the art he professes, he may very properly do so, and perhaps thereby attain to greater eminence in it; but it has hitherto been usually considered a merit to be able to show diversity, not to say versatility, of talent. Is not, however, that single-mindedness, if we may so term it, here recommended, likely to contract an artist's ideas and taste, to enfeeble them upon the whole, though it may give him greater strength in one single particular, and that sort of skill which is called "*knack*"? At all events, to attempt to enforce regulations and restrictions of the sort would be futile and ridiculous.

With the Camdenists "precedent" is a *sine quâ non*, and woe to the unhappy wight on whom they may sit in judgment, if he cannot point to authority for every circumstance and every detail introduced into his building or design. On the part of the Camdenists themselves, this rigorous doctrine as to precedent, and their holy horror of innovation, may be excellent policy and admirable prudence, for it may be questioned if they have any other test of merit, or are capable of distinguishing between what is faulty or the reverse, by any other means. Thus they would now prohibit freedom of design altogether, in a style which displayed its powers in a series of almost continual changes and constant innovation, and anxious as they are to revive it, they would nevertheless destroy its principle of vitality and spontaneity.

Such is their bigotry, their catholicism or their Puseyism, that they insist upon many things being restored in our churches which are either unnecessary or inconsistent with the Protestant form of worship. Why should there be the strange hankering there now is after the semblance and costume of Romanism, if its doctrines are repudiated and professedly held in aversion? It might be supposed that one of the main objects of such a society as the Camden would be not merely to restore the style itself, but in such manner as to adapt it to our actual service. So far, however, are they from attempting this, that they treat with scorn the idea of a Protestant church being accommodated to a Protestant congregation.

Of the slap-dash criticism of these Camdenists we have a choice specimen in page 118 of the 'Essay,' where they speak of "Messrs. Britton & Hosking's *atrocious* plan for re-arranging St. Mary Redcliffe Church." Startling as such opinion—at least the bluntness with which it is expressed—may be, we have been more surprised, and not disagreeably so, by the following:—

"We have remarkable proof that feeling without knowledge will do more than knowledge without feeling. There are instances of buildings—Lisbon Cathedral and St. Peter's College chapel, Cambridge, are cases in point—which with debased or Italian details have nevertheless Christian effect."

Now, if this does not go exactly to the extent of upsetting one main dogma of the Camdenists, it shakes it a little; being a frank admission that striking propriety of character may be attained in other styles than the pointed, and that sins against architectural authority and precedent may be atoned for by higher merits—merits not always to be found where even the most scrupulous nicety has been observed in regard to all the separate parts of a building, the general result being, notwithstanding such piecemeal correctness, unsuccessful—insipid, and unimpressive. In abiding by precedent there is, undoubtedly, safety, since there is little likelihood of any gross error being committed. Yet that kind of merit in what professes to be a fine art, and as such admits of some exercise of mind, does not amount to much, notwithstanding that so much stress is laid upon it. After all, no little depends on the spirit and feeling with which a style is treated; and it is more laudable to infuse vigour and character into a poor style, than to enfeeble a good one by copying it literally yet tamely. It is one thing to investigate buildings with the eye of a mere antiquary, another to study them with that of an artist; and an architect ought to look at them with both; which, however, he will hardly do if he take the Camden Society for his precedent and guide. It may be for this reason that two of its most intelligent members, the Master of Trinity and Professor Willis, have seceded from it.

Camdenism insists authoritatively on our reviving forms and usages that have become obsolete; it treats matters of taste, or custom, or convenience, as so many articles of faith; and it attaches an exaggerated value—almost a spiritual efficacy, to the hieroglyphical language of symbolism, which has now become an unknown tongue to all but the initiated few, yet is nevertheless spoken of as if it were almost essential to holiness and devotion. Into the subject of symbolism, as set forth in the present volume, both in the introductory essay and the translation from Durandus, we have left ourselves no space to enter; but some notion may be formed of it from the specimens afforded in Lewis's 'Illustrations of Kilpeck Church,' —(see *Athenæum*, No. 778). It is true, Mr. Lewis, while commended for turning public attention to the subject, is here censured (in a note) for having treated it extravagantly and indulged in puerile conceits; yet, as it seems to us, those who can relish the strange and far-fetched conceits of Durandus may very well tolerate those of Mr. Lewis, as being nearly as ingenious, and not a whit more absurd. The author of the 'Rationale' tells us, for instance, that the cloister of a church signifies the "contemplative state;" and "in this cloister there are *four sides, denoting, namely, contempt of self, contempt of the world, love of God, and love of our neighbour!*" which singular interpretation would equally suit a Quaker's meeting-house. We further learn, for the first time, that "*the refectory is the love of holy meditation; the cellar, holy Scripture; the dormitory, a clean conscience.*" Really, if this be symbolism, it appears a very easy matter, since any signification may be attached to anything. That here given to "cellar" is so extraordinary, that we doubt if the word has been rightly translated: as it now stands, the interpretation will strike many as ludicrous, others as irreverent, as may also a good deal besides, although intended to be devout. There certainly is much that must be thought miserably superstitious by a modern reader, and is, therefore, calculated to excite just ridicule and contempt—perhaps that sort of profanity for which the author of the 'Ingoldsby Legends' is here pointedly rebuked, in an editorial note actually referred to in the index; where it is said of that work—"Disgraceful as it would be to any author, it is trebly so if (as is said) that author is a clergyman." After this, he will now, perhaps, take up his pen and be facetious upon Protestant clergymen who show such a decided hankering after exploded papistical superstitions as is done by the editors of the present volume. However, if not in accordance with the spirit of the nineteenth century, the volume is well-timed in its appearance, because it suits certain party views which have lately sprung up, and recommends itself to Camdenists and Puseyites.

On the Improvement of Rivers; with a New Theory on the Cause of the Existence of Bars. By W. A. Brooks, C.E. Weale.

A bar is that shallow bank of sand, gravel, or other matter, which runs across the mouth of many rivers, rendering the entrance of ships of large burden at certain states of the tide impossible, and limiting the extent of navigation at all times by the depth of water over the bar. Above and below the bar the depth is generally much greater than on the bar; so that, if the bar could be removed, the navigation would thereby be improved throughout the whole length of the navigable channel. In bad weather the bar is covered with heavy breakers, and is of course dangerous; as it is known, from recent experiments, that waves break wherever they come into water whose depth is not greater than their own height. Thus waves ten feet high will break in ten feet

Digitized by Google

of water, waves fifteen feet high in fifteen feet water, and so on, the height of the breakers being an index of the depth of water on the bar, and the depth of water the limiting cause of the height of the waves.

The cause of a bar is simply the sudden entrance of the river stream into the comparatively stagnant ocean water. On meeting the waters of the sea, the stream is gradually brought to rest, and wherever this takes place there will be a region of deposition, where, the water of the river, loaded with silt, sand, or other matter which it holds in suspension, being brought to a state of repose, will deposit its contents and form a bank of sand or of mud, or finally a delta. Nay, further, just where the channel thus widens out into the sea, the waters of the river being spread over a wide channel, cease to exercise their scouring power, which is so powerful an agent in deepening a channel, and in preserving it, and the stream becomes diffused over a wide area; so that the stream extended over a wide surface requires much less depth for its passage over the sand. The bank thus formed is still further increased and maintained by these breakers, to which the very existence of such a bank gives rise; and thus the evil goes on growing by the very consequences to which itself has given rise.

These we may call bars by Deposition and Accumulation. But there is another class of analogous conditions which arise from a source altogether different, and are in their nature much less remedial. It does very frequently happen, that towards the mouth of a river the character of the channel is immediately derived from the geological features of the district: the river channel may have originally been a series of lakes or basins, which have at length been united by the destruction and gradual wearing away of the narrow channels which separated them, until they form but one continuous channel. Such rivers present us, towards their mouths, with a series of basins, deep in their bases and shallowing all round the margin. The last of these opens into a great bay of the sea, and on the margin we have a bar, the result of the general conformation of the basin, and this bar is maintained by the general conformation of the sea shore, along which the prevailing winds pile up, and of course without excepting that part of the coast where the river enters, those sandhills and beaches which form the margin of the sea.

Of a geological character, also, we may consider those bars which we find at the mouths of wide, shallow, and extensive estuaries, such as that at the Dee, where the whole river-mouth is little else than one extensive sand-bank, with only a small stream wandering through it, finding its way to the sea like a silver thread in the mazes of a wide tapestry, without power to direct its own course, but driven now to this side now to that, as the banks, shifted by the prevailing winds and waves will allow it to run. The wonder will be, in this case, not that there is a bar, but that there is an opening at all. Around the margin of the ocean there is, therefore, a general outline of coast, which the geological features of the country present to the ocean as its boundary. The general action of the winds, of the tides, and of the waves, is to fill up this outline, and to preserve its continuity; the very rivers themselves, on reaching this margin, deposit there the burden which they bring down; and thus the general tendency of a great combination of causes is to complete the continuity of the coast and to close the mouths of rivers.

The causes which counteract these tendencies are in many cases so powerful, as to present us with some rivers which are happily not impeded by bars, and which are consequently the vehicles of wealth and commerce and prosperity. The general character of such rivers is this: they debouche into the sea, not in a direct and exposed part of the coast, where the action of the waves would tend to throw up a bar, but in some deep inland or protected bay, where the waters of the stream gradually and slowly diffuse themselves over, and mingle with, the waters of a deep and extensive salt water basin. Or if the river open out gradually and slowly into the sea, widening and deepening, so that the retardation of the velocity of the water is gradual and extended over a wide space, then it is plain that the deposition of a bar at a fixed point, by the sudden arrestment of the waters of the stream, is avoided, and we have no bar. Or if the stream be carried out with unimpaired velocity until it enter a deep arm of the sea on a rocky coast, where sand is not carried up from the bottom by the action of waves, we shall again have a clear entrance. Or if the descent of the river into the sea be so long, so slow, and so gentle that it hold little matter in suspension, and mingle almost insensibly with the ocean,—such are among the happy conditions in which we expect and find unimpeded navigation.

It is plain, therefore, that the cure of these evils will be to alter the river so as to place its stream in a condition resembling, as nearly as possible, the state of such as are free from these impediments. If we find the course of the river suddenly arrested by the ocean, so as to deposit a bar at the place where its waters are thus stopped, it is plain that we should endeavour to deepen, widen, and lengthen the space in which this arrestment takes place; the channel is to be deepened above the bar, the bar itself should be reduced by artificial means, in the first instance, so as to co-operate with us, and works carried on, so as to cause a stream at all times, during ebb and flow, across that place where the bar was formed. The channel may thus be made to deepen *gradually*, to widen *gradually*, and the surface of low water to fall gradually; thus the deposit on the spot where it formerly existed will cease, and the river remain clear. Where the waves produce the banks, nothing but protection from their force will clear the navigation, so that the course of the stream must be directed away from the prevailing winds, and protected by lateral works. But suppose the impediment to be a geological formation, then nothing less than its absolute removal will clear the navigation. Above all, the *deepening* of the channel and uniting its waters, the graduation of the bed and the surface to an increasing section and a diminishing slope, are the great elements of improvement, and the increase, especially of depth, both as affording capacity for water way, depth for navigation, and an accelerated velocity of admission to the tide-wave—are the great elements for improving impeded river navigation.

The rivers most remarkable for having successfully undergone some such process as we have described, are the Clyde in Scotland, which was originally inaccessible at Glasgow to any but fishing vessels, and is now a harbour of the first class, accessible to ships drawing sixteen feet water; the Tay, which is now navigable to Perth; the Lee, the Liffey, the Wear, the Tyne, the Lune, and some others, whose names we do not at this moment remember. But there are a multitude of others whose improvement has been again and again attempted in vain; even the exertions of very distinguished engineers having totally failed to effect their improvement, have, on the contrary, injured them. It even happens that changes which have been conducted under the highest authority, have been the least successful, and have, contrary to all expectation, produced effects the very reverse of those which had been predicted.

We regard, therefore, with interest any work which professes to explain anomalies, or illustrate principles, or propound a new theory on so important a subject, one so eminently practical; and we took up this little book of Mr. Brooks on Rivers with the hope to derive benefit from the experience or the science which were to be expected from one who had sufficiently extended his views, and sufficiently weighed his reasons, to come forward with the promise of a new and true theory; for the scientific principles on which the motion of running water depends are little understood by practical men; and the great bulk of scientific men have nothing to offer for their instruction, with the exception only of a few recent investigations, tending to throw light on the matter. We have analyzed this book, for the purpose of extracting from it, for ourselves and our readers, the general meaning, and the chief facts and the nature of the theory which its author adduces; a task not without difficulty, as he has not stated his views with so much precision and clearness as we could desire.

In the first chapter Mr. Brooks states a few opinions, entertained heretofore, on the causes of bars at the mouths of rivers:—1. The lessening of the velocity of the river stream on reaching the sea. 2. The action of waves in throwing up beaches and banks conformable in position to the general trend of the coast. 3. The difference of direction between the ebb and flow streams. 4. A current entering the sea at right angles to the shore. 5. The insufficiency of back-water. 6. The action of ground swell (*flots de fond*). The author next states his own theory,—first, of the conditions under which a bar is wanting; and secondly, of its cause when present, which we must give in his own words:—

"It will generally be found, that whenever a navigable river approximates to the condition of a simple inlet, for the reception of the tide, so far as regards the longitudinal section, presented by its surface at low water, it will either have no bar, or be but lightly obstructed by one; the same may be said of those sea ports, or pier harbours, which, though free from bars in their natural state, are well known to become encumbered by them immediately on the introduction of an artificial scouring power. Resuming the investigation into the state of a river, whose entrance is free from a bar, we shall find, that, from its junction with the ocean, a long line of navigable course exists with an extremely gentle fall, or slope of its surface, at low water; the river is in this case in a proper train, its longitudinal section presenting a succession of inclined planes, becoming more and more gentle, as they approach the ocean; and the lower course of the river, from the slightness of its fall, approximates to the condition of a frith, or deep inlet, of the coast, or to that of one of those large natural or artificial harbours, which, being mere tidal receptacles, wherein the influx and efflux take place in equal times, are necessarily free from bars. The river, being in this perfect state, as regards the slope of its surface at low water, a consequent attendant upon the latter will be an equal duration, or nearly so, of the period taken up by the flow of the flood tide, with that of the ebb, in the lower reach of river; by the term flow being understood the direct upward course of the current of the flood tide, immediately after the true time of low water. Assuming that to the possession of a nearly equal duration of the period of the ebb and flow, in the lower reach of a river, accompanied by an extremely gentle inclination of its surface at low water, is to be attributed the freedom from the incumbrance of a bar, I will now pursue the investigation, into the actual condition of Bar Rivers."

The author's theory of the absence of a bar.—"An accurate examination of the state of a bar river will exhibit a great irregularity of its surface at low water; in lieu of the river presenting at that period a longitudinal section of a succession of inclined

Digitized by Google

planes, described in the preceding description of rivers free from bars, as becoming more and more gentle in proportion to their proximity to the ocean, it will be often found that the declination or slope of some of the upper reaches is less than those nearer the ocean; and the fall at low water in the lower reaches of the river is always so great, as to produce a striking difference in the vertical rise of tide, even at a short distance from the sea; and attendant upon this defective state of the section presented by the surface of the river at low water, is a great extension of the duration of the ebb, beyond that of the upward current of the flood tide. The river being in this irregular state, the process by which the bar is formed may be thus described. During the period of the first quarter flood, the current in lieu of being able to take its natural upward course, as in rivers where no bar exists, is opposed, or effectually checked, by the effluent backwater; the declination of the stream in the lower division of the river presenting a head which ensures a strong downward current, long after the tide would have been able to maintain an upward course, provided the backwater had had a free discharge. At this period the flood tide, by reason of its greater specific gravity, occupies the lower stratum of the tide-way, and like a wedge endeavours to force its course up the channel, which it is unable to effect, but merely elevates the lighter effluent water, the lower strata of which, being checked by the opposition of tidal water, yields to the latter the sand or other materials which it was capable of holding in suspension, previously to its encountering the conflicting action of the flood-tide; and where this takes place the bar is formed. From the above, we may easily extend the illustration to prove that, while the formation or increase of the bar takes place at this period, or during the first part of the flood tide, the direct tendency of the whole period of the ebb, when unobstructed by the tidal current, must be to reduce the extent of the bar in all its dimensions. The same useful effect, in keeping down the bar, must also attend the action of the flood-tide, after it has attained a true run up the channel. Turning our attention to the state of those rivers which discharge their waters into tideless seas or fresh water lakes, we shall still be able to trace to the same cause the existence of their bars, viz. to the excess of slope, which their longitudinal sections present near their embouchures: but as here the agency of the tide or counter current does not exist, the deposit which takes place will generally be differently affected from that which forms the bar of a tidal river, which latter does not usually experience that great observable elongation of its course, which takes place in rivers which discharge their waters into tideless seas."

If we rightly understand our author, it would appear that he attributes the creation of bars in rivers to the existence of "an excess of slope which their longitudinal sections present near their embouchures," and the want of bars to want of this slope. This, as far as we can gather, is Mr. Brooks's "New Theory on the cause of the existence of Bars." If we have rightly extracted his meaning, then we confess we *cannot* agree with him that it is *new*, nor, as a general theory, *true*.

In the first place, the excess of slope, which is stated as a cause of bars, is not of the nature of an efficient cause, but is only in some cases a symptom and consequence of the true cause. This rapid slope of the water surface is an indication of a rapid stream entering abruptly the waters of the sea, and is, therefore, neither more nor less than an indication that such bar exists, and that the river is thereby dammed up: to adduce this as a cause, and to treat it accordingly, is to mistake the symptoms for the disease,—a mistake as dangerous in the treatment of rivers as of fevers. The maxim of Dr. Hahnemann, that symptoms alone are to be treated, however it may succeed in medicine, does not hold good in engineering, and will not apply to hydropathic practice, however well it may suit the homœopathic.

In the second place, the symptom, even as a symptom, does not hold good as a general indication, for a bar frequently exists where there is no such sudden slope of the water surface. In all cases where the mouth of the river is wide and very shallow, the width, if sufficient to compensate want of depth and furnish a large section for the discharge, will effect that discharge over a bar without a slope such as our author describes. In such a case his cause is neither the mere cause nor the constant indication.

The class of cases to which Mr. Brooks alludes, is that to which we have already referred in our introduction, where we stated that "the cause of a bar is simply the sudden entrance of the river stream into the comparatively stagnant ocean water. On meeting the waters of the sea, the stream is gradually brought to rest, and wherever this takes place there will be a region of deposition, where the water of the river, loaded with silt, sand, or other matter, which it holds in suspension, being brought to a state of repose, will deposit its contents and form a bank of sand," &c. This is, in short, the first cause, already stated by himself as one of the known causes of a bar—and as it is known that in a case of this nature the sudden entrance of the river stream into a still sea will be attended by a corresponding considerable slope of the water surface, and an abrupt termination of it, it follows that the symptom adverted to by Mr. Brooks will attend this case: and further, that the cure will be, to prevent this sudden entrance of the rapid stream abruptly into the stagnant sea at low water, by enlarging the opening, lengthening the region of debouchement or entrance, or removing its suddenness, and, by the substitution of a gradual for an abrupt subsidence, remedy the evil by removing the cause—and along with this cause there would of course disappear the symptom of the abrupt termination and rapid slope of the water surface.

But although we cannot altogether admit the author's theory, or its assumed novelty, nor subscribe to the efficacy or value of his remedial processes, in so far as they pretend to novelty, we have nevertheless, perused the work with interest,—we find in it much valuable matter for discussion, we welcome it as an attempt to elucidate an important subject; and the reader who will peruse it, not as a guide or authority, but simply as an ingenious argument, will derive from it both pleasure and information. The report of the author on the river Clyde is interesting, as a clear statement of the facts which he was sent to examine, and as one of the most successful instances of artificial improvement, in the absence of all theory, by perseverance in the mechanical process of deepening by means of the steam dredge—a plan calculated to effect greater improvements than any other within the reach of man. There are one or two instances, however, where the author virtually says, there *is* a plan of improving your river, which other engineers have not adopted, but which "I" don't choose to tell you in this place (we suppose until the fee be paid), which savours more of a professional feeler than of the candour of a scientific writer, and which cannot be too strongly reprobated in a treatise where candour is implied by the very act of publication. With these limitations, we commend the treatise to the perusal of our professional readers.

The Spirit of the Nation.

[Second Notice.]

ACCORDING to our promise, we now turn to the new and rising school of poetry, which, as we said, in our article on Repeal Songs last week, is chiefly patronized by the generation just beginning to take a part in active life. The lyrics of this new school are published in a paper recently established in Dublin, called *The Nation;* a paper bearing the most obvious marks of being chiefly conducted by young men; its articles are full of spirit and energy, but are not equally remarkable for temper and discretion; its most powerful appeals are made to the passions rather than the judgment, and its high tone of self-reliance sometimes assumes the form of that overweening confidence, not to say presumption, which is so often found to be a drawback on youthful cleverness. The songs published in this paper display considerable beauty, both of language and imagery, combined with intense feeling. The best pieces in the collection have fictitious signatures attached to them, intimating that the writers are natives of Munster, and this circumstance greatly increases the effect of the contrast between the new and old schools of Munster poetry. The new school leaves no room for mistaking the objects of its advocacy; no one can misapprehend the very first song in the collection:—

The work that should to-day be wrought
Defer not till to-morrow;
The help that should within be sought,
Scorn from without to borrow.
Old maxims these—yet stout and true—
They speak in trumpet tone,
To do at once what is to do,
And trust ourselves alone.

Too long our Irish hearts we schooled,
In patient hope to bide;
By dreams of English justice fooled,
And English tongues that lied.
That hour of weak delusion 's past,
The empty dream has flown:
Our hope and strength, we find at last,
Is in ourselves alone.

Aye! bitter hate, or cold neglect,
Or lukewarm love, at best,
Is all we've found or can expect,
We aliens of the west.
No friend, beyond her own green shore,
Can Erin truly own;
Yet stronger is her trust, therefore,
In her brave sons alone.

* * * *

The "foolish word impossible"
At once, for aye disdain;
No power can bar a people's will
A people's right to gain.
Be bold, united, firmly set,
Nor flinch in word or tone—
We'll be a glorious nation yet,
Redeemed—erect—alone.

In the older ballads of Munster the allusions to oppressive exercise of a landlord's rights are faint and timid; but the *Nation* knows neither fear nor scruple in denouncing those whom it calls Exterminators; "the Exterminator's Song" is one which has taken a strong hold in Ireland. We shall quote only the first verse:—

'Tis I am the poor man's scourge,
And where is the scourge like me?
My land from all Papists I purge,
Who think that their votes should be free—
Who think that their votes should be free!
From huts only fitted for brutes,
My agent the last penny wrings;
And my serfs live on water and roots,
While I feast on the best of good things!
For I am the poor man's scourge!
For I am the poor man's scourge!
(*Chorus* of the Editors of 'The Nation')
Yes, *you* are the poor man's scourge!
But of *such* the whole island we'll purge!

There is but little adulation of O'Connell in these songs, and some opinions which he is known to entertain are not treated with much respect or ceremony. For instance, O'Connell speaks slightingly of the United Irishmen, and he believes that their premature agitation was a principal cause of all the evils which Ireland endured at the close of the last century. We need not enter into any discussion of a subject so full of pain and peril, but we shall quote a spirited song, which proves that a want of sympathy with the United Irishmen cannot be attributed to the conductors of the *Nation*:—

Who fears to speak of Ninety-eight?
Who blushes at the name?
When cowards mock the patriot's fate,
Who hangs his head for shame?

Digitized by Google

He's all a knave, or half a slave,
Who slights his country thus;
But a *true* man, like you, man,
Will fill your glass with us.

We drink the memory of the brave,
The faithful and the few—
Some lie far off beyond the wave,
Some sleep in Ireland, too;
All—all are gone—but still live on
The fame of those who died;
All true men, like you, men,
Remember them with pride.

Some on the shores of distant lands
Their weary hearts have laid,
And by the stranger's heedless hands
Their lonely graves were made,
But, though their clay be far away
Beyond the Atlantic foam—
In true men, like you, men,
Their spirit's still at home.

The dust of some is Irish earth;
Among their own they rest;
And the same land that gave them birth,
Has caught them to her breast;
And we will pray that from that clay
Full many a race may start
Of true men, like you, men,
To act as brave a part.

They rose in dark and evil days
To right their native land;
They kindled here a living blaze
That nothing shall withstand.
Alas! that Might can vanquish Right—
They fell and pass'd away;
But true men, like you, men,
Are plenty here to-day.

Then here's their memory—may it be
For us a guiding light,
To cheer our strife for liberty,
And teach us to unite.
Through good and ill, be Ireland's still,
Though sad as theirs your fate;
And true men, be you, men,
Like those of Ninety-eight.

A few of the *Nation*'s songs have no connexion with politics, and these are among the best in the collection. There is a spirit of melancholy music in a wild irregular melody, which bears the title of 'My Grave':—

Shall they bury me in the deep,
Where wind-forgetting waters sleep?
Shall they dig a grave for me,
Under the green-wood tree?
Or on the wild heath,
Where the wilder breath
Of the storm doth blow?
Oh, no! oh, no!

Shall they bury me in the Palace Tombs,
Or under the shade of Cathedral domes?
Sweet 'twere to lie on Italy's shore;
Yet not there—nor in Greece, though I love it more.
In the wolf or the vulture my grave shall I find?
Shall my ashes career on the world-seeing wind?
Shall they fling my corpse in the battle mound,
Where coffinless thousands lie under the ground?—
Just as they fall they are buried so—
Oh, no! oh, no!

No! on an Irish green hill-side,
On an opening lawn—but not too wide;
For I love the drip of the wetted trees—
On me blow no gales, but a gentle breeze,
To freshen the turf: put no tombstone there,
But green sods deck'd with daisies fair.
Nor sods too deep; but so that the dew,
The matted grass-roots may trickle through—
Be my epitaph writ on my country's mind,
"He serv'd his country and lov'd his kind."
Oh! 'twere merry unto the grave to go,
If one were sure to be buried so.

The author of these lines has contributed some of the most exciting of the war-songs to this volume; in one of them he directly offers his services as a volunteer:—

Let Britain brag her motley rag;
We'll lift The Green more proud and airy;—
Be mine the lot to bear that flag,
And head The Men of Tipperary.

Though Britain boasts her British hosts,
About them all right little care we;
Give us to guard our native coasts
The Matchless Men of Tipperary.

We prefer the unknown Celt in his character of Alcæus, and would gladly see him abandon that of Tyrtæus, which clearly is not his natural vocation.

A little piece, bearing the signature Clericus, will remind our readers of Bryant; the Irish, like the American poet, "has touched the plaintive chords of memory, and waked an echo in every heart":—

Ah! why should I recal them—the gay, the joyous years,
Ere hope was cross'd or pleasure dimm'd by sorrow and by tears?
Or why should memory love to trace youth's glad and sunlit way,
When those who made its charms sweet are gathered to decay?
The summer's sun shall come again to brighten hill and bower—
The teeming earth its fragrance bring beneath the balmy shower;
But all in vain will mem'ry strive, in vain we shed our tears—
They're gone away and can't return—the friends of boyhood's years!

Ah! why then wake my sorrow, and bid me now count o'er
The vanished friends so dearly prized—the days to come no more—
The happy days of infancy, when no guile our bosoms knew,
Nor reck'd we of the pleasures that with each hour flew?
'Tis all in vain to weep for them—the past a dream appears;
And where are they—the lov'd, the young, the friends of boyhood's years?

Go seek them in the cold church-yard—they long have stolen to rest;
But do not weep, for their young cheeks by woe were ne'er oppressed:
Life's sun for them in splendour set—no cloud came o'er the ray
That lit them from this gloomy world upon their joyous way.
No tears about their graves be shed—but sweetest flow'rs be flung—
The fittest off'ring thou canst make to hearts that perish young—
To hearts this world has not torn with racking hopes and fears;
For bless'd are they who pass away in boyhood's happy years!

We pass over many pieces of power and beauty which are one-sided and inaccurate in their historical allusions. From time immemorial the plea in such cases has been—

Adzooks! must one swear to the truth of a song?

but the case before us cannot fairly claim this privilege; each poet affects to speak, not for himself, but for a nation, and his voice is more likely to be heard if its tones be marked by candour and kindness, than if he indulges in exaggeration, menace, and defiance. We wonder that an obvious inconsistency has escaped the clever writers of these songs; at the very moment that they are writing what they choose to consider as anti-English strains, their language is English, their imagery English, their metres English, and no small portion of their allusions and their tunes purely English. It would be no difficult matter to show that the writers of several of the songs before us have studied Milton, Shakspeare, and other English bards until they have become penetrated with their spirit, and though nationally Irish they are intellectually, as was said of Fox, "all over English." This consideration ought to have suggested many abatements of that exclusive nationality which marks these songs, and it involves lessons of forbearance which may be profitably developed by the guides of public opinion on both sides of St. George's Channel.

OUR LIBRARY TABLE.

The Banker's Wife: or, Court and City, by Mrs. Gore, 3 vols.—Though less amusing, perhaps, this is a sounder book than some other of Mrs. Gore's fictions. Too often, when the authoress has most busily occupied herself in the denunciation of worldliness—always her creditable object—the plensures and usages she condemns have been painted with a *gusto* calculated to neutralize the effect of her admonition. It is not so in the present instance. The struggles of a city man to out-shine and outspend a nobleman, his country neighbour and antagonist, and their lamentable consequences, are depicted earnestly. As far as her idea of Hamlyn's character goes, Mrs. Gore may be correct—she *is* correct, we are sure, in painting the subjugated estate of 'The Banker's Wife,' and the effects of his immoderate ambition upon his domestic circle, but inasmuch as the special details of his life are attempted, she fails. The uneasy condition of thraldom, in which the detected impostor is held by the suspicions of his prying head clerk, is acutely conceived; but the solution of this perplexity, though possible, is so improbable as to be out of place in a novel, the scene of which is Leadenhall Street. Terrible as must have been the workings of suppressed passion, jealousy, and suspense among the ledgers and gold shovels of the temples of Mammon, it is difficult to imagine an outbreak so melodramatic—a purchase of secrecy by bargain so nakedly explicit, as we here find. The end of the story, too, is too violent: the downfall too complete; the retrieval for the deserving and the virtuous too satisfactory and soothing. Were Nature apt to distribute noble husbands and honourable advancement to the children of scoundrel bankrupts—the death of such would be hailed as a blessing, instead of being contemplated as an awful lesson by their families. Year after year, book after book, do critics preach against faith in the popular fallacy about "Poetical justice": when will writers act as if they listened? In theory they all acquiesce: in practice they have not advanced beyond the unscrupulous concoctors of the old faëry tale. Ere we close our notice of this novel, we may point to Col. Hamilton, the returned East Indian, as one of those cheerful, generous, liberal creatures, who are so eminently wanted to give life and hope to a dreary tale of duplicity and suffering like the one before us. His unexpected visit to the Vernons, the selfish, stupid, and scheming family of aristocrats, who are the Mordecais to the Banker's ambition, is described in Mrs. Gore's liveliest vein. Generally speaking, however, 'The Banker's Wife' will be found harder reading than either 'The Desennuyée,' or 'The Peeress,' or 'The Woman of the World,' or 'The Woman of Business,' or 'The Ambassador's Wife,' or the thousand, in short, of Mrs. Gore's thousand and one novels.

The Zoology of the Voyage of H.M.S. Sulphur, under the Command of Captain Sir Edward Belcher, Edited and superintended by R. B. Hinds, Esq., Surgeon R.N., attached to the Expedition. Parts I. and II.: Mammalia, by J. E. Gray, Esq. 4to.—The voyage of H.M.S. *Sulphur* was undertaken for the purpose of prosecuting surveys and scientific inquiries on the shores and amongst the islands of the Pacific Ocean. The western coast of North America and the Sandwich Islands formed, however, the principal points of research, as it was only during the homeward voyage that the greater part of the islands of the Pacific Ocean were visited; hence the majority of the animals contained in the two Parts of the work before us, are natives of tropical America. We could indeed have wished that the work had been confined to this geographical range in its subjects; since it is one of the great inconveniences of the publication of the zoology of different recent voyages, both by Englishmen and foreigners, that they embrace subjects from almost every quarter of the world, thereby vastly increasing the labour of reference.—The Parts before us contain portions of the mammalia collected during the voyage described by Mr. J. E. Gray, illustrated by coloured figures drawn by Mr. Hawkins, who have severally executed their tasks in the most satisfactory manner. We think, however, that the new species of animals collected during the voyage ought to have been indicated, so that the benefits to science which have resulted from it might have been at once apparent. There is nothing, for instance, to show, upon the face of the work, that zoological science is indebted to the voyage of the *Sulphur* for a knowledge of *Phyllophora* megalotis*, or *Phyllostoma elongatum*, &c. The work is excellently got up, and a liberal sum of money having been granted from the Treasury towards the expenses of publication, it is sold at a much lower price than would otherwise have been possible. The birds collected during the voyage are to be described by Mr. Gould, [the first Part is just published, and contains some beautiful specimens,] the fish by Dr. Richardson, the Crustacea by Mr. Bell, the shells by Mr. Hinds, and the Radiata by Mr. J. E. Gray. Were neither reptiles nor insects collected during the voyage?

A History of British Birds, by W. Yarrell, Part XXXVII., completing the work.—Most cordially do we congratulate Mr. Yarrell on the termination of his laborious undertaking. The five volumes which he has produced, containing descriptions and figures of every known British species of fish and bird, are honourable alike to the author, the publisher, the draftsman, and the engraver. They are in every sense of the word national works—national in their subject and national in their execution; for it is be-

* This name is elsewhere employed in zoology.

Digitized by Google

yond the power of any other country to produce such a series of illustrations as those contained in these works. As specimens of the capabilities of wood engraving, they have never been excelled, for although we miss the bold rough handling of Bewick, yet we find the *character* of the plumage of every bird clearly shown, whilst the description of each species is sufficiently detailed for precise identification, accompanied by ample popular matter. To every lover of Nature, and especially to every admirer of the productions of his own country, these works are indispensable.

Coloured Illustrations of the Eggs of British Birds, accompanied with descriptions of the Eggs, Nests, &c. by William C. Hewitson: No. I. with four plates.—This can scarcely be called a second edition of the beautiful work on the Eggs of British birds, completed some time ago by its author, as the drawings and engravings for the present work are entirely new, and made, as far as possible, from other specimens than those employed in the former publication. The plates are beautifully coloured, and the descriptive text is rendered interesting by the accounts of the often hazardous adventures of the author in pursuit of *his game*, and which led him over the whole of the Shetland Islands and a great part of the coast of Norway. The work, in its present form, is a fitting supplement to Mr. Yarrell's volumes. The first Number, now before us, contains seven coloured figures of the eggs of the Egyptian vulture, golden eagle, white-tailed eagle, osprey, Iceland falcon, and peregrine falcon. To render these illustrations complete, we would suggest a series of figures of the nests: we have, indeed, learned that in Germany the publication of such a work has just been commenced.

A History of the Fishes of Madeira, by R. T. Lowe, M.A., with original figures from Nature of all the species, by the Hon. C. E. C. Norton and M. Young: No. I. with five plates.—The Rev. Mr. Lowe's contributions to the Transactions of the Zoological Society are sufficient guarantee for the value of the present work. The very detailed descriptions of the species, united to the excellent figures of each, leave nothing to be desired by the systematic ichthyologist. A list of the species having already appeared in the Transactions mentioned above, naturalists will at once be able to perceive how desirable is the publication of these detailed descriptions and figures, especially as several of the genera and more than one-fourth of the species are either entirely new or have been hitherto imperfectly described. The descriptions are accompanied by remarks upon the natural history of the several subjects, and are preceded by a short introduction, in which a sketch of the class is contained.

The Elements of Fossil Conchology, according to the Arrangement of Lamarck, with the newly established Genera of other Authors, by Captain T. Brown.—A neat and, to a certain extent, a useful little manual of the genera of fossil shells and other animals usually confounded therewith, such as the Cirripedes and Serpulidæ, &c. The student must not be deceived, however, by the announcement on the title-page, that the work comprises the newly established genera; for notwithstanding it professes to take up the fossil genera found *all over the world*, yet, even in the first comparatively small order, Cephalopoda, we find the following *British* genera omitted, Gomphoceras, Cyrtoceras, Heliocerus, Beloptera, Ancyloceras, Actinoceras, Lituites, Onychoteuthis, and Ptychoceras; and amongst the genera introduced into the same order, we find some which belong to the Foraminifera. A glossary, index, and a dozen neat and useful plates terminate the volume, which is miserably destitute of references to the works of authority upon the subject.

A Catalogue of British Fossils; comprising all the Genera and Species hitherto described, with References to their Geological Distribution and to the Localities in which they have been found, by J. Morris.—A carefully compiled and useful list of all the British fossil plants and animals of Great Britain. They only who have been employed in such labours can form an idea of the difficulties of the task; we think it due, therefore, to the author to mention one particular feature of his work, which he has himself omitted in his title-page; namely, that every species is accompanied by a reference to the page and plate of the work in which it has been described and figured. The genera arranged under each class or order, are placed alphabetically, and a general alphabetical index at the end of the volume greatly facilitates research.

A History of the Molluscous and Cirripedal Animals of the Counties of Aberdeen, Kincardine, and Banff, by W. M'Gillivray, A.M.—As a descriptive list of the Mollusca and Cirripedes of a portion of the northern division of our island, this work will be found an interesting addition to our zoological library. The descriptions are written with care, and references made, so far as the situation of the author permitted, to the labours of other malacologists. As a work intended to further the study amongst the students of the university to which its author is attached, it would have been far more serviceable if a series of slight wood-cuts had been introduced.

Venice in the Autumn of 1838, *translated from the original Italian of Baron Giordano*, by R. Barton.—Enviable indeed must have been the feelings, soul-inspiring the enthusiasm, which filled the bosom of Baron Giordano, "who was present" when "Ferdinand the Clement, the Titus of our times," visited Venice in 1838, on the occasion of his coronation. "The winged lion of Venice gently waved his tufted tail, and shaking his hairy mane, took a share in the general hilarity, with a grin of joy." "So completely were the waters of Venice covered and encumbered" with gondolas, &c., "that the scaly tribes might not seem to have space left for their gliding courses." After this, are we to be surprised if the lapse of six years has produced no diminution of our author's enthusiasm? Why, his thoughts have nearly stood the cooling influence of Horace's decennial probation, and yet come forth glowing with all the warmth of a first burst. Other scenes might merely be "earthly Paradises," or at most "heavens on earth"; but to this magic sight "the refulgent gates of heaven, described in the Apocalypse, were not equal." And what wonder if the scene surpassed heaven itself, when even the Imperial eagle, which stood in all the majesty of bronze on the triumphal arch, "seemed to defy the sun, and reflect back his rays from his sapphire eyes. He shone as the sun himself, and the bright interchange of light dazzled the eyes of the beholders."

Moscow, a Poem, in six Cantos, by H. F. Barham, M.A.—Mr. Barham is a poet, and a successful one, in what is called 'the Prize Poem School.' It is, however, difficult to say with reference to the work before us, whether it is in the epic or the lyric portions, that he has most triumphantly attained the characteristic mediocrity.

Brighton and its Three Climates, by A. L. Wigan, M.D.—A little pamphlet of warning and advice. The author maintains that there are three different climates to be found in different parts of Brighton, and, therefore, that it is by no means optional to the invalid visitor in what part of the town he should settle.

Memorials of Ernest the Pious, by the Rev. T. Lathbury.—Ernest Duke of Saxe Gotha, in the seventeenth century, was the founder of that branch of the Saxon line from which Prince Albert is descended. His Life, written in Latin by Eyring, was translated and published in England by Philips, when Frederic Prince of Wales married a princess of the Saxe Gotha family, and "a similar event may, perhaps," Mr. Lathbury thinks, "be regarded as a sufficient apology for the appearance of the present volume."

Martin's Vagaries; being a Sequel to 'A Tale of a Tub.'—A skit, we need hardly say, upon the new lights of the Church, amusing enough, in its way, and rendered still more so by the assistance of Mr. Robert Cruikshank. Martin saying grace, with his back to the guests, candles on the table, though in broad daylight, and these with extinguishers on, forms the subject of one of the illustrations, which needs no explanation.

The Post Office Reading Directory, compiled by J. Snare.—*The Environs of Reading*, edited by J. G. Robertson, Vol. I.—The first of these works may be of some use as a directory, but the compiler's ambition for literary distinction renders it one of the most absurd directories ever published. 'The Environs of Reading' illustrates with letter press and wood-cuts an interesting locality.

Culture of the Grape Vine and Orange in Australia and New Zealand, by G. Suttor.—The author insists on the possibility of cultivating with success both the grape vine and the orange in our Australian possessions, so that "instead of choice fruits and wines being rarities for the wealthy, they might be made so to abound as not only to be enjoyed by the humblest, but to become staples for export to less favoured countries." It is right to add, that the author founds his assertion on experiments made by himself with complete success.

An Essay on Spontaneous Combustion, by J. Peto.—This essay was read before the Brighton Literary Institution, and may be useful in directing attention to a subject of some interest, not very well understood.

Essays on Partial Derangement of the Mind in supposed Connexion with Religion, by J. Cheyne, M.D., *with an Autobiographical Sketch of the Author*.—There is not much either in the Sketch or the Essays. The latter were written to disprove the assertion, "that there is, in evangelical religion, a tendency to produce a deranged state of the understanding," and the title-page would more correctly have described the work had it run thus:—Essays on Evangelical Religion, with some remarks on its supposed tendency to produce insanity.

Thoughts and Reflections on Sickness and Affliction, by A. R. Sanderson, M.D.—A well written work, grafting on a subject peculiarly the province of the author moral and religious views equally free from sectarianism and bigotry.

Das Kalte Herz von Wilhelm Hauff, edited by H. Apel.—A German tale of wonder, accompanied by a few brief notes.

Borrow's Bible in Spain. Part I.—Here we have the first volume of Mr. Murray's 'Colonial and Home Library'—an undertaking which, if liberally supported by the public, may become an era in the history of publishing. Mr. Murray, we think, has done wisely in substituting this new and popular work for the excellent but somewhat hackneyed Life of Nelson first announced. The manner in which the work is got up is most creditable—so excellent indeed, and withal so cheap, that he who, after this, purchases any of the pirated editions, must do it out of sheer affection for piracy and dishonesty. This is not, be it remembered, an undertaking like many which have lately been set on foot, a re-issue of old works which cost the publisher no more than the price of printing and paper; but the republication, at a short interval from its first appearance, of a work, the copyright of which has many years to run, and for which the publisher has paid a large sum of money. We therefore heartily recommend 'The Colonial and Home Library,' and wish Mr. Murray success in his bold venture.

List of New Books.—A New Set of Tables for Computing the Weight of Cattle by Measurement, by J. Strachan, 2nd edit., 12mo. 2*s.* 6*d.* cl.—Hints for Pedestrians, Practical and Medical, square, 1*s.* 6*d.* swd.—A Practical Treatise on Congestion and Inactivity of the Liver, by F. J. Mosgrove, illustrated by cases, fcp. 8vo. 2*s.* 6*d.* cl.—Neuman and Baretti's Spanish Dictionary, pearl, 8*s.* roan.—Entick's Latin-English Dictionary (Tyronis Thesaurus) sq. 5*s.* 6*d.* shp.—Colonial Library, No. I. FRESCO PAINTING.

So far back as April last (*ante*, pp. 417—440), we published the letter by Mr. Barry addressed to the Commissioners, on the Internal Decorations, and the proposed improvements in the neighbourhood of the New Houses of Parliament, which accompanies the second Report, lately issued. We shall now give an abstract of so much as is likely to interest the public of a Report, by Mr. Wilson, on Fresco Painting. This gentleman was employed by the Commissioners to proceed to the Continent, to collect information relating to the objects of the commission, and appears to have exerted himself diligently, and executed his trust most ably. Much, however, of the information collected will be useful rather for the guidance of the architect than of the artists; such as that relating to the construction of the walls, the mortar to be employed, &c. We shall proceed, therefore, at once to—

The Execution of the Picture.

"The history of this process, as observable in the works of Italian artists, is of great interest. We find that whilst several mechanical modes of outlining (fully described in the First Report) were adopted for fresco, each artist used these means in his own peculiar way, little influenced, apparently, by any received rule; and as every artist commonly adheres to his own method, the execution of the outline may assist in deciding on the authorship of a work of art.

"The practice of indenting the plaster with a point or stylus is very ancient, and we find that the figures painted in Etruscan tombs were thus outlined; that is, the point was used to mark the external outline of the figure only. It was employed by the early masters at the revival of art in Italy precisely in the same way in outlining their works in distemper on panel; thus Giotto drew, and his followers; and we find the same practice followed in the Sienese school, with a singular exception, which is, that the figure of the Madonna is entirely marked in with the stylus; that is, not merely the external outline, but the outlines of folds in the drapery are drawn in the same manner; and a notice of this practice, confined to the school of Siena, is useful, as it establishes a clear distinction between the early pictures of that school and those of the contemporary Florentine masters.*

"At a later period of tempera-painting (referring at present to easel pictures) the point was used in every part of the picture, as is exemplified in the works on panel of Fra Beato Angelico. It then came to be used, when oil was introduced, in the backgrounds only, which proves that the grounds for oil-painting were of the same nature as those previously in use for painting in distemper;† that is, of whiting.‡

"It is very remarkable, that whilst the point was used in distemper pictures on panel, it rarely was in those of the same period on walls. It is never found in mural paintings by Cimabue, Giotto, Orgagna, or Benozzo Gozzoli, but was employed by Fra Beato Angelico in the architectural backgrounds only of the paintings in the Chapel of Nicholas V. in the Vatican; in this case he may have pounced in his outline with a cartoon, and then have ruled in the lines of his architecture; but as these lines are carelessly drawn down through the figures, an objection may be started to this theory, as the pounced outline of the figure would easily show where to stop. In Masaccio's frescos in the Carmine, the lines of the architecture are put in with the point, whilst the figures are not. It is very difficult to suppose that after the background was thus outlined the figures were drawn in with the brush only. It is true the head of Masaccio in fresco, which exists among the portraits in the Florence gallery, is merely drawn in with the brush; but this does not prove that the outlines of entire pictures containing many figures were so executed.

"If cartoons were used in these earlier times, what could be the object of the curious practice of outlining in a rough and free manner on the last coat of plaster laid on previous to the intonaco itself? This is exemplified in all the frescos by Benozzo Gozzoli in the Campo Santo, at Pisa:* wherever the intonaco has fallen down, the outline of the composition is seen marked in with red; and I was informed by Mr. Gibson, R.A., that in Sta. Croce, in Florence, there are examples in which not merely the outline, but also the colours are sketched in. * *

"A few instances may now be given of the different modes of marking the outline adopted by different masters. Luca Signorelli carefully marked in every necessary outline. Andrea del Sarto also used the point. Pinturicchio used it in his works at Siena and Spello. Although the absence of the use of this instrument is no proof that mural pictures are not fresco, its use is a certain proof that they must be so, showing that the lime was wet when the outline was put in, as any attempt to draw with a point on dry lime would merely make a series of ruts with broken edges. The fact that Pinturicchio used the stylus at Siena proves, beyond a doubt, that, however much these pictures may be finished in distemper, they were begun in fresco.

"The practice of Luini may be mentioned as showing his facility in fresco-painting. In his faces

"* I had an opportunity of making use of this observation at Rome, in the case of disputed pictures, and it excited some attention and debate, both amongst distinguished artists and amateurs."

"† The stylus was thus used by many of the great masters; by Perugino in his architectural backgrounds; by Fra Bartolomeo, Mariotto Albertinelli, and others."

"‡ The Signor Pacetti, of Florence, who has carefully studied this subject, says, that the grounds on which old paintings, whether in distemper or oil, were executed, were formed of a fine whiting, called 'gesso da oro.' This is said to be a product of Tuscany, and is unquestionably much finer than any whiting used in other parts of Italy, or in this country. It was mixed with a weak size, made from parchment shavings, and could be drawn upon with a point with the utmost facility. The fact that these pictures were so drawn proves the softness of the ground."

"* Confirmed by Cennini's description (see Trattato della Pittura, pp. 59. 60)."

Digitized by Google

the features are merely indicated by straight lines. On such careless outlines he painted female heads, the beauty of which never has been excelled.

"Razzi, the Sienese, of a still more impatient spirit, dashed in a few lines on the wall, indicating the places of his figures rather than outlining them. He trusted to his facility with the brush, and is often very incorrect in his drawing; still, the exquisitely beautiful female faces painted by him in St. Domenico, at Siena, are entirely produced by the brush, the outline previously laid in with the point being out of all proportion; thus the point of the nose and mouth of the St. Catherine, as outlined, are fully half an inch below the same features as finished in the painting.

"The Venetian masters were by no means careful. Titian seems to have taken little pains in preparing the outline in his fresco pictures, which he seems hardly to have painted *con amore*, although, in many respects, they bear the impress of his genius. Pordenone used the point, and in some places, where he appears to have changed his mind, he has taken the first thing that came to hand to make an outline—perhaps the end of his mahl-stick, or the point of his dagger, thus breaking out lumps of plaster, and producing irregularities in the surface which he never seems to have thought it worth while to have mended again.

"Innocenza da Imola offers in his practice a striking contrast to that of the artists mentioned; he puts in every hair and wrinkle with the point, before beginning to paint.

"It might be supposed that the spirit of Buonarotti may have shown itself in the vigorous and impatient marking of his outline, but such is not the case; he adopted the slower process of pouncing. There are no marks of the stylus in the 'Last Judgment.' The remarkable distemper picture attributed to him, which hangs in the Tribune, at Florence, is drawn in with the point; the Fates in the 'Pitti' are not, neither is it seen in any frescos of his which I could closely examine.

"Pietro Perugino pounced all his outlines, and so did his great pupil, Raphael; but his pupils again followed each his own fancy in this respect. The following facts as to the frescos in the Stanze, may be interesting, and when taken in conjunction with other differences in the colour and mode of painting, may not be without value in considering these pictures with reference to the different hands employed in painting them. The stylus is nowhere used in the 'Dispute of the Sacrament,' nor in the 'School of Athens,' except in the drapery of Hippias, where the artist has made an alteration in the folds. In the 'Parnassus' there is no use of the stylus, save in the robes of Homer and Tasso; probably, therefore, painted by a pupil who followed his own system of outline. In the 'Heliodorus,' 'Attila,' 'Mass of Bolsena,' and 'Peter Delivered from Prison,' the point is not used, except in putting in the moon in the last picture. The 'Incendio del Borgo' has first been pounced, and then outlined with a very sharp point on the wet plaster; the picture of the 'Oath of Leo III.' is outlined in the same way, and so carelessly that the plaster is broken out in parts; these two pictures are in this respect a striking contrast to the others. Giulio Romano did not use the point in his 'Battle of Constantine with Maxentius.'

"Raphael did not use the point in his fine works in the Farnesina, and the advantage is obvious; those beautiful creations would have been injured by its use; for whilst its convenience makes it very proper to use it in works removed to a considerable distance from the spectator, it never should be seen in those which are nearer to the eye, especially if the light comes from the side.

"In the 'Loggia' the outlines of the ornaments, bounded by straight lines, are put in with the point and ruler, without the intervention of a cartoon; all other lines are apparently pounced, but on minute examination I found that they were pricked on the plaster. It is not easy to understand why so tedious a process was adopted.

"The Caracci and their pupils sometimes used the stylus; but, in the great majority of the works left by them in all parts of Italy, they preferred the spolvero or pouncing bag."

Painting.

"We find in the frescos of the old masters every quality of execution that has a name in oil-painting, although those qualities are necessarily exemplified in different degrees; we have transparency, opacity, richness; we have thin and thick painting, nay loading, and that to an extent that cannot be contemplated in oil. We have the calm transparent elegant painting of the Florentines and Romans, the rich variety of the Venetians, and there are cases in which the well-nourished brush of Rembrandt seems represented in the works of the fresco-painters of old Italian times.

"The distemper paintings of the elder masters have already been alluded to; it was their practice in laying in the preparatory tints in fresco to make some of these totally different from the colour to be used in finishing in distemper: thus, a dark red colour was almost invariably laid in as a preparation for blue, and this practice was generally adhered to with very few exceptions till after the time of Raphael.

"In the works of Giotto, in the Campo Santo, at Pisa, the plaster seems to have been painted black in the first instance. Time did not permit a satisfactory examination of these works, but there is an example of the use of black as a preparation for blue in the Farnesina, where Daniele da Volterra in his frescos on a ceiling in that edifice has first laid in a coat of black in fresco, and then a coat of blue in distemper.

"In some pictures, as for instance in those by Andrea Mantegna in the Eremitani at Padua, the blue of the skies has either partially changed or entirely faded, whilst that of the draperies is comparatively well preserved, it is thus evident that from motives of economy different blues were used in different portions of pictures. There are many other examples of this in other parts of Italy.

"The Cardinal Bonaventura, in the fresco called the 'Dispute of the Sacrament,' by Raphael, is represented in a purplish-black robe which has been painted over red; this is an instance of the adoption of an indirect process with reference to another colour besides blue. It may be observed, that the cardinal was a Franciscan, an order which is distinguished by a brown dress; and, as it is not brown in the picture, this may perhaps be an instance of a change of colour: but one object of this mode of painting seems to have been the security of the colours against change, while another may have been, the attainment of more harmony in the tone. In the picture just mentioned, Raphael has followed precept in painting the blues in distemper over red, and these have stood perfectly. In the 'School of Athens,' on the contrary, he has painted in the blues in fresco, and they have perished or nearly so, as they have in most instances in every part of Italy where blue has been thus used; both in pictures of this and of previous times. In the great works which Raphael subsequently painted in the Stanze he returned to the old practice of painting the blues above red, probably dissatisfied with the crudeness, which was the result of using them on the wet plaster. The blue that has thus been generally used seems to have been of a vegetable nature, as in many instances it has changed to a brilliant green. It may be urged that the use of ultramarine or cobalt may obviate all necessity for such preparations, and secure the pictures against change; but whilst the former is by far too expensive a colour, the latter is crude and harsh in fresco. It seems to have been the blue which was used by the Caracci, and in their pictures, as in those of Guido, it will be found to be frequently out of harmony with the other colours; either these have in some degree faded, the blue remaining the same, or the blue has increased in intensity. Domenichino used distemper extensively in his works; but in those of Guercino will be found a triumphant solution of the difficulty; his blues are put in in fresco, and yet are in fine harmony with the other tones; they have generally a warm purple hue, and may be either smalt, or cobalt tempered with a red, such as colcothar of vitriol. This is strongly exemplified in the Zampieri Palace at Bologna, where the harmony apparent in a fresco of Guercino is an agreeable relief, after the crudity which offends in those of his masters in other rooms of the same palace: a comparison between the 'Aurora' of Guido in the Rospigliosi at Rome (all the blues in which are not retouched) and that by Guercino in the Ludovisi, further corroborates the above observations.

"As has frequently been stated in the previous Report, it was the practice to retouch when the fresco was dry, more especially in the shadows. In some cases it is now easy to detect this retouching; it will generally be found to be proportionably somewhat darker than the painting around; and whilst in many frescos a remarkable polish or gloss may be observed even in situations where that effect could not be produced by rubbing, the retouched parts are invariably dim; this is exemplified in the Evangelists by Domenichino, in the church of S. Andrea della Valle at Rome: these are historically known to have been retouched; and in viewing them from particular spots, their surfaces are seen to shine as if varnished, whilst some parts, which it may reasonably be inferred are retouches, such as darks under the arms and in the deep folds of the drapery are quite flat and dim.

"There are portions in Raphael's pictures which present the appearance just described; in the 'School of Athens' there are a few distemper touches evidently by the master's own hand, which have darkened: for instance, in one head he has had recourse to distemper to represent the external locks of hair. This seems to indicate a difficulty in fresco which at first sight appears formidable. In a picture by Gaudenzio Ferrari, at Milan, a female head with long flowing locks is represented, and the joining is made next the locks, and has a very bad effect; the difficulty is successfully overcome by the German artists without having recourse to distemper, and without placing the joining so as to injure the appearance of the picture.

"To return to the frescos of Raphael. The 'Heliodorus,' 'Miracle of Bolsena,' 'Attila,' and 'Deliverance of Peter' seem to be pure frescos, with certain exceptions already alluded to. In the first of these pictures there is a portion which exhibits a remarkable contrast to all the rest. The papal chair-bearers, known to be portraits of the artist's friends, are painted rather in the style of Pordenone than of Raphael; the lights are much loaded, and have apparently been glazed, and, as extensive retouching in distemper has evidently been had recourse to, these retouches have become very dark.

"The ostentatious freedom with which these figures are painted contrasts disadvantageously with the calm dignified execution of Raphael. With regard to the duration of this part of the picture as compared with the other portions, apparently in pure fresco, that which is so much retouched has certainly stood as well as the rest, with the exception that parts have become dark.

"M. Orsel, a distinguished French artist, who has attentively examined the fresco of the 'Last Judgment' by Michael Angelo, says that it is much retouched in distemper, and without doubt by the great artist's own hand; as this distemper has darkened considerably, the present tone of the picture is accounted for, without having recourse to the supposition that the smoke of candles has been the sole cause. M. Orsel says that the retouching of Michael Angelo's great work is all effected by hatching: this fact necessarily leads us to infer, that retouching was carried to a great extent in old frescos, but, as will be shown, hatching is also much practised in the actual process of fresco-painting, and it is consequently difficult to form a very correct judgment in every case as to what may or may not be retouching. Many important pictures exhibit much hatching, which is probably retouching. The 'Madonna del Sacco' of Andrea del Sarto may be instanced; if the very regular hatching over this picture be retouching, it has stood perfectly well. It is not probable that Daniele da Volterra, who added certain draperies in Michael Angelo's fresco, ventured to retouch the figures.

"The story of Franciabigio's wrath at the premature exhibition of his fresco in the court of the SS. Annunziata at Florence, may be instanced as supporting the prevalence of the practice under discussion, amongst the old masters: the picture was not finished in the artist's estimation, yet as fresco it would be pronounced to be so: all the intonaco is laid and painted upon, but as he esteemed the work incomplete, it is quite plain that he meant to retouch it in distemper.

"From these and other examples we find, that although as art advanced, the extensive use of distemper, at first prevalent, was given up, and that pictures were chiefly executed in fresco, still the practice

Digitized by Google

was never entirely abandoned; and till art was revived by the Caracci, it may justly be doubted whether there is one mural picture in existence that is entirely completed in fresco.

"Indeed, after the adoption of fresco-painting, an apparent love of the older practice induced artists to return to it. Pinturicchio adopted it; his pictures at Siena are unquestionably much painted upon in distemper.* Those at Spello seem to be executed much in the same way. The pavement in one of these pictures, for instance, is laid in flat with white, in fresco; when this dried the artist evidently outlined the divisions of the stones over it, and he then laid on in distemper the colours which varied the pavement. In the pictures by the same artist in the church of Ara Cœli in Rome he has returned to the practice of the early masters; he has begun the pictures in fresco and then entirely painted them over in distemper: and in all the works of this artist, foregrounds and foreground plants, landscape backgrounds, and probably the skies, are executed altogether in distemper.

"In the church of S. Onofrio at Rome, there are specimens by Baldassar Peruzzi, which are painted in the old way; and the fine work of Melozzo da Forlí, now transferred to canvas and placed in the Vatican, is another instance of the extensive use of distemper. This last picture is in excellent preservation. There seems to be no reason to doubt the durability of this kind of painting, although other objections may be brought against it; but where egg has been the vehicle used, the colour, if loaded, has a tendency to scale off, while the pictures darken, and become inky in tone.

"The Genoese also abandoned true fresco-painting, and used distemper to a great extent, so much so that their works may be considered apart under the head of distemper-painting.

"It is evident that the practice of the great masters supports the propriety of a certain amount of retouching, and it may be inferred from their works that no very bad results follow from its adoption within due limits. The Germans, however, maintain an opposite opinion, insisting that it is not allowable and quite unnecessary. If adopted at all, the limits seem marked by the practice of Raphael in his later works; but it may be observed, that loose opinions upon this subject might lead to careless practice, and in this view of the case the severe injunctions of the German masters are of value."

We shall give some further extracts next week.

FOREIGN CORRESPONDENCE.

I have already pointed out one or two bye-ways in the Rhine-land worth exploring, and, at least, a word of notice for the benefit of future tourists, sketchers, &c. The latter, in particular, will have reason to thank you if you further direct them to the Ahr valley—a passage of scenery greatly in favour among the Dutch, but which the English seem hardly ever to reach, if one may judge by the names in the *Fremden-buch* of that best of all country inns, the Sternat Ahrweiler. There can be nothing of its kind more striking and original than the view from the castle, which is the closing point of the excursion at Altenahr—a splendid fragment of ruin, triumphing upon a scarcely accessible crag, at the foot of which the clear stream wanders in the most capricious sinuosities. The heap of stones which was Saffenburg, is perched on an eyrie little less imposing from its height, and peculiar from the windings of the stream. Ahrweiler, too, is beautifully situated; and besides the attraction of capital sleeping quarters which it offers in the inn aforesaid, the architect would find no worthless subject for his meditations in the church, by the early mass in which, he will possibly be waked at five o'clock A.M., or thereabouts, if not worn out by his ramble. The tower is in the Romanesque style; eight-sided, and singularly harmonious in its proportions. *Apropos* of this same tower, I have wondered again and again, during the last fortnight, to see how strangely the German architects of our own day overlook their own models—at best, how infelicitously they copy them. It would be hard, I suspect, to find a good new building in this simple and most effective style of architecture. Nor has it hitherto been, apparently, much affected in this district, if we except Professor Bethman Hollweg's show-box at Rheineck, where the forms and arrangements which, without force of language, are, beyond all others, mystically ecclesiastic, have been pressed into the service of modern domestic luxury. The twin spires of the church at Geissenheim, an object of much admiration, are a minikin attempt at the spire of Strasburg Minster. The chapel recently patched on to the princely castle of the Rheinstein, is as frivolous and *piccolo* as if it had been modelled for a *presse papier*, or the cotton-box of one of the indefatigable tapestry-working *fraülein*, with whom the land abounds. Little less felicitous appear to me the ekings-out and substitutions at the Stolzenfels. Nor is it captious to call attention to these, since the mania for building in critical situations seems spreading. We hear that Godesberg is to be repaired, and put in habitable order; that the Katz above St. Goarshausen (which, by the way, and *not* St. Goar, is the true station for tourists who mean to loiter thereabouts) has found a purchaser who is bent on its beautification: nay, even that the huge barrack-like ruin, the Rheinfels, is about to undergo restoration, so as to make some portion of it habitable as a pleasure house. The present Rhine patriotism of the Germans may lead to most vexatious consequences if not controlled by taste. For restoration—as was well remarked by a correspondent of yours awhile since—no people can be better qualified, by patience, reverence, and intelligence: and restoration goes on. It did me good, the other evening, to see the masons, in the airily-vaulted choir of Our Lady's Church, at Oberwesel, scraping off the mock-marble paint which had disfigured the beautiful rood loft. I could enumerate a dozen like wholesome measures of the Germans. But the original attempts to reproduce the forms of their own Gothic architecture (the new churches at Berlin and Munich not forgotten), seem to me alone pedantic, inexpressive, and cumbrous. One exception, however, may be mentioned, in the new church at Apollinarisberg, near Remagen, rebuilt, at the instance of Baron Fürstemburg, by Herr Zwirner, the architect of the works at Cologne. This promises far better than any of the structures I have mentioned; and, at any rate, seen from the river, is a much more graceful and welcome object than the tamed and decorated castles, over whose ruined estate Fancy will long lament, while Common Sense can find but little ease and enjoyment in their occupation.

I know not whether a fragment of literary news, about what the young German poets are doing, may have appeared elsewhere. Herr Freiligrath, who is esteemed as one of the most original and powerful of contemporary lyrists, and whose perfect knowledge of our language, and command over his own, have already been exhibited in translations of poems as dissimilar as the 'Ancient Mariner' of Coleridge and songs by Burns, Tennyson, &c., is about to issue a translation of 'The Forest Sanctuary' of Mrs. Hemans; and, what is more to the purpose, a volume of original verses. "I have it from a sure hand," too, that Herr Geibel is to be watched for as a lyrist of great promise in quite a different style; he having been praised to me as one smooth, musical, and facile, in no ordinary degree—an absolute modern *minnesinger*, too, in right of his social popularity, and the grace and elegance with which he can extemporize, or, like our own Anacreon, sing his own words. A drama, too, by him, has been seen, which is full of beautiful thoughts and fine situations. These gifts appear to point him out as the one who ought to co-operate with some great national musician in that much needed effort, the regeneration of German Opera.

DAYS' EXCURSIONS OUT OF LONDON.

Winchester.

We leave the Cathedral by one of the doors on the south side. After bestowing a few minutes' observation on some timber-built houses, apparently used, at the present time, for prebendal stables, and passing without examination the Prior's Hall, now part of the deanery, and the old Refectory and Kitchen still standing, but not over easy of access for strangers, we make our exit from the Cathedral precincts through an old arched gateway, on which the exuberant loyalty of the dean and chapter has suspended a most unsightly sign-board of the royal arms. Their predecessors, three centuries back, would rather have employed a bas-relief curiously "intailed" in free stone. A few paces take us into College Street, along which our road lies to St. Cross, but we must first stay awhile to notice Wykeham's College itself, which has some picturesque virtues in its original portions—we wish we could honestly say as much of the modern additions. The street front is not unpromising—but as soon as you get into the back settlements, anything more characteristic of the money-grubbing spirit which called buildings into being, it would be difficult to conceive. Wykeham's College is made the cat's-paw to enable the head master to make a profit on the education of some hundred foreigners to the institution. On the one side stand the venerable stone walls of the ancient college, its dormitories, hall, chapel, cloisters, &c., solid, grey with age, and bidding defiance to old Time, suggestive of study and solitude, offering a picture at every angle:—on the other, an enormous wen of red brick, thin, lath and plaster looking buildings, bald, naked lines of brickwork, without the merest shadow of ornament—constructed on the rigid utilitarian principles of just sheltering the utmost number of scholars,—the merest sufficiency of housing, recalling at best the notion of an uncomfortable barrack. There may, perhaps, be even cogent reasons to be urged against such an unpicturesque mode of housing a private school: here there seems a positive antagonism at work, when we find such a thing as an appendage to an old college—the latter founded in what are called "the dark ages" of the human mind, whilst the former is the product of the most approved period of its most rapid march. If for no other consideration, we abominate the new brick work on account of its unsubstantial ugliness: we find comfort, however, in the assurance that Wykeham's walls will long outlast such a contemptible flimsy neighbour.

The original college might well exhaust a whole day in the examination of its gateways, quadrangles, turrets, statues. Without having any very precise similarity in its architectural details, it calls to mind rather Wayneflete's Magdalen College than its founder's own New College at Oxford, to which Wykeham intended it to serve as a preparatory school: not that Wykeham, whose motto, "manners maketh man," shows the great importance he must have attached to teaching, was the first founder of a school at Winchester. The city is said to have possessed a grammar school from a much earlier period. The Chapel, the Library and Cloisters, are all of them places in the College worth minute study. The character of the first has been changed by the insertion of heavy panelling, not bad of its kind, but misfitting here. The walls are completely lined with it—and an ante-chapel is formed by a screen of the Ionic order. The original altar too has been entirely covered up with the panelling, but portions are still seen in their ruins of "bice" and gilding, where parts of the screen have been removed. The lights are all filled with stained glass, and half an eye may detect that only the glass of the east window, representing the root of Jesse, is ancient, whilst that of the side lights, in which figures of the prophets are set out, is but a dull affectation of antiquity. There are several brass effigies here, many concealed by the ruthless manner in which the modern woodwork has been fixed. A flight of stairs nearly hides the whole of one of the most interesting of them. But perhaps the most genuine remains in this chapel are the old Miserere seats at the entrance, in which the carving exists as fresh as it was chiselled four hundred years since. Though the cloisters are not very remarkable in their architectural features, they abound in pictures for those who can see them. A Cattermole or Nash may find endless subjects, as the several parts of the old college—its towers, the chapel, the library in the midst of the quadrangle—appear through the arched openings, fringed with ivy and light swinging creepers. The cool deep shadows, and grey old stone work, contrast delightfully with the random gleams of sunshine stealing between the mullions. Many ancient brasses, chiefly inscriptions commemorative of the members of the college, are inserted on the walls of the quadrangle. The library, which stands in the centre of

"* M. Orsel, however, thinks that these have been retouched in wax, nor is the opinion wholly improbable; in a chapel in the Palazzo Vecchio at Florence, there are frescos by Ridolfo Ghirlandaio which have been lately cleaned by Signor Marini, who informed me that they had been glazed with something 'unctuous,' to use his own term."

Digitized by Google

the open quadrangle, looks as if it had anciently been a chapel. There is that quiet undisturbed repose about all its appurtenances, which is only to be seen in collegiate libraries. It seems to be useless except as a sight. Drowsiness reigns supreme; you might imagine yourself straying into a room of the Sleeping Beauty's palace, but that the attendant is by, to remind you of his expectations of a fee. The great public curiosity of the place is the tome which records the gifts of books—a sort of sepulchral monument made when the book is consigned to the everlasting stillness on a shelf. There is some old stained glass in the lights of this library, said to have been brought from the chapel, when new windows were inserted in that part.

To proceed from the College to the Hospital of St. Cross, pursue College Street to its termination, and arriving at one of the streams of the Itchen, follow its descent, passing close to a water-mill. The Hospital is about a mile distant from the city. The footpath over ever-verdant meadows, is one of the most delightful of its kind. It is close to the banks of the clear rapid streams of the river—sheltered in a hot sun, from the strong reflected light and heat cast by the distant chalk hills—the Cæer Gwent, or White Clay, as the Britons called the chalk—which give Winchester or Winton its name, by the cool shadows of the foliage of willows, walnuts, &c. There are several water-mills—those always picturesque objects in a landscape—tempting places to rest at, and watch the foam and dash of the waters, the flickering lights, and deep-reflected shadows. The square tower of the Hospital, reposing among fine lofty trees, is conspicuous throughout the walk. We say walk, because every one who can should go by the river side,—yet, for the incompetent, there is an excellent coach-road, nearly parallel with the railway. Arriving then by the footpath, at the precincts of the Hospital, it may be entered either on the north side through the gateway, or south side by the church-yard. The visitor should choose the north for entrance, the south for departure.

"There is not," says Dr. Milner, "within the island any remnant of ancient piety and charity of the same kind, which has been so little changed in its institution and appearances as this before us. The lofty tower, with the grated door and porter's lodge beneath it, the retired ambulatory, the separate cells, the common refectory, the venerable church, the black flowing dress, and the silver cross worn by the members, the conventual appellation of brother, with which they salute each other; in short, the silence, the order, and the neatness, that here reign, serve to recal the idea of a monastery to those who have seen one, and will give no imperfect idea of such an establishment to those who have not had that advantage. This, however, never was a monastery, but only a hospital for the support of ancient and infirm men, living together in a regular and devout manner; of which sort there was formerly an incredible number in the kingdom. It is true, that soon after the conversion of the island to Christianity, a monastery had been erected on the same spot, the original name of which was Sparkford; but this having been destroyed by the Pagan Danes was never afterwards rebuilt. The first founder of the Hospital was Henry de Blois, the celebrated Bishop of Winchester, and brother to King Stephen, who instituted it about the year 1136, to provide thirteen poor men, who were otherwise unable to maintain themselves, with every necessary. They were required to reside in the house, and they were allowed each of them daily a loaf of good wheat bread, of 3lb. 4oz. weight, and a gallon and a half of good small beer. They had also a pottage called *Mortrel*, made of milk and Wastel bread; a dish of flesh or fish as the day should require, and a pittance for their dinner; likewise one dish for their supper. Besides these thirteen resident poor men, the foundation required that one hundred others, the most indigent that could be found in the city, but of good character, should be provided every day with a loaf of bread, three quarts of small beer, and two messes for their dinner, in a hall appointed for this purpose, called, from this circumstance, 'Hundred Mennes Hall,' and as this was a very ample allowance, they were permitted to carry home with them whatever they did not consume on the spot. There was also a foundation for a master, with a salary of from 7*l.* to 8*l.* annually, together with a steward, four chaplains, thirteen clerks, and seven choristers, the latter of whom were kept at school in the Hospital, besides servants. The comptrollers and head administrators of this charity were, by the appointment of De Blois, the religious hospitallers of St. John of Jerusalem, whose peculiar institute was to take care of hospitals, and who had a preceptory at Baddesly, near Lymington in this county. But the succeeding bishop, Richard Toclyve, disagreeing with the Hospitallers concerning the administration of the hospital, at the instance of the sovereign Henry II., and on certain conditions agreed upon between the parties, they resigned their charge into the hands of the prelate and his successors. Toclyve being bent upon the improvement of this charity, provided that an additional hundred poor persons should be supported on it, besides those appointed by his predecessor. In the end, however, he seems to have built and founded an hospital of his own, on the opposite side of the city." Subsequently this hospital was much abused, and then reformed by William of Wykeham, who seems eminently to have succeeded in his many undertakings. Additional endowments were also conferred upon it by Cardinal Beaufort, for more priests and residents, and three nuns were added to it as attendants upon the sick brothers. A great part of the present structure was rebuilt by the Cardinal, whose kneeling statue is still existent in a niche on the upper part of the tower seen on entering the first court.

The Reformation did not suppress this hospital, like most others, but pared it down from seventy residents to thirteen. It abolished the "hundred menne's" daily dinner, but left the crust of bread and horn of small beer, of which numbers still partake daily. The charity puzzles the teetotallers, who reject the beer, and grumble at not receiving a *double* portion of bread.

Having passed the first gateway, and crossed a little court of low and stable-like buildings—those on the east having once been the *Hundred mennes* Hall, now a brewhouse—the visitor will receive at a little portal beneath the second gateway his crust of bread and horn of beer. Whilst thus regaling himself, he will not be insensible of the great beauty of the interior court, and the variety of each of its sides. On the south, the church and open meadows—on the west the low storied dwellings of the brothers, each with its lofty chimney—on the east, the cloistered ambulatory leading to the church. Here too he will find a brother of the hospital, who will act as his *cicerone*, and will conduct him through the church, and the various buildings of the establishment. He will leave him, too, to his own meditations if the visitor desire it, and this privilege is especially welcome in the church, which as a specimen of early Norman architecture, cunningly devised, and elaborately ornamented, is particularly deserving of careful study.

However, before visiting the church, which should be reserved as the last object, the visitor should see the refectory, pretty much in its original state, except its loss of stained glass, of which only remnants of Beaufort's arms and mottoes are left—not overlooking a folding panel picture of the Virgin and Saints of about the age of Mabuse, hanging at the east end;—the kitchen picturesque in every corner, with ancient apparatus and a most huge chimney;—the rooms said to have been the tenancy of Cardinal Beaufort himself, not suggestive of over much comfort according to modern notions, with their plastered flooring and imperfect means of ventilation, situate one above the other, high up a narrow corkscrew staircase, inconvenient of access for old or gouty legs;—the bird's eye view of the hospital and its neighbourhood from the tower;—the nuns' rooms, and the view into the north transept of the church from them. The visitor should miss none of them.

This hospital has suffered little from alterations of any kind, and all its remains are essentially the same as in their original structure. All parts abound in subjects for picture making, but no part possesses so much architectural interest as the church, which is pre-eminent in this respect among Anglo-Norman buildings. It is like most of them, cruciform. The nave and aisles are 150 feet in length, and there is a span of 120 feet across the transept, the intersection of which, with the nave, is surmounted by a large square tower, not very dissimilar to that on the cathedral. "It is entirely the work of De Blois, except the front and upper story of the west end, which are of a later date, and seem to have been an effort of that great encourager of the arts to produce a style of architecture more excellent and better adapted to ecclesiastical purposes than what had hitherto been known. This style, accordingly, soon after made its appearance in a regular shape. The building before us seems to be a collection of architectural essays with respect to the disposition and form both of the essential parts and the subordinate ornaments. Here we find the ponderous Saxon pillar, of equal dimensions in its circumference as in its length, which, however, supports an incipient pointed arch. The windows and arches are some of them short, with semicircular heads, and some of them immoderately long, and terminating like a lance. Others are in the horse-shoe form, of which the entrance into the north porch is a most curious specimen. In one place (at the angle of the south transept and chancel) we have a curious triangular arch, a species of work not at all common in any style of building. The capitals and bases of the columns alternately vary in their form as well as in their ornaments. The same circumstance is observable in the ribs of the arches, especially in the north and south aisles, some of them being plain, others profusely embellished, and in different styles, even within the same arch. Here we view almost every kind of Saxon and Norman ornament—the chevron, the billet, the hatched, the pellet, the fret, the indented, the nebule, the wavy, all superiorily executed." These are promises of interest enough to whet the appetite for a minute examination of this very curious church. The interior has been thickly coated with whitewash, which should be removed carefully, as there are manifestly paintings beneath it, seemingly extending over the whole church. Both the aisles of the choir appear to have been used as chapels; both retain their piscina—that on the north side remarkable for the carved nondescripts which ornament it. There is also on the north aisle of the nave, worth noting, a handsome canopy inserted in the wall, which would seem to have surmounted the tomb of Peter de Sancta Maria, in 1295: but the occurrence of this description of canopy inserted in the north walls of churches is so frequent (we have lately observed it at Great Yarmouth, at Stoke Pogeis, &c.) that we are inclined to consider whether it must not have had some ceremonial purpose. There are some remnants of stained glass in the great west window, but otherwise the church is bare (having probably been stripped) of this species of decoration. Rich and abundant is the variety of the old encaustic tiles, curiously disposed in patterns, and the monumental brasses are so many and fine—especially that of John de Campden, Master of the Hospital in 1383—that they alone would repay a collector of "rubbings" for his pilgrimage hither. The carved work of the stalls in the choir, apparently of the early Tudor period, must not be passed unobserved; and lastly, we recommend Dr. Milner's cheap account of the Hospital, from which we have already quoted.

The visitor, on his return to the city, should leave the Hospital by the meadows on the south side, ascending the main stream of the Itchen along the ruins of the castle walls, and he will have time to mount one of the hills of "Gwent," in order to take a general view of the city before his departure.

Besides its Cathedral, College, and Hospital of St. Cross, Winchester has much else of historic and antiquarian interest, worthy of investigation, from the time of the Romans, who made it one of their principal fortified stations. It was also the capital of the kingdom of the West Saxons; frequently the residence of our early Norman kings. The city formerly had its mint, its treasury, and public record office. In its "Winchester" ells and bushels it gave measures for the whole kingdom. It was the seat of many parliaments. The corporation, under a charter from Henry II., hold the superintendence of the royal kitchen and laundry at coronations. Sir Christopher Wren left incomplete a palace begun on the site of the old castle. It was of course a walled city, and had four gates, only one of which remains. Its cross, apparently not well restored, is still standing in the midst of the city. Friaries for black, white, and grey coats, as well as other monastic institutions and churches, abounded in Winchester. But all these subjects may well remain for one or more other day's excursions, perhaps to be made at a future time. For

Digitized by Google

one day's diversion, which is all that at present we cater for, enough, and more than enough, is furnished by the Hospital of St. Cross, Wykeham's College, and the Old Minster.

OUR OWN NATIONAL MUSEUM.

[*From a Correspondent.*]

Unless aught should now occur to cause interruption, the day is not far distant, when Great Russell Street will present a very altered appearance; when the line of dingy wall, with the odd as well as old fashioned gateway of Montague House, will disappear; and the front of the Museum will stand displayed to view the object of public admiration—perhaps; or, with another perhaps, a mark for the shafts of criticism. Then, and most likely not till then, or thereabouts, there will be an end to all doubts, all conjectures, all apprehensions, all anticipations, favourable or the reverse.

If it has power of prophecy at all, what our mind's eye discerns of the coming structure, is by no means of a kind that tempts us to exclaim—

Visions of glory! spare our aching sight.

More cause is there for praying that our sight may not ache, and our heart grieve also, when we behold that piece of architecture. Although we have not seen the model, we have before us a printed plan of the building, from which we would engage to draw out a tolerably accurate elevation of the front, having sufficient data for that purpose in those forming the inner quadrangle, and between which and the front there will be little other essential difference as to character than that in the latter. The order will form a continuous colonnade throughout, breaking round the advanced pavilions or ends of the façade, with an additional row of eight columns within the receding centre, there presenting an Ionic *octastyle*, *prostyle*, surmounted by a pediment. No doubt, in regard to mere columniation, there will be more of both play and display of it than we are accustomed to meet with in our Anglo-Grecian architecture, but even in that respect it will fall far short of St. George's Hall at Liverpool, and still more so in regard to originality of ideas,* and richness of style.

If the effect arising from columniation alone, and negative merit as to all besides, will content us, we may dismiss our apprehensions and make ourselves easy at once, assured that Sir Robert Smirke will be able to comply with such very moderate demands. He is not one of those who lay themselves open to ordinary criticism by transgressing ordinary rules, or who perplex it by deviating from established routine. "Content to dwell in decencies for ever"—he is always respectable,—and no more: never absolutely shocks, and never captivates. The most phlegmatic in his profession, he makes no pretence to the poetry of art, except it be that respectable kind of poetry which Horace pronounces intolerable; for he never rises above a decent mediocrity—which he has perhaps found to be in his own case the *auream mediocritatem* of philosophers. Accordingly, we cannot help considering it unfortunate, both for himself and for the public, that with such coldness of feeling and dearth of imagination, he should be engaged upon a work which not only affords opportunity but calls for a high poetic style of art,—not merely imitative of Grecian architecture as it is known to us from mouldering and faded relics, or the ordinary "elegant extracts" in which its orders are set forth for the benefit of students; but also emulous of what it was, or may have been, in its palmy state, set off by sculpture, painting, and gilding, and finished up throughout in the most exquisite manner.

Nothing is easier, it may be said, than to talk in this strain, for it amounts to nothing more than mere moonshine, unless we can convey some tolerably distinct notion of what we would have, by putting our ideas into shape. Well, we accept the challenge, though it must here be with our pen, not our pencil; therefore, without deprecatory apology of any sort, or to any one, we at once lay before the reader the following—

SKETCH.

Availing ourselves of the full extent of frontage, from east to west, towards Great Russell-street, which is rather more than six hundred feet, we would on the extremities of that line erect two Doric edifices, to serve by way of architectural foreground to the main structure seen between them, and to produce contrast and perspective effect; while for the central building, or actual front of the Museum, we would employ the Corinthian as well as the Ionic order, thereby exhibiting all the three classical orders at one view, and upon the same scale, grouped together so as mutually to set each other off. Having thus far got in the leading masses of our composition, we proceed to more particular description, and beginning with the two advanced Doric wings, we should observe that those are adjuncts to the Museum, forming a considerable extension of the plan as now laid down. According to this last there will indeed be wings or lateral buildings connected with the façade, yet hardly will they be in continuation of it, since they will be for official residences, and, therefore, must partake of the usual dwelling-house character more than is consistent with classical design,—more especially in a case where nothing of ordinary or every-day character ought on any account to be allowed to obtrude.† In our visionary design, the advanced and external wings—if we may so describe them, by way of distinction from those of the main façade,—form temple-like structures of the richest Doric character, with hexastyle porticos fronting each other, that of the eastern building facing the west, and *vice versâ*, so as to show themselves at right angles instead of parallel to the general line of the façade and principal portico, consequently avoiding the formality attending the usual arrangement of three pediments parallel to each other, if not upon the same line.

But have we no particular destination for those two Doric structures? or are they to be erected chiefly for effect, and to complete the assemblage of architectural objects? Purpose for them we have, and one which, though new in itself, would be perfectly in accordance with that of a national museum, as these buildings might be made to constitute a British Walhalla,—two Halls of Honour, one for votive or monumental busts of those who had distinguished themselves in science, the other for such as had proved themselves worthy lasting renown in literature and art. This scheme would go very far towards providing what seems now to be called for—namely, some place or building set apart for public monuments to those "entitled to the gratitude of their country by eminent civil, literary, or scientific services." Worthies of the first-mentioned class might more properly find a place within the walls of the "Palace of Westminster," but hardly could one more suitable be devised for the others, than within the precincts of our national repository of literature and science. It is true we contemplate not statues, but merely busts, as in the German Walhalla, yet that mode we consider in some respects preferable to the other, and not least of all, because it gets rid at once of the objections and difficulties attending modern costume. We have, however, another scheme in reserve, in regard to those halls,—one which we should still better like to see realized,—which is, to appropriate them to the purpose of a Museum of Architectural Models, one for those in the Grecian, the other for the Gothic style. Thus, Architecture would be represented as well as the other arts, whereas at present we have no public collection of the kind anywhere, unless we choose to consider the Soanean Museum such, though that is by far too limited, too miscellaneous and desultory, to answer to such character.

After these parenthetical observations, we come to the principal architectural mass, or actual façade, for which we should not scruple to adopt combinations that, although not warranted by direct precedent, are, nevertheless, quite compatible with the principles and genius of the columnar style of the ancients.‡ Together, therefore, with the Ionic order, in all the other colonnades, we would employ the Corinthian for the principal one, or central portico, which—the scale being the same—would, of course, be loftier than the rest, independently of the additional height there caused by the pediment. That central division of the façade would form a magnificent octastyle, with columns perhaps rather more than forty feet high; and *polystyle*, or many-pillared within, for we would bring it out so as to obtain double the depth now proposed, thereby securing a degree of effect and richness in that respect, which is not even approached by anything in our modern architecture. The whole of this part should be rich even to extravagance; the entablature should have a splendid sculptured frieze; and in all respects be finished up in the most elaborate manner; and within the pediment there should be a further display of sculpture, of a kind yet unknown among us, the figures there being in full relief; and rich acroteria would complete the outline of our portico. But now,—and we request all ultra-admirers of Greek, and nothing but "pure" and "chaste" Greek architecture,—to brace their nerves, lest they be knocked down by the idea,—instead of fluting the columns of this order like those of the Ionic one, we would here adopt quite a different mode—would produce a decided contrast, by entirely "damasking" their shafts with a sort of twining arabesque pattern, of which examples enow to quiet a scrupulous conscience may be found among architectural relics—and, if we mistake not, some in the British Museum itself. But this, we shall be told, would be Roman rather than Greek: well, no matter to what sources we go, what elements we combine, provided we can reconcile them together, and amalgamate them into a *whole* of beauty—which shall be recognized as such by the eye of an artist, however it might scandalize the whole tribe of Pecksniffs, be they professionalists or amateurs, and all those excellent people who swear by Vitruvius and Stuart's Athens.

Within, our portico should display increase of splendour: there, being protected from the weather by their own situation, and the great depth of the colonnades, all the soffits, ceilings, and upper part of the walls, should be decorated with polychromy and gilding. We would have panels and friezes with *enamel painting* on a gold ground; and even have recourse to stained glass for further aid, "*practising*" for that purpose some compartments in the ceiling, filled in with it, so as to produce the appearance of transparent mosaics, let into a framing or tracery of gilded bronze. Splendid in itself when seen from beneath, this last-mentioned kind of decoration would diffuse a glow, and in sunshine a radiance, within the portico; and the same effect might be extended to the Ionic colonnades, yet not so as to destroy the relief arising from shade. The doors of our portal should be superb—imposing in dimensions, and of no less classic material than bronze, with richly "storied" panels, each worthy to be reckoned a work of art. Throughout the entire extent of the colonnades, the pavements should be inlaid in various patterns, and might be made to exhibit specimens of our native marbles, as might also the lower part of the walls. The colonnades themselves would be of such depth—what the learned call *pseudo-dipteral*—as to be sufficiently spacious as ambulatories; and here we would also have votive monuments to great men—a uniform series of colossal Hermes busts, with names and other brief memorials inscribed on the shafts.

Enough! Let us lay down the pen at once. If thus far we have been delirious in our fancies, we are now sober again, and feel that we have been indulging in "the stuff that dreams are made of."

* Though the architect of St. George's Hall has looked at Schinkel, and borrowed or rather *derived* some ideas from him, he has also brought forward some which are decidedly his own, nor are they the least happy ones.

† There would be no difficulty in finding a suitable site for the official residences, since they might very well be erected in continuation of the houses on the west side of Montague-street, and either quite plain like them, or made a distinct piece of architecture of uniform character, with a frontage of 250 feet by 40 in depth,—the dimensions proposed by the published plan. Of course this would encroach upon the present garden on the east side of the Museum, but that would be no great inconvenience, as there would still be a space of a hundred feet between the two buildings; and an additional advantage would be gained by the blank east side of the Museum being—partially at least—shut out from public view.

‡ Should this be thought by the puritanical and over-scrupulous to be strongly tainted with heresy, let them condemn the Greeks themselves, for they occasionally combined two orders together, by placing one *behind* the other—Ionic behind Doric columns, as in the Propylæum at Eleusis.

OUR WEEKLY GOSSIP.

The European obituary of the last few months contains some names of mark, which deserve a passing notice, and may be assembled in a paragraph of final record. In France the Arts have lost two sculptors of eminence, M. Cortot, Professor in the Academy of Fine Arts, and M. Gérard, whose name is attached

Digitized by Google

to so many of the great monuments of the capital:—on Saturday last M. Duret was elected in the room of M. Cortot. The Academy of Sciences has lost M. Coriolis, and the Press one of its honoured members, M. Bert, formerly editor-in-chief of the *Commerce;* while mathematical science has been deprived of one of her brightest ornaments, Sylv. F. Lacroix. Italy has lost her famous engineer, Milani, at the age of seventy-five, and the still more famous Ippolito Rosellini. Rosellini, with his brother Gaetano, were members of the expedition sent to Egypt in 1829, by the French and Tuscan governments: Ippolito is best known in England as author of 'I Monumenti dell' Egitto,' which is unfortunately incomplete.—Medical science has suffered in Denmark by the death, at sixty-one, of Dr. Jacobsen, first physician to the King, and member of many learned bodies; amongst which, he filled, in the Academy of Sciences at Paris, the chair vacated by the death of our countryman, Sir Everard Home. Dr. Jacobsen was of a Hebrew family, and the number and value of his published works on Anatomy had carried him into two chairs, one at the University and the other at the Academy of Surgery at Copenhagen, in spite of the usage of ancient standing in Denmark, which excludes from the office of public teaching all persons not professing the dominant religion of the country.—In Sweden the drama has suffered by the death, at the age of seventy-one, of the great comic actor, M. Lars Hjortberg. He was the first translator of Molière's works into the Swedish tongue, and naturalized the masterpieces of the great dramatist on the stage which he adorned, playing the leading characters himself. He had retired from dramatic life ten years ago, but gave every year, on the stage of Stockholm, one or two representations for the benefit of the charitable establishments in that metropolis. A fitting accompaniment to this notice of the recent dead will be a hasty summary of some of the monumental celebrations (in addition to those lately mentioned in our columns), by which the gratitude of nations is seeking to honour the memory of those of their illustrious sons who have preceded the passing generation to the grave. Besides the inauguration at Pau, of the statue of Henri IV., the statue of the academician, Roger, was inaugurated at Langres, on the 31st ult.; Raggi's statue of La Pérouse, for his native town of Albi, is finished, and has been placed provisionally for the inspection of the Paris public in the court of the Louvre; Dunkirk is preparing to erect to her sailor hero, Jean-Bart, a bronze statue, the figure of which M. David has offered to execute gratuitously, and the pedestal is promised by M. Lebas, the architect; the Archæological Society of Touraine has originated a subscription for a monument to one whom we should wonder to find so long without a public monument in France—if Englishmen had any wonder to spare on such subjects which they could carry further than their own door—Descartes; and we may add, that among ourselves, sufficient funds have been collected to erect a monument to the lowly heroine of the Fern Islands, poor Grace Darling, in the church, or churchyard, of Bamburgh, the resting-place of her mortal remains.

Our readers may remember that, amongst other bequests made to his native town of Ajaccio, by the late Cardinal Fesch, he directed that a collection of pictures should be given to the city, to be selected from his magnificent gallery, previously to its sale. Letters from Civita-Vecchia mention that these pictures have been embarked, at that port, for their destination, by the exertions of the French consul and two delegates from the town of Ajaccio, and at the cost of the Count de Survilliers, who has exhibited much zeal in carrying out the intentions of his uncle. They are to be placed in the vast edifice, constructed, at Ajaccio, in the Cardinal's life-time, destined as an institution for the gratuitous instruction of the youth of Corsica in the higher branches of education.

A letter from Lucca, dated September 16th, says—"The meeting of the fifth Italian Scientific Congress opened yesterday. The number of persons present is not so great as in preceding years. After a speech from the Marquis Mazzarosa, General President of the Congress, the different Sections proceeded to appoint their Presidents. In that of Agriculture, Count Freschi di San Vito was elected; in Medicine, Chevalier Speranza; in Zoology, Prince de Canino (Charles Bonaparte); in Geology, Marquis Pareto of Genoa; in Natural Philosophy, Chevalier Georgini, of Florence; and in Botany, Dr. Biasoletto, of Trieste. We may mention also, that the twenty-first annual meeting of German Naturalists and Medical Men commenced at Gratz on the 19th, the Archduke John in the chair. His Royal Highness delivered an address, in which he alluded to the greater intimacy that had been created amongst the German States by these scientific meetings, and to the advance that science was making under their labours. He recommended the members particularly to direct their attention to practical matters, and said that the conduct of the scientific societies of England afforded them a good example of how much might be effected by Science when properly directed.

The Minister of the Interior has taken possession, "in the name of the French government," of the Hôtel de Cluny, and the splendid collection of the late M. Dusommerard; and has appointed M. E. Dusommerard, a son of the celebrated antiquary, conservator of the new National Museum.—Documents, relative to the flight of Louis XVI. to Varennes, have been lately discovered in the Register-office of the Cour Royale of Orleans. They are composed of all the papers used at the trial of MM. de Bouillé, de Klinglin, de Choiseul, de Damas, de Goguelat, and others, which took place at Orleans, and consists of letters, examinations, and depositions, calculated to throw a new light on the historical facts of the day.—Horace Vernet, scarcely rested from his Russian journey, has departed for Algeria, to collect, on the battle-field where the Duc d'Aumale carried the Smalah of Abd-el-Kader, the materials for a picture representing the action; and M. Paul is perpetuating on canvas the interview, at Eu, between the Queen of England and the King of the French—both pictures destined to form part of the great Historical Gallery at Versailles.—M. Boulanger, the architect, has been sent by the government on an artistic mission to Athens; having as its particular object, the making measurements and drawings of all the monuments in that city of old art.—We also find, under the head *Cherbourg*, a notice, which is interesting, in connexion with Mr. Scott Russell's report, read at the meetings of the British Association, that M. Givry, engineer, is at Cherbourg, for the purpose of studying the currents in the Raz-Blanchard and the Raz de Gatteville. His examination has for its more especial object, the direction of the currents, and the precise determination of the changes, at different states of the tide, with a view to their being laid down correctly on the new chart of the Currents of the Channel, now in course of preparation.

A private letter from Berlin of the 25th September says—"Professor von Raumer is very busy in reading up for his proposed journey to the United States, where he intends to spend the months between April and October of next year. He at present thinks very favourably of the Americans, and of their institutions—so that their visitor starts somewhat prejudiced in their favour—let us hope he will return so."

A letter from St. Petersburgh gives some account of an emigration, on a large scale, which is going on in the heart of the Russian empire; and presents, as the writer observes, a great resemblance to the migrations of the primitive races of the world. The movement in question aims at distributing the Crown peasants,—amounting to about twelve millions in number, and constituting thus a fifth of the entire Russian population, over those vast tracts of uncultivated land which are held, as yet, by a thin and scattered population. The emigrants of the best character are sent into the Transcaucasian provinces, where the climate is mild and the soil fertile. But, "in truth," says the writer, "none of these unfortunate beings are voluntary emigrants. They are all, more or less, the victims of a system of despotism which disposes, at its caprice, of the human species, as of cattle who are driven in herds wherever their owners will."

Her Majesty, at the suggestion of Sir Robert Peel, has considerately bestowed a pension of 100*l.* a-year on Lady Bell, the widow of Sir Charles Bell, who, we regret to hear, died in circumstances very different from what his position, as an eminent lecturer and professor, and as the author of more than one successful work, would have led us to expect.

The owner of Strensham Park, Worcestershire, on whose estate the author of 'Hudibras,' was born, is about to erect a monument to his memory. It is nearly completed, and consists of a large white marble tablet, bearing an inscription in illuminated letters, and bordered by Caen stone, carved in the Gothic style. Its size is eight feet by three. The following is the inscription:—"This tablet was erected to the memory of Samuel Butler, to transmit to future ages that near this spot was born a mind so celebrated. In Westminster Abbey, among the Poets of England, his fame is recorded. Here in his native village, in veneration of his talents and genius, this tribute to his memory has been erected by the possessor of the place of his birth—John Taylor Strensham." Samuel Butler, the son of a farmer of the same name, was born in the parish of Strensham, on the 13th of February, 1612. He was buried in the church of St. Paul's, Covent-Garden.

The restoration of the Church of the Holy Sepulchre, the Round Church, Cambridge, which, for nearly two years, has been carried on under the direction of the Cambridge Camden Society, is now almost finished. The church was pronounced, two years ago, to be unsafe—indeed, part of it had given way. The parish being poor, it was in contemplation to pull the church down, and thus get rid of the difficulty, when some members of the University undertook its restoration. The walls have been rebuilt with the original materials on a foundation of concrete, the western doorway has been restored, and the windows filled with stained glass, partly old and partly executed by Mr. Willement and Mr. Wailes.—The *Cologne Gazette* announces that the Emperor of Austria has sent in his name to the Association proposed, by the King of Bavaria, to be formed, among the members of the Germanic Confederation, for completing the Cathedral of that city, by an annual contribution. The Emperor, it is said, has engaged to furnish the yearly sum of 40,000 florins (4,000*l.*) The King of Prussia has put at the disposal of the architects charged with the rebuilding of the Grand Opera, the sum of 800,000 thalers (about 120,000*l.*); and desired that the new theatre may be completed with the utmost possible rapidity.

Our home report of autumnal music may be very brief this year. The Birmingham Festival has produced large receipts for the charities it is ordained to serve: the Edinburgh meeting is yet to come. There has been a disappointing want of novelty in the selections of music performed; but we are in a time of transition, which ought to conduct us to research and enterprise. Meanwhile, the opening for new English singers widens daily. The approaching departure of Miss Birch for a winter's engagement at the Leipsic concerts, leaves the place of *soprano primo* vacant, it being understood that Miss Clara Novello, likewise, returns to Italy: and though an English songstress of Parisian renown, Madame Anna Thillon, is announced among the attractions of the Princess's Theatre during the season about to commence, she will possibly not be heard among us till May.—While speaking of the Leipsic concerts, we must mention that Dr. Mendelssohn Bartholdy has, at last, definitively resigned his conductorship of these incomparable meetings to M. Ferdinand Hiller, who enters upon his duties at the coming Fair.

We will now glance for a moment at some of the great Continental musical solemnities held during the past summer and early autumn. The great festival at Zurich, late in June, numbered 2,000 singers. That part-singing should flourish in the Cantons, will surprise no one who is aware that M. Naegeli, with whom, perhaps, the soundest existing system of popular vocal cultivation originated (his friends claiming for him the first idea of the peculiarities of the Wilhem method), was a Swiss. A monument is now about to be erected to this worthy Professor's memory, in Zurich. But with taste and knowledge so highly developed, and a theatre of natural objects, so to say, beyond all others so calculated to quicken and cherish poetical invention, it seems strange that the Swiss should not possess a musical composer. The festival at Fribourg, held in August, appears to have been picturesque in its arrangements, and interesting in its selections, and yet, the grace of nationality was altogether wanting, or, at best, feebly represented by some specimens of wild mountain music. In these celebrations, Germany still takes the lead. We read of the anniversary of the treaty of Verdun, celebrated in Brandenburg, by the *seventy-two* philharmonic societies of the province. These, united in torch-

Digitized by Google

procession and in costume, 11,000 strong, repaired to the Marienburg: arrived at the summit of the hill, this monster-chorus began to sing national songs and hymns—among others, Mendelssohn's Songs of the Huntsmen, with an accompaniment of six hundred horns!! These details seem to us as extravagant as faëry tales—perchance as absurd, to those who are unfamiliar with the jovial enthusiasm of the Germans on such occasions. Open-air festivals on a less scale were held, a week ago, in Brussels, but, we are told, with small success, owing to the impossibility of sufficient rehearsal; and thence deficiency of due control over his forces, on the part of M. Ferdinand, the conductor.

In France, a disposition to consider the condition of sacred music, appears increasingly manifest. Improvement is taking place in church organs, and the young composers try their hands on new masses as well as new operas. It will be long, however, ere the theatre ceases to have "the first fruits" of music in France. The last operatic novelty has been Monpou's posthumous 'Lambert Simnel,' at the Opera Comique, performed with but little success; the next, at the Grand Opera, is to be Donizetti's 'Don Sebastian.' The Italian Opera, too, is by this time open for the winter. Those who care for musical reading, cannot but be amused by the letters M. Berlioz is now contributing to the *Journal des Débats*, in which that clever and sarcastic writer describes the incidents of his last winter's German campaign: not sparing many handsome allusions to his successes and merits: still less, sharp and poignant remarks on the persons and places by whom and in which his expectations were disappointed.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.—N.B. A GRAND MACHINE ORGAN has been constructed expressly for this Exhibition, by Messrs. Gray and Davison, of the New-road, and will perform the Gloria, from Haydn's Service, No. 1, during the midnight effect of the Cathedral of Notre Dame.

MUSIC AND THE DRAMA

DRURY LANE.—The commencement of the season has been auspicious, in so far as the Ballet is concerned; and it was not to be expected that operas which have been played for seasons past as afterpieces should attract at first price, especially when the performance is not above average mediocrity; we conclude, therefore, that the management relies upon the attractions offered to second-price visitors, until some new, and, let us hope, successful opera, shall draw crowds to the opening of the doors. 'The Peri,' a version of the splendid but withal heavy affair last produced at the *Académie*, is handsomely put on the stage, albeit not with the surpassing finish and brilliancy of the Paris representation; the performance of Carlotta Grisi and M. Petipa astonished and delighted the spectators. The subject is the everlasting theme of the ballet-makers, the passion of a spiritual being for a mortal; nor is there any novelty in its treatment: indeed the story is not told in the happiest manner. It serves, however, to give Carlotta Grisi opportunities for the exhibition of her powers, which have greatly increased since her appearance on the boards of our Italian Opera: she is more deficient in *à plomb* than might be desired, but her movements are smooth and graceful; and with the assistance of M. Petipa,—who deserves more credit than he will generally gain, for his effective co-operation,—she achieved some extraordinary *tours de force*. Her pantomime wants significance and variety of expression; and her style is less intellectual than that of Fanny Elssler, or even of Cerito; but she is entitled to rank as a *première danseuse*, and to take precedence of Dumilatre.

COVENT GARDEN.—The boldness of the manager in opening with a new play has not been attended with answerable results, Mr. Bourcicault's attempt at a romantic and sentimental drama having proved a failure, as might have been expected. 'Woman,' like Mr. Bourcicault's comedies, is a *rifacimento* concocted from other plays, with that sort of conventional stage tact, which may serve for farce or melodrama, but without that higher kind of art which moulds nature into a dramatic form. Wholly destitute of real character and passion, it is devoid of interest and congruity; and that want of depth and sincerity of purpose and feeling which characterizes all the productions of the author, is fatal to the "poetry" of the dialogue: the utter disregard of motives and probable circumstances, shown in contriving the "situations," destroys their influence; and, in consequence, the stage effects, which are all in all with the author, went for nothing with the audience. In effect, the whole is a game of make-believe: none of the parties seem in earnest; and even when the solution of the mystery is not apparent, the device by which it is produced is so palpable, that one is sure that all will be made right at last. The plot is made up of two distinct stories, or rather incidents, linked together not very artfully; in the first, a disappointed suitor, an Iago, with the name of *Gaston de Foix*, of all others, poisons the mind of a rival, *Julian Doria*, with suspicions of his bride's fidelity; and, in the second, a Jew magician, a caricature of *Shylock*, out of wanton malignity poisons the bride, who turns out to be his own daughter; but both kinds of poison are happily neutralized by the Jew's other daughter, who seems chosen to be the instrument of her father's murderous design, precisely because she is most likely to frustrate them, she having a passion for the object of all this malice. Connected with this plot is a pair of comedy lovers, evidently suggested by Benedick and Beatrice; and the joyous *espieglerie* of Mrs. Nisbett's manner made the lady the most effective and agreeable character in the piece. Miss Vandenhoff was not so successful as the heroine; with a degree of earnestness that inclines us to sympathize, she combines a crude kind of declamation that seems as artificial as it is inefficient; but it has since been announced that she was suffering from severe indisposition. Mr. Vandenhoff, as the Jew, failed in his efforts to be impressive, by reason of his mannerisms both of speech and gesture, which, by continual repetition, coupled with the unreality of character and situation, became ludicrous at last: possessed of one of the finest voices on the stage, and displaying in his acting force, feeling, and intelligence, this gentleman is, nevertheless, one of the heaviest and least effective of performers; for he exhibits his art—which is defective—instead of the character. Mr. Phelps, as *Gaston de Foix*, had an ungrateful part to play, and treated it as such. Mr. Anderson, as *Julian Doria*, displayed his Macready-mannerism as usual; and Mr. Walter Lacy, as the comic lover, was vivacious after the manner of farce-playing. The getting up of the piece is creditable to the new management: the scenes are set forth with splendour and appropriate style; the painter's studio, and the magician's chamber—the palace gardens, filled with carnival groups, and the lighted saloon crowded with guests, being quite equal to anything that has been done in the way of stage furnishing. There was considerable dissent, and loudly expressed, when the piece was announced for repetition; notwithstanding the audience had been propitiated by a preliminary address, and were evidently well-disposed towards the manager. We can only wish that the next novelty may be more successful. Shakspeare's plays are also to be performed, the three tragedians we have spoken of, playing the principal parts, aided by Mrs. Warner; Miss Helen Faucit's name does not appear in the list of the company.—A new farce followed, called 'My Wife's out,' in which Mr. and Mrs. Keeley did their utmost to elicit fun from very insufficient materials.

Of the Adelphi doings we cannot report favourably; and the Olympic and New Strand do not invite attention. The Princess's re-opens on Monday: Mad. A. Thillon, from the Opera Comique, is said to be engaged in addition to the operatic corps; a company of juvenile performers is likewise secured. Mr. Webster having returned from his provincial tour, with Mad. Celeste, the Haymarket shows signs of activity; Old Parr is summoned to appear on the stage next week in the person of Farren.

MISCELLANEA

Paris Academy of Sciences.—Sept. 25.—A communication was made respecting a new mode of preventing horses from running away when in harness. Hitherto several means have been devised to prevent accidents of this nature. One of them most in favour is a mechanism for detaching horses from the traces, and setting them suddenly free, but it is not certain in its action; and it is obvious that, if the horse take fright on a descent, the sudden detaching of the carriage may be attended with very great danger. The author of this paper, having remarked that horses rarely take fright at night, imagined that all that was necessary, in order to check a horse when running away, was to cause him to be visited with temporary blindness; and, in order to do this, he contrived, by means of a spring connected with the reins, to cover the eyes suddenly. This was done when the animals were at the top of their speed, and the result was their instantaneous stoppage; for the light being suddenly excluded, horses no more rush forward, he says, without seeing their way, than would a man afflicted with blindness.—A letter was read from M. de Humboldt on the boring for an Artesian well in Westphalia. It is intended, says the writer, to bore to a depth of 2,000 mètres (a mile and a quarter English), and at that depth it is supposed that the water will be of the great heat of 70° Centigrade. The borers have reached a depth of 622 mètres. To that depth the augmentation of temperature had not followed the ordinary law, which according to M. de Humboldt, was owing to the cooling of the column of air by the waters of filtration from above; but once arrived at 622 mètres, the ascensional force was so great as to drive back the water of the upper sources, and the ordinary law was re-established. M. Arago took this occasion to announce the intention of the government to make an Artesian well in the Jardin des Plantes of a depth of 900 mètres, viz., 200 mètres more than that of Grenelle. The water from the Artesian well of the Jardin des Plantes will, it is supposed, be of a temperature of 31° Centigrade, and will be employed to serve to heat the hot-houses of the gardens, and supply the hospitals of La Pitié and La Salpetrière, and thus effect a great economy as to fuel.—A paper from Dr. Plouvier, of Lille, was read, on the application of the cornea of one animal to the eye of another. The doctor states that he has a rabbit which was blind, but to whose eye he applied the cornea of another rabbit, and that the hitherto blind animal now sees perfectly.

Great Mass of Native Gold.—"The auriferous alluvia of Tsarevo-Nikolaefsk and of Tzarevo-Alexandrofsk, which had already furnished a product of 400 poods, (the pood is 36 lb. avoirdupois, Kelly's Cambist, i. 371,) seemed nearly exhausted in 1837. New researches were commenced in the neighbourhood, especially near the rivulet Tachkou-Targanka, which soon gave rise to the discovery of a bed of auriferous sand of a very rich nature, but very limited in extent. This bed being soon worked out, the waters of a pond which had served for washing the sands were let off, and its bottom was explored. Here was discovered an alluvium of more than 8 zolotniks (1 zolotnik = 65⅘ grains) in 100 poods. All the valley of Tachkou-Targanka was now explored, except the spot on which stood the *workshops* for washing the sand. In 1842 it was resolved to destroy these shops, and after having washed the soil, (of prodigious richness, containing in a small compass as much as 70 zolotniks per 100 poods of sand,) there was discovered on the 7th of November, 1842, *under the very corner of the building*, at three mètres (10 feet) depth, resting upon a stratum of diorite, the *monster-lump*, weighing 2 poods, 7 Russian pounds, and 92 zolotniks (79 lb. 1625 dec.)." This mass has an undulated surface; it is somewhat porous and free from all trace of matrix, or gangue. The largest lump of native platina hitherto found in the platiniferous alluvia of Nijni-Taguilsk, weighs 20 Russian pounds and 34 zolotniks (= 18.319 lb.). (*From Humboldt's new work, entitled 'Asie Centrale.'* The quotation is from the Russian *Journal Officiel des Manufactures et des Arts*, Dec. 9, 1842.)

Scientific and Literary Societies.—On Sunday last the Act of Parliament with respect to scientific and literary societies came into operation. The object of this Act is to exempt from county, borough, parochial, and other local rates, land and buildings occupied by scientific or literary societies. It is provided that societies, in order to avail themselves of the exemption, shall cause three copies of their rules of management to be submitted to the barrister appointed to certify the rules of friendly societies, who shall certify thereon. One copy is to be returned to the society, one to be retained by the bar-

Digitized by Google

rister, and the other transmitted to the clerk of the peace for confirmation at the sessions, where it is to be deposited, without the payment of any fee. The societies to come within the Act must be supported "wholly or in part by annual voluntary contributions."

Dynasty of Manetho.—Dr. Lepsius mentions that he has discovered in the Labyrinth the name of the royal builder; that he occupied a place in Manetho's twelfth dynasty, and infers "that the 12th dynasty immediately preceded the 18th." "On reference," says a correspondent, "to Dr. Hincks's paper 'On the Egyptian Stelé, or Tablet,' read at the Royal Irish Academy on the 18th June, 1841, and printed in the 2nd part of the 19th vol. of the Transactions of the Academy, it appears that he had previously come to the same conclusion from other data; and he repeated the statement in his paper on the age of the 18th dynasty, read and printed in the last session. The passage runs thus:—'Before the commencement of the 18th dynasty, the tablet of Abydos furnishes us with five royal names, to which we may add a sixth, ascertained from other monuments, who appear to have constituted the 12th dynasty of Manetho, and to have reigned for about 160 years. These sovereigns have been classed under the 16th and 17th dynasties of Manetho; but that writer's catalogue of the 12th appears to me to be intended for them, though we must suppose it to be grossly corrupted. The five dynasties intervening between the 12th and 18th I conceive to have been either contemporaneous with the twelfth, or altogether imaginary. I have made the preceding statements advisedly, and on what I consider perfectly sure grounds, though they are at variance with the received opinions.' The inference of Dr. Hincks, that the 12th dynasty immediately preceded the 18th, has then been *confirmed* by Dr. Lepsius on other data."

Manufactures.—We have a curious example in the German papers of the ignorance which prevails on the Continent as to the extent of English trade and manufactures: thus, at a meeting of the Austrian Industrial Society, a patentee of caoutchouc works claimed to have taken out the earliest patent, in 1831, whereas one was taken out in England in 1823; and he asserted that his firm was the largest manufacturing establishment in the world, and in proof stated, that they employed no less than 140 workmen, and made 4000 pair of braces annually! A discussion this week in the daily papers offers an amusing commentary: from this it appears that one outfitting house in the city of London employs 3000 persons, and makes and sells more than 20,000 dozens of shirts annually.

Music.—M. Fetis, the well-known musical historian and critic, has recently made some discoveries in the Royal Library at Brussels, which promise to furnish valuable contributions to the history of music. Among the books of plain chant in the library, he has found a volume of masses and motets by celebrated composers who lived about the end of the fourteenth and beginning of the fifteenth centuries. The most important pieces of this volume are three masses each for three voices by Guillaume Dufay; two masses for four voices by the same composer; a mass for four voices by the same composer; a mass for three voices by Binchois; the mass 'Omnipotens Pater' for three voices, by a composer named Jean Plourmel; and the mass 'Deus creator omnium,' by an English composer named Rignardt (Richard) Cox. All these masters wrote during the interval between 1380 and 1420. These masses are followed by the motet 'Orbis terrarum' for four voices, by Busnois; a 'Magnificat' for three voices; the famous Christmas chant for four; another 'Magnificat' for four; the motets 'Ad cœnam ogni providi' for three; 'Anima mea liquefacta est' for three; 'Victimæ paschali laudes,' for four; 'Regina cœli lætare,' for four; another motet for four on the same text; a mass for three voices, 'Sine nomine.' All these compositions are by Busnois. The volume closes with a mass 'Ave Regina,' for three voices, by Le Roy, commonly known by the name of Regis. By these compositions, a considerable chasm in the history of the musical art is filled up. In another volume, which has been mutilated by cutting out the miniatures and arabesques, M. Fetis found the following compositions uninjured: 1. An admirable mass, by Josquin de Près, for six voices, 'ad fugam in diatessaron super totam missam.' This composition differs from that published in the third book of the same author's masses, by Petrucci di Fassombrone. The whole mass forms a triple canon in fourths, each part for two voices. 2. The mass 'De Assumptione beatæ Mariæ Virginis,' for six voices, composed by Henry Isaak, Chapel Master to the Emperor Maximilian I., about the year 1450. Before the discovery made by M. Fetis, this composition was known only by name. 3. The mass of 'Sancta Cruce,' for five voices, by Pierre de la Rue, Chapel Master at Antwerp, about the close of the fifteenth century. This last composition is also found in another manuscript in the Royal Library of Brussels. M. Fetis has already scored the masses of Josquin de Près and Isaak; and he is now engaged in scoring the compositions contained in the other volume.—*Foreign Quarterly.*

Progress of Lotteries.—A correspondent has taken the trouble to collect and forward to us a list of what are called 'Derby Sweeps,' by which, alone, are to be disposed of, *by chance observe*, not less than 100,000*l.*! Other correspondents have sent us, from different parts of the country, announcements of lotteries and little-goes, to an extent and amount that has fairly startled us, proving that the mischief has already extended beyond our means of chronicling its progress. It is manifest indeed, that the duties imposed by Act of Parliament on the law officers of the crown, are mere blinding formalities, and that, with all the forms of a government, the country is left to govern itself. We shall therefore take leave of the subject, at least for the present, with the following report from the *Morning Post* of Thursday last:—

"*Riot at the National Association Hall, Holborn.*—Monday night a numerous meeting was held at the National Association to hear a lecture from a Mr. Mudie on Scottish minstrelsy, and to witness a distribution of prizes, varying from one shilling to one guinea, promised by Mr. Lee, the publisher of a penny periodical, to all purchasers. The hall was crowded to excess. As there was no appearance of the promised prizes a general row ensued. Mr. Mudie in vain attempted to address the meeting, and ultimately the anger of the assembly was vented upon the building. An attack was made upon the forms, tables, chairs, and gas fittings of the hall, which were quickly demolished. The very gallery railings were destroyed, and the violence of the mob extended to the adjoining houses, the windows of which were broken by them. A messenger was at last dispatched to Bow street for the police, and upon their arrival the rioters were ejected, and peace was restored, but not before 30*l.* worth of property was destroyed in the hall. A woman's arm was broken in the affray."

Accidents by Flood and Field.—A letter from Coure (Canton of the Grisons), of the 18th ult. says—"On Tuesday morning the mountain of Calanda suddenly gave way with a dull noise which lasted some minutes, and soon after it was perceived that a number of crevices had taken place in the mountain longitudinally. Since then several large pieces of rock have fallen down, and some of them into the village of Felsberg. The government engineer, M. Leccana, was immediately sent to inspect the place, and make a report. He has declared that the mountain was continually though slowly coming down, and that, at no distant period, the whole of the village of Felsberg must be destroyed by it. The government at once ordered measures to be taken for facilitating the emigration of the inhabitants, who are about 500 in number. A new village is about to be founded for them beyond the Rhine."—A letter from Narbonne, 22nd ult., mentions that "a frightful disaster has fallen on this neighbourhood. We have had heavy rains since the 13th, and Narbonne is now surrounded with a vast lake. The losses caused by this inundation are immense, the water being higher by 75 centimètres (nearly 2½ feet English) than in the great flood of 1772. Trees, cattle, houses, and furniture are carried away at each moment. The smallest rivulets have become torrents, and several dead bodies have been observed—one of them that of a young woman holding a lifeless child in her arms. At Coursan the water reached the first floor. The inhabitants of the neighbouring communes pass from one district to another in boats. At Bize 14 houses were swept away; at Sallèles 10 or 12. At Canet every thing is under water, and an immense quantity of wine, which was placed in the cellars, having been floated, was lost. At Orvaisons 20 houses have fallen down."

To Correspondents.—H. R. Q.—A. J. E.—received.

E. C.—We do not know of any translation of Dr. Schönbein's work. Where the foreign title is given in our review, it is to show that our notice is of the *original* work.

SMITH'S STANDARD LIBRARY.

Fifty Popular Works are already published in this Series, to which the following are just added:—

Essays. By Ralph Waldo Emerson. Price 2*s.*

Tecumseh; or, the West Thirty Years since. A Poem. By G. H. Colton. Price 2*s.* 6*d.*

A Journey round my Room. From the French of Count Xavier de Maistre. Price 1*s.*

Strife and Peace. A Tale. From the Swedish of Frederika Bremer. Price 1*s.* 6*d.*

Recollections of Travel in Italy, Sicily, and Calabria. From the French of Alexander Dumas.

And several other Works are in preparation.

London: published by William Smith, 113, Fleet-street; and may be had, by order, of any Bookseller in Town or Country.

CRUDEN'S CONCORDANCE.

Lately published, 4to. price 21*s.* cloth lettered,

A COMPLETE CONCORDANCE to the OLD and NEW TESTAMENT; or, a Dictionary and Alphabetical Index to the Bible. In Two Parts. Containing the appellative or common words in so full and large a manner, that any verse may be readily found by looking for any material word in it, the proper names in the Scripture, &c. To which is added, a Concordance to the Apocrypha. By ALEXANDER CRUDEN, M.A. 10th edition. With a Life of the Author, by ALEXANDER CHALMERS, F.S.A.

London: Longman & Co.; T. Cadell; Harvey & Co.; Bagster & Son; Hatchard & Son; J. G. F. & J. Rivington; C. Dolman; T. Tegg; J. Setchell; Sherwood & Co.; E. Hodgson; J. Mason: Hamilton & Co.; Duncan & Co.; Allen & Co.; Whittaker & Co.; Simpkin, Marshall & Co.; J. Nisbet; J. Capes; Smith, Elder & Co.; J. Bigg; J. Dowding; T. Bumpus; Houlston & Co.; H. Washbourn; J. Chidley; R. Mackie; J. Parker, Oxford; J. & J. Deighton, Cambridge; and J. Anderson, Edinburgh.

8, New Burlington-street, October 7, 1843.

MR. BENTLEY WILL PUBLISH THE FOLLOWING NEW WORKS DURING THE PRESENT MONTH:—

I.

In 2 vols. 8vo. with Portrait, &c.

MEMOIRS OF THE RIGHT HON. THE EARL OF ST. VINCENT, G.C.B. &c. By JEDEDIAH STEPHENS TUCKER, Esq.

II.

In 3 vols. post 8vo.

THE SOLDIER OF FORTUNE; a Novel. By HENRY CURLING, Esq.

III.

2 vols. 8vo. with Portraits,

CONCLUDING VOLUMES OF

GEORGE SELWYN AND HIS CONTEMPORARIES, with MEMOIRS and NOTES. By J. HENEAGE JESSE, Esq. Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'

IV.

In 3 vols. 8vo. with Portraits and Maps,

THE HISTORY OF THE CONQUEST OF MEXICO, with the Life of the Conqueror, Hernando Cortes, and a Preliminary View of the Ancient Mexican Civilization. By W. H. PRESCOTT, Esq., Author of 'The History of the Reign of Ferdinand and Isabella.' &c.

V.

In post 8vo.

CHRONICLES OF GRETNA-GREEN. By PETER ORLANDO HUTCHINSON.

VI.

In 1 vol. post 8vo. with Portrait,

MEMOIRS OF JOSEPH SHEPHERD MUNDEN, COMEDIAN. By HIS SON.

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

8, New Burlingson-street, October 7, 1843.

NEW WORKS JUST PUBLISHED BY MR. BENTLEY.

I.

In 3 vols. post 8vo.

SIR COSMO DIGBY; a TALE of the MONMOUTHSHIRE RIOTS. By J. A. ST. JOHN, Esq. Author of 'The History of the Manners, Customs, Arts, &c. of Ancient Greece.'

II.

In 1 vol. post 8vo.

LETTERS FROM NEW YORK. By MARIA CHILD, Author of 'The Mother's Book,' 'The Girl's Book,' 'Philothea,' &c.

III.

Now first published, (Concluding Series.)

2 vols. 8vo. with Portraits from original Paintings, &c.

LETTERS OF HORACE WALPOLE, EARL OF OXFORD, to SIR HORACE MANN, H.B.M. Resident at the Court of Florence, from the year 1760 to 1785. Printed from the Original MSS.

IV.

In 3 vols. post 8vo.

WYANDOTTÉ; or, THE HUTTED KNOLL. A Romance. By J. FENIMORE COOPER, Esq. Author of 'The Pilot,' 'The Spy,' 'The Jack O'Lantern,' &c.

V.

Hudson's Bay Company.

In 1 vol. 8vo. with Maps, by Arrowsmith,

NARRATIVE OF THE DISCOVERIES ON THE NORTH COAST OF AMERICA; EFFECTED BY THE OFFICERS OF THE HUDSON'S BAY COMPANY, during the Years 1836–39. By THOMAS SIMPSON, Esq.

VI.

In 3 vols. post 8vo.

THE BUSY BODY; a Novel.

VII.

2 vols. 8vo. with Portraits,

GEORGE SELWYN AND HIS CONTEMPORARIES, with MEMOIRS and NOTES. By J. HENEAGE JESSE, Esq. Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'

VIII.

In 2 vols. post 8vo. revised and corrected by the Author,

SECOND EDITION OF

SLICK IN ENGLAND; or, THE ATTACHÉ. By the Author of 'The Clockmaker; or, Sayings and Doings of Sam Slick of Slickville.'

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.

By WILLIAM DESBOROUGH COOLEY.

"A truly classical work....This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gräberg da Hemsö, in the *Rivista Europea*, May, 1842.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

J. Arrowsmith, 10, Soho-square; and all Booksellers.

Adapted for Schools, Private Teachers, and Students.

RURAL CHEMISTRY.

By EDWARD SOLLY, Esq. Jun., F.R.S.
Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Royal Agricultural Society, and Lecturer on Chemistry, at the Royal Institution, &c. &c.

Extracts from the Introduction:—

"A knowledge of the chemical composition of soils and the various substances employed as manures enables us to comprehend the mode in which the latter act; and a knowledge of the nature of those substances which plants require, points out the best and most economical methods of restoring to the soil, by manures, those substances which plants remove from it."

"If the farmer knows what it is that gives the fertilizing powers to manure, and is aware of the nature of those substances, he will soon learn the best method of preserving and using them: he will then understand how to make the most of the various sources of manure at his disposal, and he will be enabled readily to save much, that, for the want of such knowledge, would otherwise be lost."

London: 3, Charles-street, Covent-garden; and may be ordered of all Booksellers.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits, as follows:

ANNUAL PREMIUM PER CENT.

Age 15	20	25	30	35	40	45	50
£1 10 8	1 14 7	1 19 0	2 4 3	2 10 11	2 19 9	3 11 9	4 8 0

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

By order of the Board of Directors,
CAMPBELL JAMES DOWNER, Sec.

FREEMASONS' and GENERAL LIFE ASSURANCE COMPANY, 11, Waterloo-place, Pall Mall, London.

Business transacted in all the branches and for all objects of LIFE ASSURANCE, ENDOWMENTS and ANNUITIES, and to secure CONTINGENT REVERSIONS, &c. Loans granted. Information and Prospectuses furnished by

JOSEPH BERRIDGE, Secretary.

STANDARD LIFE ASSURANCE COMPANY. Head Office, 3, George-street, Edinburgh; London Office, 32, Lombard-street.

NOTICE.—DIVISION OF PROFITS.

The next Division of Profits falls to be made at 15th November, 1845; and persons assuring

BEFORE 15TH NOVEMBER, 1843,

secure one year's additional claim for Profits at that as well as at future divisions. On reference to the Tables of Bonus additions of other Offices, it will be seen that this Company's Policies possess very decided advantages, which will also be participated in by future Policies,—the rule being to add at each successive investigation a per centage, not merely for each year of the period from the last investigation, *but for each year during which the Policy has been in subsistence.* This principle, it will at once be perceived, is peculiarly favourable to that class of assurers who open Policies for family provisions.

Practical Examples of Benefits afforded by the Company.

Date of Policy.	Sum Assured.	Bonus Additions.	Loan which would be advanced by the Company. Age at Entry 40.	
1825	£1000	£337 10	£395	No Entry Money.
1826	1000	312 10	365	
1827	1000	287 10	335	
1828	1000	262 10	305	
1829	1000	237 10	275	
1830	1000	212 10	250	

Later Policies have also Large Additions.

Edinburgh, 3, George-street.
WILL. THOS. THOMSON, Manager.

Assurances can be effected with this Company in the most secret and confidential manner, as the Papers are not submitted to a Board of Directors in London.

32, Lombard-street. PETER EWART, Resident Sec.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.

Samuel Anderson, Esq. | Charles Graham, Esq.
Hamilton Blair Avarne, Esq. | F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident* | William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident* | John Ritchie, Esq.
Charles Downes, Esq. | F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past 2.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE, founded A.D. 1815, upon the principle of Mutual Contribution. Constituted by Act of Parliament. THE WHOLE SURPLUS FUNDS which remain after making provision for the claims of the Society, BELONG TO THE ASSURED.

At 31st December, 1838, it was ascertained on investigation, that the Surplus Fund amounted to very nearly 280,000*l.*, and it was sufficient to enable the Directors, after setting aside upwards of 90,000*l.* as a Guarantee Fund, to declare and provide for the following additions:—

1. An addition at the rate of Two per Cent. per annum, for the period from 31st December, 1831, or 14 per Cent. on the *accumulated* amount of the original Sum assured, and the previously declared additions; or about 19 per Cent. on the Capital Sum assured by the early Policy holders.

And in order to provide for the case of those parties who may die before 31st December, 1845, when the next investigation and declaration of Surplus is made, there was provided further—

2. An addition at the rate of Two per Cent. per annum, on the *accumulated* amount of the original Assurance, and *previously* declared additions, for each Premium that may be paid after 31st December, 1838, provided the party die before 31st December, 1845, having been insured at least five years, this addition, supposing the case of a party insured in the early years of the Society's existence, to die after payment of the premium for the year 1845, would be for the 7 years from 31st December, 1838, to 31st December, 1845, upwards of 21 per Cent. on the original Assurance.

Thus, if a party aged 20 had assured for 1000*l.* in the year 1818, and were to die after payment of the premium for 1845, being then aged 47, his representatives would get no less than £1809 8*s.* 7*d.*

If he had assured in 1825, when 27, and died at 47, they would be then entitled to £1436 1*s.* 2*d.*

If he had assured in 1830, when 32, and died at 47, they would be entitled to £1238 11*s.* 9*d.*

The proportion of the Surplus Fund allocated to each Policy, may be applied towards REDUCTION OF THE FUTURE PREMIUMS, and if desired, the party may BORROW UPON THE SECURITY OF HIS POLICY, to the extent of nine-tenths of the *value* (not the amount.)

Capital accumulated and invested, upwards of ONE MILLION THREE HUNDRED THOUSAND POUNDS. Annual Revenue upwards of TWO HUNDRED THOUSAND POUNDS.

HEAD OFFICE, EDINBURGH, 5, St. Andrew-square.
JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall.
HUGH M'KEAN, Agent.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, No. 24, Lombard-street.

H. WALKER'S NEEDLES (by authority The 'Queen's Own') in the illustrated Chinese boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of her Majesty or his Royal Highness Prince Albert, in relief on coloured grounds. Every quality of needles, fishhooks, hooks and eyes, steel pens, &c., for shipping. These needles or pens for the home trade are sent, free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value.—H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. S. Parish, agent for exportation, 21½, Broad-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

BUTTER MADE IN TEN MINUTES, by the NEWLY-INVENTED CHURN, registered according to Act of Parliament.

ATTWOOD, WIMBLE & WARNER, Manufacturers, LEWES, Sussex.

This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which insures the butter coming in ten or twelve minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the summer, placing the churn in cold water will be the means of hardening the butter.

Sizes,	No. 1,	2,	and 3,
Churn from Price, carriage paid to London.	7 to 8 lbs. 25*s.*	13 to 15 lbs. 35*s.*	26 to 28 lbs. 42*s.*

Metal Pans for Churns to stand in, 4*s.* 6*d.*, 6*s.*, and 7*s.* Larger sizes made to order.

To be seen in London, at Wright's Range Warehouse, No. 3, Arthur-street, near the Monument; W. Baily & Son, Furnishing Ironmongers, 71, Gracechurch-street; Livermore & Son, Ironmongers, No. 30, Oxford-street; Benham, 19, Wigmore-street, Cavendish-square. Export Agents, Barnes & Co., 109, Fenchurch-street.

THE OMBROSOME, or PATENT PORTABLE SHOWER BATH, especially adapted for travelling and exportation. By this Bath an inexhaustible shower is produced from a few quarts of water: the height of the shower may be increased or lessened to suit adults or children, and occupying so little room, is peculiarly suited for bed-rooms and dressing-rooms; it is also an excellent Douche Bath. Being little larger than a writing-desk when packed, it will be a great desideratum for exportation to India and other hot climates. To Military Men and others of a migratory life, also to Students of the Universities, Inns of Court, &c. (where rooms are low and water scarce), the present invention cannot fail to be most acceptable. It is made entirely of brass, and is at once simple and elegant.—May be seen at the Royal Polytechnic Institution; and be had, with Prospectuses, wholesale and for exportation, at the Manufactory, 115, Old-street; and retail at the Bazaar, Panklibanon Iron Works, 58, Baker-street; Mr. J. L. Benham, 19, Wigmore-street; Mr. C. Bray, 16, Cranbourne-street; Mr. J. Deacon, 4, Moorgate-street; Mr. J. Evans, London Bridge; Messrs. Fallows & Adcock 4, Halkin-street West; Messrs. Glenton & Chapman, 147, New Bond-street; and of all the leading Ironmongers throughout England.—Price 4*l.* 10*s.* and 5*l.* 5*s.*

F. ARNOLD'S

INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

MESSRS. HENRY SOUTHGATE AND CO.,

AUCTIONEERS OF LITERARY PROPERTY,

22, Fleet Street, London,

In announcing the following SALES BY AUCTION (now in course of preparation), beg respectfully to return their most grateful acknowledgments to their friends and connexions for the kind support they have been honoured with, and hope, by the most sedulous attention to the interests of the parties for whom they are concerned, to merit the continuance of their patronage and recommendation.

Messrs. H. S. & Co. beg to call the attention of Executors, Trustees, and others, having Literary Property to dispose of, to the importance of their being enabled to display an entire Library, even should it extend to twenty thousand volumes, in one large room, at the same moment; thus affording their connexion and casual visitors an opportunity to make personal selections with the greatest facility, instead of depending on the description of the Catalogue.

Libraries, large and small quantities of Books, Collections of Prints, Pictures, &c. promptly disposed of.

Testamentary Valuations made; and should the property be afterwards intrusted to Messrs. S. & Co. for sale, no charge will be made for the valuation.

Messrs. H. S. & Co. continue to make advances on Consignments from the Continent, and undertake to defray all charges of Customs, &c. on Property sent to this Country for immediate Sale.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, London.—Inventors and Capitalists are informed that all business relating to the securing and disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, and Drawings of Inventions, is transacted with care, economy, and despatch.

REGISTRATION OF DESIGNS.—Under the new Act, 6 and 7 Vict. c. 65, ARTICLES of UTILITY, whether in Metal or other substances, may be protected in the three kingdoms for 3 *years* at a small expense; *Ornamental Designs* may also be registered under the Act 5 and 6 Vict. c. 100.

A PROSPECTUS, with full particulars as to the course to be pursued, and the expense, &c., of being protected, either by Letters Patent or the Designs Acts, may be had *gratis*, upon application, personally or by letter, to Mr. Alexander Prince, 14, Lincoln's Inn-fields, London.

RECONNOITERING TELESCOPES.—These beautiful Instruments, measuring but 3¼ inches when closed, possess sufficient power to show clearly Jupiter's moons: price 35s. Securely packed, and sent through the post for 1s.—To be had only of the Maker, JOHN DAVIS, Optician, Derby; or at the Establishment of his Brother, High-street, Shrewsbury.

Achromatic Objectives.—J. D. has just received from M. Oberhäuser, Paris, a series of fine Objectives for Microscopes; of their performance J. D. can give the first reference. The price varies from 2l. to 3l.

To Agriculturists.—J. D. has just constructed a highly efficient Level for Draining and Irrigating, price 3l. 5s.

SMOKE PREVENTED, and VENTILATION EFFECTED, by SPONTANEOUS ACTION.—Mr. JEAKES, 51, Great Russell-street, Russell-square, *Sole Agent in London* for the sale of DAY'S PATENT WINDGUARD, by the use of which he guarantees to cure all Chimneys smoking from wind, and also to prevent downward currents. It is admirably adapted for the ventilation of apartments of every description; also of ships, stables, dairies, and larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise, and not liable to derangement. It also offers no impediment to sweeping. Price, for general use, 30s.; larger size, 45s.; larger sizes, especially adapted for ventilation, 60s. and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the Trade in general, is especially invited.

BY EDWARD WILLIAM LANE,

Author of 'The Manners and Customs of the Modern Egyptians,' and Translator of 'The Thousand and One Nights.'

SELECTIONS from the KUR-ÁN, commonly called in England the Koran, with an Interwoven Commentary; translated from the Arabic, methodically arranged, and illustrated by Notes. To which is prefixed an Introduction, taken from Sale's Preliminary Discourse, with Corrections and Additions. In 1 vol. 8vo. price 10s. 6d.

London: J. Madden & Co. 8, Leadenhall-street.

Now ready, the Second and Cheaper Edition, with numerous important Additions, the 3 volumes being comprised in 2, price 21s. bound,

LETTERS OF

MARY, QUEEN OF SCOTS; Edited, with an Historical Introduction and Notes, By AGNES STRICKLAND.

"Undoubtedly the most valuable, and by far the most interesting work, illustrative of the life and character of Mary Stuart, ever given to the world."—*Edinburgh Evening Post.*

"No public or private library can be considered complete without this valuable work."—*Morning Post.*

"The best collection of authentic memorials relative to the Queen of Scots that has ever appeared."—*Morning Chronicle.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

13, Great Marlborough-street.

VOL. VI. OF MISS STRICKLAND'S "LIVES OF THE QUEENS OF ENGLAND—QUEEN ELIZABETH." IS NOW READY.

"The best picture of the reign of Elizabeth we possess."—*Messenger.*

"A work of great interest, which throws a new light on the life of the great Elizabeth."—*Britannia.*

"This volume is interesting in the highest degree. Miss Strickland has brought together many curious particulars of Elizabeth's private conduct and character. We are now enabled to see Elizabeth as she really was—to view her as the woman as well as the Queen."—*Court Journal.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

NEW WORK BY THE WALTER SCOTT OF GERMANY.

Now ready, in 3 vols. post 8vo.

THE BURGOMASTER OF BERLIN. Translated from the German of W. ALEXIS.

"This is a very striking romance and graphic picture of Germany in the fifteenth century. There is a kind of gothic solidity and plainness about it which are quite peculiar, and, as far as we remember, new to this species of composition. It is ably historical and amusingly personal."—*Literary Gazette.*

"For interest of narrative, for nationality of idiom, which has been admirably preserved in the translation, and imparts an air of extraordinary novelty, for energy of character and power of description, 'The Burgomaster of Berlin' will find but few rivals in the present day."—*Metropolitan.*

Saunders & Otley, Publishers, Conduit-street.

In a few days will be published, in 1 vol. royal 8vo. with Ten Portraits engraved on Steel, price One Guinea,

HISTORICAL SKETCHES of STATESMEN who flourished in the Time of George III.; to which are added, Remarks on the French Revolution. Third Series. By HENRY LORD BROUGHAM, F.R.S., Member of the National Institute of France, and of the Royal Academy of Naples.

CONTENTS OF THE THIRD SERIES.

The French Revolution—Robespierre—Danton—Camille Desmoulins—St. Just—Siéyes—Fouché (afterwards) Duke of Otranto—John, Fourth Duke of Bedford—Earl Camden—John Wilkes—Demagogue Arts—Lord Ellenborough—Lord Chief Justice Bushe—Thomas Jefferson—American Democracy—Marquess Wellesley—Lord Holland—John Allen.

Appendix: Walpole—Bolingbroke.

London: Charles Knight & Co. 22, Ludgate-street.

BLUNT'S HISTORY OF THE REFORMATION.
In one neatly printed volume, price 5s. bound in cloth,
A SKETCH of the REFORMATION in ENGLAND, by the Rev. S. J. BLUNT, Fellow of St. John's College, Cambridge. The 7th edition, forming part of the Family Library.
London: printed for Thomas Tegg, 73, Cheapside.

Just published, price 4s.
NEW CHEMICAL TABLES.
In folio, Part I.
TABLES of the ELEMENTARY and COMPOUND BODIES, systematically arranged and adapted as Tables of Equivalents, or as Chemical Labels.
By CHARLES BUTTON and WARREN DE LA RUE.
T. De la Rue & Co. Bunhill-row; Taylor & Walton, Upper Gower-street; Knight & Sons, Foster-lane; Dymond & Co. Holborn-bars.

October 1st, price 2s. 6d.
THE ELECTRICAL MAGAZINE, No. II., published Quarterly, conducted by Mr. CHARLES J. WALKER, contains a full account, with Illustrations, of Armstrong's Hydro-electric Machine; and Faraday's Researches on the Electricity of Steam; De la Rive's Voltaic Condenser; Becquerel on the Deposition of the Oxides; Voltaic Phenomena, by Grove; Translations, Reviews, Anecdotes, &c. &c.—Simpkin & Co. London; Baillière, London and Paris. Communications, Books for Review, and Advertisements, care of Baillière, London and Paris.

This day is published, in royal 4to. with 17 Plates and 28 Woodcuts, price 26s.
PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY, ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh.
Lately published, by the same Author,
I.
The Natural Principles and Analogy of the Harmony of Form. In 1 vol. royal 4to. with 16 Engravings and Woodcuts. Price 15s.
II.
The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 6 coloured Diagrams, 8vo. Price 7s.
William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

NEW EDITION OF MR. GILBERT'S LIBER SCHOLASTICUS.
In small 8vo. price 10s. 6d. the 2nd edition, much enlarged, of
THE PARENT'S SCHOOL and COLLEGE GUIDE; or, LIBER SCHOLASTICUS; being an Account of all the Fellowships, Scholarships, and Exhibitions, at the Universities of Oxford, Cambridge, and Dublin; by whom founded, and whether open or restricted to particular Places or Persons; also, of such Colleges, Public Schools, endowed Grammar Schools, Chartered Companies of the City of London, Corporate Bodies, Trustees, &c. as have University Advantages attached to them, or in their Patronage; with the Ecclesiastical Patronage of the Universities, Colleges, Companies, Corporate Bodies, &c. With appropriate Indexes and References.
By RICHARD GILBERT,
Editor of the Clergyman's Almanack,
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

SUMMERLY'S
HOME TREASURY
OF BOOKS, PICTURES, TOYS, &c.:
PURPOSED TO CULTIVATE THE AFFECTIONS, FANCY, IMAGINATION, AND TASTE OF CHILDREN.
Works now ready:

BIBLE EVENTS, WITH 8 PICTURES BY HOLBEIN. 4s. 6d. AND 2s. 6d.	TRADITIONAL NURSERY SONGS, WITH 8 NEW PICTURES. 4s. 6d. AND 2s. 6d.
LITTLE RED RIDING HOOD, WITH 4 NEW PICTURES. 3s. 6d. AND 2s.	SIR HORNBOOK: AN ALLEGORICAL BALLAD, WITH 8 PICTURES. 4s. 6d. AND 2s. 6d.

Works in preparation:

THE PLEASANT HISTORY OF REYNARD THE FOX, TOLD BY EVERDINGEN'S PICTURES. 4s. 6d.	BALLAD OF CHEVY CHASE, WITH FOUR NEW PICTURES. 3s. 6d. AND 2s.
BEAUTY AND THE BEAST, WITH FOUR NEW PICTURES. 3s. 6d. AND 2s.	TESSELATED PASTIME, WITH NUMEROUS PATTERNS. 6s. AND ABOVE.
JACK AND THE BEAN STALK, A NEW EDITION, WITH 4 NEW PICTURES. 3s. 6d. AND 2s.	BOX OF TERRA COTTA BRICKS, GEOMETRICALLY MADE. 10s. 6d. AND UPWARDS.

PUBLISHED BY JOSEPH CUNDALL,
12, OLD BOND-STREET,
LONDON.

OLD ENGLAND. To be completed in Twenty-four Monthly Parts, with Three Thousand Woodcuts, and Twenty-four Coloured Engravings, forming two splendid folio volumes. Also published in Weekly Numbers.
By CHARLES KNIGHT.
The First Monthly Part of 'OLD ENGLAND,' has been advertised to appear on the 1st of November. Since that announcement, the Publishers have received some urgent recommendations to bring out the Work also in Weekly Numbers; and as they are anxiously desirous to meet the wishes of the Public, being quite aware that many persons prefer making a small weekly outlay to expending a monthly sum, however moderate, they have now to announce the following arrangements:—
'OLD ENGLAND,' Number I., to be continued every Saturday, printed of a uniform size with the 'Museum of Animated Nature,' and containing Four Pages of Engravings and Four Pages of Letter-press, price 3d., will appear on
SATURDAY, OCTOBER 28.
A Supplementary Number, containing an Illuminated Fac-simile of a highly-finished Architectural Drawing will be published, in a wrapper, on the last Saturday in every Month, price 6d. The First Supplement appearing on Saturday, Nov. 25.
The Monthly Part, containing Four Numbers and the Supplementary Number, will be published Monthly, with the Magazines, price 1s. 6d.
THE FIRST PART WILL APPEAR ON 30TH NOVEMBER.
London: Charles Knight & Co. 22, Ludgate-street.

New Works.

NARRATIVE of the TRAVELS and ADVENTURES of MONSIEUR VIOLET, in California, Sonora, and Western Texas. Written by CAPT. MARRYAT, C.B., Author of 'Peter Simple.' 3 vols. post 8vo. 31s. 6d. boards.

THE EDINBURGH REVIEW,
No. CLVIII.
CONTENTS:
I. MEMOIRS and CORRESPONDENCE of FRANCIS HORNER.
II. HAY on HARMONIOUS COLOURING, FORM, and PROPORTION.
III. LIFE and TIMES of RITTER VON LANG.
IV. ROYAL SOCIETY of LITERATURE—ANGLO-SAXON LITERARY BIOGRAPHY.
V. DRAMATIC REFORM—CLASSIFICATION of THEATRES.
VI. SIR ISAAC NEWTON and his CONTEMPORARIES.
VII. TRAVELS in YUCATAN—RUINED CITIES of CENTRAL AMERICA.
VIII. JEREMY BENTHAM.
IX. THE MINISTRY and the LATE SESSION.

To be published in October:—
I.
UNIFORM WITH THE 'ENGLISHMAN'S GREEK CONCORDANCE.'
THE ENGLISHMAN'S HEBREW and CHALDEE CONCORDANCE of the OLD TESTAMENT; being an Attempt at a Verbal Connexion between the Original and the English Translations; with Indexes, a List of the Proper Names, and their Occurrences, &c. 2 vols. royal 8vo. 3l. 12s. 6d. cloth; large paper, 4l. 14s. 6d. [*On Monday the 16th.*
*** The Prospectus, illustrating the plan by extracts, may be had, *Gratis.*
II.
THOMAS MOORE'S POETICAL WORKS; containing the Author's recent Introductions and Notes. Complete in 1 vol. uniform with Lord Byron's Poems. Medium 8vo. with a new Portrait, by George Richmond, engraved in the line manner; and a View of Sloperton Cottage, the Residence of the Poet, by T. Creswick, A.R.A. 21s. cloth.
III.
THE APPLICATION of GEOLOGY to AGRICULTURE, and to the Improvement and Valuation of Land; with the Nature and Properties of Soils, and the Principles of Cultivation. By NICHOLAS WHITLEY, Land Surveyor. 8vo. 7s. 6d. cloth.
IV.
A PICTORIAL TOUR in the MEDITERRANEAN; comprising Malta, Dalmatia, Turkey, Asia Minor, Grecian Archipelago, Egypt, Nubia, Greece, Ionian Islands, Sicily, Italy, and Spain. By J. H. ALLAN, Member of the Athenian Archæological Society, and of the Egyptian Society of Cairo. Imp. 4to. with upwards of 40 Lithographed Drawings, and 70 Wood Engravings. 2l. 2s. cloth.
V.
Lord Jeffrey.
LORD JEFFREY'S CONTRIBUTIONS to the *EDINBURGH REVIEW*. 4 vols. 8vo. 2l. 8s. cloth.
VI.
OBSERVATIONS, on DAYS of UNUSUAL MAGNETIC DISTURBANCE, made at the British Colonial Magnetic Observatories, under the Departments of the Ordnance and Admiralty. Part I. 1840-41.
Published by the British Government, under the Superintendence of Lieut.-Col. EDWARD SABINE, of the Royal Artillery. 4to. 10s. 6d. cloth.
VII.
New Edition of Ure's Dictionary.
DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES; containing a clear Exposition of their Principles and Practice. A New Edition, corrected throughout. 8vo. with 1,241 Wood Engravings, 50s. cloth.
VIII.
THUCYDIDES' HISTORY of the PELOPONNESIAN WAR. A new Recension of the Text; with a carefully amended Punctuation; and copious Notes, Critical, Philological, and Explanatory. With full Indices, both of Greek Words and Phrases explained, and matters discussed in the Notes. Illustrated by Maps and Plans, mostly taken from actual Survey. By the Rev. S. T. BLOOMFIELD, D.D. F.S.A. The Second and Concluding Volume. 8vo. 20s. cloth.
*** Vol. I. 8vo. 18s. cloth.
IX.
AN ELEMENTARY GRAMMAR of the GREEK LANGUAGE. By DR. RAPHAEL KUHNER, Co-rector of the Lyceum at Hanover. Translated by J. H. MILLARD, St. John's College, Cambridge, late Second Classical Master at Mill Hill Grammar School. 8vo. 9s. cloth.
*** This Work contains all that is most important in the Author's celebrated '*Ausführliche Grammatik*,' and was carefully prepared by him for the special use of colleges in Germany, where it has been tried with much success.
X.
TAXIDERMY; or, the Art of Collecting, Preparing, and Mounting Objects of Natural History: for the use of Museums and Travellers. By MRS. R. LEE, (formerly Mrs. T. E. Bowditch.) Author of 'Memoirs of Cuvier,' &c. 8th edition, corrected, improved, and modernised. Fcap. 8vo. illustrated with Engravings on Wood, 7s. cloth.
London; Longman, Brown, Green, and Longmans.

BOOKS FOR STUDENTS,
Printed for JOHN W. PARKER, West Strand.

THE PUBLIC ECONOMY of ATHENS. By Prof. BOECKH; translated by G. CORNEWALL LEWIS, Esq. A.M., one of the Translators of Müller's *Dorians*. New Edition, revised, 1 vol. 8vo. 18s.

PINDAR'S EPINICIAN ODES, and the FRAGMENTS OF HIS LOST COMPOSITIONS, revised and explained. With copious Notes and Indices. By the Rev. JOHN WM. DONALDSON, M.A., Head Master of the Bury School. 8vo. 16s.

THE NEW CRATYLUS; or, Contributions towards a more accurate Knowledge of the Greek Language. By the same, 8vo. 17s.

THE SPEECHES of DEMOSTHENES against Aphobus and Onetor; translated, with Notes explanatory of the Athenian Laws and Institutions, by C. RANN KENNEDY, M.A., Fellow of Trin. Coll. Cambridge. 8vo. 9s.

SELECT PRIVATE ORATIONS of DEMOSTHENES, after the Text of DINDORF; with the various Readings of REISKE and BEKKER; with English Notes, by the Rev. C. T. PENROSE, Head Master of the Grosvenor College, Bath. 5s.

SCHLEIERMACHER'S INTRODUCTIONS to the DIALOGUES of PLATO. Translated by W. DOBSON, M.A., Fellow of Trin. Coll. Cambridge. 8vo. 12s. 6d.

THE FROGS of ARISTOPHANES, with English Notes. By Rev. H. P. COOKESLEY, M.A. 7s.

THE IPHIGENIA IN AULIS of EURIPIDES; with English Notes. *The Cambridge Edition.* 8vo. 8s.

A LIFE of ARISTOTLE, including a Critical Discussion of some Questions of Literary History connected with his Works. By J. W. BLAKESLEY, M.A., Fellow of Trinity College, Cambridge. 8vo. 8s. 6d.

SELECTIONS from the GREEK VERSES of SHREWSBURY SCHOOL; with an Account of the Iambic Metre and Style of Greek Tragedy, and Exercises in Greek Tragic Senarii. 8vo. 8s.

STEMMATA ATHENIENSIA; Tables of Biography, Chronology, and History, to facilitate the Study of the Greek Classics. 4to. 5s.

THE CAMBRIDGE GREEK and ENGLISH TESTAMENT. The Greek and the English being given in Parallel Columns on the same page. New and Improved Edition, with Marginal References, 8s. 6d.

THE GREEK TEXT of the ACTS of the APOSTLES; with Notes, Original and Selected. By HASTINGS ROBINSON, D.D. F.A.S. 8vo. 8s.

THE MENŒCHMEI of PLAUTUS, with Notes, and a complete Glossary. By JAMES HILDYARD, M.A., Fellow of Christ's Coll. Cambridge. 2nd Edition, 7s. 6d.

THE AULULARIA of PLAUTUS, with a Glossary and Notes. By the same, 8vo. 7s. 6d.

A PRACTICAL ARABIC GRAMMAR. By DUNCAN STEWART. 8vo. 16s.

HEBREW GRAMMAR. By CHRISTOPHER LEO. 8vo. 12s. 6d.

ELEMENTS of SYRIAC GRAMMAR. By the Rev. G. PHILLIPS, M.A., Fellow and Tutor of Queen's College, Cambridge. 8vo. 10s.

THE STUDENT'S MANUAL of MODERN HISTORY; the Rise and Progress of the Principal EUROPEAN NATIONS, their Political History, and the Changes in their Social Condition; with a History of the COLONIES founded by Europeans. Third Edition, revised, 10s. 6d.
By W. C. TAYLOR, L.L.D. M.R.A.S., Trinity College, Dublin.
By the same Author,
STUDENT'S MANUAL of ANCIENT HISTORY; containing the Political History, Geographical Position, and Social State of the Principal NATIONS OF ANTIQUITY; carefully Digested from the Ancient Writers, and Illustrated by the Discoveries of Modern Scholars and Travellers. Third Edition, revised and enlarged, 10s. 6d.

LONDON, SATURDAY, OCTOBER 14, 1843.

REVIEWS

Memoirs of the Life, Writings, and Mechanical Inventions of Edward Cartwright, D.D. F.R.S. Saunders & Otley.

THERE is a sad uniformity in the lives of Mechanical Inventors—not that they are devoid of incident or adventure, for they are full of exciting events from the raising of the curtain till the fall of the drop scene. But there is a sameness of sequence in the scenes, and a similarity in the general construction of the plot, which enables the experienced auditor to predict from the beginning the course of the drama, however much the *dramatis personæ*, and the dialogue, and the stage arrangements may be varied and transposed. In the first scene we have a youth of promise playing with the lid of the tea-kettle, making infantine experiments with more than infantine sagacity, and proclaiming to the fond mother the future inventor of the steam-engine. The youth makes extraordinary progress in his studies, but is unhappily designed for some profession totally at variance with his capacities and tastes, being apprenticed to a tailor or articled to an attorney, or, if his father have a presentation, sent into the Church, for each of which his natural bias totally unfits him. In the next scene, Nature begins to assert her empire, and an irresistible impulse drives on our hero to the situation where first his dormant energies are awakened. An apple falls to the ground—a pump fails to draw—a boiler fails to feed its class model—an old woman painfully draws out a hempen thread—a flax-worker painfully his hemp—such is the simple motive, and from this moment we accompany a Newton, a Galileo, a Watt, an Arkwright, a Cartwright—*le verre d'eau*, great ends from small beginnings. From this moment we have scenes of profound solitude and deep reflection—sleepless nights and toilsome days of calculation—experiment—contrivance: the automaton is at last completed, and the critical moment of trial arrives—it is about to move—hope and painful anxiety are excited to the limits of endurance—the moment arrives when the new engine shall begin those movements which are to carry with them the destinies of our hero and of mankind, and to cease, it may be, only with time: but first they must begin: the moment arrives—the word is given and the new machine—refuses—will not go—fails. "Successes are more pleasant, failures more instructive," and so our inventor discovers his errors, improves his plans, benefits by his discomfiture, is a wiser man and a better mechanic. His first machine was hastily made and ill put together—he seeks out a more skilful workman to assist him in its construction; to work they go together—it is in the dark deep cellar and in the night they work, for the secret must be kept. To work they go; master blows the fire, Caspar wields the hammer; the monster grows under their hands, and now it is a thing of force and power—it is completed, it moves, it works, success is achieved—that now first works, which is to continue working in that shape or a better till the world's end—here, in this dark cellar, by dingy fire-light, in the hands of these two dirty workmen, are the destinies of the world. All now, then, is accomplished? consummated? ended? Not so; it is but the beginning of the end. The workman has conquered the dead matter; has made it obey his will; has achieved the highest functions of his nature akin to the divine; he has created a new being. But the hero is only yet over the first of his labours; he has conquered matter, he has yet to conquer man. It is here that the inventor meets his trials, his sorrows, his pains. He works for his fellow men; he seeks their welfare, prosperity, wealth—but they will none of him. They do not wish to be benefitted, improved, advanced by his talents, by his inventions, to his honour and glory; they will suppress it if they can,—they will steal it if they can,—they will buy him and sell him if they can; but to take a benefit and be grateful, and bow down in homage to superior genius while yet its possessor is living, poor, young, and not celebrated—that is what they will not do: and yet among these men our hero begins,—ardent, enthusiastic, single-minded, trustful, guileless, and ignorant of craft, deceit, the world. Then comes the series of hopes, enterprises, disgusts, disappointments, patents, infringements, lawyers, chancery, jury trials, and costs—partnerships, jealousies, quarrels, debts and insolvency. Such is the career of nine hundred and ninety-nine inventors of the most valued of our material elements of civilization; the thousandth individual is the Arkwright with his *seven* millions, the Watt with his Bolton, the Howard with his vacuum pan.

We cannot now pause to follow the inventor's path through the intricacies of the after-plot, the beginning of which we have thus undesignedly sketched out, but must hasten to introduce the Memoir to our readers which has suggested this train of reflection, or rather of recollection, to ourselves, for we have merely been jotting down recollections of the fate of inventors known to us personally. Dr. Cartwright, with his share of disappointments and annoyances, was not the most unfortunate of inventors. His name is familiar to us as the inventor of the Power Loom, one of the great machines of modern industry, the companion of the mule, the jenny, and the steam-engine.

Cartwright's was a genius somewhat universal. A respectable poet, his early productions were popular, and one of his poems, 'Armine and Elvira,' passed through *seven* editions in little more than a year. An Oxford Master of Arts, he had Dr. Langhorne as a tutor and friend, and afterwards entered the Church, in which alone he does not appear to have distinguished himself. In the cure of bodies, though not of souls, he distinguished himself by discovering a cure for fever by yeast, a remedy not un-homœopathic. Then he invented the power-loom, of which there are now some hundred thousands at work, and assisting Watt's steam-engine in working out the wealth of this country. Then he contrived an engine to do the work of fifty thousand workers, employed then in the tedious, mindless occupation of combing out wool. It is remarkable, that both these machines issued from the head and hands of the inventor, in a perfect working condition. Next he worked at the steam-engine and invented dry condensation, a principle which has since had at least one dozen of inventors and patentees—then he contrived rope-making, and an arch without buttresses. He corresponded with Fulton about steam navigation, and with Sir Humphry Davy about agriculture. Parliament voted him 10,000*l.* for benefits conferred on his country, and in part compensation for his great losses by them—not in remuneration, for they cost him above 30,000*l.* Then he retired, bought a farm, planted cabbages, fattened sheep on sugar, and wrote papers on agriculture. Finally, he attempted locomotion, rotatory and gunpowder engines, and ended by a theory of the planetary system—*sic itur ad astra.*

To do full justice to so universal a genius would be to write half a dozen of biographies—the author, however, has done something like justice to his subject, being sufficiently in love with it to carry the reader on with interest, and sufficiently judicious not to extend or spin out the history with unimportant details—above all, it is a biography, not a dissertation, and is written with modesty, clearness, and discrimination. In order to follow the biographer, we must take his subject *seriatim*, in his manifold capacities.

Cartwright the Poet—was born precisely a century ago—fourth son of William Cartwright, of Marnham, in Nottinghamshire—was distinguished by early proficiency at Wakefield school—wanted to go into the Navy, and was sent into the Church, *because* his family interest was stronger in that quarter. At Oxford, at eighteen, he became a poet and Master of Arts, under his tutor, Dr. Langhorne. Langhorne, no mean judge, thus writes of him: "Many of your verses are pretty; but I am less pleased with the harmony of your little poem, than with that philosophical temper you seem to have been in when you wrote it." Sir Walter Scott says of him—"I have a vision of having met this accomplished gentleman in my very early youth, and am the less likely to be mistaken, as he was the first living poet I recollect to have seen. His poem had the distinguished honour to be much admired by Dugald Stewart, who was wont to quote, with much pathos, the picture of resignation in the following stanza—

> And while his eye to heaven he raised
> Its silent waters stole away."

We find in this part of Dr. Cartwright's biography some interesting correspondence with Crabbe, Montgomery, and other men of his day; the following letter from Crabbe is an admirable specimen of the confidential intercourse of kindred minds:—

"June, 1813.

"Now, my dear Sir, I begin to think that I am, as it were, a great man!—a man to be spoken of—not so much as Nicholson, who killed his master, or Peg Nicholson, who would have killed his Majesty, but still spoken of, in an honest way, enough to have it called fame; for, look ye, I have letters addressed to me, as an author, from strangers and strange admirers, and is not that fame? Oh that Hatchard's current were as flattering. No less than four letters from gentlemen and ladies lie at this time before me; and I make my boast of them to you, as I intend to do to Sir Walter Scott, whose letter of the 18th I have to reply to, and I will let him know what a man I am. A gentleman from town insists that I have my picture painted, and prints taken for my books. Again, a lady invites me (she knows not my age, nor I her's) into the mountainous countries, that I may witness the sublime of nature, and describe it in that beautiful * * * Well, thirdly, another lady offers me a narrative for a new work, which, if related in my pathetic * * * and, lastly, I have a young poet's request for an opinion of his verses, mixed, you may be sure, with notable things said of my own."

There follows a great deal to interest the reader, in Cartwright's correspondence with the editors of the *Monthly Review*, to which he was a frequent contributor, but for which we have not room, as we must hasten on to introduce our hero in his next capacity.

Cartwright the Physician.—In his parish of Brampton the inhabitants were poor, and the good man took to the study and practice of medicine in their behoof. In the course of his practice he made an important discovery, such as we often attribute to accident and good luck, but, which is, in reality, the uniform and legitimate offspring of a careful and observant mind applying itself with energy and originality to every subject in which it may happen to be engaged. This discovery was the efficacy of yeast in the cure of putrid fever; the following is the Doctor's own account of it:—

"During my residence, upwards of twenty years, at Brampton, a populous parish near Chesterfield, a putrid fever broke out amongst us. Finding by far

Digitized by Google

the greater number of my parishioners too poor to afford themselves medical assistance, I undertook, by the help of such books on the subject of medicine as were in my possession, to prescribe for them. I attended a boy about fourteen years of age who was attacked by the fever. He had not been ill many days before the symptoms were unequivocally putrid. I then administered bark, wine, and such other medicines as my books directed. My exertions were, however, of no avail; his disorder grew every day more and more untractable and malignant, so that I was in hourly expectation of his dissolution. Being under the necessity of taking a journey, before I set off I went to see him, as I thought, for the last time; and I prepared his parents for the event of his death, which I considered as inevitable, and reconciled them in the best manner I could to a loss which I knew they would feel severely. While I was in conversation on this distressing subject with his mother, I observed in a corner of the room a small tub of wort working. The sight brought to my recollection an experiment I had somewhere met with of a piece of putrid meat being made sweet by being suspended over a tub of wort in the act of fermentation. The idea flashed into my mind that the yeast might correct the putrid nature of the disease, and I instantly gave him two large spoonsful. I then told the mother, if she found her son better, to repeat this dose every two hours. I then set out on my journey. Upon my return, after a few days, I anxiously inquired after the boy, and was informed that he was recovered. I could not repress my curiosity, and though greatly fatigued with my journey, and night was come on, I went directly to his residence, which was three miles off, in a wild part of the moors, and, to my great surprise, the boy himself opened the door, looking well, and he told me he had felt better from the time he took the yeast."

"After I left Brampton, I lived in Leicestershire. My parishioners there being few and opulent, I dropped the medical character entirely, and would not prescribe even for my own family. One of my domestics falling ill, the apothecary was sent for. Having great reliance on the apothecary's skill and judgment, the man was left entirely to his management. His disorder, however, kept gaining ground, and the apothecary finding himself baffled in every attempt to be of service to him, told me he considered it to be a lost case, and in his opinion the man could not live twenty-four hours. On this, I determined to try the effects of yeast. I gave him two large spoonsful, and in fifteen minutes from taking the yeast his pulse, though still feeble, began to get composed and fall. In thirty-two minutes from his taking it he was able to get up from his bed. The expression that he made use of to describe the effect to his own feelings was, that he felt 'quite lightsome.' At the expiration of the second hour I gave him sago, with wine and ginger, &c., and in another hour repeated the yeast. An hour afterwards I gave the bark as before; at the next hour he had food, and an hour after that another dose of yeast. He continued to recover, and was soon able to go about his work as usual.

"About a year after this, as I was riding past a detached farm-house, at the outskirts of the village, I observed the farmer's daughter standing at the door, apparently in great affliction. On inquiring into the cause of her distress she told me her father was dying. I went into the house and found him in the last stage of putrid fever. His tongue was black, his pulse was scarcely perceptible, and he lay stretched out like a corpse, in a state of drowsy insensibility. I immediately procured some yeast which I diluted with water, and poured it down his throat. I then left him with little hope of recovery. I returned to him in about two hours and found him sensible and able to converse. I then gave him a dose of bark. He afterwards took at proper intervals, some refreshment. I stayed with him till he repeated the yeast and then left him with directions how to proceed. I called upon him the next morning at nine o'clock, and found him apparently recovered; he was an old man, upwards of seventy."

Cartwright the Cotton Weaver.—How the popular poet, the peaceful country parson, and the practical parish physician became a calico weaver, a proprietor of power looms, and, in short, a cotton manufacturer, is an inquiry both curious and instructive. Yet it has been observed that the poetical temperament is by no means so foreign to the mechanical as might be at first supposed; for the same powers, vivid imagination, fertile invention, talent for combinations, devices, expedients, are equally requisite to both. It is somewhat remarkable that Cartwright knew little or nothing of the theory or practice of mechanics. Yet, in little more than twelve months he completed this machine in all its details, and produced it in a form in which it long continued to be practically used. His ideas do not appear to have been suddenly derived from any incident. He studied the mechanism of the common loom itself, and by assiduously attacking this problem—*given, a shaft revolving by steam power, to derive from that shaft, by simple mechanism, all the motions performed by an intelligent weaver on his hand-loom*—by simply stating thus the problem, and by sheer dint of imagination and pure invention, he appears to have achieved one of the most difficult problems of the mill. The biographer states amusingly, how the Doctor's children used to watch with curiosity "their father, imitating the action of a weaver throwing his shuttle, as he walked up and down the room absorbed in his new speculations." He now took out a patent, dated 1785. His gradual progress, and the final perfection of the invention, may be collected from the correspondence with his friends. The following is a letter from Crabbe to Dr. Cartwright:—

"Belvoir Castle, February 14, 1785.

"I am not a little surprised at what you tell me of your enterprise. I have a thousand good wishes for your success, without one idea of your contrivance. Mrs. Crabbe has a better conception of your plan, and no less desire that you may accomplish it. I am about my contrivances, too, but mine is spinning—spinning flimsy verses—Dodsley shall manufacture them, and send you a sample."

And again,— "May, 1785.

"Fortune smile on your undertaking; or, not to be heathenish on a serious subject, God bless you in it: only remember when you grow very rich, that we were friends before, and do not look down on us as the summer birds that will come and serenade you daily. They talk here of your machine, but they are shy of us; if they say any other than well it is amongst themselves, and I scarcely meet with anybody who has any opinion at all upon the subject."

In June of the same year Mr. Cartwright sent Mrs. Crabbe a specimen of his weaving, for which he received the following acknowledgment:—

"I have just time to thank you for your letter, and to present my wife's thanks for your cloth, of which she is very proud: I need not report my congratulations nor our wishes. I who never had a mechanical idea in my life, begin to lament my want of capacity to comprehend in some measure how these things can be; but I comfort myself that my ignorance is not, as ignorance generally is, of the malignant kind."

We shall now turn to the Memoir for a continuation of the narrative:—

"In 1785 some property in the town and neighbourhood of Doncaster having devolved to Mr. Cartwright and his family, he was induced to fix his residence principally in that place; where, finding skilful workmen more attainable than in a country village, he applied himself, with increasing energy, to the perfecting of a contrivance in which he had already made no inconsiderable progress. Early in the year 1786, he visited Manchester, partly with the view of engaging some of the superior workmen of that place to assist him in the construction of a more perfect model of his machine than he had hitherto been able to accomplish, and also in the hope that some of the opulent and enterprising manufacturers of that flourishing town might be induced to enter into his views, and give effect to the productions of his inventive genius by the aid of their practical knowledge. The following letter to his friend, the Rev. W. U. Wray, contains a description of his early difficulties, as well as of his subsequent expectations of success:—'When I arrived at this place (Manchester) I found my machine not even begun upon; indeed, the workmen who had undertaken it despaired of ever making it answer the purpose it was intended for, and therefore, I suppose, were not willing to consume their time upon a fruitless pursuit. I have, however, the pleasure to tell you that the whole system of it is now finally adjusted, and so much so both to mine and the workmen's conviction, that we cannot entertain the shadow of a doubt respecting its success. I have taken some pains to make myself acquainted with the manufacturers of this place, which has much contributed to the perfection of what I have been aiming at. I cannot forbear telling you, that the machine is so exceedingly simple and cheap as not to cost (after the model is once made to work) above five or six pounds.' By another letter to the same gentleman, written also from Manchester, in May, 1786, the fact is ascertained of his having at that time effected an improvement in his loom, which was subsequently considered of great importance; viz., the stopping of itself of the machine on the accidental breaking of a thread:—'Respecting my business, sorry am I to say that it seems very little nearer a conclusion than when you left me. Delay upon delay. It is a satisfaction, however, that the delay does not proceed from any unforeseen difficulty. The apparatus for stopping when the thread breaks, either in the warp or woof, is completed, and performs its business with the greatest accuracy and facility.' A projector may overrate his own success, or an experimentalist be disappointed even in the best founded expectations, and therefore the ill-fortune that pursued Mr. Cartwright for so many years of his life might be considered as the not unusual lot of the ingenious; but it was much more remarkable that he should live to see his self-confidence completely justified. Twenty years afterwards from the very place where the machine that he describes first struggled into existence, and where it was most especially decried and opposed, a memorial from several of the most influential manufacturers was offered to the Legislature, in which it was stated that Mr. Cartwright's looms were employed there to the extent of several thousands. The little encouragement that Mr. Cartwright met with at the time from persons already engaged in manufacturing concerns, was probably the cause of his deciding on a somewhat hazardous undertaking; no less than the establishment, under his own direction, of a weaving and spinning factory, at Doncaster, in which free scope might be given to every description of mechanical experiment. Having engaged the most skilful workmen he could procure, he continued to make repeated alterations in his loom, and one branch of mechanism leading to another, he effected important improvements in the art of spinning, as well as in that of weaving. The capability of the weaving machine seemed now to be unequivocally proved. From the report of an aged person now living, who was employed at the factory at its first commencement, it appears that twenty looms were shortly set to work; ten for muslin or muslinette, eight for cotton, one for sailcloth, and one for coloured check. The machinery was at first worked by a bull, but in 1788, or 1789, he set up a steam-engine. However gratifying to Dr. Cartwright's feelings the progress of his new discoveries might be, it soon became evident that the establishment at Doncaster, on the whole, was far from being profitable. The 'factory system' was then in its infancy, and his own want of experience in the details of business such as he was now engaged in, occasioned all the work under his direction to be done at a more than ordinary expense. And being, in some cases, dependent on other branches of manufacture for the completion of his own, he was continually exposed to the influence of a narrow-minded jealousy, which now began to operate against him, but which probably proceeded from a growing conviction, on the part of the manufacturing interest, of the importance of his invention. Various petty means were practised in order to obstruct the popularity of the machine-woven goods. The cottons sent by Mr. Cartwright to be printed, were frequently rendered unsaleable by obsolete patterns and imperfect execution; and of his best and most uninjured articles, the chief consumption was in presents to his friends, or in supplying furniture for his own house. Nor was Mr. Cartwright's new position in society altogether without its trials. By the upper class of the inhabitants of a provincial town, proud of their exemption

Digitized by Google

from commerce and manufactures, his proceedings were viewed with no small degree of distrust; and so portentous an innovation as the introduction of a steam-engine, was received with expressions of general dissatisfaction. Although some few of his personal connexions and friends participated in his own sanguine views, and even joined in the pecuniary part of the speculation, by others he was considered as having deserted his *caste*; whilst, by the more rigid he was condemned for engaging so deeply in occupations unsuited to his profession. With the poor of the place, however, his establishment was far from being equally unpopular. It afforded employment to numbers, without interfering with their previous occupations; and in addition to remuneration for their industry, they were certain of assistance when required from his benevolence. His name is still venerated by the descendants of his ancient workmen."

Thus far Cartwright as a power-loom weaver, an occupation invented by himself, and by which many millions of the wealth of England have been produced. But we have not yet seen the end of these power-loom disasters. Towards the latter end of the year 1791, a favourable prospect opened for the introduction of his loom into the cotton manufacture of Manchester. Some enterprising manufacturers contracted with Mr. Cartwright for the use of 400 of his looms, and built a mill calculated to receive and work that number. Soon after the building was completed, and some of the looms set to work, threatening letters were received by the owners; other indications of hostility to the establishment were shown; and then the whole edifice was burnt to the ground, no doubt being entertained of the conflagration being the work of incendiarism. No other manufacturer would encounter so great a risk, and to Cartwright the consequences were ruinous.

Travels in Ireland, Part I.—[*Reisen in Irland*]. By J. G. Kohl. Dresden & Leipzig, Arnold; London, Williams & Norgate.

For industry Mr. Kohl is a pattern to all travellers. We have scarcely ceased to trace his footsteps through Bohemia and Austria, when we are called upon to follow his wanderings through no less interesting a land than that of the "still young among the nations," the land of temperance and repeal, of O'Connell and Father Mathew. Nor can we complain of his rapidity, either in his personal movements or his narrations of perils by land and sea, since he is equally free in his writings from flippancy and prejudice. He skims, it is true, over the surface, and rarely ventures deeper; but for this very reason his representations of men and manners are the more interesting, because unmixed with crude and hasty theory and explanation. He seldom hazards an opinion upon institutions and practices which he has not had sufficient opportunity to become thoroughly acquainted with, but he sets down without extenuation, and without malice, all that he sees and hears, pronouncing freely his condemnation when the case requires it, and the facts are clear enough to warrant it; but seldom, if ever, induced by national vanity or prejudice to withhold praise when justly due. In this spirit he has visited our shores, and the first fruits of his explorings are contained in the volume before us, from which, without farther prelude, we proceed to make some translations.

We are sorry, yet not surprised, to hear Mr. Kohl's report of the state of Ireland, which is the more valuable as it proceeds from one not led by the prejudices of party to exaggerate or extenuate the miseries of that suffering country. After leaving the beautiful scenery about Edenvale, Mr. Kohl determined to travel through that barren part of the county Clare which lies between Edenvale and Kilrush, for two reasons, the one to see Father Mathew, who was to visit the latter town, and the other, the round tower and the ruins of the seven churches, on the island of Scattery, situated in the neighbourhood:—

From Edenvale to Kilrush is a distance of somewhere about sixteen English miles; yet along this whole country, although the eastern main road of the county passes through it, I did not pass one single village, nay, not even a single, I will not say regular, but even tolerable human habitation. The landscape was everywhere bare and unvaried by trees, the colour of the land, as far as the eye could reach, most melancholy, that is to say, a brown or dirty red or black, the surface of the whole country, even of the hills and rocks, being covered with peat; no alternation of green meadows, and purling streams, and wooded hills, but all one mass of peat and moor; and even when an elevation in the road presented to the eye a more extended view, still nothing was to be seen but a greater extent of peat and moor, of bleak rocks, desolate hills, and ruined huts. It made me melancholy to travel through this country; but how far more melancholy must it be, to dwell here as a *glebæ ascriptus*, a servant of some hard master, and, withal, a father of a host of ragged and hungry children! I have seen, in Hungary, Lithuania, and the neighbouring countries, dwellings wretched enough, but scarcely in any land have I beheld such miserable hovels as are to be seen here, and, sad to say, in many other parts of Ireland. It is fortunate that the sky is generally dull, and the air so full of mist and turf smoke, that all this wretchedness is not clearly visible. Were we able to see everything plainly and thoroughly brought out, it would scarcely be possible to endure it.

This is wretched enough; but Mr. Kohl proceeds to compare the state of Ireland with the state of other nations generally considered the poorest in Europe, and this comparison does but increase the abject misery of the picture:—

I remember that I once pitied the poor Lithuanians in Livonia when I found them dwelling in houses formed merely of stumps of trees, the interstices filled up with moss. I pitied them especially on account of the low entrances to their dwellings, and the smallness of the windows, and gladly should I have seen their chimney better arranged. I remember, too, what melancholy reflections rose in my mind when I beheld the simple, rude, and wretched arrangements of their household. Now, may God forgive me for my ignorance! I might have spared all this, for I did not know that it had pleased God to lay such privations and worse upon another people. After I had seen Ireland, I found that even the poorest among the Lithuanians, Esthonians, and Finlanders live decently, and that in ninety-nine cases out of a hundred Paddy would be delighted if he could be housed, clothed, and fed as any of those people. Whoever has seen Ireland will no longer think any other part of Europe miserable. He will even consider the position of savages preferable. A log hut lined with moss—what a luxury! The Irishman's dwelling-place is usually built of mud, and how? one shovelful piled upon another, intermixed with a few rough stones, picked up in the fields, till the walls are sufficiently high. A house regularly thatched, or covered with bark would be indeed admirable: the Irishman often covers his with the turf taken from his bogs. Small windows filled up with panes of glass, or half-transparent bladders, or talc, as here and there in Walachia and some parts of Russia,—such luxuries are unknown to an Irish peasant. Here most of the huts are without windows; one square hole in front serving at once for window, chimney, house-door, and stable-door, for light, smoke, men, and pigs to pass through. * * Russians, it is true, are often in harder bondage than the Irish, but their habitations and food are as good as they desire; there is no trace of Irish beggary among them. Moreover, they are happy in their slavery, and do not, like the Irish, bite their chains and endeavour to break them. The Hungarians, too, are not, as a people, very well off, but even the lowest among them gets excellent wheaten bread to eat, and tolerable wine to drink. Could a Hungarian believe that there are many people in a Christian land who can only afford to eat potatoes on alternate days? The Servians and Bosnians are reckoned among the most miserable people in Europe, and indeed the sight of their villages is not very inviting,—but how well these people are clothed! If the Irish peasant could peep into a Servian house and see a Servian woman sitting therein in her full dress, the men standing by her with their weapons, I think he would be inclined to tell his countrymen, that the "good people" had taken him to a land where all the women looked like queens and the men like princes. Among the Tartars of the Crimea few luxuries and comforts are found: this they seem to know themselves, as they are in the habit of emigrating in great numbers to Asia Minor; they are called poor and barbarous, but after all they look like men; they have a regular national dress; neat, clean cottages in good repair: how neat are their orchards! how well kept their horses and harness! But the Irish have neither form nor shape; they look all edge and trimming; except their rags, they have no national dress; their dwellings have no national form, but are built hap-hazard; their whole household seems without rule or law. Among the Tartars and other such nations, the saddles, travelling bags, carpets, divans, dishes, spoons, even the smallest articles, are made after a customary and ancient pattern, being well adapted to their several purposes: the Irishman has nothing of the kind. As he dresses himself with rags gathered up here and there, his seat is at one time a chair, at another a block of wood, or a barrel, and his dish a broken vessel of one shape or another. We have also our beggars and poor, who cannot keep pace with the national manners, yet lawless beggary forms with us, and other nations, the exception, but with the Irish it is the rule. Here is a people of beggars, among whom the wealthy form the exception. It is this which makes Ireland unique among the nations of the world.

Mr. Kohl seems to have been much struck with the Irish costume, which he confesses has, in its way, something national in it. In another part of his work he says,—

The rags of the Irish appear to us the more comical, as the cut of their national costume is that of our dress coat. In Germany people of the lower classes wear long great coats, or when at work short round jackets; in Belgium, France, and other countries, the working people wear very useful blouses, as also in many counties of England. Paddy probably does not find this mode of dressing sufficiently elegant; preferring the French dress coat, with the high, useless collar, its two hanging swallow tails, and open breast. With this he wears breeches, coming to the knee, with shoes and stockings or gaiters. Consequently, as regards the cut of his clothes, he is a "raal jontleman." * * The covering of his head harmonizes with his coat, for instead of a useful, light waterproof cap, he wears a quizzical, shapeless felt or silk hat, which may have been soaked a hundred times in the rain and dried again. That the higher and unoccupied classes should encumber themselves with so uncomfortable and inappropriate covering as our hats, and keep to them because they have been once the fashion, is intelligible enough; but how such an absurd article of dress could have been kept up for years among millions of people of the labouring classes is to me incomprehensible.

At Edgeworthtown Mr. Kohl went to the market, and missed some old friends, for he observes:—

I did not see any gipsies there, and, in fact, in no other part of Ireland; and I was assured that there were none, and had never been any in the country. The books which I have consulted on the subject have afforded me no explanation of this phenomenon, for unfortunately authors rather too often forget to notice what there is not in a country, a point frequently as interesting to learn as what there is to be found in it. Wonderful as it might seem, that gipsies, who have found a way into every country of Europe, even into England, where they have spread over the whole land, should not have crossed over into Ireland, the fact has been positively stated to me by many Irishmen; and as Ireland is distinguished by many peculiarities from other countries, as, for example, for the absence of toads and serpents, and other creatures found in every other part of Europe, we are inclined *à priori* to believe in this fact. Perhaps

Digitized by Google

some gipsies may have occasionally visited Ireland, but finding there a race almost as barbarous and miserable as themselves, they turned back again. Why even the Romans, who occupied all the rest of Europe, never took possession of Ireland. There is another fact as remarkable and strange, that there are no Jews in Ireland,—at least, there is no synagogue in the whole country, not even in the metropolis, although it contains 270,000 inhabitants. Jews came over to Ireland with Cromwell, and in the year 1746 there were 200 individuals, or 40 families, in Dublin, who had a synagogue and a burying ground, but in the year 1821 their number was reduced to nine individuals!

In travelling from Dublin to Edgeworthtown, Mr. Kohl had occasion to try a stage coach, a phenomenon which must have appeared strange to him, and which he thus describes:—

The seats in English stage and mail coaches are the most uncomfortable in the world, and at first I found it hard to reconcile this circumstance with the love of comfort so peculiar to the English people, but I think I have at last hit on the solution of this problem. The English are a people who in all their undertakings look to the main object: thus, in their houses, domestic comfort is the principal point, and consequently no more comfortable rooms are to be found in the world than in England; but in travelling the chief thing is to get on fast, and therefore everything relating to this is also inimitably arranged. The carriages, even the largest, are light as feathers, but at the same time as solid as steel and iron; the horses are as fleet as birds, and at the same time as strong and lasting; and the coachmen are so skilful in their craft, that each of the 3,000 public drivers, who are said to exist in the United Kingdom, would obtain a prize among us. But you must dispense with comfortable seats, which you may look for at home; nor must you be overloaded with luggage, especially such as may be easily spoiled. Those who wish to get on quick leave the vanity of fine clothes at home. We only guarantee thus much, no matter whether dry or wet to the skin, clean or splashed with mud from head to foot, with luggage or without, crushed or with a whole skin, we shall get you quickly and at the appointed hour to the place of your destination: all the rest are matters of no moment, especially among people of business, and such are at least ninety out of a hundred persons who use the public conveyances in England.

The jaunting cars, though as inconvenient at least as the stage coaches, seem to be favourites with our author:—

These Irish posting cars I would recommend to every one who wishes to see the country to advantage, for by means of them he secures a perfect independence of the world. Being bound to no fixed route, one can go in and out of the cross roads of the country, by paying sixpence per mile more than the usual fare; and as one is obliged to sit with one's legs half out of the vehicle, it is no difficult thing to make up one's mind to jump in and out, and examine anything noticeable on the road. Besides this, one has always the coachman, an honest Paddy, at hand, who generally, in order to keep the balance true, sits, not on the box, but *dos-à-dos* to the traveller himself. He is, however, always willing to change this *dos-à-dos* into a *vis-à-vis*, when he explains anything to the traveller, or shows him the country. Being himself a little given to curiosity, he affords every facility to the curiosity of the traveller; stops when he is asked to do so, drives more slowly without being bidden, when he sees that his employer is observing anything, and often adds, when he thinks he has said something rather clever, "Will your honour please to put that down."

On his way from Edgeworthtown to the Shannon, Mr. Kohl was particularly struck with the multitude of ruins:—

In the rest of Europe (he says) ruins are generally removed; in Ireland just the contrary takes place. This country is unique as regards its ruins. We find here an abundance of them from all periods of history, such as are met with in no other country in the world, from the times of the old Phœnicians to the present day. There are some which are supposed to have belonged to fire-worshippers from the East; others which are believed to be remains of Druidical temples, or castles of old Celtic kings of the island. The ancient churches, built by the first Christians in the land, are still traced in numerous fragments of crumbling walls; the period of the Danish dominion left the country another rich collection of solid masonry; and every century—nay, every decade of years, down to our own times, has left its ruins here; for one sees everywhere a great number of dilapidated buildings, which seem not only to have fallen recently into decay, but also to have been but recently built. I nowhere, in my journey, saw a village or town which did not offer to view some such ruined modern building. In some I saw as many as ten or twelve untenanted and crumbling houses, in immediate succession. As some melancholy tale of war or poetical legend attaches to every old ruin of castle or church, so a still more melancholy story is connected with every one of these modern ruins, as they relate to some wrong committed in the midst of peace. The cruel expulsion of some tenant by the landlord, or the sad emigration of the poor inhabitants, commanded by dire necessity, or the want of means for the repairs of the house, are the causes usually assigned for such decay. Generally, however, the people are not very communicative on these matters. "Oh, it's a very melancholy story, Sir," they say, "it's better to say nothing about it:" or else, "It seems the landlord does not much care about it—just as it happens so he leaves it." These ruins are, however, usually very picturesque, as they are mostly covered with vegetation, in which Ireland is peculiarly rich. The most beautiful ivy creeps over them, and wild roses, yew trees, beeches, and the like, have fastened everywhere among the crevices. In many countries, such as Livonia, Courland, and Poland, the ruins are almost always bare—not so in green Ireland. I often saw the most miserable hovels covered with a rich ivy, worthy to have mantled the ruins of a royal palace; nay, I should say that many a hut would fall to pieces if it were not kept together by the ivy.

The learning met with by Mr. Kohl in Ireland will surprise many:—

I have already spoken of some old-fashioned learning of the people of Kerry, even of the lower classes. I met a remarkable instance of this on the steam-boat on the Shannon. An elderly Kerry man was reading an ancient manuscript, written in the Irish language, and in those peculiar old Celtic characters in which that tongue is still written. The manuscript consisted of many divisions—some small and some large—which, to judge from the different shades of the paper, must have been joined together at various periods. It was very nicely and neatly written. Some, the man said, he had added himself, some parts he had inherited from his father and grandfather, and others had been in his family long before them. On my asking what was the subject, he told me that it contained the most beautiful old Irish poems, tales of wonderful events, histories and essays of antiquity; and among others, a translation of a treatise on natural history, by Aristotle! Being still a novice in these things, I scarcely trusted my eyes and ears; but I had subsequently many opportunities of remarking how interesting and antique all traditions are among the Irish—a people who believe that their letters are still the same as the Phœnicians brought into the land, who attribute some of their ruins to Oriental fire-worshippers, and who will tell you with the same face anecdotes and sayings of Aristotle and of the late King George the Third. I was twice told by common Irishmen of Aristotle as of a wise and powerful king of Greece, and they seemed to entertain some such idea of him as they had of King Solomon. They are a people who believe that a Scythian king, who married a daughter of that Pharaoh who expelled the Jews from Egypt, after having conquered Spain, had come over to their island. I inquired if there were any others in the company who had manuscripts in their possession, and another man of the same county opened his travelling chest, striped with blue oil colours, and drew out from under his night-shirt and boots an old manuscript. I asked them why they carried such writings about them, and was told that they would not easily part with them, and that they gladly read part of them on their journeys. I afterwards met with several such manuscripts in the hands of the lower classes in Ireland. I heard that some had writings on parchment in their possession, which would probably be of greater antiquity than those which I saw, which were always on paper.

We shall continue our translations next week.

The Corporation of London and Municipal Reform. Clarke.

The enormous amount of money appropriated to, and levied on the people, for what is by law considered local purposes, passes all belief, and the disbursement generally is in the hands of persons who are virtually irresponsible. The "Rebecca" outrages in Wales were at first but a resistance to local injustice. The pamphlet before us, reprinted from the *Westminster Review*, is an able exposition of Corporation government and misgovernment so far as the city of London is concerned. We cannot enter into details, but, according to this statement, the city estates, held for public and charitable purposes, produce more than 364,000*l.* per annum—yet the local rates amount to 272,788*l.* per annum, a greater amount than is raised in any district of corresponding extent in the kingdom; and to these enormous sums may be added 202,549*l.* for duties on coals, provisions, &c. and about 150,000*l.* per annum, for freedoms, licences, trading privileges, river tolls, tonnage dues, &c.—altogether little less than One million a year! and this principally for the local government and benefit of a district about the fifteenth part of the metropolis, as described in the Bills of Mortality of the Registrar General, and not so populous as the single parish of Marylebone!

Of the character of some of the highest dignitaries to whom the disposal of these funds are intrusted, we have had sufficient evidence lately in the daily papers. We, however, who know but little of city affairs, supposed that the election of such persons to high office were rare and casual exceptions; but we have somewhat changed our opinion now that we are informed that there are only 198 houses in some wards; that not even householders, but only the freemen householders, are entitled to vote; and that 38 persons do, therefore, in some instances, elect an alderman—unless, indeed, the candidate is willing to buy the office, by paying for the admission—taking up the freedom, as it is called—of new electors: so that there is no security that these civic dignitaries, these local legislators, judges, magistrates, shall be men either of character, intelligence, or even property enough to afford a reasonable safeguard against personal jobbing—indeed, we find in a note to this pamphlet, that the families of no less than nine aldermen receive pecuniary relief from the city funds!

Some instances of abuse and of the absurd consequences of the powers and privileges of the corporation, are amazing enough to deserve notice. Thus, of the oppressive operation of the various regulations affecting the freedom of trade we have a curious example. First, there are the fines and fees on being admitted free of the city—but a freeman is not entitled to open a shop, unless also he be free of one of the companies; and this law the poorer companies enforce; and a freeman cannot, under any circumstances, vote at the municipal elections, unless he is also a liveryman or member of one or other of the companies. The cost of taking up this freedom and livery in the Poulterers' Company is 29*l.* 7*s.*; in the Merchant Taylors' Company, 116*l.* 5*s.* 8*d.*:—

"A case was mentioned by the town clerk, of a tradesman who, having been admitted a wheelwright, set up a shop as a cheesemonger; and, as in this occupation he sold butter and eggs, he was summoned by the poulterers to become a freeman of their company, with which he complied. He then added sucking pigs and summer pork to his stock, when

Digitized by Google

the butchers required him to become a member of their company, and he complied also with this summons. He then, having left off business, was summoned by the poulterers to take their livery, which he refused; he appearing on the city books as a citizen and wheelwright. An action was commenced against him, but on the suggestion of the Court of Aldermen, it was discontinued."

Other cases of exaction are equally strange and absurd. The corporation maintains, by the agency of licensed labourers, a monopoly of labour within the city: it is said, indeed, that, if the laws were strictly enforced, no parcel, however small, could be carried for hire from one part of the city to another, except by a ticket porter. It is obviously right that there should be authorized porters, weighers, and others selected by, and responsible to the authorities, in whom the public may confide (yet many of these offices are obtained by purchase) —but the absurdity is the compelling persons to employ these weighers and porters who have no occasion for their services; and even when their enforced employment amounts to an inconvenience and occasions a delay. Yet the power is enforced to its most ridiculous extent. Thus—

"Messrs Combe, Delafield, and Co. malt their own barley in Norfolk, and import it, by the river, for the use of their brewery in Castle-street, Long-acre. They do not want to measure it, because the malt is not for sale; and they do not want City porters to carry it, because, in their own establishment, they have better porters for the work: yet, says the Corporation, our meters and our porters shall be employed, whether you want them or not. Messrs. Combe, Delafield, and Co. refusing, Chancery proceedings were instituted against them; and this cause, which has been five years before the Court, is still pending. The case will appear the more striking, when we state that the wharf of Messrs. Combe, Delafield, and Co. is not in the City but on the west side of Waterloo bridge, in the Savoy; but the Corporation is actually, at the present moment, contending for the right (which, if it ever existed, has at least been long in abeyance), and are enforcing their claim at Brentford and other places,—to send their own meters and porters into every wharf along ninety miles of river navigation between Staines bridge and Yantlett Creek beyond Gravesend."

The monopoly of oyster meters is said to entail a burden on the public of nearly 10,000*l.* per annum, and is an instance of the growth of an abuse:—

"It appears that, down to the year 1680, the metage of oysters was performed by certain officers called *yeomen of the water side*, of whom there were formerly four, now but two, receiving, for almost nominal duties (chiefly connected with the Lord Mayor's household), in salary and fees the sum of 831*l.* 13*s.* 4*d.* The yeomen of the water side are still called master measurers, but long ago, growing tired of measuring, they made over the duty to *deputy oyster meters*, who in their turn, finding that unloading, shovelling, and measuring oysters, in all weathers, was not the most agreeable occupation, appointed deputy assistants to discharge their duty, seeing them paid of course for their services, as the reader will naturally suppose, and as he will suppose correctly, but seeing them paid by the public in shape of additional charges. The deputy oyster meters' deputies or assistants are fellowship porters, called *Holdsmen*; and for the last half century they have been in the habit of doing the work—demanding and receiving a recompence from the purchasers of oysters over and above the charge made by the deputy oyster meters, upon the importer, of 8*s.* per bushel for the first one hundred bushels of every cargo, and 4*s.* per bushel for the remainder."

Of the abuses consequent on the vast powers intrusted to irresponsible and half responsible persons, the following may be adduced from the Report of the Charity Commissioners:—

"There were ten applicants for the office of clerk to the Merchant Tailors Company in 1806; only three were deemed eligible. The whole Court voted. After the successful candidate had held the office five years, it was found that two of the Court had entered into an agreement to receive a moiety of the profits of his office previous to his election. Our informant stated, that six or seven years after the discovery, the clerk was found a defaulter to the company in the sum of 800*l.* The clerk was continued five or six years longer. One of the Court became bond for him. This discovery was made in 1817. The clerk got new securities, who gave a bond for 3,000*l.* He had law charges against the Company, and he was to insure his life to an amount to cover the deficiency, and to place the policy in the hands of the Masters and Wardens. Within a month or two after the discovery, the Court passed two minutes, one giving him a gratuity of 600*l.*, the other increasing his salary from 400*l.* to 800*l.*, and stating that the 600*l.* was to go in reduction of the debt due from him to the company. The salary was several times altered, because the company paid the policy, and subtracted that from the salary. He continued in office till a second defalcation, and then he was turned out of office. There was a dispute about the bond; and he compromised the 3,000*l.* by paying 1,000*l.* The policy had been allowed to drop."

The vast wealth possessed by some of these companies is another consequence of abuse—a form of abuse in which they profit by the interpretations of law contrary to common sense. Thus if a testator says in his will—

"'I have a field worth 10*l.* per annum; I bequeath 5*l.* to school A., and 5*l.* to school B.,' and after his death this field rises in value as building ground to 500*l.*, then the Master and Wardens, the trustees of the testator, claim the right of keeping for their own uses the difference between the 10*l.* and the 500*l.*;—the testator having neglected to provide that *the whole* produce of the field should be divided between the two schools; and it is understood that the greater proportion of the funds held by the Trading Companies as their private property, is the residue of charity funds thus acquired, or held under this claim."

The total amount of property in the hands of these companies, is supposed by persons competent to form an opinion, to be about a quarter of a million per annum!

A Diary of a March through Sinde and Afghanistan, during the Campaign of 1842. By the Rev. J. N. Allen. Hatchard & Son.

"*Uniform*," say the advertisements, "with the Journals of Lady Sale and Lieut. Eyre;" which, being read according to our interpretation, meaneth the work of a messenger of peace and good-will, clad in scarlet, and crying, "Ha! ha!" at the sound of the trumpet. Indeed, the mixture of pious ejaculations, scraps of verse, and military aspirations, which we find in this Diary, reminds us of that union of pride in the "turkey-shell coom" and peace in the "New Gerusalem," so amusingly announced in Win. Jenkins's letters.

We shall not bear the Rev. Mr. Allen company in all his marches and counter-marches; a detached scene or two being all that we shall give: the first attractive (to avail ourselves of the play-bill style) from its "unprecedented concourse of Alligators." The author is stationed at Kurachee, Lower Sinde, and has already enumerated an excursion or two:—

"Another point of attraction was a spot, about eight or nine miles distant, called the Mugger Tullao, or Alligator's Tank, the shrine of a Mahommedan saint of some celebrity. * * A tent, furniture, provision, &c., for five persons, were sent out on camels, at noon, with ten servants, and at about 4, P.M., we followed on horseback. Our route lay over a plain, intersected by the dry bed of a river, to a chain of rocky hills about five miles distant. As we approached the pass which led through this, the road became more narrow and difficult; we had to thread our way through masses of rock, and up peculiarly hard and flinty stones, worn to a polish by being often traversed. At length we reached the crown of the pass, which opened upon an extensive valley, with far more verdure than on the Kurachee side, and bounded by more distant hills of exceedingly bold form. In the bottom of the valley was the Mugger Tullao, thickly wooded with dates and other trees, standing as an oasis in the desert, with the white dome of the shrine rising from the midst of the grove. We first arrived at two tombs, elaborately carved in sand-stone, and very perfect. * * The dome of one had fallen, and encumbered the interior with its ruins. The devices were principally scroll and diamond work; the carving, though not very bold, was elaborate in design, and neatly executed. Passing on, we entered the wood, which arched gracefully overhead, and presently one of our party, who was ahead, cried out, 'There's a mugger!' I looked in the direction in which he pointed, and saw an alligator, about seven feet long, basking under a tree. I viewed it with interest, as it was the first I had seen alive, but at the same time with some degree of apprehension. My companion, however, to whom it was not a novelty, sprung from his horse, and threw a heavy stone at it, which sounded on its side as if it had struck a piece of timber; it gave a groan, and began to waddle sluggishly away towards the tank, showing no inclination whatever to resent the affront. We passed on, and found the tent pitched under a tamarind tree, one of the most magnificent trees I have ever seen. We joined the rest of our party near a hot spring, which issues from the rock on which the shrine of the saint is built. The temperature was about ninety-seven degrees, and the water perfectly clear, with a sulphureous smell. There is another spring about half a mile distant, the temperature of which is one hundred and twenty degrees. We then went to the Alligator's Tank, and beheld about a hundred of these sluggish animals, from one to twelve feet long, lying basking on the banks, or in the shallow water, with the mud caked white on their backs by the heat of the sun, showing that they must have been in the same position for hours. There was one enormous beast, called by the natives Moor Sahib, who had taken up a tank for himself, and seemed the only one who was really savage and disposed to be mischievous. Poor fellows! times are sadly changed with them. Formerly they lived in great dignity and sloth, the objects of respect and veneration to all around; but now, two or three times a week come a party of galloping 'griffins,' and thereupon they are poked, and pelted, and worried out of their lives, though I must confess they bear it with exemplary patience. * * I had a couch on the open side of the tent. It was a beautiful moonlight night, and I lay watching the beams as they shone on the top of the shrine, and tipped the plume-like heads of the date trees, till I fell asleep, soon, however, to be awakened by one of my young friends, who whispered in my ear, 'Do you know there is a mugger within ten yards of the tent, and (pointing to a bush at a very short distance) he is just behind that; I could not sleep, and nearly stepped on him while walking out in the moonlight. I started up at once, and sure enough there he was, about seven feet long, with his head pointing in the direction of the tent, the whole side of which was open. I was puzzled what to do. I did not like to lie down again while he was there, not knowing the habits of these creatures, and whether the sluggishness of the day might not be exchanged for activity during the night. However, at length we determined to leave him where he was, and wait the progress of events. We both lay down, and cast many an anxious glance towards the bush behind which our enemy lay, my companion having his gun ready at a moment's notice, in case of a charge from the foe. But Morpheus would have his way, and soon 'weighed our eyelids down, and steeped our senses in forgetfulness,' in spite of the mugger. And at the morning's dawn we traced the zig-zag trail of the waddling beast in the direction of the tank, and decided that muggers were as great drones by night as by day."

A slap at liberalism, and "*cheap religion*" at home, concludes this scene, and indisposes us, we must add, to the record of pastoral and ministerial experiences which follows. A vignette, taken on the Indus, will serve our turn better:—

"On the evening of Jan. 3, we anchored under a high bank, and I went on shore with a party, and plunged into one of the Shikarghurs. It was a thick tamarisk jungle, in which I was astonished at the frequent tracks of the wild hog, and the pieces of ground turned over and rooted up by these animals; there

Digitized by Google

must have been hundreds about, but we saw none. We wandered to some distance, and returning along the bank of the river, a very lively scene was presented, by the embarking of some camels to cross the river. There was a steep inclined plane dug through the bank to the edge of the water; the camel was brought to the top of this, and a couple of strong lines fixed to the cartilege of the nose, by which he is led and guided, like some wiser people; the ends of these cords were given to two men, who dragged with all their might, while the rest belaboured the haunches and flanks of the beast with long sticks, bestowing a storm of blows till they compelled it, roaring and holding back, to the water's edge. Here a struggle ensued to get one of the fore-legs over the side of the boat, in which sometimes the men, and sometimes the camel, were hustled into the water. This being effected, and a line tied to it, the same 'pressure from without' was applied with the sticks, till the bewildered animal, kicking, floundering, and plunging, contrived to get into the boat, where it was made to kneel down, and secured; and another underwent the same discipline, till the boat was filled. The frantic gestures and animated screams of the Sindees, with their picturesque drapery waving in the setting sun, whose slanting beams overspread the broad tranquil river, produced a striking effect, though with some mixture of the ludicrous."

One or two pages later, we shall find our author as little disposed to symbolism as to the "voluntary system":—

"A sketch of the place and manner of arrangement of divine service at Bukker, will strongly illustrate the kind of shifts to which a poor chaplain is liable to be reduced in this campaigning life. The church was prepared in a ruined building, which had once had a groined and vaulted roof. This had given way, and large masses of shattered brickwork seemed much inclined to follow it. On three sides were lofty pointed arches, which universally prevail, as far as I have seen, throughout Sinde and Affghanistan. The ordnance department had kindly issued planks, which were laid with the ends resting on empty ammunition boxes, so that the poor fellows had comfortable seats. It was a curious and striking scene. As I stood, the arches to the right and left disclosed the tools and machinery of the ordnance workshops, forges and anvils, carpenters' benches, lathes, &c., erected among the crumbling ruins, which lowered and frowned upon their sooty intruders, as an old country aristocrat might be supposed to do upon some upstart who had established himself in his neighbourhood. The centre was occupied by the officers and troops; a lofty arch behind them gave, as a background, other crumbling ruins of the fort, glowing in the setting sun, and surrounded by cannon, mortars, tumbrils, tents, and all the various paraphernalia of modern warfare. 'What a strange contrast,' thought I, 'is my present life to the uniform routine of a curacy at home! Here I am feelingly convinced of the comparative insignificance of those outward accompaniments of worship, concerning which there are often such bitter disputes at home. While men are as eagerly discussing the position of a pulpit, the decorations of a communion-table, the form of a vestment, as if their salvation depended upon it, I am satisfied to get under the fly of a tent, or the shade of a ruined wall, with a discarded packing-case for a pulpit, to dispense the Word of Life to as many as will hear me. Not that the decent solemnities of the house of God are to be regarded as unimportant—indeed there is abundant room for the exercise of a little ingenuity in providing some portable ecclesiastical furniture for a chaplain in the field."

Next we will take a desert scene, nearly as gaily done as if Warren had painted it:—

"Started early in the morning: a most magnificent sunrise; numerous floating clouds of the richest golden colour, on a sky of glowing crimson. I never saw a more splendid sunrise, for generally, I think, it is poor and tame compared to a sunset. I was detained, by the idleness of my servants, some time after the column, and by this detention, had an opportunity, as I rode on, of seeing the whole cavalcade of baggage, &c., which was of course in rear of the column. I can scarcely conceive anything that would excite more astonishment, if it could be exhibited in England, than the multitudes, the variety of costume, &c., attending the march of a regiment in India. Several hundreds of camels, led by natives in every variety of picturesque Sindian and Hindoostanee garb; carts which might be the identical 'stridentia plaustra' of the classics, drawn by bullocks with heavy yokes, and impelled by goads; the irregular cavalry, with dresses in which the gayest colours were brought into the strongest contrast, their long black locks floating in the wind, their animated gestures, loud cries, and quivering spears, now urging their horses forward, now checking them in full career; the regular cavalry, with their elegant light blue uniform, and systematic movements, powerfully contrasting with the erratic evolutions and dresses of the irregulars; native and European infantry; officers on horseback, some in furs, some in cloaks, as they might best resist the cold of the morning; all this in the midst of a pathless and unfeatured desert, was a wild and animated scene. The appearance of mirage in this desert, was more curious than I ever saw it before, though I have frequently seen it early in the morning, in Lower Sinde. In some places it had exactly the appearance of a large lake flowing within half a mile, as if to mock poor mortals with the appearance of that of which there was, in fact, the greatest destitution. Sometimes the camels in advance would appear of large and unnatural size, their bodies and loads floating in the air, while the legs were entirely hidden by the mirage. A small building on the left, in the midst of this scene of desolation, seemed cut off at the bottom, and hanging suspended in mid-air. Here also I perceived the propriety of the term applied to the camel, 'the ship of the desert,' for they appeared and disappeared on the horizon, precisely as a ship does on the ocean."

We had marked a passage through the Bolan Pass, with an "effect on the olfactories" (to quote Mr. Allen's precise words) more powerful than pleasant, caused by the myriad carcases of dead camels. Second thoughts, however, are best. Thus, too, we shall but refer those who require proof of the incongruous mixture we have adverted to, of things clerical and things warlike, to the Reverend's dashing account of the second Hyderzye affair—commenced with a "bidding prayer," and ended by a doxology! A description of Candahar offers too little novelty to tempt us; but here are some remarks on the etiquette to be observed in visiting mosques, &c., which are too curious to be overlooked:—

"Near the north-west angle of the city is a very handsome tomb, erected to Ahmed Shah, the founder of the Dourannee monarchy. It is octagonal, with minarets; and the lofty dome is beautifully painted in flowered patterns, the colours in such chaste and exquisite keeping, that it was a great relief to the eye when compared with the glare of gay and flaunting colours which the native works generally exhibit. In the interior are to be seen grave persons sitting on their heels at low desks, and before them folio copies of the Khoran, from which they chant passages in a shrill, measured tone. They appear very intent, and once in passing apparently the most devotional of the party, I stepped along the carpet on tip-toe, that I might not disturb him; he was not, however, so wrapt in contemplation but that he paused to ask me for some pice, on receiving which he resumed his occupation with the same energy as before. In former days no one could enter this shrine without putting off his shoes; now, however, we do as we like, and since we take off our hats, which they well know is our method of showing respect, they ought not to take offence, we being always content with their putting off their shoes, and never requiring them to uncover the head in showing respect to us or our habitations."

A visit to Prince Timour Shah, eldest son of Shah Soojah, follows;—and a dinner with Aga Mahommed, which failed to satisfy Mr. Allen. The liquors were abominable; the cake used for napkin and table bread "dreadful;" the mode of sitting uncomfortable; and the Aga's household minstrel—who was *wound up* with opium before he began to play on his guitar—a very poor performer.

The march to Ghuznee initiated the chaplain into some of the more violent scenes of warfare. We shall prefer an adventure of a more pacific character, and with it close our notice:—

"An excursion with a party of officers to the tomb of the Emperor Baber. We turned to the right from the road parallel to which we were encamped, and traversed, for about a mile and a half, a narrow way, beautifully shaded by poplars and willows, with meadows of grass and clover on each side, and brooks and rills which strongly reminded me of home. The weather was exquisite, like the finest summer weather in England, the heat so moderate as to allow of riding or walking throughout the day without inconvenience. We crossed the Kabul River, at this part strongly resembling the Wharf in Craven, by an antique stone bridge, on which a party of our officers were fishing, and proceeding a little way up the left bank, came to a ruined caravansera, with four gates of lofty pointed arches, which must at one time have been handsome and commodious. Passing through this, we entered what strongly resembled an English park, and passing a small tank (Anglicè, a square stone-walled fish-pond), ascended a succession of terraces, shaded by avenues of lofty trees, down which a limpid stream was murmuring in small cascades. At the top of the terraces was another small tank of stone, surrounded and shadowed by trees of surpassing height and beauty of foliage, among which was a hollow sycamore of immense girth. Into this tank the water rushed in a large stream, from a height of perhaps seven feet; more pure and crystal water I have never seen. It was a spot which seemed formed for tranquil contemplation. Ascending still higher to the level of the cascade, we came to a small platform of earth, on which was erected a beautiful musjid of white marble, presenting a front of three ornamented gothic arches. Within and opposite the centre arch, was the niche, or place of prayer; the front was surmounted by four cuspated minarets, the whole in good and substantial repair. Over the centre arch was a Persian inscription, of which the following is the substance, as given me by Captain Macduff, H.M. 40th regiment. 'This beautiful musjid, a place of prayer for angels and cherubim, is erected in the garden and place of rest of the late wise, good, and beneficent monarch, now an inhabitant of Paradise, the Emperor Zakur-ud-deen-Mahommed Baber, by order of the Emperor Shah Jehan Badshah, after the capture of Balkh and Budukshan, the flight of Nuzr Mahommed Khan to Subz-ghan, and his defeat near that place, by divine aid and the bravery of the imperial forces. It was completed in the nineteenth year of his reign, being the 1056th of the Hejirah (1640), after two years' labour, at an expense of forty thousand rupees' (four thousand pounds). I obtained a sketch of this musjid. On a still higher terrace is the tomb of the Sultan, plain and unpretending, and near it another, said to be in memory of his daughter, surrounded by a marble screen of flowered open work, so delicately wrought, that it at once recalled Sir W. Scott's comparison of the tracery of Melrose Abbey to the work of a fairy, entwining willows and flowers, who

> Framed a spell when the work was done,
> And changed the willow wreaths to stone.

The hill, on the other side of which the town of Kabul abuts, rose bold and rocky behind, with a summer-house at a considerable height. I had not time to climb to the summer-house, but from the side of the hill, one of the most beautiful landscapes burst upon me that had ever delighted my eyes. The rich foliage of the trees surrounding Baber's tomb formed the fore-ground, beyond was the Kabul River, and on its opposite side extended for miles and miles, the richly cultivated and wooded valley, bounded by a semicircle of mountains, the fantastic and varied forms of which it would be vain to attempt to describe. I shall wander far, and see much, ere the memory of that glorious view is obliterated from my mind."

This is a fair specimen of our diarist's style. We have but to add, that he received a medal at Ferozepore, from General Nott, for the part he had taken in "the affairs," and that on the fly-leaf of this volume are advertised "Five Sermons preached on various occasions during the campaign in Affghanistan."

The Influence of Respect for Outward Things: in Two Dialogues.

[Second Notice.]

THE contents of this little volume are, as we have before hinted, a reading on the philosophy of the operative classes, impregnated with a good deal of that truth which proceeds from a cognizance of things, but involved in much of the obscurity derived from the habit of abstract and ideal speculation. This is sufficiently manifested in the title-page itself—"The influence of respect for outward things"—a title neither very perspicuous nor very clear, for some respect for outward things is absolutely necessary for men destined to live and have their being in and through outward things. This, however, is not the writer's view of the subject. The respect for externals, here examined, is that deference for wealth and rank which excludes the intrinsic qualities of the individual, and which forms the besetting and growing sin of English society, laughing to scorn the honest assertion of Burns, that—

The rank is but the guinea stamp,
The man's the gowd for a' that.

"Since the world is composed of ordinary men, the plea that an extraordinary genius meets with respect in spite of his poverty, is no compensation to them for being treated with positive disrespect *on account of theirs*. The ground of complaint is, that while utterly unacquainted with an individual's character he is treated with contumely for no other reason than the inferiority of his circumstances; and to say that, in rare cases, men apply their knowledge to a good use, is no excuse for the daily practice of applying their ignorance to a bad one. Suppose that we are unacquainted with the inward claims of two men who are widely separated in an outward sense, the unbending law of justice, to which nature has annexed such powerful sanctions, requires us to treat them with equal respect. * * I ask, will any man in his senses pretend to doubt that the general conduct of mankind contradicts this law of justice? The learned and the simple, the professor and the rejector of christian faith, the rich and the poor, equally regulate their conduct by the false, invidious, demoralizing principle, THAT OUTWARD THINGS POSSESS A PARAMOUNT CLAIM TO RESPECT, no matter how true and sublime their theories. * * Opinion has such an inevitable influence upon language, that the moral history of a people might almost be gathered from a strict investigation into the changes which are gradually introduced in the signification of words and their combinations. Nothing more strongly evinces the prevalence, in our own country, of the most sordid principles than the use of certain terms. The word *respectable*, for instance, seldom designates either moral or intellectual qualities, but primarily and chiefly the possession of money; and the terms *good society* are exclusively confined to individuals possessed of certain wealth. They may be destitute of almost every virtue, they may be distinguished by nearly every vice, provided only that a decent veil of hypocrisy be assumed, and still, in the current acceptation of the terms, constitute 'good society.' Thus, money and desert of respect, money and goodness, are convertible terms!"

This is undoubtedly all very true—true to a common-place—and it is no less true that the vice is among the signs of the times; and that the sense of such injustice is one of the most exciting aggravations of existing circumstances in the eyes of such of the operatives as are conscious of some personal superiority. Such persons also take great pains to propagate their own sense of wrong among their less gifted class-equals, till it becomes an active element of danger to society. But it is by no means equally true that the evil denounced proceeds (as our author imagines) from commerce as a cause, or that machinery has any share (that is, any necessary share) in increasing the inequality of fortunes. Neither can we go the length of believing that the prostration of personal independence before the throne of Mammon is one jot more debasing than a servile submission to the false pretensions of rank. What can be more one-sided than the following statement?—

"That a mean and sordid character of mind is the necessary result of such devotion to contracting pursuits, as excluding those which expand and liberalize, are wholly connected with material things, and, for the most part, terminate in physical advantages, is too obvious to need illustration or argument. If to acquire money requires neither genius nor virtue, it is equally certain that the process of acquisition tends to repress the growth, if it do not destroy the seeds, of both. Who ever heard of nobility of thought, or elevation of practice, from the mercenary slave to gain? The observation of existing things disposes us to believe that the reproach implied in the Roman proverb 'Punica fides,' was not inapplicable to Carthage during the continuance of its *commercial greatness*, a phrase to which I have a strong objection."

On the tendencies of commerce and manufacture we took occasion to speak in our review of Dr. Vaughan's admirable 'Age of Great Cities,' (*ante*, p. 53) and the author before us has not shaken our faith in their civilizing efficacy. Manufacture and commerce have not been fairly dealt with. Ignorance, legislative neglect, and legislative dishonesty, have all combined to cripple and contaminate the free and natural working of industry; while foreign war and domestic fanaticism have each operated fatally to prevent that moral developement of the nation which should have accompanied a vast developement of the national industry. It is no fault of commerce that bread is artificially dear; that taxation forces all classes to regard too anxiously and too exclusively the main chance; that the habitations of the poor are ill ventilated, ill drained, and therefore hostile to the maintenance of decent order: it is no fault of commerce that the consumption of spirits is encouraged; that innocent amusements are withheld from the poor; that contending churches refuse all education to the lowly, because they mutually prevent each other from obtaining exclusive possession of the mastery over the consciences and the ductility of the rising generation. To denounce commerce and manufacture is to laud agriculture, as being peculiarly favourable to manly independence and to a just appreciation of the dignity of man: but is that praise deserved? the whole experience of society proves the direct contrary.

The abounding vices and miseries of the people, which claim the compassion of all thinking men, are less the results of a universal undue regard for externals, than of a perverse misunderstanding of their import and bearing. He who has rightly examined the motive powers of externals will perceive that commerce and manufacture are at once causes and effects of a dense population—that they are necessary co-efficients in certain stages of social combination—an essential part in the history of nations. Such a person, too, will distinguish between what is inherent and what accidental; and he will also, we think, avoid the mistake, from which the present volume is not quite free, of believing that an abstract sense of duty, or any artificial culture, can supersede or master that influence of externals, upon which the Creator has founded the natural existence of man in this his sublunary career. Such a person, too, as it appears to us, would regard the practical injustices of society rather as the causes than as the effects of a deference for rank and wealth—a deference which is, indeed, but an instance of the more general tendency of man to defer to power, whatever form it may assume. All modern governments are founded on violence; all institutions, therefore, favour the depositaries of this supremacy. The rank and wealth thus founded are powers, material powers, that act on the human mind after their kind, and will make themselves respected wherever they exist. This is the one secret of the undue distribution of wealth, and of the opinion which follows largely unequal fortunes. It is not too much to say that the one law of primogeniture, with its consequent class legislation, has done more to degrade the gold and to raise the guinea-stamp than all other causes combined.

Of these truths the author is not, indeed, ignorant, though he does not draw from them all the consequences to which they tend. Nothing can, for instance, be better than the following:—

"That higher principles of morality ought to be introduced into all institutions, and influence the conduct of public men; that regard for the welfare of others should predominate, in a greater degree, over selfish considerations; that deeper and kindlier feelings of respect and sympathy for universal man, ought to pervade all classes, are sentiments which few will dispute the propriety of inculcating, and which some inculcate in a variety of forms, who are either in a state of indifference or of opposition to the only methods by which their precepts can be successfully carried into practice, namely, such comprehensive and efficient measures for the general developement of mind as will erect the prevalence of virtue upon the balance of interest. * * To turn to another class, take a large portion of the labouring population, and inculcate the great rule of benevolence among a people whose characters have been formed by circumstances which, so long as the natural laws of action and re-action continue, will preclude the possibility of their entertaining christian feelings towards the majority of men distinguished by outward superiority. * * Is it possible, I would ask, that they should credit or esteem the virtues of men identified with this system, or that the most eloquent exposition of the duties of contentment and charity, should do more than make them hypocrites? * * I am far from intending to assert that the men who inculcate judiciously the duties of religion and morality are not discharging an important office, but what I do assert is, that if they confine themselves to the ordinary routine they signally fail in relation to the highest parts of conduct to which all men are summoned by the state of the world which surrounds them—I mean bringing the most enlarged and patient investigations into mind, morals, human nature, and political philosophy to bear upon the formation of the individual character for virtue or vice, happiness or misery, and regulating accordingly the entire amount of their influence and energies."

Education, it is true, is the one step which alone leads to the amendment of society, and "all the wisdom of the past teaches the duty of imparting the elements of knowledge to every child born into the world." But that this should be fulfilled implies that all teachers should be honest, and all honest teachers should know what are the elements of knowledge. For this reform, then, we must begin by educating the educated, by teaching the lessons of reality to those brought up in the mere science of words—which is very like putting the salt on the bird's tail, to facilitate its capture. It is not by abstract inculcation of the dignity of man, and of contempt for the advantages of rank and wealth, that we shall raise a blush on the face of the luxurious and the proud, nor can we thus prevent the necessitous from prostrating themselves to all "possessed of aught to give." Nay, more, the rights of humanity, which require to be respected in a well-ordered society, proceed, not from the dignity of man as a moral and intellectual being, but from his condition as a being susceptible of pleasure and pain, and from the want in which every man lives of the co-operation and benevolence of all. But were this otherwise, to be respected, man must exert energies in themselves respectable. He is not to be preached into thinking either of men or things otherwise than as he feels them. Our author,

Digitized by Google

therefore, as it seems to us, argues in a vicious circle. Education, indeed, the people want, and they know it; they will, therefore, probably one day obtain it for themselves, and choose for themselves an education suited to their position: but they want more than education; they want also that substantial justice of which education is but a part; they want a real equality before the law, without which education will only add a sting to the privations and sufferings that must continue unabated and ever pressing.

With every disposition, therefore, to speak with respect of a kind-hearted and sensible writer, and to recommend his work, as containing much suggestive and useful matter, we must still think that he has not attained the level of his important subject. We have now only to add, that our remarks apply simply to the first Dialogue; on the second we are not disposed to enter.

Memoirs and Recollections of the late Abraham Raimbach; including a Memoir of Sir David Wilkie. Edited by M. T. S. Raimbach.

[Second Notice.]

We resume, this week, our extracts from Mr. Raimbach's Autobiography. He deserves to be heard on the subject of his own art, and well and wisely does he speak. Of Bartolozzi's large engraving, from Copley's 'Death of Chatham,' he observes:—

"Although a work of great ability and immense labour, it has never become a standard, or at all a popular print. It was many years in hand, and the price agreed upon with Copley (2000 guineas, as I understood) was nearly expended by Bartolozzi on assistance, which proved, for the most part, according to his account, worse than none. Testolini, a fellow-countryman, was employed on it for three or four years, and as I heard him state, to the entire satisfaction, as expressed by his principal, during its progress; but their engagement terminated in a quarrel, and Bartolozzi erased much of what Testolini had done. Delattre, the ordinary and regular assistant of Bartolozzi, also contributed his aid."

Of Woollet he says, though he never saw him,—

"In person Woollet was rather below the middle stature, and extremely simple and unpretending in manner and demeanour. He had been apprenticed to a general engraver in Cheapside. His great works were executed at his house, the corner of Charlotte and North Streets. The house has undergone much alteration of late years; but, till a comparatively recent period, the window of his workroom, which he had adapted to his purpose, and had a northern aspect, remained unaltered. He was accustomed, on the completion of a plate, to assemble his family on the landing-place of his study, (the first-floor) and all give three cheers. He was intimate with Parsons, the celebrated comedian, who had a taste for the arts, and they occasionally smoked their pipes together. Woollet was a man of integrity, candour, and liberality, worthy of his elevated station as an artist. I have seen a letter of his, in which he bore the highest testimony of his admiration and respect for the talents of his then-considered rival, Bartolozzi."

The mention of this distinguished artist reminds us, that his only surviving daughter, now in the 70th year of her age, is a candidate for admission to the National Benevolent Institution! We trust that the mere announcement of the fact will ensure her election. Every subscriber of *five shillings* is entitled to a vote, and proxies are received by Mr. S. Cartwright, Old Burlington-street; Mr. R. Gibbs, White Hart-court, Lombard-street; Mr. R. Moffatt, Mincing-lane; and Mr. R. Westall, 115, Lower Thames-street.

Of the clever but eccentric Sharp, Raimbach writes—

"Sharp I knew personally. He was as notorious for singularity of character as he was celebrated for talent in his profession. After his apprenticeship, with a man of the name of Longmate, he began as a writing and heraldry engraver in Doctors' Commons, where he kept a small shop, of which there is a card extant of his own execution. He afterwards engraved a good many book-plates for the *Novelist's Magazine*, *English Theatre*, &c. His first great work (perhaps the greatest) was The Doctors of the Church, &c., which was followed by the splendid portrait of John Hunter, The Sortie of Gibraltar, King Lear, and a great number of other fine works. He was engaged by Copley to engrave his picture of the Destruction of the Floating Batteries, (exhibited in a large tent in the Green Park, by express permission of George III.) which, after the lapse of twenty years, was published, but with little success. Sharp was said to have dissipated a decent patrimonial fortune in the indulgence and pursuit of his wild vagaries. He was a proselyte of the insane prophet, Richard Brothers, and of Johanna Southcote, to the very last, engraving their portraits in testimony of his faith in their prophecies. He was implicated slightly in the affair of Hardy and Horne Tooke, who were tried for high treason in 1794. In his ordinary conversation he was shrewd and intelligent, but with a general tinge of eccentricity."

Of Heath he says, with great truth—

"His numerous early book-plates for *Bell's Poets*, *The Novelist's Magazine*, &c., exhibit a display of tasteful ingenuity till then unknown in this department of art. Its popularity afforded Heath an opportunity of turning his talent to account, of which he did not fail to profit. He constantly employed a considerable number of assistants, from whose labours he derived great pecuniary advantages, and willingly sacrificed a portion of his reputation as an artist to his desire of becoming a rich man. Hence many of the works bearing his name contain but little of his labour, and are far below that standard of tasteful and elegant execution in which his excellence was acknowledged. His larger productions, The Riot in Broad Street, Death of Major Pearson, and Death of Nelson, do not maintain a very high character, though it must, I think, be admitted that the small figures in the first named are of exquisite beauty. Heath accepted the diploma of Associate Engraver in the Royal Academy, to the great vexation and surprise of Sharp and Hall, who had invariably spurned it, considering, as did Woollet and Strange, that it was injurious to the profession, and degrading to the individual."

Fittler, he observes, was "an artist of respectable talent, great industry, and, at one time, of considerable reputation;" while of Anker Smith he says, and we agree with him, that "his reputation was scarcely equal to his merit." To Charles Warren he does justice:—

"Many of this artist's book-plates are of the most exquisite beauty of execution. He was very desirous of engraving a large plate, that, as he said, he might have something that would show what he could do; but though he planned and talked of several schemes for the purpose, he did not accomplish it. He was a well-meaning man, of a friendly disposition, an agreeable companion, and fond of jovial society, for which he was well adapted by his perfect self-confidence, his talent for singing, and his power of making a speech: qualities which perhaps were rather injurious than beneficial to him."

He tells a story of the Royal Academy, in no way honourable to that dignified body:—

"In the first year's exhibition in their new apartments in Trafalgar Square (1837), a picture of cabinet size was presented for admission by M. Gudin, the French marine-painter, and was at first refused, but, on the indignant remonstrance of more than one academician on the discredit which such a proceeding towards an eminent foreigner would reflect on their society, it was afterwards admitted, *but only on condition that one of the remonstrators* (Mr. W. Daniell) should withdraw one of his own pictures already received, of similar dimensions. The condition was at once acceded to by Mr. W. Daniell, and rigidly enforced by the Academy, who justified this harsh proceeding on the plea of want of sufficient space in their rooms for works of superior claims. It required, however, but little critical knowledge to perceive at a glance over the exhibition, that Gudin's *La Détresse*, as his picture was named, possessed more interest in its subject, a shipwreck, and displayed more talent in its execution, than scores of the gay works which surrounded it. During my stay in Paris, in 1824, one of the chief attractions was the *Salon*, as the collection of works of living artists is called; and it was highly gratifying to observe the sensation produced by Sir Thomas Lawrence's pictures, two of which (portraits of the Duc de Richelieu and of Mrs. Harford) he had sent for exhibition."

On the decline of line-engraving, and the triumph of mezzotinto, he remarks:—

"Another and very important cause for the change that had come over the fortunes of the good old legitimate art of line-engraving should not pass unnoticed; namely, the enormous sums now for the first time exacted by the painters under the claim of copyright; a claim, however founded, hitherto left in abeyance at least, if not considered altogether abandoned. The printsellers, in yielding to these claims, sought to indemnify themselves by adopting a more expeditious and lower-priced mode of engraving (mezzotinto), and which, being also executed on steel, enabled them, by printing much longer numbers than copper-plates will produce, to obtain their usual regular profits."

Mr. Raimbach has something to say on the subject of electrotype plates:—

"To the introduction of steel-engraving, by multiplying almost indefinitely the number of impressions each plate would produce, may in a great degree be attributed the decline and debasement of the art, exercised on a small scale. The embellishments of books are no longer what they have been, and the recent discovery and application of the electrotype bids fair to effect similar results as regards works of a large size. This most ingenious process has the power of reproducing, and at a comparatively small expense, any number of fac-similes of the original plate, so perfect as not to be distinguishable from it, whereby an indefinite amount of prints, all equally good, may be taken from them, consequently greatly lessening the value of the aggregate, and destroying, at the same time, root and branch, the long established system of proofs and early impressions, which contributed so much to the advantage and respectability of the profession, by holding out inducements to connoisseurs and lovers of rarity, to form collections of choice exemplars. The electrotype has not yet been brought into full activity, nor indeed can it ever be unless by the discovery of some means of effecting a prodigious increase and multiplication of print-buyers, a task of great difficulty, if we may form our judgment upon the very slow progress that has hitherto been made in the dissemination and cultivation of a taste for the fine arts among the bulk of the population in this country."

The Memoir of Wilkie is very meagre, and, in many places, incorrect.

THE SOANE MUSEUM.

THOUGH not at all fond of murmuring for murmuring's sake, like turtle doves and some of our contemporaries, we must now and then give voice to the public discontent; as we did of late, that the National Collection should be closed every Autumn without any unavoidable reason. We shall do so again and again, until those Epicurean gods and governors of the little world beneath them, the Trustees, think about remedying this abuse, instead of looking down from their Olympus with lack-lustre eyes and listlessly permitting it. Another grievance, very similar except in its transcendant magnitude,—that the Soane Museum should be shut *nine months* per year—we have likewise signalized before, and shall proclaim anew while it remains unredressed. Jerusalem walls did not yield at the first dint of Vespasian's ram, and the jealous defences drawn round Soane's Museum seem ill able to resist the breaching battery which a well-served press might open against them. We acknowledge the sacred nature of Wills, however eccentric, humoursome, and heteroclite the mortals who made them; but we can by no means acknowledge the sacred nature of supineness in those trustees who put, when possible, the most exaggerated construction upon such testamentary caprices, because it leaves themselves, or their substitutes, proportional licence to follow their own fancies. Let us cite the Act of Parliament so far as it is relevant, and see whether its provisions have been interpreted more for the convenience and advantage of the public, or of the private personages above mentioned:—"The said Trustees and their successors shall and will, from time to time, and at all times thereafter as occasion shall require, inspect and exercise a due controul over the said Museum, library, books, prints, manuscripts, drawings, maps, models, plans, and works of art, and the house and offices in which the same are deposited, and provide for the due preservation of the same, in the said house, being No. 13, in Lincoln's Inn Fields aforesaid, so that free access shall be given *at least* two days in every week throughout the months of April, May, and June, *and at such other times* in the same *or in any other months* as the said Trustees shall direct, to amateurs, and students in painting, sculpture, and architecture, and to such other persons, as shall apply for and obtain admission thereto, at such hours and in such manner, and under such regulations for consulting and inspecting and benefitting by the said collection, as the said Sir John Soane shall have established previous to his decease, *or as the said Trustees shall establish relating thereto.*" It seems evident from the above words italicated by us—above all, the last—that a discretionary power has been lodged with the Trustees to make the Museum as public as they think fit, i. e. *as public as need be.* Yet how far have they exerted this power towards rendering in its most liberal sense the letter of the Will, and interpreting it to the utmost reach of the spirit? What have they "established" towards carrying out the testator's objects? Why the minimum that he himself required! His Museum still remains, after so many years since his death, an exhibition, on the strictest, narrowest construction, of his works, during those self-same months April, May, and June, specified. A kind of *Almack's* Museum, for gentle-folk visitors! a hot-house for bees and butterflies mingled, to frequent three months in the year, and all the nine others a drones' nest! Whilst open, it is almost as difficult to wind your way through its labyrinth of high piled curiosities and precious gimcracks as through the lanes of a glass warehouse, without damage: its explorers resemble terriers or ferrets creeping through a rabbit-warren after their objects: in such Pygmæan saloons and strangulation passages, the gazer must turn himself round and round, elbow to flank and skirts lapt tight, like a fowl "skivered and trussed" and hung by the bill a roasting; nor can he see many of the larger articles properly, because they are just at the end of his nose, a position indeed where most things are quasi imperceptible. Well then, it will be said, the greater need of an exclusive exhibition. No! but of an extensive one—extended throughout a considerable time, to prevent crowds during a short period. Increase the number of visit days, and diminish the number of daily tickets if requisite. There is also a *Library* here, miscellaneous, though richest in architectural works, access to which is obtainable on proper application, from the Trustees or Curator; yet what means, let us ask, of commodious and continuous study are afforded the applicant even if successful? we have good grounds for belief that despite this ostensible access, the British public have little more usufruct of the Books, Prints, Manuscripts, &c. than the Terra-del-Fuegans. Alas, that commerce with ghosts and departed spirits has gone out of fashion, or perhaps some modern Glendower or Dr. Dee might behold Sir John's apparition wringing its aery hands at the effect of its most unwise deed committed in the flesh, when it left this House and its treasures, virtually away from his countrymen, as a *National* Museum. *Apropos* of shutting up collections, the British Museum has likewise been closed this season, but a single week however, the Print Room excepted, whose door remains hermetically sealed and annealed to visitors a whole month every year, while the superintendent takes his holidays. Far from begrudging him these, we wish he had more, and his still less favoured humble brethren of the Institution as many: at the same time it must not be forgotten that to one superintendent's recreation is sacrificed, by this annual closure, the recreation of a hundred visitors; nay, perhaps, the very livelihood of some among the latter! Who can say how far such an interruption affects the business pursuits of students and others connected with the fine arts and artistic literature?

FRESCO PAINTING.

WE now give the further extracts from Mr. Wilson's Report, as promised last week.

Transparency.

"This important quality is perfectly attainable in fresco-painting; it is found in the works of the Roman and Florentine masters; amongst the latter, more especially in those of Andrea del Sarto; in those of the Lombards it is admirably maintained; and its excess is seen in those of the Venetians. * *

"In a church near Conegliano there are some curious frescos by a Venetian painter, in which the excess of this quality is exhibited; they do not merit the name of works of art, and are very slightly executed: the colours seem laid in in one wash only, the plaster ground shining through; but these bad pictures prove that it is possible to lay in tints in a transparent and yet flat manner.

"Titian frequently makes use of the bare intonaco in particular places; thus in his fresco of the Healing of the Foot of the Boy, &c., in the Capitolo of S. Antonio at Padua, the shadows are laid in with brown in a very transparent manner, and for the half-tint he has left the bare lime. It may be doubted whether this practice is to be recommended; it is never found in the frescos of the Florentines or Romans, and that great fresco-painter, Luini, obtains equal lightness and transparency without having recourse to it. Such a practice gives a work a sketchy character which is objectionable, especially in the principal figures.

"How the effect of transparency is to be mechanically obtained it remains for the artist to discover by practice.

"A Milanese professor says, that with a view to transparency it is necessary to lay in the first tints early in the morning, and then to leave the work and not to resume it for two hours. He further says, that the lime, if it have any remains of an injurious caustic quality, exhausts its fury, to use his own words, on these first colours, and may be more safely painted on afterwards. It must be confessed, that the frescos by Appiani, which he instanced as examples of the practice, are very far from exhibiting the quality of transparency. Other artists, however, hold the same opinion, and it is therefore proper to state it."

*Hatching.**

"The prevalence of this practice amongst many of the old masters (for it is evidently not always the result of retouching) seems to prove that they also found a difficulty in getting flat tints; in some of the later masters it is a mere manner, but in earlier and better examples it may have been adopted in the hope of getting a flat tint without destroying transparency: whatever was the reason, the practice was very general, and it is to be observed that the great masters did not cross in this hatching; the lines lie all in one way, and Signor Colombo of Rome says, that the tempera hatchings in Michael Angelo's Last Judgment are thus laid on with great evenness and dexterity.

"In the works of Raphael, the most perfect of fresco-painters, there is no hatching‡ anywhere, nor is there in those of Correggio. The hatching with which the Cupids of the last-named painter in the Convent of S. Paolo, at Parma, are covered and destroyed, is manifestly the work of another hand; the lunettes underneath have fortunately escaped this profanation."

Solid Painting.

"This is a quality that is easily attainable; it will be best understood by observing, that whilst the plasterer lays on a preparatory intonaco of lime and sand with the trowel, the artist lays on a finishing one of lime and colour with the brush, and he may employ it as thickly as he pleases. I observed in the works of Pordenone in Sta. Maria in Campagna, at Piacenza, that the lights were laid on with such a body of colour that before the lime had time to set, the artist's sleeve, or mahl-stick, or something else in his way, has accidentally ploughed through his work, which he has not been able, or has not cared to mend.

"Paul Veronese, in his frescos in the Villa Mazer, has charged his lights; and his imitators in their works, both in the above villa and in that of the Obizzi near Padua, have loaded so much that the lights stand up in lumps upon the wall. Such extravagancies, like the washing in of the shadows in the pictures near Conegliano before mentioned, are poor substitutes for a careful imitation of nature.

"The lights must of necessity be thicker than the shadows, as there is more lime in the colours of the former than in those of the latter. The great masters laid in their colours without ostentatious handling; their works exhibit no tricks of manipulation; but it is surprising to observe the manner in which some artists seem to have worked their tints. Pordenone has already been alluded to, and Polidoro da Caravaggio produces an effect as if his brush had been full of macguilp, as may be seen in his frescos in Rome, viz. in S. Andrea on Monte Cavallo, and in the Farnesina.

"It is necessary to mention these instances to prove the extraordinary dexterity that has been attained in painting in fresco, a dexterity however, which is not to be admired when it produces such effects, and which too often distinguishes the pencil of mediocrity."

Glazing.

"This process is frequently exemplified in the fresco-works of the old masters; its most successful application is seen in those of Razzi at Siena, where the celebrated picture called the 'Cristo alla Colonna,' in the gallery of the Academy, is a particularly interesting example of its legitimate application in fresco, that is, of its use while the plaster is still moist; in this instance parts are made out by means of it, and much lightness and transparency are attained.

"Pordenone invented or adopted some process which resembles that common in oil-painting; his works have evidently been glazed after the lime had been allowed to dry; the flesh in all his figures is richly glazed,—the transparent colour filling up the hollows arising from the peculiar loading already described as so remarkably exhibited in his frescos, if they can be called such. Polidoro da Caravaggio seems to have adopted some analogous method, but probably these are the only masters who can be quoted as having adopted a practice so foreign to fresco-painting. Perhaps the artist who painted the papal chair-bearers in the Heliodorus may be added to this brief list. The adoption of such a practice evidently arises from a misapprehension of the legitimate application of fresco-painting. It will be found that the Venetian painters generally had no clear idea of the true mode of employing this art: even Titian fell into the mistake of trying to produce effects of light and shadow and colours, like those which he had been in the habit of producing in his oil-pictures. The light and brilliant colouring of Paul Veronese enabled him to paint with more success in fresco than the generality of his Venetian

"* This term of art means employing lines in shading somewhat in the manner of engravers, but more freely."

"‡ The clumsy hatching visible in parts of the frescos in the Stanze is evidently to be attributed to Carlo Maratta."

Digitized by Google

brethren; but in his works it is evident that this is merely the result of his system, not any attempt at an application of the principles of colour suited to the peculiar art of fresco-painting, which he sometimes practised, and most successfully at the Villa Mazer. Palma Vecchio alone of the Venetian masters seems to have truly estimated the powers of fresco; there are two Saints by him in S. Liberale at Castelfranco, which have breadth and dignity.

"Rizzi has already been alluded to as an artist whose works most prominently exemplify legitimate glazing in fresco; it is not apparent in the works of any other master to the same extent."

Time occupied by the Italian Masters in painting Frescos.

"It is not difficult, in examining some frescos, to ascertain how much time has been occupied in painting them. In some examples, the joinings by means of which this calculation can be made are distinctly visible; in others they are either so well executed, or are so concealed by the use of the distemper, that it is very difficult to trace them.

"It is evident that the old masters painted with great rapidity; large and important works, judging from the following examples, were executed in a month or six weeks. The 'Incendio del Borgo,' in the Stanze, seems to have been painted in about forty days; the group of the young man carrying his father has been executed in three days. The exquisite group of the Graces, in the Farnesina, by Raphael, has been painted, at most, in five days. The Cupid and the head of the Grace, with her back to the spectator, have occupied one day; the back and part of the lower limb of the latter figure, another. In this day's work the rest of the leg may have been included. There appears to be a joining across the knee; there was certainly one across the neck; both these joinings do not follow outlines, but are in parts of the figure which are in shadow. It is of course better, as has been already observed, to cut by outlines; but this is not always possible, especially in very large figures. The Germans prefer cutting across a broad light when circumstances compel the artist to make a joining where there is no outline. The graceful composition called the Galatea, also in the Farnesina, has been entirely executed in eleven or twelve days; the head and body of the principal figure have been painted in one day."

In elucidation of the subject, Mr. Wilson has added a few descriptions of paintings in fresco by different masters. He has also a paragraph on the

Effect of Stained Glass on Paintings.

"An opinion has been expressed that windows coloured in any degree are incompatible with paintings in rooms so lighted. It rather appears, however, from many instances, that stained glass may be sometimes so employed with great advantage; and that the excess of light may be thus subdued or otherwise modified so as to produce the most pleasing effect. In the cathedral at Munich the windows are coloured to a certain height, and although the effect is far from pleasing considered in itself, yet it is very useful as regards the pictures in the church, as the light is brought in from above in an advantageous manner. At Saronno, near Milan, there are two small frescos by Luini with a coloured circular window between. The pictures are lighted by a window on one side, and could not be seen at all but for the exclusion of white light by the coloured glass in the centre window. In S. Patrizio, at Bologna, there is an altar-piece under a window filled with richly stained glass; the picture is well lighted from an opposite window, but if the window over it had been of white glass it would have been impossible to see the picture, which is very dark. The sun happened to shine through the rich hues of the window above, and I observed here, as I had previously remarked at Saronno, that the picture did not suffer in consequence. At Assisi in the upper church, all the windows, one excepted over the door, are coloured, but in those which are painted, much of the glass is left white; the light is weak in this church, and it is thus apparent that it does not always answer to tint all the windows, even although pure light is partially admitted, but where the light is sufficient every window in a room with paintings may have a certain proportion of stained glass in it, provided pure light be not altogether excluded. It may be objected that coloured rays will be thrown on the frescos when the sun shines, but white rays are quite as objectionable, and besides, frescos never should be placed where the sun can shine upon them, as, like other pictures, they fade sooner or later under its influence; coloured glass in such a case might be an advantage, and the inconvenience from the coloured rays would be temporary."

Mr. Wilson concludes with an account of certain processes of painting allied to fresco, and called—

Fresco-secco.

"The late masters painted extensive works in this manner: the ceiling of the great hall in the Barberini Palace in Rome appears to me to be in fresco-secco; and in Rome, Florence, and Genoa, the ceilings of most of the palaces are covered with paintings executed in this manner; it is the mode of painting still adopted in Italy for nearly all decorative purposes, is easy of execution, and unquestionably durable, whilst it is certainly the most economical process which can be followed. Fresco-secco has been practised for some time in Munich: the ceilings of corridors and loggie and those of staircases, are thus painted in the palace; and the Chevalier Von Klenze, who first introduced the process at Munich, is satisfied with the experiments which have been there made with it. The following is a description of the method. The plastering of the wall having been completed and lime and sand only having been used for the last coat, the whole is allowed to dry thoroughly. When a wall is intended to be painted, the surface of the lime is rubbed with pumice-stone, and on the evening of the day preceding that on which the painting is to be commenced the plaster is thoroughly washed with water, with which a little lime has been mixed. The wall is again wetted next morning, and then the cartoons are fastened up and the outline is pounced. The artist then begins to paint. The colours are the same as those used in fresco-buono,* and are mixed with water in the same way, lime being used for the white. If the wall should become too dry, a syringe, having many fine holes at the end, is used to wet it. Work done in this way will bear to be washed as well as real fresco, and is as durable: for ornament it is a better method than real fresco, as in the latter art it is quite impossible to make the joinings at outlines, owing to the complicated forms of ornaments; on this account walls thus decorated in real fresco present an unsatisfactory appearance. The joinings are particularly observable in the loggie of the Vatican. Painting in fresco-secco can be quitted and resumed at any point. The artist need not rigidly calculate his day's work, and can always keep the plaster in a good state for working on. But whilst it offers these advantages, and is particularly useful where mere ornamental painting is alone contemplated, it is in every important respect an inferior art to real fresco. Paintings executed in this mode are ever heavy and opaque, whereas fresco is light and transparent. Fresco-secco has been chiefly adopted by late and inferior masters, and none of the works executed in this manner are of great reputation. The early pictures which are designated by the Italians as works in fresco-secco are not probably executed in this manner. The method may have been adopted in repainting parts, and this may have led to the idea that entire works were thus executed."

"* Fresco-buono, or buon-fresco, is the ordinary term for the regular process as opposed to fresco-secco."

OUR WEEKLY GOSSIP.

Announcements of new works come forth but slowly. Mr. Bentley, however, promises during the present month 'Memoirs of the Right Hon. the Earl of St. Vincent,' by J. S. Tucker,—concluding volumes of 'George Selwyn and his Contemporaries,'—'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover,'—'The Discovery and Conquest of Mexico,' by W. H. Prescott,—and 'Chronicles of Gretna Green,' by P. O. Hutchinson.

The daily papers announce the death on Monday last, of Mr. George Maddox, in his eighty-third year. Mr. Maddox was more extensively known among architects than the public. He was probably the oldest living member of his profession, and may be considered, says a correspondent, as "the father of the present generation, having been the instructor of Professor Cockerell, Mr. D. Burton, Professor Hosking, and many other eminent men. Indeed, the last thirty years or more of his life were devoted chiefly to teaching, and he thereby exerted, although not directly, a considerable influence on architectural taste, more especially as his was not a mere routine system of instruction. Though it is now upwards of sixty years since he commenced his career, hardly can he be said to have belonged to the old school, since he rather held it in contempt, as he likewise did all the superficial jargon of its criticism. Apt to speak anything but respectfully of Vitruvius and Palladio, and all 'pattern-makers' of the Orders, his opinions must, at one time, have been deemed not a little heretical; but he lived long enough to find them gaining ground, and that Architecture was studied in a better and more intelligent spirit, than it had been in his earlier days. He was a member of the Suffolk-street Society of British Artists from its formation, and a constant contributor to its exhibitions, chiefly of classical architectural compositions, with fragments of sculpture and ornaments in the antique taste, but frequently displaying many happy as well as original ideas. They were however *caviare* to the million of exhibition visitors, and indeed required to be carefully examined in order to have their merits appreciated. Some years ago he undertook a series of etchings, consisting of capitals, entablatures, and a variety of architectural ornaments, picturesquely grouped together, therefore of a very different character from the usual 'books of ornaments'; but increasing infirmities, accompanied with severe attacks of indisposition, prevented his accomplishing what would have obtained for him a high name in Art, not only at home, but wherever those productions found their way."

Baron Von Rumohr, who, as we learn from the *Foreign Quarterly*, died at Dresden, in July last, will long be remembered after his other literary productions shall have been forgotten, by his 'Italienische Forschungen,' a work of considerable research, and one throwing fresh light on the history of early Italian art. As a writer on an art altogether different—avowedly at once utilitarian and æsthetic—he will be known by his 'Geist der Kochkunst,' which is itself of a very different *genus* from those of the celebrated Hannah Glasse, and highly popular Mrs. Rundell, since it places him by the side of the philosophical Brillat-Savarin.

Here are a few words from a correspondent respecting "Paul's pence"—

If no abler knight-errant has stept forward to defend those full-grown Innocents, the functionaries of our metropolitan cathedral, whom, in a late article, you classed with harpies and land-sharks, perhaps I may be allowed a small arena for the display of my chivalry? Albeit, the numerous fees, which you nickname "Paul's pence," levied upon a visitor of that colossal toll-house (such you describe it rather than a sacred temple,) may, when totted up, look a little exorbitant, yet many among them, I maintain, afford him a good pennyworth of gapeseed, as the following items will make clear. First, *quoad* the Great Bell, whose thunder-claps we are told, like Pantagruel's wonderful triple-bobs, turn all the beer of the neighbourhood sour; a visitor has free permission to throw his eyes up at its *mouth* from the scaffold forty feet beneath—to see its *tongue* hang motionless afar off—and to suspect its clapper where he is informed it exists outside. In the Library he can feast his gaze on the *backs* of some hundred old books, and sharpen it on some very celebrated stone-work kept so inaccessible that, for what he can discern, it might as well have been carved by "Joiner Grub" as Grinling Gibbons. Here, also, is a floor of wood-mosaic, both valuable and visible; the amateur has five whole seconds to investigate its complex, labyrinthian design, to understand its subtle mechanism, and to linger over its fascinating beauties! Again, the Model Room exhibits four dignified blank walls, and Sir Christopher's plan of the Basilica looking still dingier and dolefuller amid the gloom; five seconds allowed here likewise to make one's-self perfect master of this model's architectural details, to saturate one's mind with the principle, in short, to render the visit really and thoroughly instructive! Yet how much do these three magnificent sights together cost the beholder? Why, but one and eight pence—little more than *thrice* what the single object, Westminster Abbey, would cost him, and ten minutes instead of an hour! Another sight so cheap, that it must be almost a positive loss to show it, is the Crypt for a bare shilling: now here, besides Nelson's beautiful trough of grey stone on an indescribable pedestal, are full half-a-dozen modern antique statues, over which the disappearance of their legs and the decay of their noses have flung a charm and an interest they never, when most perfect, possessed. But into this crypt too, along with the visitor and his guide, descends a flaming mutton-candle, though, peradventure, a rush would suffice to exhibit all the wonders: how far this splendid addition of a *dip* justifies the fee, housekeepers will understand—I need not quote *Suetonius*. No doubt, Mr. Editor, after the light my epistle has thrown upon all these obscure points, you at least will have grace enough to read your recantation.—I am, Sir, Yours, &c. O. P.

Digitized by Google

Pretermitting Mr. O. P.'s "display," our comparison between the respective fees demanded at Westminster Abbey and St. Paul's—sixpence, and four-and-fourpence—has been met by the plausible objection, that it is but fair a greater fee should reward a greater trouble. We grant that, at the first-mentioned edifice, it is neither requisite to dive into a crypt nor scale a cupola; we grant the larger amount of trouble given at St. Paul's, i. e. to the *visitors*; because, to the showman, it can make very little difference whether they are distributed horizontally or vertically throughout the building; indeed, we consider the round of a dozen chapels, which an Abbey guide performs, far more toilsome than any beat in the rival exhibition. But again, trouble alone, we assert, does not constitute a criterion; the *value* given for the fee is a no less important element thereof, or rather much the weightiest. How many of the Pauline curiosities, as exhibited, are *quasi*-worthless, may perhaps be conjectured from the illustrative letter above quoted.

The drawings, copies of inscriptions, and fragments of sculpture, discovered by M. Botta, in exploring the site of the ancient Nineveh, as mentioned in his interesting letters, (see *ante*, pp. 632, 697,) have been submitted to the Academy of Inscriptions, and the members have transmitted a formal report to the Minister of the Interior, recommending him to give national aid to the prosecution of these explorations. The Minister has accordingly instructed M. Eugène Flandin, who, as our readers know, was employed on a similar mission some time since in Persia, to proceed to Mosul and assist M. Botta in his further researches.

The principle of voluntary association is making a progress, and taking forms, which constitute one of the marking features of the age. In the cause of *abstinence*, its sanction is daily becoming more and more widely recognized and enforced. The passions which law has, in vain, sought to restrain from the issue, at once savage and ridiculous, of *duelling*, have been summoned to give in their allegiance to the new controlling principle: and *Sumptuary Laws*, never strong and always short-lived, are reviving, in the more healthful character of an appeal to opinion,—clearly the fit corrective of an abuse which it directly created. A letter from Nuremberg, dated September 25, states, that a public meeting was held on the preceding day, for the purpose of forming a society against extravagance in living and dress! Nearly 200 persons were present, many of whom were merchants; and the assembly was addressed by M. Binder, the burgomaster, who dwelt on the utility of such institutions. Similar institutions have, we believe, been formed in other parts of Germany; and it was stated, at the meeting in question, that there were like associations in France.

The Italian Opera of Paris opened a few days since, with 'Lucia di Lammermoor,' sustained by Persiani, Salvi, and Ronconi. The second artist, a tenor untried on this side of the Alps, seems to have produced but little impression, and to be thought a mannered rather than an expressive singer. For the moment, Ronconi's impassioned style is pronounced to be infinitely more charming than "the monotonous perfection" of Tamburini—our neighbours willingly forgetting, for novelty's sake, that the test of an artist is neither one single song nor one single character.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—FIRST PUBLIC EXHIBITION of Two important Discoveries in Science, viz.—ARMSTRONG'S HYDRO-ELECTRIC MACHINE, which produces eight times the quantity of Electricity of any other machine yet known, and which will be exhibited Daily at Three o'Clock, and at Eight in the Evening; and LONGBOTTOM'S OPAQUE MICROSCOPE, showing Objects in NATURAL HISTORY in all their varied Colours. LECTURES Daily on CHEMISTRY and NATURAL PHILOSOPHY by Dr. Ryan and Prof. Bachhoffner. The arrangement of the OPTICAL DEPARTMENT is under the management of Mr. Goddard. DISSOLVING VIEWS and COSMORAMIC PICTURES, MODELS of all kinds of MACHINERY in MOTION, DIVER and DIVING BELL, &c. Conductor of the Band, T. Wallis, Mus. Doc. Open Mornings and Evenings, except Saturday Evenings. Admission 1s.—Schools Half-price.

MUSIC AND THE DRAMA

SOCIETY OF BRITISH MUSICIANS.—There is more health and promise in the present sociable evening meetings of the young British Musicians, than in the more pretending entertainments they have superseded. An opportunity for trial and judgment is afforded to those who bestow their leisure upon classical composition—and (what is yet more important) of comparison and self-examination: since now the works of the foreign classical writers of chamber music are made a feature in each meeting. The good sense of this arrangement cannot but be felt by all who measure the *first soirée* of the season, held yesterday week, against certain orchestral concerts given in the Hanover Square Rooms some years ago. The first of the English compositions was a pianoforte trio, by Mr. Mudie: in which the opening *allegro* in ♩ time is the movement we prefer, as graceful, conversational, and sustained with attention to relief and contrast: the slow movement seemed, however, the favourite. The next was a MS. song by Mr. Macfarren, 'The Sailor's Grave'—which is more welcome than any song by its composer we recollect: because at once less strained and less common-place. Nothing is easier, for an adept in harmony, than to put together a few uncouth chords, and modulations unfamiliar because unpleasing;—but the result is not originality. Mr. W. S. Bennett's 'Gentle Zephyr' is another charming canzonet, which will make its way. The *soirée* wound up with Mr. Macfarren's clever quartett in A major. Besides this, Mozart's 'Non mi dir' was sung—Beethoven's quartett in G major played; and Mr. W. S. Bennett and Mr. W. L. Phillips introduced Mendelssohn's new duet for pianoforte and violoncello (op. 58) touching which, as the last novelty issued, we take this opportunity of saying a few words.

The character of the composition is life and brilliancy. The opening *Allegro assai* in D major, ♩, has the effect almost of an improvisation, the familiarity of its leading phrases being carried off by the spontaneous animation with which they succeed each other. The *Allegretto scherzando* in B minor is one of those movements in a national and old-world style—the *Volkslied* in the fourth book of Mendelssohn's '*Lieder ohne Worte*' another—which are as individual as they are charming: nothing can be at once easier and more engaging than the melody given to the violoncello. The *encore* was inevitable. In the *Adagio* the composer has broken new ground, by taking a simple *corale*, the chords of which are widely spread by the use of the *arpeggio* and the pedal on the pianoforte, while the violoncello executes a free accompaniment. The *finale*, though, like the first movement, brilliant and vivacious, is more hackneyed in its forms and modes and phrases. We are well aware that in all Dr. Mendelssohn's pianoforte music the idea is the main thing, and the *passage* of subordinate consequence: still, would it not be worth while for a thinker at once so far-sighted and so poetical to recollect that in the present developed state of mechanical science, one who constantly repeats the same forms of clothing will, in the end, become liable to the charge of poverty, or carelessness, or mannerism, as may be? Are there no other ways of setting off a thought to the best advantage, than the *arpeggio*,—or the quick reiteration of *staccato* chords?

COVENT GARDEN.—Mr. Bourcicault's 'Woman' has been elbowed off the stage by his 'London Assurance,' which introduced a new representative of the young men about town,—a Mr. Hoskins, from the Norwich Theatre, who played *Charles Courtly*, in lieu of Anderson; but, having neither the air and address of a finished gentleman nor the art of an accomplished actor, his performance made no impression. Mrs. Nisbett's animation and sprightly ease as *Lady Gay Spanker* infused a spirit of gaiety into the comedy, and Keeley, as her droll little dolt of a husband, made the ball of fun rebound by his dense stolidity. There is no one at this theatre to supply the places of Farren, Bartley, and Charles Mathews; but Mr. Wigan was an acceptable substitute for Harley, as *Lawyer Meddle*. 'Othello' is being played, Messrs. Vandenhoff, Phelps, and Anderson alternating the parts of *Othello*, *Iago*, and *Cassio*; and other tragedies of Shakspeare are to be represented in like fashion. If positive badness be the only attainable relief to mediocrity, we think the latter should be preferred, though the public may not care for either. The 'Lady of Lyons' was promised, but the manager announces that he could not accede to the terms demanded by Sir E. Bulwer for the privilege of playing it. Perhaps the author purposely asked a prohibitory price.

HAYMARKET.—'Old Parr' owes his stage existence, which is likely to be prolonged to an extent proportionate to his protracted career on the stage of life—to the skill of Mr. Farren, who has infused vitality and individual character into a slight and vague conception, that might have been taken for any other old man, giving to his personation an interest which the character wants, and rendering the audience tolerant of a dull and disagreeable drama, made up of detected knavery and rusticity, made rich by restitution. *Old Parr* appears first as a hale, active old man, of 120, though looking little more than half that age, for the actor has rightly delayed the advance of infirmity in ordinary mortals, and presents the portrait of a lively, chirping, grey-headed man, who walks a score of miles without fatigue, and whose ruddy face is set off with a white moustache and pointed beard, such as a veteran who cultivated a youthful aspect would be vain of: the only signs of advanced age are an occasional lapse of memory and a pride in proclaiming his years. In the next act, he is bowed down with the weight of eight-and-twenty added years; his limbs and senses fail, and both the bodily and mental facultics are in a state of decrepitude, though he is not reduced to complete imbecility: his thick flowing beard and scant straggling hair falling on his robe, give a venerable aspect to his wrinkled visage and enfeebled form; and as he sits in his easy chair, toying with flowers, and remembering their names with effort, talking with his little page beside him, the picture of happy old age lapped in comfort and content, is beautiful. We are inclined to resent the old man's being disturbed, as the necessities of the drama require him to be, in order to prove that his signature to a false will has been forged; and the intrusion into his chamber of a swaggering scoundrel and a quarrelsome couple of Welsh rustics, clamouring for justice, destroys the sentiment of the scene. It was bad enough to see *Old Parr* the dupe of a couple of cheating horse-dealers and the bugbear of a roguish lawyer, in the first act; but to view him only through an atmosphere of villany is wholly unsatisfactory. The dramatist has made no better use of Parr's long life than an Old Bailey advocate.

MISCELLANEA

Paris Academy of Sciences.—Oct. 2.—At the opening of the sitting, M. Flourens announced the death of Dr. Jacobsen, one of the correspondents of the Academy in the section of zoology and comparative anatomy (see *ante*, p. 907).—M. Person read a paper on the means of giving more precision to the thermometer, and substituting this instrument for the barometer in measuring heights.—M. Moreau de Jonnès presented some new statistical researches as to the population of Europe. According to his calculation, it amounted in 1788 to 144 millions, and in 1838 to 253 millions, which shows an increase of about 75 per cent. in a period of fifty years. The increase of the population in France is by no means in the same ratio. According to a recent account, it does not double itself in less than 130 years.—M. Moreau de Jonnès also communicated some statistical facts as to the price of provisions amongst the ancients. A report of a work, by M. Parchappe, on the causes of insanity, was then read.—A discussion took place on a paper by M. Langlois respecting the existence of sugar in the sap of certain plants.

Society of Arts, Adelphi, Oct. 10.

Run-away Horses.—A paragraph appeared in the last number of the *Athenæum*, in reference to a communication which had been sent to the Academy of Sciences at Paris, relative to stopping run-away horses. A similar plan was laid before our Society last spring by Mr. R. Templeton, of Greenwich, but as the same object had been practically effected by that eccentric character, Martin Van-Butchell, and published in a book called "Wonderful Characters,"—it was not considered worthy of the further attention of the Society; in other words, no premium was awarded to the Candidate, nor is Mr. Templeton's communication to be published in our forthcoming volume of Transactions. I am, &c. FRANCIS WHISHAW,

The Editor of the *Athenæum*. Secr.

Pope.—I do not find the following in Pope's works, and believe they have never been printed. Perhaps

Digitized by Google

some of your numerous readers can say whether they are new or not. F. D.

Upon Ds. of Q....bury, by Mr. Pope.

Did Cæcilia's person and her mind agree,
No mortal could behold her & be free;
But Nature has, in pity to mankind,
Enriched the image & defaced ye mind.

Answer to Mr. Pope.

Had Pope a person equal to his mind,
How fatal wou'd he be to womankind,
But Nature, wch doth all things well ordain,
Defaced ye image & enriched ye brain.

Dover.—According to the *Dover Telegraph*, another of those blasts by which the progress of the railway works have been so greatly facilitated, was intended to have been effected last week, but, from some unaccountable cause, the circuit of one of the voltaic batteries was prematurely completed, discharging a portion of the mines, and leaving the rest unsprung. In this blast 3,600lb. of gunpowder were to have been exploded. This was divided into twenty-eight charges, varying from 28lb. to 900lb. each, and placed upon two platforms, 100 feet apart; the upper having twelve and the lower sixteen charges, the whole of which were intended to have been simultaneously ignited. It is impossible to account for the partial and premature ignition which took place. So, however, it was; some of the mines first exploded, and Mr. Hodges, finding that to be the case, completed the circuit of the whole of the batteries, by which the twelve mines on the upper platform were discharged. Upon examination it was found that the explosion had disarranged the whole of the wires connected with the lower mines, and prevented their being discharged until the next day. The result, however, appears to have been the same, and to have satisfied the engineers.

Railways.—The *Journal des Chemins de Fer* says—"An inventor announces that he has found a composition which will reduce to a mere trifle the price of rails for railroads. He replaces the iron by a combination of Kaolin clay (that used for making pottery and china) with a certain metallic substance, which gives a body so hard as to wear out iron, without being injured by it in turn. Two hundred pounds of this substance will cost less than 12*s.*, and would furnish two and a half mètres of rail. The Kaolin clay is abundant in France, and the valley of the Somme contains immense quantities of it."

Coins.—A letter from Wisby (the island commonly known as Gottland, in the Baltic, on the coast of and belonging to Sweden,) mentions that "On the 1st of this month a countryman of Rohne, while ploughing on the side of a hill, found an oval copper vessel, containing above 3,350 silver coins, and fragments of different sizes. About 380 of these coins are Anglo-Saxon, Danish, and Norwegian, of Kings Ethelred, Canute, Harold, Hardicanute, Edward, and Swen Erickson. The others are German, chiefly of the cities of Cologne, Magdeburg, Maine, Strasburg, Augsburg, &c. They are all of the 10th and 11th centuries, and the whole appear to have been buried in the ground towards the end of the 11th century. There are only two cafes (Arabian coins) among them. Two other peasants have found a coin and a clasp."

A Volcano.—According to letters from Ancona, a volcano appeared last month in the rocky island of Melada, situated in the Adriatic, near Ragusa. On the night of the 14th the crew of a Roman vessel saw lava issue from the centre of the island, and flow over an extent of half a mile. The night after seven distinct craters were seen to send forth darkish inflamed matters.

Algiers.—The *Moniteur Algérien* announces the discovery at Orléanville, in preparing the foundations for some new buildings, of the ruins of an old Christian church. On the porch of the edifice was found an inscription in Latin, of which the following is a translation:—"Here reposes our father Reparatus, Bishop, of sacred memory, who for eight years and eleven months performed the sacerdotal functions, and who has passed before us in peace, the 11th day of the Calends of August, in the 436th year of the birth of Jesus Christ.

To Correspondents.—H. J. F.—Moussoul—W. C.—received.

H. E. S. Our report was copied from the official record, and cannot therefore be altered.

Erratum.—The painter engaged in commemorating the interview between our Queen and the King of the French (*ante*, p. 907, col. 2.), was last week called M. Paul instead of M. Paul *Delaroche*.

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

STONE-COLOURED CEMENT.
FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

F. ARNOLD'S
INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.
In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*
To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curson-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

H. WALKER'S NEEDLES (by authority The 'Queen's Own') in the illustrated Chinese boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of her Majesty or his Royal Highness Prince Albert, in relief on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c., for shipping. These needles or pens for the home trade are sent, free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value.—H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 71½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 123 years. W. & Son have removed to 74, CORNHILL, where the advantages of the premises will enable them personally to superintend their workmen. An extensive Stock, finished with the utmost care, and at the lowest possible prices consistent with maintaining their reputation supported during so many years for the finest work; consisting of COMPENSATED DUPLEX and LEVER WATCHES, on the principle of their Chronometers, to which Government awarded the prizes three years in succession. The Detached Lever and Horizontal Watches for ladies, of the smallest and most elegant patterns. Marine and Pocket Chronometers with long and accurate rates, also a large selection of second-hand Chronometers and Watches by the most eminent makers. Superior workmen are employed on the premises in the repairing department, for English and foreign work.—Webster & Son, 74, Cornhill.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.
FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtor's Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.
Manufactory, No. 6, Francis-street, Gray's-inn-road.

ELECTRO-PLATED and GILT ARTICLES.—ELKINGTON & CO., Patentees, gratefully acknowledging the distinguished patronage the articles of their manufacture have hitherto received, beg to announce that their stock, embracing every variety of NOVELTY for the SIDEBOARD, DINNER, DESSERT, and BREAKFAST TABLE, may be inspected at their Establishments,
WEST-END,—22, REGENT-STREET, corner of Jermyn-street.
CITY,—45, MOORGATE-STREET.
The Patentees beg expressly to state, that their electro-plated goods differ entirely from any hitherto offered to the public as 'plated goods,' or 'substitutes for silver.' Both in appearance, sound, and wear, these goods are equal to SOLID SILVER; they are cast and chased in SOLID WHITE METAL, and strongly plated with silver by their PATENT ELECTRO PROCESS; all joints are made with hard silver solder, which cannot be used in ordinary plated goods, and neither acids nor heat affect them.
Their ELECTRO-GILDING, for beauty of colour and facility of application to ALL METALS, is much superior to the old method of water-gilding.
Old Sheffield plate restored and re-plated; plating and gilding, on old or new articles, promptly executed, at the Manufactory, 45, Moorgate-street.
Every article made and warranted by the Patentees bears their stamp, E. & Co. over a crown.

THE OMBROSOME, or PATENT PORTABLE SHOWER BATH, especially adapted for travelling and exportation. By this Bath an inexhaustible shower is produced from a few quarts of water: the height of the shower may be increased or lessened to suit adults or children, and occupying so little room, is peculiarly suited for bed-rooms and dressing-rooms; it is also an excellent Douche Bath. Being little larger than a writing-desk when packed, it will be a great desideratum for exportation to India and other hot climates. To Military Men and others of a migratory life, also to Students of the Universities, Inns of Court, &c. (where rooms are low and water scarce), the present invention cannot fail to be most acceptable. It is made entirely of brass, and is at once simple and elegant.—May be seen at the Royal Polytechnic Institution; and be had, with Prospectuses, wholesale and for exportation, at the Manufactory, 115, Old-street; and retail at the Bazaar, Panklibanon Iron Works, 86, Baker-street; Mr. J. L. Benham, 19, Wigmore-street; Mr. C. Bray, 16, Cranbourne-street; Mr. J. Deacon, 4, Moorgate-street; Mr. J. Evans, London Bridge; Messrs. Pallows & Adcock, 4, Halkin-street West; Messrs. Glenfield & Chapman, 147, New Bond-street; and of all the leading Ironmongers throughout England.—Price 4*l.* 10*s.* and 5*l.* 5*s.*

BUTTER MADE IN TEN MINUTES, by the NEWLY-INVENTED CHURN, registered according to Act of Parliament.
This Act imposes a penalty of from 5*l.* to 20*l.* for each imitation, piracy, or selling, recoverable by the proprietors before a magistrate, or by civil action. Half the penalty will be given to any person informing the proprietors of any infringement. The words of the Act are, "No person or persons shall copy or alter any design, either by adding to, or subtracting from," &c.
ATTWOOD, WIMBLE & WARNER, Manufacturers, LEWES, Sussex.
This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which insures the butter coming in ten or twelve minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the heat of summer, placing the churn in cold water will be the means of hardening the butter.

Sizes,	No. 1,	2,	and 3,
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London,	25*s.*	35*s.*	42*s.*

Metal Pans for Churns to stand in, 4*s.* 6*d.*, 6*s.*, and 7*s.* Larger sizes made to order.
To be seen in London, at Wright's Range Warehouse, No. 3, Arthur-street, near the Monument; Rigby's Brush Warehouse, No. 80, Gracechurch-street; Livermore & Son, Ironmongers, No. 30, Oxford-street; Benham, 19, Wigmore-street, Cavendish-square. Export Agents, Barnes & Co., 109, Fenchurch-street.

THE NATURALIST'S LIBRARY,

Now completed in 40 Volumes.

By SIR WILLIAM JARDINE, BART.

F.R.S.E. F.L.S. &c.

Each volume, besides the usual quantity of letter-press, contains between 30 and 40 coloured Plates, drawn and engraved, in most instances, from the natural objects, elegantly bound in extra cloth, small 8vo. price 6*s*.

The following is a list of the subjects embraced by this publication; and each volume is, moreover, enriched with a Memoir and Portrait of a celebrated Naturalist.

CONTENTS.

ANIMALS.

INTRODUCTORY VOLUME. 31 Plates.
MONKEYS. 32 Plates.
LIONS, TIGERS, &c. 38 Plates.
DEER, &c. 35 Plates.
GOATS, SHEEP, &c. 33 Plates.
ELEPHANTS, &c. 31 Plates.
WHALES, &c. 32 Plates.
BRITISH QUADRUPEDS. 36 Plates.
SEALS, &c. 33 Plates.
DOGS. 2 vols. 65 Plates.
MARSUPIALS. 36 Plates.
HORSES. 35 Plates.

BIRDS.

HUMMING BIRDS. 2 vols. 68 Plates.
PEACOCKS, &c. 30 Plates.
GAME BIRDS. 32 Plates.
PIGEONS. 32 Plates.
PARROTS. 32 Plates.
BIRDS OF WESTERN AFRICA. 2 vols. 68 Plates.
BIRDS OF GREAT BRITAIN AND IRELAND. 4 vols. 134 Plates.
FLY-CATCHERS. 33 Plates.
SUN-BIRDS. 30 Plates.

INSECTS.

INTRODUCTORY VOLUME. 38 Plates.
BEETLES. 32 Plates.
BRITISH BUTTERFLIES. 36 Plates.
BRITISH MOTHS. 32 Plates.
FOREIGN BUTTERFLIES. 33 Plates.
FOREIGN MOTHS. 34 Plates.
BEES. 32 Plates.

FISHES.

INTRODUCTORY VOLUME. 33 Plates.
PERCH, &c. 32 Plates.
FISHES OF GUIANA. 2 vols. 66 Plates.
BRITISH FISHES. 2 vols. 68 Plates.

THE MEMOIRS AND PORTRAITS include Linnæus, Buffon, Pennant, Cuvier, Aristotle, Raffles, Banks, Ray, Pliny, Werner, Camper, J. Hunter, Sloane, Mdme. Merian, Bewick, Lacepede, Bruce, Lamarck, Le Vaillant, Sibbald, Haller, Aldrovandi, Peron, Smellie, Pallas, Huber, Salviani, D'Azara, Swammerdam, De Geer, Barclay, Gesner, Schomburgk, Latreille, Walker, Drury, Willughby, Rondelet, Burckhardt, Humboldt, and Wilson.

*** No series of volumes which have appeared have kept up their interest more than this popular Work—none have been better patronized by the public; and none have been more favourably noticed by the periodical press of the day, from which we select a very few

NOTICES.

Athenæum.

"The book is perhaps the most interesting, the most beautiful, and the cheapest series yet offered to the public."

Literary Gazette.

"We could hardly have thought that any new periodical would have obtained our approbation so entirely as the 'Naturalist's Library;' but the price is so low, the coloured plates—three dozen in number—so very elegant, and the description so very scientific and correct, that we cannot withhold from it our warmest praise. The whole is a perfect bijou, and as valuable as pretty."

Asiatic Journal.

"The Pictorial Illustrations, in respect both to form and colouring, are perfection."

Saunders' News-Letter.

"This admirable series is at length concluded, and consists of forty volumes, viz., Animals, thirteen; Birds, fourteen; Insects, seven; Fishes, six; and it is but just to the eminent publishers to say, that no expense has been spared in making it the most comprehensive digest extant. The distinguished writers whose services have been procured, are a sufficient guarantee of care and correctness, and they have left but little to be desired."

Evening Packet.

"This truly beautiful and valuable history of animated nature is now concluded, and with the volume of the series devoted to British Birds, the onerous labours of the Messrs. Lizars have terminated. The work is now complete in forty elegant volumes, containing a mass of information such as never before was presented to the public in a form so cheap and easily attainable. To Animals the Editors have devoted thirteen volumes; to Fishes six, to Birds fourteen, and to Insects seven; and the Naturalists to whose care each department has been intrusted, are the most eminent in the world. But even the excellence of the letter-press, enriched as it has been with the biographies of all the eminent men of past ages, whose researches have brought Natural History familiar to our eyes, must pale before the splendour of the illustrations. They are superb specimens of art, coloured in the richest and most finished manner; and when we tell our readers that they number so many as one thousand two hundred and eighty plates, containing more than four thousand figures of natural objects, drawn and coloured almost entirely from living specimens, they may form some idea of the beauty of the work. It has now occupied the publishers ten years, and we heartily congratulate them on the perfect success that has attended their efforts. Not one word of promise, uttered in the original prospectus, has been broken, and that the speculation, even taking into consideration its enormous expense, must be profitable, we cannot entertain a doubt."

*** Any of the popular volumes may be had separately, in bindings and with titles different from the book in series, price 6*s*., of which the following is a list,—

ANIMALS.

HISTORY OF MONKEYS.
—— LIONS.
—— DEER.
—— ELEPHANTS.
—— WHALES.
—— BRITISH ANIMALS.
—— SEALS.
—— DOGS. 2 vols.
—— HORSES.

FISHES.

HISTORY OF BRITISH FISHES. 2 vols.

BIRDS.

HISTORY OF HUMMING BIRDS. 2 vols.
—— GAME BIRDS.
—— PIGEONS.
—— PARROTS.
—— BRITISH BIRDS. 4 vols.
—— SUN BIRDS.

INSECTS.

HISTORY OF BEETLES.
—— BRITISH BUTTERFLIES,
—— BRITISH MOTHS.
—— BEES.

S. HIGHLEY, 32, FLEET-STREET, LONDON; W. H. LIZARS, EDINBURGH; CURRY & Co. DUBLIN;

Singing	—	Mr. Wrighten.
Drawing	—	Mr. Wallis.
Elocution	—	Mr. Smart.

Annual Subscription, 2*l.* 2*s.*; Half-yearly, 1*l.* 1*s.*

CLIMATE.—A MEDICAL GENTLEMAN, who was sometime since led to visit the Tropics for health, having arranged a pleasant temperature with a free circulation of pure air throughout a large house, with some peculiar advantages, wishes to RECEIVE TWO or THREE INVALIDS, who would be benefited by protection from the severities of this climate, so constantly prejudicial in cases of weak lungs, rheumatisms, and most *varying* disorders.

36, Bedford-square, London.

MEMOIRS of ABRAHAM RAIMBACH, Esq., Engraver, and of Sir DAVID WILKIE, R.A. London, 1843. Sm. 4to., for *private* circulation.

The few copies of this work intended for review, were sent out by myself in consequence of the absence of the Editor on H.M. service; and I declare that no copy was sent to the *Weekly Dispatch*. A review of the work, however, appeared in that paper on the 15th instant.—All the extracts which the reviewer gives, had before appeared in the *Athenæum*; and the name of the Author, which is introduced six times, is in every instance mis-spelt! It is my conviction, therefore, that the writer had never seen the volume—and I denounce the article in question as a piece of literary imposture.

Greenwich, 18th October. BOLTON CORNEY.

GRADUATION IN ARTS, &c.—Gentlemen of liberal education and pursuits may, through the assistance of the Advertiser, obtain a Degree in any Faculty for which their previous education may have qualified them. The Exercises, amount of Fees, &c., will be communicated in answer to all letters, giving particulars of applicant's status and education.—Address (pre-paid) to M. D., at Messrs. Nock's, Booksellers, 15, Tottenham-court New-road.

PRIVATE PUPIL.—A CLERGYMAN, for some years Tutor to a Nobleman, and subsequently receiving Six Pupils into his house, a moderate distance from London, would be glad to fill a VACANCY with a GENTLEMAN'S SON, whose education or health may require more than common attention.—Letters, addressed to the Rev. J. C. C., Post-office, Hampton Court, Middlesex, will be forwarded to him.

GOVERNESS.—A LADY, who is a member of the Established Church, and has had several years' experience in Tuition, wishes to meet with an ENGAGEMENT AS GOVERNESS. In addition to the usual branches of education, she gives instruction in Music and Drawing, and the French, German, and Italian languages.—For reference, apply to the Rev. Thomas Dixon, Incumbent of Trinity Church, South Shields, Durham.

TO PUBLISHERS.—The Advertiser has been successfully engaged for the last 15 years in CANVASSING for an extensive Work now completed. Any Publisher requiring an active person, would find the Advertiser a great acquisition. Apply by letter (post paid) to A. B., care of Mr. Laver, Stationer, 28, Upper Marylebone-street, Portland-place.

Now ready, gratis, and post free.

HINTS for the FORMATION of READING SOCIETIES.

The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature, the choice of all the most valuable works in the various languages, and that of extending the choice of New Books to the entire productions of the Press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the new works as they appear may be obtained.

Saunders & Otley, Publishers, Conduit-street,

Of whom may be had, gratis and post free,

A New List of the Redundant Copies of New Publications in History, Biography, Memoirs, Travels, Novels, &c., withdrawn from Saunders & Otley's extensive Library, Conduit-street, Hanover-square.

ROYAL COLLEGE OF SURGEONS, EDINBURGH.

The following COURSES of LECTURES on MEDICAL SCIENCE, and also those delivered in the University, qualify for Examination for the Diploma of this College.

Classes open on THURSDAY, November 2, 1843.

NATURAL PHILOSOPHY.. George Lees, A.M., and Mr. George Glover.
ANATOMY (ELEMENTARY and DESCRIPTIVE).. Dr. Mercer, Dr. Handyside, Dr. Lonsdale, and Dr. Skae.
ANATOMICAL DEMONSTRATIONS..Dr. Mercer, Dr. Gray, Dr. Handyside, Dr. Lonsdale, Mr. Spence, Dr. Skae, and Dr. W. Macleod.
PRACTICAL ANATOMY..Dr. Mercer, Dr. Gray, Dr. Handyside, Dr. Lonsdale, Mr. Spence, Dr. Skae, and Dr. W. Macleod.
PHYSIOLOGY..Dr. Knox and Dr. W. Macleod.
CHEMISTRY..Dr. Fyfe and Dr. Reid.
PRACTICAL CHEMISTRY (Three Months' Courses).. Dr. Fyfe and Dr. Reid.
MATERIA MEDICA and DIETETICS..Dr. Seller and Dr. Douglas Maclagan.
PRACTICE of PHYSIC..Dr. Craigie, Dr. Alexander Wood, and Dr. Bennett.
CLINICAL MEDICINE (Mondays, Wednesdays, and Fridays) ..Dr. Craigie.
SURGERY..Dr. J. A. Robertson and Dr. J. Duncan.
CLINICAL SURGERY (Tuesdays and Thursdays).. Dr. Handyside.
MIDWIFERY (Three Months' Courses)..Dr. W. Campbell and Dr. Marr.
FORENSIC MEDICINE..Dr. Cormack and Dr. A. D. Campbell.
ROYAL INFIRMARY, Daily, at Noon.

By order of the Royal College,
AW. FYFE, President.

All the Courses are for Six Months, if not otherwise specified. The Fees for each of the above Courses are—First Course, 3*l.* 5*s.*; Second Course, 2*l.* 4*s.*; Perpetual, 5*l.* 5*s.*, with the following exceptions:—Anatomy and Natural Philosophy, 3*l.* 3*s.* each; Practical Anatomy and Demonstrations, together, 4*l.* 4*s.*, and, to those who have attended two Courses, 2*l.* 2*s.*; Perpetual Ticket, 9*l.* 9*s.*; Forensic Medicine, 2*l.* 5*s.*; Midwifery, 3*l.* 5*s.* for two Courses of Three Months' duration each. Royal Infirmary: Perpetual Ticket, 12*l.* 12*s.*; Annual, 5*l.* 7*s.* 6*d.*; Half-yearly, 3*l.* 3*s.* 6*d.*; Quarterly, 1*l.* 13*s.*; Certificate of Attendance, 5*s.*

The above Courses of Lectures, so far as required, also qualify for Graduation at the Universities of London, Oxford, Cambridge, St. Andrews, and Aberdeen; and for Examination at the Royal Colleges of Surgeons of London and Dublin; the Apothecaries' Hall, London; the Faculty of Physicians and Surgeons of Glasgow; and the Boards of the Army, Navy, and East India Company.

In consequence of the opinion recently delivered by the Attorney-General of England, those persons who hold a Scotch or Irish Diploma or Degree in Surgery are now admitted "to the same rights under the Poor-law Amendment Act as Members of the Royal College of Surgeons of London."

Sales by Auction.

SOUTHGATE'S ROOMS.

JONES'S HISTORY OF ANCIENT AMERICA.

Second Edition.

Now published, in England, the United States, France, and Prussia, in royal octavo, Medallion portrait, and vignettes, price 20*s.*

THE ORIGINAL HISTORY of ANCIENT AMERICA, anterior to the time of Columbus, founded on an analysis of the Ruined Cities; proving the identity of the Aborigines with the People of Tyrus and Israel, and the Introduction of Christianity into the Western Hemisphere by the Apostle St. Thomas.

By GEORGE JONES, M.R.S. F.S.V.

TYRIAN ÆRA, 333 BEFORE CHRIST.

"The History of Ancient America is founded upon the great principle of the Baconian philosophy—viz. inductive reasoning, i. e. *facts*, accumulated to prove a theory; it, therefore, follows that the novel secrets of this History are *discoveries*, not inventions, and they essentially are upheld and supported by the records of the Bible."

"The author's mind has explored a vast multitude of facts; and the striking originality of his idea is ably supported by arguments."—*Metropolitan.*

"There certainly is great originality in the idea; and the author has endeavoured to lift his style and language into keeping with the lofty pretensions of the theory."—*Church of England Quarterly Review.*

Longman & Co.; and at all Booksellers.

TO BE HAD OF ALL BOOKSELLERS.

*** For the considerable changes introduced into this edition of the Gradus, the Editor having availed himself of the suggestions of several of the most distinguished scholars in the kingdom, is gratified to find that his labours have received their approbation.

COMPLETION OF THE HISTORY OF ENGLAND.
In 21 vols. small 8vo. with 80 Plates, price 5s. each, bound in cloth,

VALPY'S only Complete HISTORY of ENGLAND.
By HUME and SMOLLETT, and HUGHES.
The Continuation from the Reign of George II. (1760 to 1835.) By the Rev. T. S. HUGHES, B.D., Prebendary of Peterborough, late Christian Advocate at Cambridge, Author of 'Travels in Greece,' &c. Embellished with 80 highly-finished Engravings on Steel.
Printed by A. J. Valpy, M.A.; sold by H. Wix, Bridge-street; and all Booksellers.

CITY ABUSES.—The Trust Estates held in the City for public and charitable objects produce an annual sum of 384,096l. 11s. 9½d. Notwithstanding these princely endowments, the local rates collected for the relief of the poor, for the Church, paving, watching, lighting, &c., are a heavier burden upon the inhabitants than exists in any district of corresponding extent in the United Kingdom, amounting for the year 1841 to 272,796l. 4s. 5d., besides Octroi duties, or taxes upon coals, provisions, &c., levied by the Corporation upon the public at large to the amount of 202,549l. 12s. 7d. per annum. For an account of the mode in which these enormous funds are raised and expended in an area embracing only 1-15th section of the Metropolis, see a Pamphlet entitled 'THE CORPORATION OF LONDON AND MUNICIPAL REFORM,' reprinted by subscription from the *Westminster Review*. Price 6d.
S. Clarke, 13, Pall Mall East; E. Wilson, 18, Bishopsgate-street.

HORTICULTURAL ALMANACK.
The STATIONERS' COMPANY will publish, with their usual Almanacks, in November, price 1s.

THE GARDENERS' ALMANACK, and CALENDAR and REGISTER of the KITCHEN, FRUIT, FLOWER, and FORCING DEPARTMENTS, for the Year 1844.
By GEORGE W. JOHNSON, Esq.
Fellow of the Agri-Horticultural Society of India; Corresponding Member of the Maryland Horticultural Society; and Author of 'A History of English Gardening,' 'The Kitchen Garden,' &c.
*** This almanack will afford a large supply of matter, interesting not only to the professional, but also to the domestic gardener, as well as to the amateur cultivator of flowers and fruits, and to the general reader. Besides containing calendarial directions and suggestions for every department during the current year, it will also be a register of all discoveries in gardening which have characterised the previous twelvemonths. The contents will, for the most part, vary every year; and it is recommended that each annual publication be preserved, as an index will be given to bind up with each volume. To Nurserymen, Seedsmen, Implement-makers, and Publishers of works connected with the cultivation of the soil, this Almanack offers a peculiarly desirable medium for Advertisements, as a very large number will at once be circulated through the United Kingdom, and will remain *a permanent and indexed record* for reference in the hands of those most desirable to be made acquainted with their contents, viz., the Landed Gentry, and Cultivators of Gardens generally.

BRITISH FARMER'S ALMANACK.
In November will be published, by the STATIONERS' COMPANY, price 1s., comprising nearly 100 closely-printed pages,

THE BRITISH FARMER'S ALMANACK, and CALENDAR of GENERAL INSTRUCTION in the MOST IMPROVED MODES of AGRICULTURE and GARDENING; being a Register of Daily Useful Information for the United Kingdom, for 1844.
London: printed for the Company of Stationers; and sold by G. Greenhill, at their Hall, Ludgate-street; and by all Booksellers.
*** This Almanack, now offered for the Second Year, includes a great variety of original information. The List of Fairs has been rendered much more complete; and its facility of reference greatly improved by being wholly in the Alphabetical Order of Places, instead of the usual arrangement under Counties or Months. To all who require a knowledge of the Fairs in England, Wales, Scotland, and Ireland, this list is alone sufficient to render the Almanack a most valuable acquisition.

By EDWARD WILLIAM LANE,
Author of 'The Manners and Customs of the Modern Egyptians,' and Translator of 'The Thousand and One Nights.'

SELECTIONS FROM THE KUR-ÁN,
Commonly called in England the KORAN, with an interwoven Commentary; translated from the Arabic, methodically arranged, and illustrated by Notes. To which is prefixed an Introduction, taken from Sale's Preliminary Discourse, with Corrections and Additions. In 1 vol. 8vo. price 10s. 6d.
London: J. MADDEN & Co. 8, Leadenhall-street.

THE NATURAL HISTORY OF GREAT BRITAIN.
This Series of Works is illustrated by more than 1,700 Engravings; all the Species have been drawn and engraved under the immediate inspection of the Authors; the best Artists have been employed, and no care or expense has been spared. A few copies of each have been printed on large paper.

A HISTORY OF BRITISH BIRDS.
By WILLIAM YARRELL, F.L.S. V.P.Z.S., &c.
The three volumes contain 520 Illustrations, price, in demy 8vo. 4l. 10s.; royal 8vo. 9l.; or imperial 8vo. 13l. 10s. To suit the convenience of purchasers, the Work will still be sold in Parts at 2s. 6d. each, or in Volumes. Vol. I. price 28s.; Vol. II. 35s.; Vol. III. 30s.

MR. BELL'S HISTORY of BRITISH QUADRUPEDS. 28s. 200 Illustrations.
——— HISTORY of BRITISH REPTILES. 8s. 6d. 40 Illustrations.
MR. YARRELL'S HISTORY of BRITISH FISHES. Second Edition, enlarged, 2 vols. 3l. 500 Illustrations.
MR. FORBES'S HISTORY of BRITISH STARFISHES. 15s. 120 Illustrations.
MR. JONES'S OUTLINE of the ANIMAL KINGDOM. 38s. 350 Illustrations.

"Most cordially do we congratulate Mr. Yarrell on the termination of his laborious undertaking. The five volumes which he has produced are, in every sense of the word, national works—national in their subject and national in their execution; for it is beyond the power of any other country to produce such a series of illustrations as are contained in these works. To every lover of nature,—and especially to every admirer of the productions of his own country,—these works are indispensable."—*Athenæum*, Oct. 7.

"The series of excellent zoological works, published by Mr. Van Voorst, have included able surveys by our most eminent Naturalists, of the existing species of different classes of animals of Great Britain."—*Professor Owen's Report before the British Association for the Advancement of Science.*

Also, price One Shilling, a Specimen Catalogue of the Works published by
JOHN VAN VOORST, 1 Paternoster-row.

DENHAM PARK INSTITUTION
FOR
THE TREATMENT OF MENTAL DISORDERS
AFFECTING THE UPPER CLASSES OF SOCIETY OF BOTH SEXES.

Director—EDWARD HORNOR, Esq.

Consulting and Visiting Physician—JOHN FORBES, M.D. F.R.S.,
Physician in Ordinary to Her Majesty's Household, and Physician Extraordinary to His Royal Highness Prince Albert,
12, OLD BURLINGTON-STREET, LONDON.

Resident Medical Officer—WILLIAM WILSON, M.D.

Medical Referee in London—ERASMUS WILSON, Esq., 55, Upper Charlotte-street, Fitzroy-square.

SOME changes in the direction of this Institution, and an important addition recently made to its medical staff, seem to justify the Director in calling attention to the claims which it possesses to the confidence of the public and to the support of the medical profession. It is believed that a fuller knowledge of the character of this establishment, on the part of medical men, will be found of importance to them, in many cases, when called upon to recommend a temporary abode for a patient who may be required to be removed from home. It is the object of the Director and Medical Superintendents to give to the Institution the character and appearance of a domestic retreat during the removal of a temporary disease, not of a place for the seclusion and punishment of dangerous and incurable persons. Accordingly, the greatest care is taken, not merely to discard every form of personal restraint, but, as far as practicable, to remove from the observation of the inmates everything that could tend to irritate or distress their feelings; and no pains are spared to cheer the mind, and to lessen the gloom and despondency to which so many of this class of persons are unhappily subject. Opportunities for varied occupation and amusement, within and without doors, are studiously supplied, and exercise in the open air, in the carriage and on foot, is carefully enjoined.

The excellence of the accommodations generally, and the great conveniences and comforts to be found in Denham Park, are, it is believed, of a kind that cannot fail to be approved of. The building is a fine specimen of the old English mansion, having apartments sufficiently spacious for in-door exercises during wet weather, and designed on a scale of magnificence rarely met with in modern houses. The general appearance of the house betrays nothing of its present destination, either in external or internal arrangements; and, besides the usual suites of apartments, it contains a billiard-room, a library, and a consecrated chapel, in the latter of which the patients, officers, and servants of the establishment meet daily for morning and evening prayer.

Classification forms an important part of the arrangements. The Ladies and Gentlemen have each their distinct moiety of the house, and assemble in their separate saloons, from which those are excluded who, from the state of their disorder, would be likely to prove annoying to the convalescents, or be themselves excited by the presence of company. In these reunions the invalids mingle constantly and systematically with the sane; the observances of polite society are carefully maintained; and, by judicious intercourse, the minds of the invalids are strengthened and prepared for that exercise which a return to the world may require. In some instances, where benefit is likely to result to the sufferer, and no inconvenience to the rest of the inmates, relations and friends are admitted to stay with an invalid in the house. This permission has on several occasions been found a desirable privilege, and been eagerly embraced; the arrangements, society, and resources of the establishment being such as to render it an agreeable place of residence to all.

The advantages offered by this Institution for the retirement of Ladies are considered to be especially worthy of notice: they will be found to be highly appreciated by several now resident there.

The Terms of Admission for both Sexes at Denham Park are moderate, and are regulated according to the following among other circumstances: I. The nature and extent of private accommodation required. II. The amount of domestic attendance rendered necessary by the nature of the individual case; or required for the special comfort and convenience of the patient. III. The kind and amount of horse or carriage exercise required as a luxury, beyond what is deemed of importance medicinally, and which is always furnished. IV. The pecuniary means of the Patient; a small number, to whom it is an object, being from time to time received at an inferior charge, provided they are desirable inmates from their position in society and the nature of their malady.

When required, highly responsible persons are sent for patients to any part of the kingdom.

Denham Park is situated on the Oxford Road, two miles from Uxbridge, and within easy reach of the West Drayton and Slough Stations of the Great Western Railway.

Full particulars may be obtained from the Director by letter or personal application, (Denham Park, Uxbridge, Middlesex,) or of any of the Medical Officers.

EDWARD HORNOR.

REVIEWS

Extracts from the Presbytery Book of Strathbogie, A. D. 1631 to A. D. 1654. Printed for the Spalding Club.

RECENT circumstances have given the presbytery of Strathbogie a factitious interest, else it is probable that the Spalding Club would have hesitated in publishing, as the first of the promised series of historical illustrations, the records of a locality situate on the verge of the Highlands, during a period of semibarbarism and fanaticism. Few men who love their fellows, and feel interested in their social advancement, can read this record without indignation and shame;—indignation at the tyranny which, under the name of religion, watched board and bed, violated the sanctity of the chamber, commanded the laws of hospitality to be broken, and the ties of social intercourse to be disregarded;—and shame that such a system should find vindicators in the nineteenth century. Calvin's memorable injunction that all should keep a watch upon each, seems to have been improved by his Scottish disciples into all being spies upon each; the malicious scandal of private gossip was invested with legislative and executive authority; and envy, hatred, and malice, were raised to the rank of social virtues. Poor Castalio complained that the iron rule of the presbytery of Geneva made him sometimes wish for the restoration of the milder reign of the papacy; Turkish despotism itself would have been a desirable exchange for the tyranny exercised by the presbytery of Strathbogie.

It would be unfair to charge the members of the presbytery individually, or presbyterianism itself as a system, with all the criminality and folly recorded in this volume. Sectarianism had suddenly become an establishment, and the rules applied to the government of a narrow sect were at once extended to a large community. Now it is the very essence of sectarianism, to elevate discipline above doctrine, and to set conventional rules of conduct above moral principle. This was the error for which the author of Christianity reprobated the Pharisees and the other Jewish sects of his day, and this is precisely the error into which Christian Pharisees, that is, separatists, have a tendency to fall. But in Scotland there was an additional source of perversity; the Reformation there was the work of the people; it was a revolt, not merely against pontific pride, but also against courtly depravity and aristocratic oppression.

Whether Knox and his associates would have devised for themselves a presbyterian system of government if they had not learnt it from Calvin in Geneva, may be fairly questioned, but there can be no doubt that the great Scottish Reformer would naturally have exerted himself to give any church which he founded a republican constitution. In all the transactions between him and the nobles who took an active part in effecting the triumph of the Scottish Reformation, it is evident that he had no confidence in the lords of the congregation, and that he was secretly distrusted by them in turn. He knew that many of them were actuated by mercenary motives, by hopes of sharing in ecclesiastical plunder, and the confiscations of church lands; they dreaded his determination to secure all the wealth and power which had been wrested from the Romish church, as an endowment for the Scottish kirk. Knox yielded to them on the question of property, and they gratified him by the establishment of presbyteries, not foreseeing that they were thus setting up republican inquisitions in every district, which were not likely to harmonize long with feudal institutions.

The form of process adopted by the presbytery of Strathbogie was sufficiently inquisitorial. Thus we find Mr. Robert Gordon called upon to answer on oath to a charge of favouring popery, without being informed of the nature of the evidence against him, which indeed appears to have been mere hearsay and vague suspicion:—

"The said daye, compeared Robert Gordoune of Cowdraine, and confessed he had not communicated in the church of Gartlye these four yeeres bygone, neither resorted to the church for hearing of the word. And being requyred to purge himself, by his oathe, of the receipt of preists, receiving of the sacrament from them, and in particular, from Mr. Thomas Blackhall, Mr. Johne Smyth, Father Crystie, Mr. Thomas Abernethye, Father Robisone, and that conforme to an act of councell produced and red in his audience, he refused to give his oath, alledging that he was not holden to doe the same, becaus that act was but an act of councell, and not ane act of Parliament. And the brethren replyeing that that act of counsell was relative to ane act of Parliament, he refusit absolutelie to purge himself by his oath. And the said Robert Gordoune being demaunded whether he was present or not at the baptisme of Alexander Gordoune of Carneburro his chylde, which was baptised be a preist, and being posed theranent by his oath, he refused to purge himself by his oath. The brethren ordained the said Robert to make his repentance publikelie, in the kirk of Gartlie, and to pay 20s. for every Sabbaths absence from the church, and to paye 20 libs. for everie yeeres not communicating."

The presbytery of Strathbogie, like that of Geneva, usurped the functions of the civil magistrate, and we find cases of common assault brought under ecclesiastical jurisdiction:—

"Compeired James Mill and Issobell Duncan, his spous, parochiners of Abercherdour, compleaning wpon Walter Chalmer in Kairnehill ther, that he hade abused the said Jannat Duncan, on the Sabbath day, and hade stricken her to the effusione of her blood. The said Walter Chalmer being present, confessit that he stracke her, and his reason was, that the said James Mill and Issobell Duncan wer both his servantis, and, being drunk, hade made a pley in his house, and could not gett them rid untill the tyme that he was forced efter that maner to separate them; and that they hade abused him with wordis, and hade rent his cloathes. Alvayes the brethren present thocht him to be ane rogh ridder, and ordayned him, for the brack of the Sabboth, to mak his repentance, and pey four merkis penalty."

In the days of Charles II., when the Duke of Buckingham proposed that the importation of Irish cattle should be deemed a misdemeanour and a nuisance, the earl of Clarendon moved, as an amendment, that it should be considered adultery. But the presbytery of Strathbogie had anticipated the noble lord, for on the 17th of August, 1642, they ordained that all who "bleached cloth on Sunday should be censured as fornicators!" From a subsequent entry it appears that the penalty thus inourred was a fine of 60*l.* (Scottish), and a penance of standing in sackcloth seven Sundays at the foot of the pulpit. Dogberry's assertion that the false accusation of the Lady Helen was "flat burglary," did not involve a greater confusion of terms than the following entry:—

"James Vatt in Bucharne, being summondit *pro* 3o. for his disobedience to the session of Gairtlie, in not satisfieing for his going in pilgrimage to vallis and chappellis, for not hearing the vord nor communicating, called, compeired not. Ordained to pay eight merkis, and satisfie as an adulterer."

The suspected popery of the Lady Fendraucht appears to have given considerable trouble to the presbytery, and page after page is filled with accounts of her refusal to attend the kirk, her evasive excuses, and her suspected conferences with priests. It is easy to conjecture what trouble a belief in the existence of popery within their own district, must have given to men who assigned as their main reason for signing the covenant, that Charles I. had recognized Irish papists as his Roman Catholic subjects. The tale of Lady Fendraucht's persecutions is of unmanageable length, and we gladly avail ourselves of any excuse for escaping from such a record of bigotry.

As might have been expected, the cases of sorcery and witchcraft are very numerous; we shall note a few that tend to illustrate popular superstitions. The following relates to a custom, traces of which are to be found in most mountain-districts, both of Europe and Asia. A piece of ground is left untilled for the use of the devil, who is further conciliated by his having his reserved portion honoured with the name of "the Good-man's plot" or "the Good-man's croft":—

"Compeired William Seifvright and George Stronach, in Glas, and being accused of sorcerie, in alloting and giuing over some land to the old goodman (as they call it), denyed the same; and, becaus it vas so alledgit, they promised to manure said land."

We find next an instance of Druidical lustration by fire, traces of which may be still found among the Scottish Highlands, and in the remote parts of Wales and Scotland. It was necessary that the neid-fyre should be produced by the friction of two pieces of wood:—

"Compeired Johne Cow, and being accused for saying he had Mr. Robert Watsone his warrand for going to raise neidfyre in Grange, confessed he vent to the said Mr. Robert, and told him that he vas advysed to cure his goodis after that maner, and so desyred him to goe and sie quhat vas done ther, or if he vold not goe himself, send his sone vith him, quhilk the said Mr. Robert refused to doe, but said to him, if he vent, tak honest men vith him to see quhat vas done. This being layed to the said Mr. Robert Watsone his charge, denyed all this alledgance, but on the contrair told him, if he vsed such practices the curse of God vold follow thervpon, and told him that vas ane Highland practise, and censured alreadie be the Assemblie.

There are several long examinations of old women for curing diseases, giving charms for cattle and threatening evil to persons who had given them any cause of offence; but none of them possess the same interest as the cases which the editor has extracted from the records of contemporary Presbytery. Here is a portion of the evidence on which an unfortunate woman named Isabel Haldane, was burned at the stake as a sorceress:

"May 19, 1623. Compeared Stephen Ray in Muirton, and deponed, that three years since, Isabell Haldane having stolen some bear forth the hall of Balhousie, he followed her and brought her back again. She clapped him on the shoulder saying, 'Go thy way, thou shalt not win thyself a bannock for year and day,' and as she threatened so it came to pass, for he dwyned and was heavily diseased. The said Isabell confesses the away taking of the bear, and the disease of the man, but affirms that she only said, 'He that delivered me from the fairy folk shall take amendis of thee.' The said day, she confessed that she made three several cakes, every one of them being made of nine curns of meal, which had been gotten from nine women that were married maidens. She made a hole in the crown of every one of them, and put a bairn through every cake three times, in the name of the Father, Son, and Holy Ghost. There were women present who put the said bairns thrice backward through every cake, using the same words. The said Isabell confessed that she went silent to the well of Ruthven, and returned silent, bringing water from thence to wash John Gows bairn. When she took the water from the well, she left a part of the bairns sark at it, which she took with her to that effect. When she came home again she washed the bairn with the water. She confessed that she had done in like manner to John Gowerys bairn. May 27. The said Isabell confessed that she had given drinks to cure bairns. Among the rest that David Morrices wife came to her and asked thrice help to

Digitized by Google

her bairn, for God's sake, because it was a shargie. She sent forth her son for fairy leaves, whereof she directed the bairns mother to make a drink. But the bairns mother deponed, that the said Isabell Haldane came to her house unrequired, and saw the bairn, and said it was a shargie taken away. She thereupon took in hand to cure it, and to that effect gave the bairn a drink, but shortly after the receipt of the drink, the bairn died."

The superstition of the cake through which the children were passed, continues to exist under various forms in many parts of Britain, but is not so prevalent as that of bringing water in silence from a sacred well to a diseased person or animal, and leaving part of the patient's dress, or the halter of the cattle suspended to a bush near the well. In Scotland, Ireland, and Wales, there are still many such wells, though they have lost somewhat of their influence—and the bushes around those in Ireland often bear more rags than leaves. The substitution of a "shargie" or "fairy" for a promising child is common both to the Celtic and Teutonic races; it is still an article of popular belief in Norway and Lapland, and has not quite disappeared from Wales and Ireland.

The illustrations of manners in this volume present a picture of strange barbarism; we have several inquiries by the presbytery into cases of murder and homicide, which seem to have escaped the cognizance of the regular courts of justice; and we find one man brought to trial for having "bound Jane Davidson to a post, and bridled her to the great effusion of blood," and in the course of the examination it comes out that this ruffian had been previously guilty of two murders, and was in the constant habit of "bridling" his wife. Far the most numerous class of entries, however, relate to inquiries into female frailty, which were pursued with a grossness and indelicacy that forbid extract or description. There are, however, sufficient indications that "the stool of repentance" was a prolific source of child-murder and continuous profligacy.

There are eight records of the admission of ministers to benefices in these extracts, and they all show that the question of presentation which has given such notoriety to Strathbogie in the present day, produced equal perplexity in the seventeenth century. In these long and complicated proceedings, it is curious to see how carefully the patrons on one side and the patrons on the other avoided bringing their inconsistent claims into direct issue. Wherever there was a near chance of collision, the dispute was at once compromised, but generally at the expense of the patron.

So far as we can gather from the editor's very guarded preface, he seems to hope that these extracts will show the danger of intrusting uncontrolled power to the presbyteries; and he is so far successful, that there is not in these extracts a single instance of power exercised under the name of discipline, which is not more or less directly an abuse of authority.

Strife and Peace; or, Scenes in Norway. By Frederika Bremer. Translated from the Swedish. Smith.

The charm of Frederika Bremer's writings increases the more we read of them. She does not belong to the class of those who, after one perfect work, or a single lucky hit, become exhausted. There is not one of her novels hitherto "done into English," which does not possess some cardinal fault, in plot or in incident, if tried by "the principle of the pyramid." Nevertheless, as our acquaintance with the series advances, so also does our admiration of the variety of character which the authoress commands. We have now *Ma chère Mère* and her daughters-in-law: in 'The Home,' the mother, the sensible Louise and the experimental Petræa: in 'The President's Daughters,' that pearl of governesses, Mademoiselle Rönnquist, her pupils Edla and Nina, and Miss Greta—all delicately touched, and belonging to the same order of society, yet all as different as the real personages of our acquaintance. Here, in a shorter story—'Strife and Peace,' we are introduced to another female character, as clearly conceived as any of the above, though less interesting, perhaps, than some of them; our new friend (for who does not make friends with "beings of the mind"?) being nothing less humble than the servant in a Norwegian family.

"Service" in the far north, however, must mean a far different condition of life from that to which our Martha Pennys and Mistress Dolly Duttons belong. There, where climate is inclement, and Nature wild, and manners primitive, the distinctions between housekeeper and humble companion appear to be little more than nominal; and the faithful domestic occupies his respectable place as family friend. We do not, however, advert to this state of mutual relations to raise Susanna, the heroine, in the reader's estimation. For the sympathies of some, she will always be too low, in consequence of her position: for others, high enough, in right of her humanity. She does not possess Pamela's second-hand graces and morality, to humble her into becoming a fine lady; nor Susan Hopley's preternatural cleverness, to discover more than lawyers, police officers, proctors, and university scholars are able to find out. Placed in only one emergency, she displays no more sublime attributes than bodily strength and courage. Wherein, then, lies the charm, for those who do not subscribe to Hazlitt's openly expressed predilection for heroines of a class in which intellect must be dwarfed and elegance out of place? In the truth, tenderness, and sincerity of her nature; in that perfect propriety which—to agree with Horace Walpole—is the most attractive of graces; and in a touch of temper which, like the bitter of the Seville orange, only enhances the richness of the sweeter particles of the fruit. Susanna is a stout partizan: born a Swede, in defiance of a saucy Norwegian steward, she stands up for the superior credit of her own country, with a delightful contempt of reason, only equalled by his. The two, it is needless to tell the far-sighted, quarrel into matrimony. To complete the account of Susanna's position, it is but needful to add, that her mistress is a melancholy widow-lady, bowed down by the burden of domestic calamity, in which the suspicion of crime on the part of her late husband has a large share. Enough is told to explain the following scene, which we give because it exhibits "life in Norway" under one of its most pleasing aspects:—

"Susanna had a great deal to do in Christmas week, and was often kept up very late at night, partly by her household occupations, and partly by some Christmas gifts which she was preparing, in the hope of occasioning some pleasant little surprises. And this was perhaps the reason, that the morning of the day before Christmas she overslept herself. She was awakened by the loud singing of a bird under her window, and her conscience reproached her, that, in the cares of the preceding day, she had forgotten the birds, for whom she used to throw grains of corn and crumbs of bread upon the snow; and now they had come to remind her of it. Ah, were all such admonitions like the song of birds! With sincere regret for her forgetfulness, Susanna hastened to dress, and to draw aside the window-curtain. But see—before her window stood a tall, slender fir-tree, on whose green top, cut into the form of a wreath, stood a large bunch of golden oat sheaves, and round it fluttered, pecking and chirping, a host of sparrows and bulfinches. Susanna blushed, and thought, 'Harold.' The servants of the house laughingly answered to Susanna's questions about the fir-tree, that it was indeed the steward who had planted it. But the steward himself pretended to know nothing of the matter—was very much surprised by the sight of the tree with the oaten tuft, and could not imagine how it came there. 'It must,' said he, 'have sprung up of itself in the night, and this can only proceed from the strength of the excellent Norwegian soil—every bit of it is pulverized primary rock. Only such a soil could bring forth such wonders.' In the forenoon Harold went with Susanna to the farmyard, where, with her own hands, she distributed oats to the cows, bread to the sheep, and to the poultry corn, in fullest measure. In the community of the chickens a great variety of character might be observed. Some seized greedily upon the corn, while they drove the rest forcibly back; others remained at a modest distance, and picked up contentedly the grains that fortune sent them. Some of them seemed more anxious to provide for others than for themselves. Of this noble nature was a young cock, with a high crest and brilliant plumage, and of a peculiarly proud and lofty bearing; he yielded his share to the hens, hardly reserving to himself a single grain of corn, but looking down with an air of majesty upon the crowd that pecked and cackled at his feet. On account of this noble behaviour, Susanna had called him the Knight, and this name he always retained. Among the geese she saw with vexation that the poor grey was still more oppressed than ever by his white tyrant. Harold proposed to have the grey goose killed, but Susanna insisted warmly, that if either of the rivals were to be sacrificed, it should be the white one. In a house where there are no children, where neither family nor friends assemble, where the mistress of the mansion sits in darkness with her sorrow, can Christmas-eve bring but little joy. But Susanna had made her preparations to diffuse happiness. She had rejoiced in this thought the whole week through, in the midst of her many occupations; and the more, that her life would have been gloomy indeed, if the hope of giving pleasure to some one had not always glimmered, like a little star, over her path. Larina, Karina, and Petro were this day to taste the fruits of Susanna's night-watching; and when the evening came, and Susanna had spread the Christmas table, and had seen it set out with lutfisk,* roast meats, chickens, plates of butter, tarts, and apples, and lighted with many candles; when the people of the farm assembled round the table with eyes that glistened with delight and appetite; when the oldest of the company began a song of thanksgiving, and all the others joined in it with folded hands and solemn voice; then did Susanna feel that she was no longer in a strange land. She joined in their song, and seated herself at the table, a cheerful, hospitable hostess; animated the strong to the performance of prodigies, and placed the most delicate dishes before the weak and timid. Fru Astrid had told Susanna she wished this evening to remain alone in her room, and would take only a glass of milk. But Susanna was resolved to surprise her into pleasure, and to this end had laid a little plot against her peace. At the time when the glass of milk was to be carried to her, a beautiful boy, dressed to represent Susanna's idea of an angel, and with a crown of light upon his head, was to enter her door softly and beckon her forth. The lady could not surely resist so beautiful a messenger, and he was to conduct her to the principal room, where, in a grove of fir-trees, a table was to be spread with the choicest productions of Susanna's skill; and behind the fir-trees the people of the house were to be assembled, and sing, to the well known melody of the country, a song in praise of their lady, and full of good wishes for her future happiness. Harold, to whom Susanna had communicated her plan, shook his head doubtfully at first, but afterwards agreed to it, and even lent his aid in its execution, by procuring the fir-trees and assisting at the toilet of the angel. Susanna was delighted with her beautiful little messenger, and followed him softly, as, with some anxiety for his head and his brilliant crown, he tripped lightly towards Fru Astrid's apartment. Harold opened the door softly for the boy. Within, they saw the lady seated in an armchair, her head bent down upon her hands. The

"* Codfish, which has been soaked in lye for several weeks. This is a common Christmas dish in Norway and Sweden."

Digitized by Google

lamp upon the table threw a dull light upon her mourning dress. Roused by the opening of the door, she looked up, and gazed with a wild look upon the apparition. Then she rose hastily, pressed her hands upon her breast, uttered a faint cry of terror, and sank lifeless to the ground. Susanna pushed her angel hastily aside, and rushed to her lady, raised her in her arms, with a feeling of indescribable anguish, and bore her to the bed. Harold, on his part, occupied himself with the poor angel, whose crown having lost its balance, the hot tallow was streaming over his forehead and cheeks, while he uttered the most piteous cries. Susanna soon succeeded in bringing her lady back to life; but for some time her senses seemed bewildered, and she uttered confused and disconnected sentences, among which Susanna could only distinguish the words, 'apparition—unhappy child—dead.' Susanna inferred that her pretended angel had terrified her, and cried out in a voice broken by sobs, 'Ah! it was only John Guttormsen's little son, whom I had dressed up as an angel, to give you pleasure.' Susanna saw now but too well how unfortunate this idea had been; but Fru Astrid listened with eager interest to Susanna's explanation of the appearance which had thus shaken her. At last her convulsive state yielded to a flood of tears. Susanna, beside herself with grief, that, instead of joy, she had been the cause of sorrow to her lady, kissed, weeping, her dress, her hands, her feet, with earnest entreaties for forgiveness. Fru Astrid answered in a gentle but reproving tone, 'You meant it well, Susanna; you could not know what sorrow you would cause me. But never think again—never attempt again to give me pleasure; I can never more be cheerful—never more be happy; a stone lies at my breast that can never be lifted from it till the stone is placed over my grave. But go now, Susanna, I must be alone—I shall soon be well again.' Susanna begged that she might bring her a glass of milk, and Lady Astrid consented; but when she had brought it she must again depart—her heart full of sorrow. When she rejoined Harold, she poured out to him all her grief for the unfortunate issue of her project, and described to him the violent agitation, and repeated the gloomy, despairing words of the Oefwerstinna. Harold became pale and thoughtful, and seeing this, Susanna was still more depressed. She had yet another little mine of pleasure still unsprung, and from its explosion she had promised herself great delight; but now this too failed of its effect. It is true, Harold laughed, when he drew the waistcoat from the loaf of wheaten bread; it is true, he thanked Susanna, and pressed her hand, but he had plainly so little pleasure in his Christmas gift, his thoughts were so evidently occupied with something else, that every gleam of Christmas joy now vanished for Susanna. As she sat alone at her window, and saw light streaming from every cottage in the valley; when she thought of the happy family groups within, old people, children, brothers and sisters, friends, all assembled round the Christmas hearth, then she felt painfully that she was alone in a strange land; and when she remembered how happy she used to make her Hulda on this evening—how well all her little plots to give pleasure had then succeeded—she drew forth a handkerchief which had once covered the neck of that dear sister, and covered it with hot tears and kisses. She passed a great portion of the night on the threshold of her lady's door, while she listened anxiously to the unceasing footsteps within. But though she heard many deep-drawn sighs, Susanna heard no expression of pain which could justify her in intruding upon the solitude of her lady."

Further on, the reader will find a journey among the savage scenery of Norway strikingly described. Fragments of ancient legend and superstition are also happily interwoven; in one, the Aasgaardsreja (a poetical explanation of the sudden whirlwind which vexes all mountainous districts) we find a reproduction of the Peninsular superstition of the *Estadéa*, which, it will be recollected, terrified Mr. Borrow's half-witted guide, on the road to Finisterra. Such coincidences are interesting to fancy, as well as valuable to the student of popular literature. For the steps by which "Peace" succeeds to "Strife," we must refer the reader to the book. It is a reprint of an American translation from the Swedish, and appears to us neatly executed.

Memoirs of the Life, Writings, and Mechanical Inventions of Edward Cartwright, D.D. F.R.S.

[Second Notice.]

We have already followed the subject of this memoir through his various capacities of poet, physician, parson, power-loom patentee, and calico-manufacturer. We have found him as a poet popular and distinguished—the praised of Scott and Dugald Stewart, and the friend of Crabbe; as the physician of his parish, effecting its cure in a double capacity, saving body and soul; the discoverer of a specific for putrid fever in its last stage, and recorded, as a discoverer, in the annals of legitimate medicine. Next we find him as a mechanic, entering for the first time on the study of mechanism, and conquering its greatest difficulties. A distinguished astronomer on the Continent, himself a discoverer, once mentioned to us this curious fact, that whenever he wished to learn any subject which was new to him, he set about ascertaining what formed the most difficult problem still unachieved in that department of science or of art; and attacking at once that problem, and keeping to it until he solved it, he found that he more speedily and effectually mastered the whole subject than by any other method of study. This seems to have been Cartwright's method, or want of method. But it is the method only for powerful and original minds; and Cartwright has established his claim to that character, having learnt mechanics by attacking at once, while ignorant of the very principles of mechanics, the very highest problem presented to him—the invention of a steam weaver—the creation of the first of a race of workers that now number hundreds of thousands, and extend through every civilized country. We find him as a manufacturer successful in the production of fine and sound fabrics of cotton cloth, by machinery alone. In short, we find him successful always where success depended on the powers of a great and original mind: we find him conquering all the difficulties of matter; its inertia becoming energetic, its rigidity plastic, and its gravity intelligent under the influence of his spirit. But the prejudice, the ignorance, the selfishness, the pride of men—these know him not, acknowledge him not, honour him not. We left him neglected, disgusted—in short, ruined. But with the nobleness of a true soul he is not conquered. It is not for its rewards that he does the work of an inventor and a patriot. He works because it is *his* work, and *ought* to be done. Here is a list of his labours accomplished in mechanical invention:—

1.	A Machine for Weaving . . .	1785
2.	Improvements in the same . .	1786
3.	Further Improvements . . .	1787
4.	Further Improvements . . .	1788
5.	A Wool-Combing Machine . .	1789
6.	Improvements in the same . .	1790
7.	Machine for Manufacturing Ropes	1792
8.	Steam-Engine	1797
9.	Improvements in Steam-Engine .	1801

Nearly the whole of these were working machines; not schemes, notions, ideas, designs, plausible and impracticable, as many of the patents of the present day, with which the monthly list teems; but the working engines which worked then and since, and took a place permanent or preparatory in the actualities of industry. His mechanism well deserves study: it is characterized by originality, by simplicity, by elegance, by variety of resource, and profusion of invention—in short, by the results of genius. We have told of his disappointments, and the spirit in which he bore them. Before proceeding to trace his career through its other cycles, we present the following sketch of our hero the inventor, painted by our hero the poet, at this disastrous moment—a man worthy of imitation:—

Sonnet.

With sails expanding to the gales of hope,
My venturous bark pursued her leading star;
Hers was a voyage of no common scope,
A voyage of discovery, distant far!
To bright *Invention's* intellectual clime,
In search of *useful arts*, 'twas mine to roam.
I reached the object of my views sublime,
And, richly freighted, bore my cargo home:
My friends expectant fill the crowded strand.
But ere I gain the shore what storms arise,
My vessel founders e'en in sight of land,
And now a wreck upon the beach she lies!
With firm, unshaken mind that wreck I see,
"Nor think the doom of man should be reversed for me."

We now proceed, as we promised, to give some further extracts illustrative of the works of "the universal Cartwright":—

Cartwright a Wool-Comber—the inventor of Big Ben.—"Mr. Cartwright, though he had accomplished one great object of his wishes in contriving a loom that should be worked by machinery, was not disposed to stop short in a career that seemed to him so promising of success. His next invention—a machine for combing long wool—may be considered as even more original than the former. In the instance of the loom, he had a machine prepared to his hands that was already capable, in one way, of performing the work required of it, and the merit of his discovery consisted in applying a new power in order to produce to a much greater extent motion that had hitherto been only produced by hand; but between the very simple act of combing wool by hand and the process of combing it by means of a complicated machine, that should perform the work of twenty men, there seemed to have been no intermediate gradation—no introduction, as it were, to a more improved method, by any addition to the instrument in common use, and which is as inartificial as it might have been in the days of Bishop Blaize.* It is not precisely known when Mr. Cartwright first attempted a machine for combing wool. His earliest patent relative to that invention is dated the 22nd of August, 1789. The contrivance therein specified is altogether different from that of his later machine, and consisted of a cylinder armed with rows of teeth, which is made to revolve in such a manner as that its teeth may catch and clear out the wool contained in the teeth of the fixed and upright comb. But this imperfect method was, not long afterwards, superseded by the contrivance of a circular horizontal comb-table, for which a patent was obtained the 27th of April, 1790. In this apparatus the teeth of the horizontal table are set vertically, but with a slight inclination towards the centre, and are supplied with wool by means of a circular lasher. Motion is communicated to the different parts of the machine in a very ingenious manner; but the complicated nature of the circular lasher appears liable to objection, and renders it far inferior in effect as well as in simplicity to the subsequent contrivance of the crank-lasher. For this eminent improvement Mr. Cartwright took out another patent, bearing date the 11th of December, 1790; including, also, an alteration in the teeth of the comb-table, which are here set horizontally, and pointing towards the centre. This patent also contains the description of a simple and ingenious apparatus for washing the wool, previously to its being combed. His fourth patent, which is believed to contain his final improvements relative to this branch of manufactures, is dated the 25th of May, 1792. Mr. Cartwright having thus completed his machine for combing wool, the novelty and ingenuity of the contrivance attracted the attention of men of science and distinction, as well as of persons connected with the manufacturing classes. Several of the latter began now to consider this invention, from its prodigious saving of labour, likely to become no less advantageous than that of the loom; and notwithstanding the vast expenses he had incurred in taking out patents both in England and Scotland, and, above all, in bringing his machinery to perfection, there now seemed every rational prospect of ample remuneration, from the acknowledged excellence of the inventions. Such,

indeed, was the encouragement he had met with from those who were supposed to be best acquainted with the state of our manufactures at that time, that several of his friends and immediate connexions were induced to enter into speculations, of which his new discoveries were to form the basis."

Cartwright—Inventor of the Pistons of the Modern Steam-Engine.—This invention is a very important and permanent improvement in the steam-engine, and is valuable in its application to steam navigation, especially Transatlantic, where its use is now universal. An elementary acquaintance with the principle of action of the steam-engine, such as most persons possess, will suffice for the comprehension of this invention, and the appreciation of its value. The chief moving part of the steam-engine is its piston, which receives directly from the pressure of the steam the motion which is afterwards given out in useful work. This piston is simply a round disc of metal, which forms a moveable division in the steam chamber or cylinder. The steam being admitted at one end of this cylindrical chamber, fills that division, and pushes the moveable division or piston with force to the other end of the chamber, after which the steam is let out again into the condenser, where it is consumed or reduced back into water; then a second supply of steam from the boiler is admitted at the further end of the cylinder, where the piston remains, and entering beyond it, pushes it forcibly back to the former extremity from which it originally set out; and thus, by a repetition of efforts, the piston is moved alternately and with rapidity from one end of the cylindrical chamber to the other, and by means of an iron rod connected with other machinery, gives out power in a useful manner. But for the perfection of this operation, a certain provision is necessary, called *packing the piston*. We have already seen that the piston is a partition dividing the cylinder into two chambers, the one containing steam while the other is empty. Now, in the early days of the steam-engine, it was a matter of great difficulty to construct this partition or piston in such a way that it should move with ease along the cylinder, and still preserve a tight or close joint along the surface of the cylinder, so that, while moving, the steam should not escape at the edge of the piston without compelling it to move along its course. To accomplish this, many devices were tried: thongs of leather, that should be pliable and smooth, but stiff and steam-tight, were fixed round the edge of the piston, just as sand-bags are round the edges of doors, to keep out currents of air; but these were soon reduced to a soft pulp, by the heat of the steam. Rope lubricated with tallow was substituted, and, finally, a belt of hemp, plaited so as to give it closeness and elasticity, was laid round in a groove on the edge of the piston, and being lubricated with tallow, effectually accomplished the object, and lasted for a considerable time. The duration of the hempen packing was, however, by no means so long as the exigencies of modern steam navigation require. It also demands frequent adjustment, and would be a source of much inconvenience. But the ingenuity of Dr. Cartwright supplied a method which leaves nothing to be desired. He conceived and executed a mechanism by which rings of metal should acquire all the plasticity, softness, and smoothness of a cushion, with the same durability as the other solid parts of the steam-engine. By combining together springs, wedges, and polished metallic rings, he contrived that the piston should perfectly adapt itself to the inevitable inequalities of the cylinder, and move along from one end to the other air and steam tight, and adapt itself with such precision to the wearing of the cylinders by time, that by its very use it should become better instead of worse in fitness for use. Such is the metallic piston of the modern steam-engine—the invention of Dr. Cartwright.

Cartwright—Inventor of a simplified Steam Engine, with Surface Condensation.—"His first patent for a steam-engine was obtained in 1797. A description of this engine, accompanied with a beautiful engraving, forms the first number of that excellent work, the 'Philosophical Magazine,' edited by the late Mr. Tilloch, and first published in June 1798, and a further account of this invention is introduced in the 'Descriptive History of the Steam-Engine,' by Mr. Steuart, who bears a most liberal testimony to its ingenuity. An extract from the former of these works will explain the principles upon which Mr. Cartwright proposed to remedy the defects to which the most improved engine was subject. 'These defects, as every one knows, are an imperfect vacuum, much friction and complicated construction of parts, liable, without great care and attention, to be frequently out of order. It is to these points Mr. Cartwright has immediately, and we may add successfully, directed his attention. His first object seems to have been to obtain, as nearly as may be, an absolute vacuum, which, in consequence of the elastic vapour that separates from water injected in the usual mode of condensation, no one in the least conversant with the philosophy of the steam-engine need be told is impossible. The condensation in his engine is performed by the application of cold to the external surface of the vessel containing the steam. Mr. Cartwright is not, however, the first who tried this method; the same has been attempted by several, but with so little success, that one of our first engineers in this line has been heard to give it as his opinion, that were a pipe to be laid across the Thames the condensation would not be quick enough to work a steam-engine with its full effect. The manner in which Mr. Cartwright manages this business is, by admitting the steam between two metal cylinders, lying one within the other, and having cold water flowing through the inner one and inclosing the outer one. By these means a very thin body of steam is exposed to the greatest possible surface. But this is not all: by means of a valve in the piston, there is a constant communication at all times between the condenser and the cylinder, either above or below the piston, so that whether it ascends or descends, the condensation is always taking place. Mr. Cartwright has been equally attentive in simplifying all the other parts of the engine, his engine having only two valves, and these are as nearly self-acting as may be. But what will probably be esteemed one of the most important circumstances attending these improvements, is the opportunity they afford of substituting ardent spirit, either wholly or in part, in the place of water for working the engine. For as the fluid with which it is worked is made to circulate through the engine without mixture or diminution, the using alcohol, after the first supply, can be attended with little or no expense; on the contrary, the advantage will be great, probably equal to the saving of half the fuel. When, indeed, the engine is applied, as Mr. Cartwright occasionally proposes, both as a mechanical power and as a still at the same time, the whole fuel will be saved. A further advantage of this invention, is its applicability to purposes requiring only a small power, and for which any other engine would be too complicated and expensive.'—See *Philosophical Magazine*, June, 1798. Mr. Steuart observes, that the details of this engine 'are constructed with uncommon ingenuity, and that the whole apparatus may be considered more simple and efficient than any other combination which had been proposed of the parts of the condensing engine.' He concludes a very clear and interesting explanation of its construction by further observing, 'that the machine, from its refined simplicity, appears excellently adapted as a first mover on a small scale. It has never, however, had a fair trial. The objections which were urged against the condensing vessels, at the time of the invention, have always appeared to us more specious than solid.'"

Although we do not entirely subscribe to all these eulogies of this kind of engine, we nevertheless concede to the invention the merits of originality, elegance, and simplicity.

Cartwright triumphant—Merit rewarded.—The progress of truth is somewhat slow—but it is sure—else were this world of ours too much a fiction to be endured; truth and right are in the end realities, though little else be real or enduring. When Cartwright least thought it, and most wanted it, his good deeds found him out, and he was rewarded, aye, and by a government in these lands and in the present century. His declining years were sustained and his retirement soothed by a parliamentary grant of 10,000*l.*, in compensation of the losses he had sustained by the introduction of inventions which had so highly benefited his country. But we will not anticipate the interest of the following details of a revolution in mechanical industry, which is an important element in our present social and mercantile position:—

"It has been already stated, that Dr. Cartwright, even during the existence of his patent-right, had retained but little expectation of deriving any pecuniary advantage from his invention of weaving; and when his latest patent had been several years expired, the prospect of remuneration appeared entirely hopeless. He might be aware that his loom was coming into use, but he had now so little communication with the manufacturing districts, that he could form no idea of the extent to which it was adopted. Weaving by machinery was, however, beginning to make considerable progress, and was even then preparing for him the only compensation that he ever received for years of anxiety and great pecuniary loss. This progress was connected with the circumstances of the times, by which an extraordinary impulse had been given to the British manufactures in general, and which rendered the beginning of the present century a far more favourable period for the introduction of machine weaving than that in which Dr. Cartwright had first attempted it. The great improvements that had been effected in the art of spinning had, with other causes, occasioned a vast accumulation of cotton yarn which, on account of the disturbed state of the continent, could no longer be disposed of in the foreign market; neither could hands (which in consequence of a long protracted war were become less numerous than they had been) be found sufficient to work it up at home. At the same time the demand for English cotton-piece goods was greatly increasing, and the manufacturers found themselves called upon to devise some means of answering a demand which want of hands and want of looms prevented their being able to supply. The only expedient that seemed to present itself was the adoption of the hitherto rejected power-loom; thus literally justifying the hypothetical suggestion of its author in that remarkable conversation which had first turned his attention to the subject of mechanics. From the year 1792, when Messrs. Grimshaw's mill had been destroyed, and Mr. Cartwright's establishment at Doncaster, as well as some others connected with it, was abandoned, it does not appear that any manufacturer had ventured openly to employ his loom, liable, as he would in that case have been, to a payment for its use during the existence of the patent-right. The machine, however, had not been lost sight of, and on its becoming open to the public by the expiration of the patent, several manufacturers sought to adapt it to their own purposes. Great improvements it doubtless did receive from that ingenuity and spirit of enterprise which were called into action by the circumstances of the times, but rather unfairly towards Dr. Cartwright. Some of these improvers assumed to themselves the whole merit of the invention, and though his machine formed the basis, as it still does, of all the power-looms that have hitherto been found effective, his claim to the original invention was far from being generally recognized. In some instances the invention had been ascribed to persons who had formerly worked looms under a licence from Dr. Cartwright, but who, either from want of capital, or the then unfavourable state of the trade, had not succeeded in their undertakings, and yet had retained so decided a conviction of the value of the machine, as to be induced to revive it under more encouraging auspices. The improved quality of the yarn had also contributed to render machine weaving less difficult, as well as the fabric produced by it, of a more perfect quality.

Digitized by Google

than when Dr. Cartwright first undertook it. The extraordinary advances that had been made in h application of mechanical power by improvements in the steam-engine; &c. doubtless facilitated the extension of the power-loom; but in justice to a most ingenious man, it must be acknowledged, that Mr. Radcliffe's admirable contrivance for dressing the warp *before* it is put into the loom, by which means time and attendance are saved, contributed, probably beyond any other improvement, to render it completely available. About this year, 1806, Dr. Cartwright was induced to make some inquiries respecting the state of the cotton manufacture in general, but more especially in the neighbourhood and town of Manchester, and found that machine weaving was already practised to a much greater extent than he had anticipated, and that considerable profit was accruing, not only to individuals, but to the country at large, from discoveries which to him had been productive of nothing but loss and disappointment. In a letter to his friend Dr. Bardsley, an eminent physician in Manchester, he expressed the bitterness of his feelings on the subject. Dr. Bardsley, with a warmth of friendship most truly appreciated by him in whose favour it was exerted, applied himself to obtain such information as was required to show the grounds on which Dr. Cartwright might have a claim to public gratitude, and also to satisfy the minds of the manufacturers that he really was the original inventor of the machine in question, which so many of them were in the habit of using. A memorial in Dr. Cartwright's favour was signed by fifty of the most respectable and influential gentlemen of the town and neighbourhood of Manchester, and presented to government in August 1807. This memorial was followed, in the spring of 1808, by a petition from Dr. Arkwright to the House of Commons; and the house having agreed to take his claims into consideration, a committee was appointed to that effect, and evidence was examined in support of his allegations."

From the evidence thus adduced it appeared that Dr. Cartwright had expended between thirty and forty thousand pounds in prosecuting and bringing forward his inventions. Whereupon, in the following year, the Government granted to him a sum of ten thousand pounds "for the good service he had rendered the public by his invention of weaving"!

His object had never been the accumulation of money; this grant not only gratified his feelings, but was of real benefit, and assisted him in the prosecution of those agricultural pursuits with which he employed and soothed his declining years. He attained the age of eighty years, and died on the 30th of October, 1823.

Travels in Ireland—[*Reisen in Irland*]. Part I. By J. G. Kohl.

[Second Notice.]

Mr. Kohl paid much attention to a subject which just now occupies public attention, the relation between landlord and tenant, and its effect on property and on morals. The result of his observations is by no means calculated to remove the anxiety which prevails on the subject.

In few parts of Ireland do either the nobility or gentry understand anything of the Irish language—there are but few places, therefore, where the owners of the soil and the peasants can hold converse. Only in the neighbourhood of Galway, the most national of Irish towns, are the gentry said to understand the Erse language and sometimes to converse in it. In that neighbourhood, too, the priests are bound to preach once every Sunday in that tongue. The best Irish scholars are to be found in those parts: among these are Dr. M'Hale, the Roman Catholic Archbishop of Tuam, and his Vicar General, Dr. Loftus. The former has published a translation of the Iliad in Irish, a language which, possessing rich epic and elegiac stores, is peculiarly fitted for such a translation. The same scholar has recently published an Irish version of the poems of Thomas Moore, which is much admired. Most of the farmers, whom we visited, were in possession of arms—guns and sabres hanging in their houses. 'We could not do without them,' was the expression they made use of to me: and so with regard to the 'Peelers,' that is to say, the armed police, which one sees in great numbers all over Ireland, the expression is the same, 'We could not do without them.' These richer farmers think as their landlords do, and are completely on their side; for, standing in the position of Middlemen, they have the same fear of the peasantry as the landowner himself. Many combinations exist among the poorer farmers and labourers, and as these combinations are said to be as numerous as the grievances that exist, their name must, indeed, be Legion. Almost all the regulations which an Irish landowner adopts, even those which are directed to the well-being of the tenants, are the objects of resistance by means of an open or concealed conspiracy. Thus, for example, if a landlord wishes to cultivate a bog, which, perhaps, has furnished to the poor neighbouring tenants a scanty fuel of peat, which, whether rightfully or wrongfully, they had been in the habit of taking, his attempt is sure to be the signal to all who have an interest in the preservation of the bog, to enter into a conspiracy against all the works undertaken by the landlord—to destroy them, to remove and throw away the manure which he had brought together for the improvement of the land, and to annoy him until he has lost all wish to continue his invidious task. If a landlord, by raising the rents of his farms, has drawn upon himself the hatred of the tenants, a conspiracy is frequently formed among the neighbouring farmers, who pledge themselves to pay the landlord for the future no higher rent, or perhaps no rent at all, and not to allow others to do it. This naturally embarrasses the landlord, as his revenue is frequently diminished or entirely cut off. For even if any one of the farmers be favourable to him, he is so annoyed by the conspirators around, who not only give him no neighbourly assistance, but oppose him, quarrel with him, beat him, sometimes even murder him, that he is no longer able to continue in his farm, and the landlord is compelled to comply with the wishes of his tenants. When leases expire, it is often difficult for the landlord to remove the tenant from the estate, however much he may wish to dispose of it in any other way; the tenant clings to the property, and holds forcible possession; and although the right is clearly on the side of the landlord, yet there is an appearance of cruelty and injustice in dispossessing the tenant, which enlists many sympathizing neighbours and friends on his side, and thus another conspiracy is formed. Threats are now held out against the landlord in case he attempts to remove the tenant by force or by the forms of law. If he is not to be intimidated, but resolutely appeals to a court of law, the case is brought before a jury consisting mostly of farmers, who are themselves conspirators, and are determined, as they say, not to give a verdict against themselves. Even should the landlord gain his suit, set the people at defiance, discover and prosecute the leaders,—should he even escape their waylayings and their bullets, he does, indeed, get back his farm, but in a very altered and worthless state; for the tenant, in this case, does his best, before he restores it, to exhaust the soil and ruin the property. This, however, is not always the case: the conspiracies frequently extend to the murder of the landlord or one of his chief middlemen, and when this has taken place, it is almost impossible to discover the murderer, as all the parties implicated keep an inviolable secrecy. Almost all the large and wide-spread combinations and conspiracies among the Irish people, of which we have heard so much through Thomas Moore, and the novelists and public journals, owe their origin, not to political circumstances, but to the complicated and unhappy agricultural relations of the country, which, however, are intimately bound up with politics. The Whiteboys, the Defenders, the Heart of Oak Boys, the Peep-o'day Boys, the Ribbonmen, and those associations which are known by the assumed name of their leaders, John Doe, Richard Roe, Captain Dreadnought, Captain Moonlight, Captain Starlight, Captain Rock—all these conspiracies and the like are but different forms of one and the same feeling, varying in name and designation with the varying circumstances of the locality. Of many, it is impossible to say that they have ever disappeared, for one hears of them everywhere, and they are everywhere feared.

Whole parties of poor Irish reapers and labourers passed, during my residence in Edgeworthtown, through the place, and excited my compassion by their miserable appearance. On my way from Dublin I had already met with swarms of them, who, one and all, complained of the bad time they had had during their service in England. They were all of that class of Irish labourers who wander every year chiefly from the western parts of Ireland, as Connaught, to find employment in the harvest work of the English farmers. The harvest last year was very good, but there were so many unemployed hands to be hired at low wages in England, that the Irish emigrants found themselves badly off; hungry and ragged, they went over to England, and hungry and ragged they came back, having earned scarcely enough to pay the expenses of their journey. These wanderings of the Irish labourers to England, take place as regularly every year as the flight of birds of passage. The price of labour in England being double that in Ireland, (in Ireland it is between 6*d.* and 8*d.* per diem, while in England it varies between 1*s.* and 1*s.* 6*d.*) the poor Irish, who live on the poorest food, are generally able to earn the expenses of their journey, and bring back small savings.

Under such circumstances, what wonder is it if the Irish people are ready for temperance, repeal, or anything else which promises an alteration in the existing state of things, for it would be difficult for them to alter for the worse? Mr. Kohl, like all who have visited Ireland in a fair spirit of inquiry, attributes the distress, in a great measure, to the system of underletting, and suggests a remedy which, at any rate, bears a plausible appearance.

The good landlord will direct his attention to one of the greatest evils beneath which the Irish agricultural system groans, namely, the existence of middlemen. In order not to have to treat with a number of petty tenants, or to draw in one large sum, the revenues of the land on which they never resided, it had become the practice of many landowners to let their land in the lump to people who had a certain amount of capital, and who let it again either to the peasant or to other middlemen, provided with less capital, who in their turn underlet it, in small plots, to the actual cultivator of the soil. Thus there arose between the real owner and the real tiller of the land, a series of middlemen, who had no natural interest in the improvement of the estate, but whose great object was to screw as high a rent as possible from the tenant, in order the more easily to pay to the landowner the moderate rent which he required. The most infamous, unjust, and injurious part of this system, however, was that in case any of the middlemen became bankrupt or in any way failed to satisfy the demands of the landlord, the peasant suffered and had to pay his rent a second time. By an act of Parliament, 'the Subletting Act,' the working of which commenced, I believe, from the year 1830, the subletting was entirely forbidden;—this, however, can only have effect on agreements made after that date. There are localities in Ireland where the land has been let to tenants, subtenants, and sub-subtenants, for twenty or thirty years, nay even in perpetuity, and on such agreements the law can have but a slow if any effect. Besides this, the law is often evaded, and a bad old custom is with difficulty removed by the operation of a law. The tyranny and misery to which the poor undertenants were, and, as I must add, still are, subjected by this system of middlemen, will scarcely be credited. It frequently occurs that if the first tenant or middleman, through extravagance or vice, be unable or unwilling to pay the landlord, the latter has no other means of obtaining his rents than that of coming upon the land, that is, sending his driver to collect the cattle and other property which may be on the farm, and to sell them for the payment of the rent. If then the middleman has no property of this kind, or has removed it, the loss falls on the poor undertenant, who not unfrequently has paid his rent to the immediate landlord, but is nevertheless obliged to pay it again to the owner of the soil. Examples of this disgraceful injustice were (and are?) not unfrequent. But usage warrants the greatest injustice, and it was the usage for the owner, if the middleman failed in his payment, to come upon the tenant. These are undoubtedly things unheard of in any other country of Europe: but there are many things connected with Irish agriculture equally unheard of. There are parts of Ireland, where the

Digitized by Google

people do not understand how to make a threshing floor, and where they use any hard plot of ground, or even a piece of a macadamized road for that purpose. Till very recently there were to be found in many places, carts with wheels without spokes, nay, even carts without wheels at all, called *slide cars*. The length of time too for which leases are granted, is a point of no small importance, and many Irish farmers are only tenants at will. Such people have little interest in the improvement of the land, for they have no security that they shall not at any moment be driven out of their farm. Of course it is in the power of the landlord to let his land for as long or as short a period as he pleases. But there are certain forms of compact and certain periods for which they are concluded, in general use in Ireland. Thus there are some leases for ever, some for periods of 99, 31, or 21 years, some for three lives, those of father, son, and grandson. It is said, and, alas, with too much reason, that in consequence of the recently extended franchise, and the agitating policy of O'Connell, the farmers are apt to side against their landlords, and the landlords, having found out, that tenants who are protected by long leases, are self-willed and often vote against the wishes of the owners of the soil, are now more than ever indisposed to grant long leases, so that through fear of removal they may keep the tenants in a state of dependence.

Some of the remedies which Mr. Kohl suggests are thus stated:—

It would be advisable, if the thing could be accomplished, to forbid entirely these tenancies at will, and to compel the landlords, by a legislative enactment, to let their land on lease. This is indeed the general wish of the agricultural population, and what they call "fixity of tenure." No way or means, however, have yet been devised, by which to effect this fixity of tenure, and change these uncertain tenants at will into hereditary tenants of the soil. Being thus so far behind in the march of civilization, it is not unnatural that the idea has not occurred to any one in Ireland, of venturing on the further step of converting the tenants into freeholders. Even the bold O'Connell does not seem to dream of such a step. And this is especially remarkable, as it shows how far the cause of the agricultural population, the most important and first class of society, on which the whole fabric of the State rests as upon its base, has advanced in the states of Europe beyond the condition of the Irish peasantry. Under most European governments—in France by means of a revolution, in almost all the German States by wise reforms—the oppressed and subjugated peasant has been freed from the old feudal power of the nobles, and converted from a bondman and a slave into a free though petty land-owner. Even in Russia, during the last few years, regulations have been adopted and steps taken, tending to make the peasant less dependent on his lord, and to give him by degrees ownership over the soil which he tills. It is only in England and Ireland that no one seems to have dared to think, whether it would not be a wise thing to promise the poverty-stricken and depressed Irish farmer the possession of his land as a freehold, or, if this were impossible without a revolution, to follow the example of Prussia, Saxony, and other countries, and to adopt measures of reform whereby the tenants at will and leaseholders should become by degrees hereditary tenants, fixing the rent to be paid by such tenants by law, allowing, and at last enforcing the purchase of the property on the part of the tenant, and by these means gradually forming the free peasant and independent freeholder. Men have not thought of inquiring, as has been done in France and Germany, and in some of the Russian provinces, whether the peasant has not an older and better right to the land than the owner, who grew over his head gradually by force and oppression, and by degrees abstracted from him the land of his fathers. There is, in Great Britain, so holy an awe of touching the rights of property, as recognized by the State, that no one seems to be able to raise himself to so elevated a point of view as would show him that it might be consonant with the highest wisdom for the State herself to violate these rights.

Mr. Kohl then proceeds to show how the land in Ireland came into the possession of noble English families, a tale of wrong which we have already heard too often. Our author is not so singular in his views as to the means of ameliorating the condition of the peasantry, both Irish and English, as he appears to imagine. There have been many writers and theorists, both in England and Ireland, who have proposed plans similar to those which he himself suggests, and have cast many a "longing, lingering look" back upon those times—

ere England's woes began,
When every rood of ground maintained its man.

Into these views and speculations we cannot now enter; but we present Mr. Kohl's opinions to the reader as worthy of attention, as the sincerity of them is not likely to have been warped by party prejudice. We will further prove this by showing that Mr. Kohl can appreciate the advantages as well as the disadvantages accruing to Ireland from English rule. Speaking of Limerick, he says:—

In the more modern part of this city the tokens of wealth are clearly seen; for it is beautifully built, has fine and imposing streets, as regards their breadth and the size of the houses, which rival even the best in Dublin itself. St. George's Street may be, without disparagement, compared with Sackville Street, in Dublin. St. George is an English saint, and the whole of this modern part of the town is called "the English town." It forms a pleasing contrast to that portion which is called "the Irish town." The same division into English and Irish is to be found in Galway and other Irish cities. These Irish parts are full of dirt, disorder, and ruin; the English, on the contrary, are built after the fashion of the best parts of London. The population of these two divisions seem to live in a kind of opposition to each other. As the English have furnished the cleanest and most respectable parts of all Irish towns, so the Irish, to the number of 60,000 in Manchester, 50,000 in Glasgow, 40,000 in Liverpool, 25,000 in Birmingham, and 12,000 in Leeds, have disfigured the chief English and Scotch towns, by the appendage of a filthy and disorderly Helot-quarter. An Irish quarter, such as St. Giles's, in London, is to be found in almost all large English towns. It is therefore not to be wondered at if the English complain of the Irish. The Irish, on the other hand, ought, in all their complaints against the English, sometimes to call to mind the many benefits derived from the English, of which they are partakers. Who are they but Englishmen who speculate in the improvement of the Shannon and other Irish rivers? Who but English who plan the draining and cultivation of Irish bog-land? Are they not the English who drive the fairies and witches into the sea? Have not the English filled Ireland with elegant dwellings and country seats? Are they not the English, again, in whom lies the soul and pith of British power, through whom the Irish participate in the trade of the British nation, which embraces the whole world, through whom they enjoy the thousand opportunities and advantages which are open to a British subject? Are they not the sinewy, speculative, persevering, Anglo-Saxons, who drag on (sometimes, perhaps, by the hair) the indolent Celts, in the race of fame and national greatness?

In the following passage, the graceful and grotesque are strangely mingled. Mr. Kohl seems fond of speculating on the causes of female beauty; with what success we leave to the reader to decide:—

The fairest thing in Limerick, however, is the fair sex itself. The Limerick lasses are as famous in Ireland as are the Lancashire witches and the Welch women in England. It is remarkable that both the places renowned for the beauty of their women lie to the west, and, indeed, to the more Celtic west of both islands. Is it, perhaps, the greater mixture of the Saxon with the Celtic race that has produced this greater degree of beauty? In western and southern Ireland, too, Spanish blood has been mixed with that of the people, and perhaps it is this admixture of southern fire with northern tenderness which has produced so agreeable a result. Or is not the neighbourhood of the Ocean, breathing fresh breezes from the west, the cause of this phenomenon? But who can fathom all the mysteries which are to be found in the rearing and forming of beautiful women? I went round the town in the company of an O'Rourke, a descendant of a royal race. It is well known that an O'Rourke was one of the most renowned Irish princes, who first favoured the conquest of Ireland by the English, and afterwards was put to death by them. The family afterwards fell into decay, and at the present day there are but few of the name left. It was a Saturday evening, and therefore the pawnbrokers' shops, of which there are a great many in all Irish towns, were full of stir and bustle, some being crowded like market-places in full market. All these people were redeeming their Sunday clothes, employing for this purpose, as usual, some portion of their weekly wages, just received! the remainder was probably spent either the same evening or the next day: on Monday their Sunday dress goes back to the pawnbroker. There are thousands of people in Ireland who live in this way, during the week in rags, hunger, and misery, on Sundays in every kind of finery. Of course this is a very costly mode, as all the pawnbrokers, with their shopmen, must live at their expense. The Saturday is, in all Irish towns, as it is indeed in the whole of the United Kingdom, a day full of the greatest bustle, being followed by the quiet and joyless Sunday; for, as the weekly toil is ended, and there is no lack of money, one usually sees in the evening of that day, even till midnight, half the population of the towns busy in the streets, talking, joking, buying, and drinking. Shops and markets are open till midnight, and provision dealers and chandler's-shop keepers do then most business, as the poorer classes all buy something extra for their Sunday dinner, and fill up other little gaps in their household arrangements. The beggars, too, are best off on that day, as was lately shown by one of them, in a court of justice at Dublin, inasmuch as the working people and others who like to give to beggars have most to bestow on Saturdays. When I first visited England I always thought, on arriving in a town on Saturday evening, that either a riot had just taken place or was about to occur, for the people whom one then observes hurrying about the streets, are all of the lower classes, and crowded together in such masses, that one would think that were the smallest spark to fall among such inflammable matter it would set it in a blaze. Yet there are not only sparks, but very large torches flung into this inflammable mass without doing the least harm. Thus, I saw one Saturday evening at Limerick, a placard stuck up on every gate, and on every lamp-post of the city, containing a proclamation from the friends of O'Connell to the Irish people, in the name of this great agitator, who was to appear there in a few days and harangue them. It ran in some such way as this: "Repeal! Repeal! Repeal! Up, citizens and people of Limerick, and all Irishmen! Up for a separation from England, for your birthright of a separate parliament! The immortal O'Connell will appear among you; it is he who calls you; he needs your help for the cause of Erin. Be firm and united, and, like him, never cease to watch over the welfare of your country, and to be ever active for the great cause of our land!" Besides these, there were other and still stronger expressions, which I have unfortunately forgotten, inciting the people to hold together, to appear in numbers at the intended meeting, to provide themselves with warm patriotism, and plenty of tribute for O'Connell. The people stood and read this proclamation by the light of the lamps, discussing how many pence or shillings they could contribute to the rent, and then went quietly home.

In Kerry Mr. Kohl examined into the truth of the current reports respecting the knowledge of Latin among the peasantry. Here we have the result of his investigation, together with a visit to a hedge school in the same county:—

I have already spoken of these learned, "highbred" Kerry men, and being now in the county itself I was curious to learn what I could respecting their much praised Latin education. I had heard everywhere a great deal about shepherds, herdsmen, and ploughmen who could read and speak Latin; but all I have seen of it myself is this: in two instances men pretended to understand Latin, and recited to me a few scraps of corrupt Latin, which they had retained from the mass or the Ave Maria of their priest; and once a

Digitized by Google

peasant's son knew something more, and was able to quote a passage from Horace; but he told me that he had been brought up for a priest, and not having succeeded in his priestly career had returned to his father's plough. I met with another instance of this at a later period; whence I conclude that the Latin of the Kerry men is generally connected with the church service, and is learned with reference to it; but that we must not infer from the praise we hear of their classical knowledge, that shepherds learn the language for the sake of refined enjoyment, or for the cultivation of their minds. "They do not even understand English," said my neighbour on the car to me. "They do not even understand English in these parts" is in the western districts of England, Ireland, and Wales, a standing expression to indicate the barbarous state of the people. The English language is here the basis and essence of all civilization, and people endeavour to learn it, as it will help them on much more easily than their own barbarous Irish, which is only in use among the poor inhabitants of the remote parts of the country. In a similar way it is said in France and the Pyrenees of the Biscayans, and in the Vosges mountains of the Germans, "they do not even understand French." And so in Bohemia, Galicia, among the peasants of Courland, Livonia, &c. the common effort of the peasantry is to learn German, and it is considered a mark of education to understand and to speak that language. I had, however, an opportunity of observing the mode in which, in these out-of-the-way parts of Ireland, the light of mental cultivation is transmitted, by falling in with a hedge school of the old national style. It was indeed a touching sight. The school-house was a mud hovel, covered with turf, without windows or other comforts. The youthful scholars all sat, wrapped up as well as they might be in their rags, near the low door of the hut, which stood wide open, all holding their little books towards this aperture in order to get as much as possible of the small quantity of light that was admitted through it. Many of the little fellows sat or lay on the floor; behind them some were seated on a couple of forms, patched up of irregular boards, and behind these stood some taller ones who held their books to the light between the heads of the front ranks. The master, dressed in the national costume, sat in the midst of the crowd. In a sketch book of Ireland this would have formed an essential picture, and I infinitely regretted the want of a Daguerréotype in order to perpetuate it. Outside the door lay as many pieces of peat as there were boys within, every boy having brought one with him as a fee for the master. The latter, on my entering through the narrow door, rose from his barrel, and, with a friendly salutation, apologized for not being able to offer me a chair, saying, "Indeed I am very sorry, your honner, that I have not the opportunity of offering you a chair." He was teaching the children the English alphabet; the boys looking very cheerful, brisk, and clear over their study; and if we consider their poverty, their food, and clothing, we must indeed greatly wonder at this phenomenon, which is perceptible in almost all Irish children, at least in the country. The school-house lay close by the road side, but the children lived several miles off, and even the schoolmaster did not lodge near. At certain hours they all meet here, and in the evening, when the day's work is over, the boys put their horn books in their pockets and run away homewards: the schoolmaster closes the door as well as he can, puts his peat fees into a bag, and, staff in hand, walks to his remote cottage across the bog. Here we have a characteristic Irish picture.

The reader, we suppose, will scarcely be satisfied unless we give him Mr. Kohl's experience of teetotalism in Ireland, a subject to which he devotes more than one chapter. Respecting this movement, he remarks:—

Where can we find a similar example of a nation, without preparation, without previous instruction, at once rising, at the call of a single individual, while its vices were at their height (for the Irish were notorious as the greatest drunkards in the world), contending against itself, against its own passions, not unfrequently against the privileged classes and the most powerful of its priests, tearing itself from pleasant and long indulged habits, and confining itself to strict and rigorous abstinence! A whole people has in this case done what in the Middle Ages only a few pious monks were able to perform. How hard it is to fulfil that saying of Christ, that we should put off the old man and put on the new man! Yet here we have an instance of five millions of men fulfilling the command in one great particular. They have put off at once an old man, laden with diseases which have resisted the craft of every physician, and have put on a new, abstinent, and sober man in his stead. In all reforms and revolutions there have ever been thousands of men who have gained some temporal advantages by the change. In the Lutheran reformation many princes were active favourers of the reforming party, because it gave them a pretext for confiscating abbeys, ecclesiastical preferments, and rich church property. In the French revolution the revolutionists took possession of the estates of the higher classes. The revolutionary heroes of those changes, had also the easier work, as they swam with the great stream, which carried men away before it, and enriched them at the expense of others. But in this Irish temperance movement every one appears to lose and no one to gain, from Father Mathew himself, the apostle of temperance, up to the English Government. This Father Mathew had a brother, the proprietor of a large distillery, in which two other of his brothers had large shares. His sister had married another great distiller, of the name of Halkett; in short, all his relations were connected in some way with the spirit trade, as was almost always the case in Ireland. All these people were ruined in their worldly interests by the reform projected by their relative; who, notwithstanding, was not deterred from prosecuting his design, for effecting what he considered beneficial for the people. The spirit distillers and sellers, the public-house and hotel keepers, were a class of men more numerous and influential in Ireland than in any other country, and these people exercise a direct influence upon the lowest classes; and yet against this influential body, who held this sweet poison in their hands, as Hebe held the divine nectar, men who busied themselves in striving to lull to sleep the guardian angel of the people—against this powerful class the storm arose. Nor were these the only party who lost; the clergy and the nobility were also sufferers, as also the Government, whose excise revenue was materially diminished. All these losing parties could only contemplate in the far distance the advantages they would derive from having sober and orderly subjects, and were therefore interested in the maintenance of the old condition of things. The people themselves, who were to abstain from drink, did they gain anything by this reform? Were they not rather to subject themselves to what appeared to them one of the hardest privations? Were they not required to deny themselves that which they had long considered as their only consolation in their deepest misery? Were they to be unfaithful to the cup which had seemed to them the Lethean draught of forgetfulness, under all their oppressive sorrows? They were required to surrender themselves to a sobriety which would make them feel all that was most depressing in their condition, and only promised them a sweet and profitable reward in the dim distance. Thus, as I have said, all classes appeared interested in opposing the progress of temperance, and this reform had to stem the strong torrent of the interests, passions, and inclinations of all sorts and conditions of people. Scarcely anywhere can we find those who were to gain by this measure. Gain of course was promised, but it was gain of so peculiar, I ought to add of so unearthly, a nature, as very rarely to have any charms for wilful, sinful man. Order, industry, virtue, peace with all mankind, these were the fruits which the apostle of temperance pronounced as the results of sobriety. And then the earthly advantages which were to flow from it,—the better regulation of the household, which was promised as a consequence to the poor—the more regular payment of rents, which was promised to the landlords, if by their example and influence they would consent to advance the cause of temperance—the better and truer subjects which were held out as an inducement to Government—all these were advantages so little appreciable at the moment, requiring so much sacrifice at the first, and promising at last only a probable and tardy fulfilment, that they would seem to possess but few attractions. Yet the people flocked together passionately, I might say madly, by thousands, and hundreds of thousands, made all these sacrifices, and allowed themselves to be converted by this great apostle, who triumphed as gloriously in his cause as almost any apostle before him. Father Mathew often admitted in one day four, five, eight thousand men, and once as many as thirteen thousand. At his first appearance in Galway no fewer than two hundred thousand men gathered together to see him, to hear him, and for the most part to be registered by him in the list of teetotallers. As the Irish Temperance Society has existed for five years, and numbers five millions of members, it must on the average, have received nearly three thousand members a day. These are all extraordinary occurrences, such as the historian in vain seeks a parallel to, and the affair is more creditable to the Irish nation than anything else that has ever been known of it. For the rest, it is a natural result of the constitution of human nature, that the whole reform was by no means effected by purely spiritual and righteous means; and it is also clearly comprehensible how many who favoured the cause did it from no pure desire for the welfare of mankind and the cause of sobriety. * * The motives, too, which have influenced men to enter the temperance societies have not always been as pure and clear as crystal. I have already mentioned the Irish beggars, who sometimes adorn themselves with the temperance medal because they know that it gives them a much better chance of obtaining alms. Many, too, of the landlords have taken up the temperance cause, merely to give an example, because they hope that sober tenants will be more inclined to pay their rent regularly than drunkards. Many people have made temperance serve the cause of niggardliness and avarice; for many miserly persons think themselves peculiarly fortunate on finding in temperance so excellent and laudable a pretext with which to cover their avarice and spare their guineas. They give now to their families and guests water for wine, and tea for punch; and as temperance has prevailed and is the order of the day in Ireland, nobody ventures to grumble at the substitution. Others have been led to join the movement, not by their love of moderation, and conviction of its excellence, but by a kind of fanaticism and superstition. They think not only to secure their souls' health in the next world by this means, but they ascribe sundry beneficial and protecting powers to the blessings of Father Mathew and the medal which he bestows, and consider these medals as a species of talisman.

We are almost afraid that if the matter were thoroughly investigated, this last cause would be found among the most influential incentives to the temperance movement in Ireland. But whatever the causes that have most tended to produce the effect, the effect cannot be denied. Mr. Kohl bears witness to the sobriety of the Irish people and the better state of things resulting from it; but he is inclined to fear that the duration of the teetotal society depends on the life of Father Mathew. He thinks, that unless he lives long enough to consolidate it, it is likely to fall to pieces, as it depends now entirely on him for its existence and continuance. This dependence on an individual, and superstitious reverence for his blessing and his medals, cannot but be productive of prejudicial effects; and we must confess, that, gladly as we hail anything that throws a gleam of light on the gloomy prospects of Ireland, we do not look with any great degree of confidence to the duration of this temperance reform.

We now take our leave for the present of Mr. Kohl; but shall wait impatiently for his forthcoming second volume on Ireland to return to that country; and hope soon to hear his opinions on our own habits and customs, and doubt not that we shall gather many useful lessons therefrom.

The Book of Scottish Song: a Collection of the best and most approved Songs of Scotland, with Critical and Historical Notices. Glasgow and London, Blackie.

"THE most extensive collection ever published" is the motto on the cover of this work; an invi-

Digitized by Google

tation not quite so attractive as the publishers intend: quantity without quality is a great evil. But the present publication is full of matter for remark; and perhaps our judgment of its value will be better gathered from a few discursive observations, than from a more formal character. The "provincial" air, with which every page is stamped, is of service to this book rather than otherwise, as giving it a character different from former collections. Many of the contributors, too, belong to a younger generation than was charmed by the melody and pathos of Burns and Cunningham. We are glad to find that hard times and Kirk discords have not been able to destroy the love of song in Scotland.

The very first ditty, indeed, which tempts an annotation, reminds us how wide and deep and universal is the love of melody among our neighbours. 'My only joe and dearie' was the production of John Gall, a compositor, who died early. The next page gives us 'Gree bairnies, gree!' by William Miller, a working cabinet-turner. John Mayne, the better-known author of 'Logan Braes' and 'The Siller Gun,' was connected for many years with the *Star*, London newspaper. Alexander Keay, whose 'Bricht Star' is a very fair song of its Della Cruscan kind, is a ploughman. The beautiful 'Wae's me for Prince Charlie' came from the loom of William (not *Tam*) Glen, weaver: alas! that we must add, one who died in poverty. The new set of 'O'er the Muir' belongs to Stewart Lewis, an Ecclefechan tailor; while 'Love's Adieu' was written by Joseph Grant, a Kincardineshire peasant, whose fortunes—as far as a meagre paragraph enables us to gather his history—were of like complexion with those of poor Alexander Bethune: he, too, died of consumption. As to the contributions of schoolmasters, booksellers, &c. &c., it were loss of time to attempt their enumeration. To most of the songsters we have mentioned Fame could hardly have been the inducement, so much as that spontaneous love of rhyme and tune which belongs to certain classes, or which, to speak more exactly, originates in certain social conditions. The Scotch are certainly not so gay a people as the Irish; we even question whether, in amount of animal spirits, they would not be beaten by the children of Rebecca's country,—but they are the most persevering race of singers of the three;—the Munster melodists and the *Pennillion* harpers not forgotten: and the fact, and the causes for the fact, are not too unimportant to claim notice and examination from all who interest themselves in the education and the pleasures of the people.

In proportion, however, as we admire and rejoice in the activity of the minstrels "ayont the Border," we are bound to resist all moss-trooping propensities. We will not accept of a Scottish King Cole, nor of "an Old Scottish Gentleman." The best of these imitations is an awkward, unreal thing; and how bad they can be, a single verse will suffice to show:—

His door was op'd to every one who'd fight for Scotland dear,
The stranger cold and harper old were always welcome here,
For aye he loved to hear the tale of ancient deeds of weir,
How England's might, on Bannock's field, did quail 'neath Bruce's spear,
The rare old Scottish gentleman, all of the olden time.

Such hybrid productions have no proper place in any collection of national songs. Moreover, in this book, we have too many high-flown ditties, which want the racy flavour of the Munster melodists, and are but little fresher than Covent Garden flowers of rhyme served up second-hand at Vauxhall. Too many songs of Hector Macneil and of Robert Tannahill are open to this objection. So, too, we agree with Burns, in rejecting 'The Banks of the Dee' as sickly and unmeaning fustian, fit alone for the far-famed vase at Bath-Easton. Coarse as it is, we would rather have the 'Wee Wifukie' of jolly Dr. Geddes, than an artificial garland of such sentimentalities. The name of Dr. Geddes reminds us that not the worst contributions to this vocal anthology have been from clerical sources,—witness his 'Lewie Gordon:' witness, too, 'Tibbie Fowler,' said to have been written by the Rev. Dr. Strachan,—and the Rev. Norman Macleod's 'Farewell to Funery,' which is more orthodox, perhaps, but less spirited than the above,—and 'When lonely thou wanderest,' from a fragment by Dr. Arnott, who seems to have followed Hoadley, and Home, and Maturin, in allowing himself the indulgence of dramatic composition.

We will now let a Scottish minstrel or two sing a stave; and the first chosen shall be by Robert Miller, a law student of Glasgow, who died when only twenty-five. There is a touch of Millevoye's deep and tender melancholy in it, though the manner be somewhat conventional, and though the "Doric" of the singer's own land be so little used, that it can hardly be considered as a Scottish song.

The loved of early days!
Where are they?—where?
Not on the shining braes,
The mountains bare;—
Not where the regal streams
Their foam-bells cast—
Where childhood's time of dreams
And sunshine past.

Some in the mart, and some
In stately halls,
With the ancestral gloom
Of ancient walls;
Some where the tempest sweeps
The desert waves;
Some where the myrtle weeps
O'er Roman graves.

And pale young faces gleam
With solemn eyes;
Like a remembered dream
The dead arise;
In the red track of war
The restless sweep;
In sunlit graves afar
The loved ones sleep.

The braes are bright with flowers,
The mountain streams
Foam past me in the showers
Of sunny gleams,
But the light hearts that cast
A glory there
In the rejoicing past,
Where are they?—where?

Ere we treat the reader to another tune, we must further call the editors of this "extensive collection" to account for swelling its columns by unlawful means. Why, for instance, have they given that piece of dislocation from a noble poem of Wordsworth's, which has figured in 'Rob Roy,' the opera?* Wherefore have they *capped* the ditty of ditties, 'John Tod,'—a piece of humour, and a piece of character to boot, of which Béranger himself need not have been ashamed,—with the paltry and second-hand 'John Maut,' which follows it? To tie up weeds with flowers is bad policy. Now for another song, by one of the modern poets who passed away ere justice could be done to his great and original merits—we mean William Motherwell:—

Ye bonnie haughs, and heather braes,
Where I hae past youth's blithest days,
Ane idle dream o' bliss ye be,
That gars me sigh for my ain countrie.
O bauld we rade through Stirling toun,
Wi' pistol, sword, and musquetoon;
And banner braid displayed had we,
Like brave men halding companie.

We left our luves, we left our hames,
We left our bairns and winsome dames;
And we drew our swords right manfully,
To back the king o' our ain countrie.

But Carlile yetts are wat wi' blude:
Micht matches richt, and dooms the gude;
And gentle blude o' ilk degree
Ha'e stain'd the hearths o' my ain countrie.

And dwining in this fremit land,
Does feckless mak' baith heart and hand,
And gars thir tears drap frae my e'e,
That ne'er sall fa' in my ain countrie.
O Carron brig is auld and worn,
Where I and my forbears were born;
But bonnie is that brig to see,
By ane fremit frae his ain countrie.

And gladly to the listening ear
Is borne the water's cruning clear,
Making a moan and a melodie,
That weds my heart to my ain countrie.
O gin I were a wee wee bird,
To light adown at Randelfuird,
And in Kirk o' Muir to close my e'e
And fald my wings in my ain countrie.

This last verse gives us occasion to remark how constantly we find, not only particular persons, but also particular localities, adverted to in Scottish song. Our wolds, and downs, and dales, have nothing to show compared with almost every birk, and shaw, and heap of ruin, betwixt John o' Groat's house and "merrie Carlisle." Who has *sung*—not poetized—the Wye, or the Tamar, or the Lune? Yet these are streams at least as worthy as the Tweed and the Tay. Neither have we as yet a good ditty of Sherwood, nor of the Peak country, nor of the Cornish mines, where it might be thought that a strange adventurous life, taken in conjunction with wild aspects of Nature, must have set some one a-singing, had our people that spontaneous tunefulness, uniting music and words by instinct, not rule, which distinguishes the natives of other districts. Popular instruction, such as we are now thankful to see in course of diffusion throughout England, may heighten enjoyment, by giving the means of regulated execution, in a delightful and sociable art; but the compositions that may be expected to result from this or any other system, will be as different from the lilts and strathspeys of Scotland, and the *purths* and planxties of Ireland, as the cherry on the wall, trained by the gardener's art,—ample in fruitage, and symmetrical in form,—from the wild blossom, tossing its arms about as the breeze wills, in the depths of its native forest, so healthily and heartily sung by Barry Cornwall. Where, for instance, in England, will a Head or a Howitt pick up such a dialogue as one we find reported in a note to Madame Dudevant's 'Consuelo,' which would seem to show that even the French, whom we have been accustomed to consider as a prosaic people, are richer in the article we mean, than the countrymen of those kings of song-poets, Shakspeare and Ben Jonson?—

If you listen attentively (says the writer,) to the players on the *cornemuse* (a species of bag-pipe) who play the part of minstrels in the central districts of France, you will perceive that they know by heart two or three hundred compositions of the same style and character, which, nevertheless, are not borrowed from each other, and you will become aware, that in less than three years this immense repertory becomes entirely renewed. I had lately a conversation something like the following, with one of the fraternity.—"You have learned a little music?" "Certainly: I have learnt to play the *cornemuse* with the great drone and the *musette* with keys." "Where did you take your lessons?" "In the woods of the Bourbonnais." "Who was your master?" "A woodman." "Then you know your notes well." "As if I did not!" "In what key were you playing?" *Key!* what does that mean?"—"Were you not playing in D?" "I don't understand your D."—"What names, then, do you call your notes?"—"They are the notes; they have no particular names." "How do you recollect so many different tunes?" "By listening."—"And who composes them?" "Plenty of people: famous musicians in the woods."—"What else do they do?" "They are wood-cutters." "We have a saying that *music grows in the forest.*" "And you go to find it there?"—"Every year; the common sort of musicians don't. They listen about on the high

* Why should not 'Rob Roy' be reset in proper musical style, and some English musician try to make of it our 'Guillaume Tell,' by a process similar to that adopted by Rossini, while treating his Swiss subject, namely, a union of nationality of colour with classicality of form? The story is full of excellent material; as matters stand, we have but a melodrama with interspersed music.

Digitized by Google

roads, and repeat what they get as well as they can. But for the right *accent*, one must go and hear the woodmen of the Bourbonnais."—"And when do they invent that?" "Walking about, or coming home at night, or resting on a Sunday." "Do you compose?" "A little—but it is not worth much. One should have been born in the woods to compose, and I am of the plain. There's no one better than me for the *accent*, but I am no hand at making tunes, and had better never try." I tried to make him explain what he meant by *accent*. But he could not do it, perhaps because he knew it too well,—or because he thought I was not worthy of being so enlightened. He was a young, grave man, as swarthy as a Calabrian *pifferaro*—going about from *fête* to *fête*—and not sleeping for three nights at a time, because it was necessary for him to walk six or eight leagues before sunrise, to reach his destination in time. For this he was none the worse, drinking pitchers of wine which would have stupified an ox, but never complaining, like Sir Walter Scott's trumpeter "that he could not play *pew* on a dry humloke." The more he drank, the graver and the prouder he became. He played very well, and had reason to be vain of his accent.—His playing, we observed, implied a perpetual variation on every theme.

For the sake of the illustration, and in consideration that this is a *fantasia* rather than a criticism, we must be excused the digression, which, after all, is not so wide as it may seem, the *bourrée* of central France having a distant resemblance to many of the Scottish bagpipe tunes. But the value of the passage lies in the light it throws upon the origin of national music; and if our inferences be at all correct, we shall see why the Scotch, the Irish, and the Welsh (Mr. Chappell must forgive us), are richer than ourselves. Theirs are the tunes of instinct and imitation, invented by wild men for wild instruments; ours are the productions of trained musicians; at best based upon some more ancient and traditional melodies, of which, however, there are no longer any traces extant.

But it may be thought an Irish way of proving Scotch wealth, to descant upon English poverty; and we had better, therefore, without further apology, return to Messrs. Blackie's collection for a farewell song. The book has opened of itself, at a name which is full of interest, and we will take—

The Making o' the Hay.

BY ROBERT NICOLL.

Across the riggs we'll wander,
The new-mawn hay amang,
And hear the blackbird in the wood,
And give it sang for sang.
We'll give it sang for sang, we will,
For ilka heart is gay,
As lads and lasses trip alang
At making o' the hay!

It is sae sweetly scented,
It seems a maiden's breath;
Aboon, the sun has withered it,
But there is green beneath,
But there is caller green beneath,
Come, lasses, foot away!
The heart is dowie can be cauld
At making o' the hay!

Step lightly o'er, gang saftly by,
Mak' rigg and furrow clean,
And coil it up in fragrant heaps,
We maun ha'e done at e'en,
We maun ha'e done at gloaming e'en;
And when the clouds grow grey,
Ilk lad may kiss his bonnie lass
Amang the new-made hay!

Miller, and Motherwell, and Nicoll, are all gone: but there are still a hundred rising singers in Scotland, who will not let the credit of the old country, or the memory of her old tunes die: and this cheap and comprehensive book we are now closing, perhaps may serve as an awakener to some "mute inglorious" Hogg tending his sheep; or to some hitherto silent Allan Cunningham, plodding his way homeward by the banks of the Nith, and "crooning" to himself the while.

A Treatise on Photography. By N. P. Lerebours. Translated by J. Egerton. Longman & Co.

To those who are desirous of pursuing the Daguerréotype processes, for the production of good photographic pictures, this treatise will be of considerable value. It is however little more than a compilation from the numerous essays which have been published, from time to time, by those experimentalists who have devoted their attention to the improvement of Daguerre's process: indeed, this is all it professes to be. As the title might lead many to suppose that the book embraces all the photographic processes which have been given to the world, or at least, the most sensitive and generally useful, we are bound to state, that very little beyond the Daguerréotype engages the attention of the author. However, the directions given for the choice of the plates, the polishing and iodizing processes—the use of the camera and the exposure to mercurial vapour—and the subsequent fixing process, appear to furnish the amateur with all the manipulatory details necessary for the production of pleasing Daguerréotypes.

We regret that the translator has not given English weights and measures. However familiar he may be with the gramme and the decilitre, it is not to be expected that all those, for whom the book is evidently intended, should be aware of the proportion these bear to English measures of quantity. The portion of the book which we regard as the most useful, is that which contains directions for taking portraits. These are evidently the results of a long practice in the art.

The French may well be proud of having, by their exceeding liberality, bought "for the world"—which means with them every place but England—the most perfect of any of the photographic processes. Notwithstanding the exceeding beauty of many of the processes on paper, and the great advantage which these possess of enabling us to multiply originals, we readily admit, that nothing has yet been produced at all equal in exquisite finish, sharpness of outline, and delicate beauty of detail, to those pictures which are impressed upon the iodized silver tablets of Daguerre. But though we acknowledge thus much, we must claim for our countrymen the merit of having developed an infinitely larger amount of interesting phenomena, connected with the changes produced on chemical compounds by the agency of the solar rays, than not only the philosophers of France, but than all the philosophers of the continent. We do not understand that feeling which leads scientific inquirers of one nation to pass slightingly over, or to assume ignorance of the inquiries which have been pursued by those of other nations. Such a spirit is beneath the dignity of a philosophic mind, and bears the stamp of a contemptible jealousy. There is something noble in national pride. To boast of a great discovery made by a countryman, argues a pleasing brotherhood, and even the act of lauding an achievement above its deserts, is as excusable as the parental display of the efforts of a darling, and, it may be, a talented child. But in the book now before us, and this is but a type of a great number of essays to which the same remarks apply, the labours of the English experimentalists are kept with great caution out of sight. It is true that Mr. Talbot's Calotype process is given, but this, with the exception of so much of Mr. Ponton's method as was adopted by M. E. Becquerel, is the only photographic preparation discovered by an Englishman that is mentioned in this volume of 216 pages. Not one, of all the beautiful and curious processes discovered by Sir John Herschel is named, and to this distinguished philosopher photography, as an art, is more indebted than to any other man; and in realizing the scientific hopes of Arago, he is the experimentalist who stands without an equal, whether we regard the extent of his researches, or his philosophic deductions from them. We have said that Mr. Fox Talbot's Calotype is thought worthy of a place in M. Lerebours' treatise, but even this is very meagrely described, and appears to be due to some degree of personal acquaintance rather than to any appreciation of its excellence. To Mr. Fox Talbot something more than this was due, and although we are sorry he has acted so ill-advisedly as to patent his process, we acknowledge the extent of his researches.

If this forgetfulness of the claims of others had been confined to this treatise only, we should not have thought it worthy of notice, for although a work of much utility, it is not one which aims at originality, or which pretends to scientific inquiry; but it has long been a subject of just complaint amongst our men of science.

The last chapters of this work are devoted to extracts from the communications of Möser, of Fizeau, of Knorr, of Karsten, and of Draper, but as the memoirs and essays of these inquirers have all been published, and the questions of which they treat are fully discussed in the pages of the *Athenæum*, we need not do more at present than refer to them. The question which arises out of these researches of Möser, and those who have followed him, as to the agent which produces the mysterious images on metal plates or on glass, when other substances are brought in contact or proximity with them, is of the most interesting character. As journalists, we would, for the present, avoid venturing an opinion—and instead of doing so, impress upon all inquirers engaged in the investigation of these complicated phenomena, to rest contented with accumulating facts on which a true theory may hereafter be founded, rather than indulge in the delights of theorizing.

THE ANNUALS FOR 1844.

No one at a loss for a light subject of literary speculation, need travel further than his own drawing-room table—if there yet rest on it one of those battered pieces of finery, a last year's Annual. How hath the golden age of these toy-books gone by! The small wits, and novelists, and poets, whom they encouraged, have "crept into their caves," or make a sound so faint, that no passer-by, intent on loftier things, can be troubled by them. The engravers and boudoir artists, who complained so loudly, yet wrought so industriously, need no longer fear the lucrative temptations which drew them aside from grand historical Art! Where there were some score of the English family, there are now a bare half-dozen; and the race seems rapidly emigrating from the territories of John Bull to those of Brother Jonathan. Here at least, as sumptuous as satin-paper, and cream coloured leather, delicate typography, and luxurious illustration can make it, is

The Gift,

—a Gift, let us add, worth receiving; owing to the character and the cleverness of its letter-press. We have never seen better prose in an Annual, than some of the papers. Mrs. Clavers (Kirkland) contributes a pair of village sketches. One called 'Ambuscades and Sorties,' in spite of its affected title, is as straightforward and humorous a tale of a *dead set* made against a Cymon of the back-woods by an Iphigenia, as was ever told. The other, 'Half-Lengths from Life,' is a pleasant and almost pathetic romance founded on that terrible trial to all real housekeepers in such wild American places: to wit—the difficulty of hiring "help." Then the 'Journal of a Vicar' was worth translating from Zschokke, though hardly, we suspect, as the

Digitized by Google

preliminary note conjectures, the original of Goldsmith's immortal tale:—while, for those who love more modish wares, Mr. N. P. Willis exhibits a picture of English life, sufficiently *operatized*, but also sufficiently amusing. For ourselves, who prefer matter-of-fact when we can get it, and have an especial kindness for Miss Leslie's style of narration, we laid fast hold of that Lady's 'Pencillings of Boston':—

"The day after my first arrival in Boston (about eleven years ago), I gladly accepted the invitation of some friends who were desirous of showing me the oldest part of the city, and we finished by a walk through the North End to the ancient cemetery on Copp's Hill; so called from the ground having once belonged to William Copp, who made shoes for the early settlers. In our country every thing is ancient which has existed a hundred years; and there are gravestones on Copp's Hill whose dates are before the middle of the seventeenth century. In the year 1832, this primitive burial-place had not yet been touched, or rather spoiled by the hand of improvement; and I saw it in all its original quaintness. On the high and then rugged bank that descended from the outside of the eastern wall directly down to Charles River, were traces of a British battery, from whence on the immortal 17th of June they cannonaded across the water the glorious rebels that were defending Bunker Hill. This bank had in many places caved in, and the chasms were now filled with a thriving growth of weeds; including the purple and well-guarded tassels of the *noli me tangere* emblem of Scotland, and the large white bells of the stramonium or apple-peru (as the Bostonians strangely call it), a plant that delights in waste grounds and rubbish, and rejoices in the vicinity of old bricks, old shoes, broken crockery, and oyster-shells. It is said that there is no weed so mean as not to be cultivated in some part of the world as a valuable exotic. American travellers have found the poke-plant, and the mullein, in European green-houses, growing in pots or tubs, and carefully watered and tended; the dark-red stalks and berries of the one, and the pale yellow blossoms and woolly leaves of the other being greatly admired. Copp's Hill Cemetery was surrounded by a low wall, and we then entered at a turn-stile. All round the interior of this wall are monumental tablets inserted in the masonry, each one marking the spot where were deposited the mortal remains of some noted man of his day. The tablet that most attracted my attention was the first on the left hand of the south entrance. It is of white stone, and inscribed with only one single word, MARTYN, in large letters. Over this name is sculptured a blank shield, above which a star is ascending, and seeming to disperse with its rays a volume of clouds that appear to have gathered behind the escutcheon. I afterwards made many inquiries concerning this mysterious and dateless tomb, but could gain no information whatever. I was always told that no person now living remembered the time when it was not there. Very near this tablet, a slab of black marble bears the name and epitaph of William Clarke, whose mansion in the North Square was one of the shows of the city, as indicating the style in which a wealthy Bostonian merchant enjoyed his wealth a century ago. The inscription on the tablet of Mr. Clarke is encircled with a wreath of flowers, fruit, and corn, beautifully carved in alto-relief, and surmounted with the crest of the family, a swan with a crown on its head, and a chain round its neck. A large number of the other tablets were also decorated with armorial bearings; an additional evidence, that among the Puritan founders of New England were many, who having a tinge of noble blood in their veins, were not averse to 'the boast of heraldry,' though they abjured the 'pomp of power.' A large portion of the ground on Copp's Hill Cemetery is occupied by graves, which

> A middle race of mortals own,
> Men half ambitious, all unknown.

But the tombstones are remarkable for their old dates and quaint devices. They are of black slate, and, of course, the 'angels, epitaphs, and bones,' are engraved on them in white. In most of the inscriptions the spelling is very antiquated—for instance y^e is used instead of the article 'the;' and v instead of u, and *vice versâ*. You see 'heaven' spelt 'heauen,' and 'gracious,' 'graciovs'—also double lls and capitals in abundance. The prevailing ornament on these old gravestones seems to be a winged skull, outlined with mathematical precision, the head forming a complete circle, or globe, and having a wing growing out at each side, just where the ears should have been. In all these skulls the nose is an exact triangle, the eyes two exactly circular holes, and the mouth a large square-cornered aperture with enormous teeth of size proportionate to a double row of bricks, marked with alternate lines in true brick fashion. On some few of these slate-stones is rather a more tasteful decoration, representing a tall slender urn beneath an extremely scanty willow tree. On others are two broad flat-faced cherubs, and on some there is a long thin angel blowing a long thin trumpet. These angels and cherubs all seemed to be genuine roundheads, with straight, stiff, puritanic hair; looking as if it had been cut and trimmed by the old Yankee method of an empty pumpkin-shell laid on the head as a guide to the scissors in making an exactly even circle before and behind, and above the ears. Among the old slanting gravestones that were half sunk in the earth, and nearly hidden by weeds and long grass, I found one that seemed the most ancient of all. Having pulled aside the dock-leaves and nettles that obscured the inscription, I read on it the name of Grace Berry, 1625. This much puzzled me, knowing that the settlement of Boston did not commence till 1630. I was afterwards told that the date originally was 1695, but, to excite the surprise of the Boston antiquarians, and to create (as it did) an antiquarian controversy, a mischievous youth had taken a chisel and gone into the cemetery one moonlight night, and by a slight alteration in the figure 9, had changed it to a 2, converting 95 into 25.

"In the north-western part of this cemetery is a large brick tomb, covered with a slab of brownish stone, which looks old and coarse, and in a very ill-worded inscription denotes that the principal members of the Mather family are interred beneath. 'Tis the tomb of our fathers,' comes in awkwardly among the names and death-dates of Increase Mather, Cotton Mather, and Samuel Mather. While standing near the spot where moulders the dust of Cotton Mather, it is impossible not to reflect on his unrelenting persecution of those unfortunate beings whom he designated as the Salem witches. Who can read his Magnalia and not wonder whether he was indeed so great a fool as to believe in all the gross absurdities and palpable impossibilities that he relates as facts—or so great a knave as to affect that belief? And yet we are told that, except in his hatred of the quakers, and his persecution of the witches, Cotton Mather was a wise and charitable man. It may have been so; for strange, indeed, are the inconsistencies of human character. But we have no account of his having, in after life, testified any compunction for the part he had taken in this the darkest passage of the colonial history of Massachusetts. How unlike that of Cotton Mather was the conduct of Judge Sewall of Salem, who had presided on the bench during the trials for sorcery that disgraced the year 1692, and who had pronounced sentence of death on the victims. When the frightful excitement of fanaticism and superstition had passed away, and reason and humanity had resumed their empire, he was one of the first to regret the part which he had taken in it through his official situation. Sixteen years afterwards, one Sunday at the close of public worship, Judge Sewall left his seat, and advanced towards the pulpit, where he handed up to the minister a paper which he requested him to read aloud to the congregation, desiring them all to remain and hear it. This paper was an acknowledgment of sincere recantation and deep repentance for having, in his capacity of judge, sentenced to death so many innocent people. He stated that he now believed himself to have acted at that time under a delusion, which had seemed contagious, and which on its first appearance should have been checked rather than encouraged by those who had power and influence to repress it. He said that remorse had soon come upon him, and that he had ever since done all in his power to benefit the families of those who had suffered by his sentence, and to make all possible atonement for his misguided severity. And he now humbly and in the presence of the assembled church, expressed his sorrow and compunction, and tremblingly implored the forgiveness of his God. While this memorial was read to the congregation, (amongst which were many relatives of the victims of the year 1692) Judge Sewall stood at the foot of the pulpit in a posture of the deepest sorrow and contrition, with his head bowed down, his eyes cast on the ground, and his hands crossed humbly on his breast. That such a man must have believed himself right in doing the wrong for which he afterwards so conscientiously endeavoured to atone, can admit of no doubt. May we not suppose that in those solemn and serious times, when there was 'all work and no play,' the want of excitement, added to the contagion of example, induced these primitive Puritans to lend a willing ear to those strange and absurd stories of witchcraft that brought nineteen unoffending persons (most of them women), to an ignominious and unmerited death? We are informed that, during the prevalence of the delusion, (or whatever it may be called,) nothing was thought of in Salem and Boston but witchcraft; and this sorcerophobia spread like wildfire. From the highest to the lowest of the people, this imaginary crime was the one engrossing theme; and all real offences remained unpunished and untried. Every sort of business was at a stand; the time and attention of the whole population being absorbed in fixing suspicions, collecting evidence, crowding to the trials, and flocking to the executions of the supposed sorcerers. The court-house was every day thronged to suffocation; the greatest satisfaction was evinced when the culprit was brought in guilty of doing things that never could have been done; and men, women, and children went as if they were visiting a theatrical show, to see the miserable and abused victims expire on the gallows. Alas! poor human nature! At length the mandate of Governor Winthrop, declaring that in future no person in the Province of Massachusetts should be tried or punished for witchcraft, in stopping the prosecution, stopped also the delusion. When witches could no longer be hanged, no more witches were discovered. In wandering through this solemn field of mortality, 'where heaves the turf in many a mouldering heap,' I could not but remember that these long-buried tenants of 'the dark and narrow house' were once the living dwellers of the neighbouring streets, and that the ancient wooden domiciles we had passed on our way to the cemetery, were reared by their hands when they began to transform a forest into a city. I thought of the privations and the sufferings they had endured so bravely, in the hard and perilous times of the early settlement. The spirit that had brought these republican brethren across the pathless deserts of the Atlantic, was transmitted to their children. With the first grain of corn planted by them 'on the wild New England shore,' was deposited the seed of the Liberty Tree. After the restoration of the English monarchy, an order was sent from Parliament commanding the Governor of Massachusetts publicly to reprimand the people of that province for 'their ill-concealed joy when they heard of the martyrdom of his blessed Majesty, King Charles the First.' To know of what stuff the Bostonians were made, it is only necessary to read the titles of the pamphlets that were continually issuing from their press, for at least a century before the fight of Lexington. The moment when the head of Charles the First fell upon the scaffold, commenced the revolution of America. 'The beings of the mind are not of clay.' All who have read Lionel Lincoln (and what American has not?) will feel the enchantment that fiction lends to truth, when they visit the old cemetery of Copp's Hill. Their thoughts will recur, as mine did, to the poor patriotic Job Pray (so undeservedly regarded as an idiot) who was found by Lionel Lincoln wandering about these lonely precincts in the last hour of that memorable night, which preceded the day of Bunker Hill. I could not but remember that thrilling passage where the low murmur of distant sounds was heard coming faintly over the water, from the Americans who were working by the starlight at the intrenchment on the opposite height; and the British officer stopped and listened, and Job Pray said,—'It is only the dead going back to their graves!' * *

"I considered myself fortunate on my first visit to Boston, in being introduced at the house of Major Melville, one of the destroyers of the tea, and the last survivor of the secret band with whom this extraordinary and eventful enterprise is said to have originated. Though Major Melville was always un-

Digitized by Google

willing to say more on this subject than was already before the public, and though it was not deemed in good taste for strangers to question him concerning it, yet there was a gratification in seeing a man who had certainly taken an active part in the scene, and who was supposed to be one of the persons who on that occasion assumed the disguise of Mohawks. One of these Indians, who had forgotten to comb the powder from his hair when he let it down from the riband that usually tied it, and whose lace handruffles appeared from beneath his blanket, was said to be John Hancock. Little did he think, that night, in how short a time he would be called to the head of the nation, as President of the immortal First Congress, and that his hand would inscribe the first signature to the Declaration of Independence. The leaders in the destruction of the ten, are said (on good authority) to have bound themselves by a solemn oath, never while they lived to divulge the names of each other. Their most sanguine hopes could not anticipate that what they were then doing would eventuate in so glorious a consummation as the freedom of their country; and they considered that if known they might afterwards be stigmatized as conspirators and insurgents. With regard to each other, they conscientiously kept their oath of secrecy; though in after times many of them acknowledged the part they had themselves individually taken in drowning the obnoxious herb in the waters of the bay. Among these gentlemen was Mr. Winthrop, a lineal descendant of the founder of Boston. It is said that the steady and energetic Samuel Adams was also one of them. * * Mrs. Melville told me that when her husband came home on the memorable night of the 16th of December, his answers to her questions with regard to what he had been doing, were very brief and circumspect; and she desisted from her inquiries when she found his unwillingness to reply. On taking off his shoes (which were rather large for him) Major Melville found a small portion of the tea that had fallen into each of them. He was going to shake it into the fire, when Mrs. Melville stopped him, and, taking the shoes, she emptied the tea into a paper. This her husband permitted, on her assuring him that she had not the least design of making an infusion of it for her own drinking, and, indeed, that she would not for the world be guilty of such an abominable act. Soon convinced that her sole desire was to keep it as a relic, he allowed her to preserve the ten, and she put it carefully away, with a presentiment, as she said, that the time would come when they might be very proud of having it to show to their friends. The time *did* come —and not only friends, but strangers went to the house of Major Melville to look at the tea of '73. Finding so many persons begged a grain of this tea as a curiosity, that if these requests were granted it would soon be all gone, Major Melville transferred it to a phial, which he sealed hermetically, to be opened no more. I saw this phial among the ornaments of their centre table, and took it into my hand. Could I have presumed to solicit a single grain of this tea, I would have had it set in a ring, and valued it beyond a diamond. * * Among the things of former times that I saw with much pleasure while in Boston, were some of Copley's portraits. They were all remarkable for grace, expression, and truth; and looked like the productions of an artist who had studied in the best European schools, instead of being (as they were) the work of a self-taught American, who as yet had scarcely seen a good picture. Neither did their old-fashioned dresses seem in the least *outré*. I have heard my brother Charles Leslie remark that it is the business of a good artist to make the costume of the time becoming, whatever that costume may be. For instance, who in looking at the portraits of Reynolds, ever complained of the dresses, or thought them disfiguring? In the Epes Sargent family there are some excellent pictures from the pencil of Copley. I was especially pleased with one of them, a lady with a very benign and intelligent countenance. * * John Singleton Copley removed to Europe in 1774, and having great inducements to remain there, he never returned to America. In England he painted a number of very fine historical pictures, the figures being all portraits. * * Lord Lyndhurst (who was born in Boston) is son to the painter Copley. This gentleman distinguished himself greatly at the bar, was eventually ennobled, and became Lord Chancellor. With regard to the country of a man of genius, England has no prejudices; as can well be attested by the American artists who have sought in that wonderful island the professional advantages which the New World is as yet too young to afford them. The city of Boston not only contains much that is interesting to all who take pleasure in vestiges of the past, but it is also rich in the present, and gives abundant token of the lofty destiny of its future. Its noble institutions, so well planned, and so thoroughly carried out; its high tone of moral principle; its sympathetic appreciation of intellect; its liberal encouragement of genius, under whatever form that gift of heaven is manifested; its frank and unostentatious hospitality —all unite in rendering Boston one of the most delightful places that a stranger can visit; and we believe that a residence in the metropolis of the American east, cannot fail to improve both the mind and the heart. 'By their fruits ye shall know them,'— and the Bostonians need ask for no other test. Whatever may be its disadvantages of soil and climate, the country round Boston is eminently beautiful, and owes much to the skill and industry of its untiring cultivators. The rides in its vicinity are charming— particularly through Brookline, and round Jamaica Pond, a lovely sheet of water which in England would be called a lake.

The poetry is less noticeable than the prose; some of it is curiously imitative. From the style of 'Viola' we should imagine that Tennyson is founding *a choir* in the United States. We have already mentioned Mr. Willis, but it is long since we have quoted anything of his: the following lines, therefore, may not be unacceptable:—

The Mother to her Child.

They tell me thou art come from a far world,
Babe of my bosom! that these little arms,
Whose restlessness is like the spread of wings,
Move with the memory of flights scarce o'er—
That through these fringed lids we see the soul
Steeped in the blue of its remembered home;
And while thou sleep'st come messengers, they say,
Whispering to thee—and 'tis then I see
Upon thy baby lips that smile of Heaven!
And what is thy far errand, my fair child?
Why away, wandering from a home of bliss,
To find thy way through darkness home again?
Wert thou an untried dweller in the sky?
Is there, betwixt the cherub that thou wert,
The cherub and the angel thou may'st be,
A life's probation in this sadder world?
Art thou, with memory of two things only
Music and light, left upon earth astray,
And by the watchers at the gate of Heaven,
Looked for with fear and trembling?
God! who gavest
Into my guiding hand this wanderer,
To lead her through a world, whose darkling paths
I tread with steps so faltering—leave not me
To bring her to the gates of Heaven, alone!
I feel my feebleness. Let these stay on—
The angels who now visit her in dreams!
Bid them be near her pillow till in death
The closed eyes look upon thy face once more!
And be the light and music, which the world
Borrows of Heaven, and which her infant sense
Hails with sweet recognition, be to her
A voice to call her upward, and a lamp
To lead her lost steps to thee.

We must not take leave of 'The Gift' without adverting to its illustrations. They have been carefully prepared: and Cheney's engraving of Huntington's (not Shakspeare's) 'Beatrice,' and of the vignette head on the title-page by Sully, would do honour to the "old country." The conversation-pieces, too are creditable in design; more admirable in their finish. But the charm of much of the letter-press we have commended, is missing from the pictorial portion of 'The Gift.' One artist takes Sir Thomas Lawrence, another Leslie as his model, and so forth. From this manner of proceeding may arise a school of artifice: but no school of art.

OUR LIBRARY TABLE.

The Belle of the Family, or the Jointure: a Novel, by the author of 'The Young Prima Donna,' &c. 3 vols.—Though the authoress of these volumes possesses neither the wit of Mrs. Gore, nor the passion of Mrs. Marsh, nor the pathos of the late Mrs. Sullivan, her tale of modern life is still executed with truth and feeling sufficient to entitle her to be mentioned with those three popular novelists. It is a great advance upon any of her previous works. Nor is this mean praise, when we also say that nothing can be more trite than the arrangement of the incidents. 'The Belle' is a beautiful, perverse, excitable creature, who—thanks to the counsels of her two married sisters, the one a severe, rectangular woman of the world, all for *les convenances*; the other a weak, but kindly-natured woman of fashion, all heart, impulse, and imprudence—deliberately wrecks her own happiness, by making a match with a man old enough to be her father: and for once, pays the full price of her folly. Melancholy as is the sequel, we are obliged to the authoress for sparing us the melodramatic reparation, in the closing pages, which most writers would have administered. Without the slightest sermonizing, the tale is one to make The Chaperon think and feel: and for the sake of this unity of purpose, and the skill with which it is carried out, we are disposed to rate it more highly than perhaps its literary merits strictly justify. The three volumes contain a second tale, 'Harry Monk' no mention of which appears on the title page. This is, in every respect, a novel of an inferior order: being merely once again the story of a beautiful and inexperienced girl who will marry a stranger, in defiance of paternal caution; which stranger turns out to be a Knight of the Road. The story belongs to the times of the Commonwealth; but there is little attempt either at the manners or the costume of the period. This, however, judging from the average success of such essays, is an advantage rather than otherwise.

The Moderation of the Church of England, by T. Fuller, D.D., edited by Rev. R. Eden.—This work was written in the year 1679, when the Nonconformists on the one side, and the Romanists on the other, were vying with each other in attacking the doctrines and practices of the Church of England. It attracted much attention at the time, and now that affairs are in a somewhat similar position, will, we doubt not, be found an acceptable commentary on the polemical works of the day.

A History of the Church, in five Books, by Theodoretus, Bishop of Cyrus. A new Translation.—This History extends from A.D. 322 to A.D. 427, and was intended by its author as a continuation to the history of Eusebius. It forms the last but one of Mr. Bagster's series of Greek Ecclesiastical Historians of the first six centuries—a valuable contribution to the history of the Church.

Studies of the New Testament, by a Layman.—The great authority which the Layman adduces in confirmation of his theories is Rees's Cyclopædia, beyond which his studies do not appear to have extended far. In discussing questions even of importance, he more than once frankly admits that he has not read the arguments in support of opinions which he condemns.

A Practical Exposition of the Epistle to the Philippians, &c., by the late Rev. Robert Hall, A.M., from short-hand notes by John Greene.—All admirers of eloquence and unaffected piety will welcome anything that has proceeded from the lips of the Rev. Robert Hall. These additions to his already printed works, are not among the best specimens of that masterly oratory, but will be read, we doubt not, with pleasure by all into whose hands they may fall.

The Right Way to decide; or the Church of England her own Expositor.—The author solves a difficult question—by begging it.

The Art of Living, by Dr. H. Duhring.—This volume is devoted to the consideration and discussion of five principles connected with the art of living: 1, the harmony of our twofold nature, mental and physical; 2, the necessity of labour; 3, the equal necessity of relaxation; 4, the study of Nature as connected with happiness; 5, the joys connected with a happy home. It is pleasantly written, and contains some sound and wholesome truths.

Peace Permanent and Universal, by H. Macnamara.—The essay to which the prize offered by the Society for the Promotion of Universal Peace was awarded. Its arguments are the old ones, and, we are afraid, will produce little more effect than of old.

Rachel of Padanaram, Type of the Church, by W. Archer.—A fanciful record of "that fair Syrian shepherdess," whom holy fathers of the Church have chosen to consider as "typus Ecclesiæ," and whose claims Mr. Archer warmly advocates. The little

Digitized by Google

work is pleasantly written, and is interspersed with some not inelegant poetry.

A short and easy Catechism for the use of young Persons.—Questions for Self-Examination.—Apparently useful works for the purposes for which they are designed.

The Advantages and Disadvantages of the Feudal System, by H. B. Barry.—A Prize Essay "read" (or rather intended to have been read) "in the Sheldonian Theatre at Oxford." It is well written, in a free impartial spirit, allowing merit where it is to be found, and not permitting considerations of party, or even of antiquity, to stand in the way of a just condemnation of bygone abuses.

A Treatise on the Tonic System of treating Affections of the Stomach and Brain, by H. Semle.—This is a strictly professional work, and addressed exclusively to the professional public.

Observations on the Climate of New Zealand, New South Wales and Van Dieman's Land, as compared with that of the Brazils, Madeira, and the Continent of Europe, by J. Thompson, M.D.—This is a reprint of a short paper from the London Medical Gazette, the contents of which are sufficiently explained by the title.

The History of Peter Schlemihl, translated by W. Howitt.—This new translation is exceedingly literal, and has the German side by side with the English. It has been printed in Germany, though published in England, and contains six neatly executed illustrations.

Photogenic Manipulation, by G. T. Fisher, Jun.—This is a useful little manual, containing practical instruction in the arts of Photography, Calotype, Daguerréotype, &c., illustrated by numerous woodcuts.

Chemistry made Easy, by the Rev. J. Topham, M.A.—A short, but apparently useful treatise on that very interesting subject—the application of chemistry to agricultural purposes. It is written in easy and familiar language.

Gleanings from the South, East, and West.—A harmless, well-intentioned miscellany.

The Pictorial Spelling and Reading Assistant, by B. Steill.—A work apparently neither better nor worse than its numerous predecessors, the only novelty introduced being that the *reading* department has illustrations, and more extended explanations than usual of a few of the words in the *spelling* department of the work.

Select Poetry for Children, by J. Payne.—This work has been forced on our attention, otherwise we should have allowed it to pass in silence. It opens with a motto from Southey, who says that "it is no trifling good to win the ear of children with verses which foster in them the seeds of humanity, and tenderness, and piety:"—a sentiment with which all will cordially agree. But we do not see that this justifies "picking and stealing." It may be no trifling good to give children fruit in due season, but no one infers that he is, therefore, at liberty to rob orchards. Has Mr. Payne written verses for their edification? Not a line—he has "compiled" a volume for their use, and his own profit, by robbing Southey himself, and Mary Howitt, Bernard Barton and others. Of course this is but petty larceny compared with the wholesale violations of copyright which have been so common of late, but yet it deserves to be noticed, and, if possible, prevented, and therefore we denounce it.

The Polyglott Ladies' Washing Book.—We do not know with what eyes the huge Polyglotts of Paternoster Row will look on this unassuming brother, but we are sure that all sober citizens' wives who venture on a continental tour will thank Mr. Lee for his useful books. We have before us three of them, in German, French, and Italian, with the English annexed.

List of New Books.—Hand-Book of the Law of Landlord and Tenant, imperial 32mo. 2*s.* cl. swd.—Popular Flowers, their Cultivation, &c. coloured plates, fc. 8vo. 6*s.* 6*d.* cl.—The Book of Months, with illustrations by Harvey, fc. 8vo. 7*s.* cl. A LAST SONG OF SUMMER.

Oh! queenly fair Summer, thy beauty fades fast,
Thy flowers are all withered, thy glory is past;
And low in the woods, with the dead leaves around,
And the winds breathing o'er thee a desolate sound,
In tears thou art lying.

Oh! queenly fair Summer, thy worshippers all
Have fled and foregone thee,—right merry in hall
Their laughter is ringing;—ah! little I trow
Do they ponder how, lonely beneath the bare bough,
Unwept thou art dying.

The voices that hymned thee so gaily of yore,
The happy bird-voices, their music is o'er,—
Save the robin's, who singeth of Winter with glee,
And the rook's, who caws loud on the storm-shaken tree,
As he flaps his dark pinion.

There *are* voices, but savage and wild ones, alas!
The roaring of rivers, as foaming they pass,
The plashing of rain, and the groan, deep and low,
Of the oak, as his giant limbs toss to and fro
'Neath the wind's strong dominion.

Oh! queenly fair Summer, fierce Winter, ere long,
Will sweep o'er the hills with his turbulent throng
Of blasts and rough hail-storms, and finding thee there,
Will freeze thy warm blood with his icy fixed stare,
And laugh as thou diest.

And when thou art dead, with a false look of woe,
He will wind thee perchance in a death-sheet of snow,
And calling around him that turbulent throng,
They will howl forth a requiem, dreary and long,
O'er the grave where thou liest.

But heed not, fair Summer, sleep softly awhile,—
Sleep softly, and dream of the sun's loving smile;
They rule not for ever, that stern companie,—
Old Winter, one day, shall lie crownless like thee,
Time-wasted and hoary.

Oh! heed not, and weep not, sleep softly awhile,
And still in thy dreams feel the sun's loving smile;
When those dreams are all ended, thy waking may show
The sun on thy face, and the earth singing low,
And the birth of thy glory.

Enfield, Oct. 12, 1843. T. Westwood.

FOREIGN CORRESPONDENCE.

On the first intimation that the ports of China were open to British subjects, the Horticultural Society, with the energy which has ever marked its proceedings, resolved to dispatch Mr. Fortune to collect plants for the Society. Mr. Fortune, as we mentioned at the time, sailed from England in April last, amply provided with means to forward the objects of the Society, and with letters of introduction both from the government and private individuals. Letters, announcing his safe arrival at Hong Kong on the 27th of July, have just been received. The following are extracts from one dated—

"Anger Roads, June 15.

"We entered the Straits of Sunda on the morning of the 15th of June, after having been three months and a half on the voyage, and the only land which we saw during that time was the Island of Madeira, the Cape of Good Hope, and St. Paul's, or Amsterdam, in the Indian Ocean; but these places were only seen at a considerable distance, and you will, therefore, easily imagine with what pleasure we looked upon Java Head on the morning which I have just mentioned; and although we were several miles from the beach, the sweet smell of land and of trees which was wafted from the shore was delightful, and put us all in excellent spirits. The island of Java, as you know, is low and marshy in many parts near the shore, but presents every variety of surface at a little distance inland. The hills have a most romantic appearance, and reminded me of the Highlands of Scotland, or of some views from the Frith of Forth near Edinburgh, with this difference, however, that those of Java are clothed with dense forests to their very summits. In fact, from the sides of the ocean—where in most places the trees hang down to the water's edge—to the tops of the highest hills, the whole is one dense mass of vegetation; and even the rocky islands of the sea, which on the coast of England would be comparatively barren, are here clothed with the most luxuriant shrubs and trees; but these regions are under the bright tropical skies of the east, where—

The flowers ever blossom and the beams ever shine.

You will easily imagine that I was most anxious to land on these lovely shores, which in truth appeared to me the realization of my youthful dreams of fairy land; and by good luck the wind died away early in the forenoon, and the captain kindly allowed the passengers to have down the boat to row to the shore. We were all well armed for the occasion, as this part of the coast is said to be frequently visited by Malay pirates, who are not so harmless as the native Javanese. As we approached the land our expedition seemed to be more hazardous than we had at first supposed, owing to the rocks and breakers on the coast, which were not visible from the ship; but after selecting with care that part which appeared most smooth, we stood boldly for the shore. Unfortunately, however, our precautions were useless, for in an instant we were thrown out of the boat and plunged amongst the breakers, one over the other, in anything but regular order. We were in a pitiable plight for a botanical party or a party of pleasure to be in, but congratulated ourselves on having saved the boat.

"While on shore I lost no time in examining the trees and other objects of natural history. The shingle, which was mixed with the sand, consisted of numerous fragments of red, white, and blue coral, handsome specimens of which were gathered by several of our party. The trees and shrubs, which grow down to the beach, consisted of several species well known in the hot-houses of England. The Screw Pine (*Pandanus odoratissimus*) was growing in great quantities all along the shore, where it must often be washed by the waves; several species of Cycas, particularly *C. circinalis*, were common in the shady parts of the wood, and formed remarkably fine specimens both in flower and in fruit; the Chaste tree (*Vitex agnus castus*) was very abundant, and in full flower; and the cocoa nut and the Papaw tree were also found in various parts of the forest. The ground was strewed with seed, of the various trees, some of which were just germinating; others had advanced more, and formed the brush-wood of the thicket, along with numerous species of ferns, and other things which delight to grow in shaded situations. My time was very limited, and therefore I

Digitized by Google

had little opportunity for particular observation; I consoled myself, however, with the hope of being able to examine things more particularly at Anger, where we intend to stop for water. Our difficulty now was how to get our little boat through the breakers, but we accomplished it, and reached the ship in safety.

"We continued our voyage up the Straits, which everywhere presented the most picturesque and beautiful scenery: on Java every variety of surface—mountains, glens, and cultivated fields, the main land of Sumatra in sight, and islands dotted here and there on the sea, covered with the most luxuriant vegetation. As we neared the Bay of Anger, the island of "Thwart the Way," in the centre of the Straits, came into view, as also two small rocks called "Cap" and "Button," on the Java side of the Straits. Native canoes were now seen rowing or paddling towards us from the shore, laden with the produce of their island, which they were anxious to barter with the people in the ship. The fruits consisted of cocoa nuts, bananas, and plantains, pine-apples, melons, pumpkins, shaddocks, and oranges, and the vegetables which I obtained were sweet potatoes, yams, cucumbers, onions, and radishes. Supplies for the ship's use were abundant and cheap. One Malay sold all the contents of his boat for seven dollars, which consisted of a large quantity of sweet potatoes and yams, cocoa nuts, plantains, pine apples, and seven dozen of excellent fowls. The sheep which were brought off in boats, and which I also had an opportunity of seeing on shore, were more like goats than sheep, being covered with hair instead of wool, and having small legs and long heads and ears. Turtle, which we frequently saw on the surface of the water in the Straits, are very abundant, being caught in considerable quantities by the natives. Many other animals are brought in their boats for sale, but they are generally well known and common kinds. I observed several kinds of monkeys, musk deer (the small Javanese kind), Java sparrows, paraquets, green doves, minas, so celebrated for their talking propensities, and various other well known animals. Judging from the appearance the decks presented afterwards, the Javanese had had a considerable share of business, particularly amongst the monkeys, for they were seen chained in all parts of the ship before the mast, having been purchased by the sailors to take home."

DR. ROBINSON'S REPLY TO SIR JOHN HERSCHEL.

On my arrival here, two days since, I was surprised to find in the *Athenæum* of September 30, that Sir John Herschel has taken offence at the opinion which I have expressed respecting his father's forty-feet telescope; viz. that "however honourable to the astronomer and to the king who constructed it, it must be regarded as a failure." In these words I see nothing "derogatory" to Sir William Herschel, whose real fame is quite independent of that instrument; and if they are the only legitimate inferences from the facts *which are before the public*, they cannot be "unjust." Those facts are unfortunately few, for Sir W. Herschel, in the Philosophical Transactions, very seldom refers to observations made with this telescope, which, from the size of its mirror, I will call the four-feet: but they are sufficient to establish that it did not produce effects proportioned to its magnitude, that its maker did not employ it in cases which seemed imperatively to require it, and that he showed a marked reluctance to let others inspect it. Sir J. Herschel apparently wishes to narrow the question to "figure and polish," but the true matter at issue is the performance of the telescope. We will, however, begin with figure. It is well known that Sir W. Herschel made his mirrors of a focal length, which bear a large ratio to their aperture; thus his 9-inch mirror was of 10 feet focus, his 18.8 of 20 feet; and on the same scale his 48 should have been 51 feet instead of 40. If, as is probable, he adopted this proportion in the smaller sizes, from finding that he did not succeed so well with a shorter focus, it was to be expected that the change would be injurious to the large one. Besides, even were its figure perfect, according to all my experience, it must have been deformed by the mode in which it was supported—in an iron ring, where it must have rested at its lowest point, and upheld by a cross piece of the same substance, an arrangement which would impair the definition of a much smaller instrument.* The usual tests of this important quality are close double stars; but of these I find none mentioned; there are, however, two negative arguments which press on me the conviction that the four-feet defined ill. In the great nebula of Orion there is a star θ Orionis, which appears quadruple in common telescopes. Struve, with the Dorpat achromatic of 9.6 inches aperture, discovered a fifth, and (I believe) Sir J. Herschel himself found a sixth, on looking into Sir James South's achromatic of twelve inches. Both are visible in Lord Rosse's three-feet telescope, *even when contracted to eighteen inches*, and I see the sixth under favourable circumstances, even in my own of fifteen inches. Now these stars *cannot have been visible in the four-feet telescope.* That nebula was the first object on which it was turned in February, 1787; it was again examined in January, 1811, "in a very clear view," and it is quite impossible that such an observer as Sir W. Herschel could have overlooked them, especially the fifth: the sixth probably requiring a higher power to separate it than the telescope would bear. A similar conclusion must be drawn from his not using it to ascertain the existence of rings round the Georgium Sidus. This research requires, in a special degree, sharp definition, magnifying power, and light; and it seems absurd to use seven, ten, and twenty feet telescopes, when its testimony could be obtained. It is also evident, from the low powers recorded, that the focal image was imperfect. The highest that I can find mentioned is 400, and that only once; 370 is the common one, employed even for such work as measuring the protuberances of Saturn, or seeking multiple divisions of his ring; while higher powers, even up to 1,200, were used at the same time with smaller telescopes. Why he employed them when the other was in action, and almost exclusively in cases of micrometer measurements, seems hard of explanation, except on the admission of its imperfect definition.

As to its illuminating power, which, with equal magnifying, must have been more than six times that of the 18.8-inch, even less is recorded. The discovery of the satellites of Saturn, to which Sir J. Herschel refers, indicates no difference like this. His father himself states, that "both are within the reach of a twenty-feet telescope." Sir J. Herschel is said, in the Ast. Nach., to have observed both with that instrument; they are visible in Sir James South's achromatic, and the sixth has been observed by Lamont with one of only eleven aperture. Even on the night when this was discovered (Phil. Trans., 1790, p. 463), it must have been easily seen with the mirror of 18.8; for after suspecting it to be a satellite in the four-feet, the other was employed to verify the conjecture. The seventh was discovered at its extreme elongation from the planet, and cannot have been very conspicuous: it is described as "only a very small, lucid point in the telescope;" and it is added, that "except in very fine weather it cannot be seen well enough to take its place with accuracy." If we consider that at this time the ring was nearly invisible, and the planet at the equator, this performance exhibits nothing surprising, nor do I think Sir John's "unequivocal proof" beyond the power of *a good telescope of half its focal length* and such an aperture as would now be given to it; a size which I have no objection to call "comparatively diminutive." The observations of the Georgian satellites seem to have been made with telescopes of 18.8, and twenty-four inches aperture (Phil. Trans., 1815). The four-feet appears but twice, notwithstanding the faintness of these objects; nor have we any reason to suppose that it was much used even on nebulæ. I can find nothing on the subject, except the two notices respecting that in Orion; though Sir W. Herschel's views respecting these problematical bodies must have made the most perfect examination of them desirable. We must therefore suppose, either that it showed little more in them than the twenty-feet, or that its use was so inconvenient that he never had recourse to it but in cases of absolute necessity. Defining power is of use even with nebulæ, and, from the nature of its composition, the mirror could not reflect light in proportion to its surface; but still, it seems unaccountable that it was used so little, unless we suppose that Sir W. Herschel felt that it was a "failure." It was scarcely to be expected that he would come forward and proclaim this; but he felt it necessary to account for his sparing employment of it in a remarkable note (Phil. Trans., 1811). He says, "It should never be used but for objects which others will not reach;" that "to look through one larger than required is loss of time;" that moisture and ice settle on the large mirror; and that, "though well covered up, the polish of a mirror exposed like that of the forty-feet will only preserve its required lustre and delicacy about two years." Now, as to the first of these excuses, no telescope will ever be "too large" for nebulæ; that twenty feet is assuredly not large enough; for Lord Rosse's three-feet has shown that many of the figures of them given by Sir J. Herschel, are exceedingly defective.† In unfavourable states of the air, it may be necessary to contract the aperture, but this implies no loss of time. Dew, or ice (in Ireland at least), is not of constant occurrence; and tarnish to such an extent as is here indicated, is an evidence of "failure." In fact, the mirror *was not real speculum metal:* according to Smeaton's letter (published in Sir William's lifetime, and not contradicted), it was composed of two parts bell metal and one white metal! What the latter may be I never could learn, but believe it to be an impure alloy, obtained in a certain stage of the refining of copper. At all events, the composition was *lower* than the 20-feet metal, though even that was far below what is now deemed essential to a good mirror. This deficiency of tin was probably designed to lessen the risk of casting; but it also lessened the light, and gave a liability to tarnish. Now let us look to dates. It was cast Feb. 16, 1788, apparently in an air furnace (as founders call it), which must have still further debased the metal: by Oct. 24 "it was brought to a pretty good figure and polish." How much of this time was occupied by cooling and grinding is not stated; "but, not satisfied, he continued to work upon it till August 27, 1789, when it gave a pretty sharp image; but large stars were a little affected with scattered light, owing to many remaining scratches in the mirror." On the following night he saw the sixth satellite, and "dates from this time the finishing of the telescope." It follows, that at least a year was expended in giving this imperfect polish. The tarnishing, however, went on twice as fast; for he states, that on March 8, 1790, "the speculum being extremely tarnished, I did not expect to have seen so well as I did;" the object being the satellites of the Georgian, which he on that night also observes with the twenty-feet. As the duplicate speculum was useless, this does account in part for the instrument being idle; but, assuredly, had this been all, so zealous an observer would soon have recast that duplicate. I may add, that this contrasts very unfavourably with the three-feet mirrors of Lord Rosse, which retain their polish for several years, and are repolished in a day.

My opinion of this telescope is necessarily founded on the facts published by Sir W. Herschel himself, for I am not aware that he permitted any person except Dr. Vince to look into it. Troughton was refused. Lalande wrote to obtain permission, but got no reply. An excuse is, however, made for this want of courtesy in Tilloch's *Phil. Mag.* vol. xxviii. p. 339, which makes the matter worse; it was probably done by some injudicious friend, but it is impossible to read it without feeling that, as said in a similar instance, the author "distrusted astronomers." Several years later, Dr. Pearson (Rees's Cycl. art. Telescope) says, "he was informed by the ingenious and dexterous observer,' that instruction and practice were necessary to enable any other person to follow a star or planet with it, which is probably the reason why so few persons have been in a situation to form an estimation of the merits of this transcendent instrument." The reason is a bad one, but it establishes the fact, and for this I see no probable motive except the imperfection of the image.

On these grounds I think myself justified in concluding that this telescope was deficient in defining power; that it had not light in proportion to its size, and that it was inconvenient in use. I think no un-

* In reference to my assertion, that "the principle of uniform support had not been acted on," I must explain it by stating, that I was under the impression, that the twenty-feet reflector, when I saw it at Slough, in 1830, was merely supported on folds of soft cloth; if this be Sir John Herschel's method, I think it inadequate for large mirrors.

† As one instance, out of many, I will name his fig. 81 of 1 Messier; because Sir James South exhibited a drawing of it at the Royal Institution, last spring, which was made with the three-feet.

prejudiced person, who reads Sir William's papers with care, can think otherwise, and I know that others are of the same opinion. In stating my sentiments, I trust I have not forgotten the respect due to his virtues and talents. With the exception of this weakness on the subject of his telescopes, which excited him to an attack on Schröter that cannot be justified, his moral character seems to have been without a stain; the friends who survive him cherish his memory, and he fills a place in the records of Astronomy, more brilliant, if not more high, than that held by any other individual. His son himself does not feel this more strongly than I do, but even such feelings cannot be permitted to interfere with the pursuit of Truth.—I have the honour to be, &c.

Oct. 12, 1843. T. R. ROBINSON.
Armagh Observatory.

WORKS AT HAMPTON COURT.

A recent visit to this palace, which is shown by increasing numbers of visitors to be still gaining in popularity, enables us to give our annual report of the progress of restorations, &c., and we record them not less for the information of our readers than to acknowledge the efficient custodyship of the Commissioners of Woods, and their desire to promote the attraction of this palace. At the west entrance, the front of the north wing has been completely restored —proper mullions have taken the place of the unsightly modern sashes in the windows, and the stone copings and ornaments have been completed. But the frontage only has been thus treated, whilst in the sides of the wing the window-sashes have been suffered to remain—let us hope, only for a season. The restorations are advancing, too, on the south wing. Two terra cotta busts of the series of Roman Emperors presented by Leo X. to Cardinal Wolsey, have been inserted on the towers of the west entrance, which were probably removed when this part was restored some years ago. Little attention was then paid to the colour of the bricks, and their orange red does not match with the purple red of the ancient brick-work of the Cardinal's palace. The busts on other towers have been restored. Ornamental chimney shafts are rising conspicuously everywhere in all the courts.

The most important work, however, of the present year has been the insertion of stained glass in the large window at the eastern end of the great hall. Characteristic of the glass of the period, it is filled with genealogical and heraldic devices. The upper windows contain the arms of the kingdom of France, the kingdom of England, the lordship of Ireland, and the principality of Wales. In the openings of the arched head of the window are inserted rich foliage patterns on deep brightly coloured grounds. The effect is much lighter and more brilliant than at the opposite window, where the colours, chiefly blue, are too massive. The large window is divided into an upper and lower series of seven lights. In the centre of the lower are the arms of Edward III., below which a stock of broom—the *Planta genista*—Plantagenet, from which, on the dexter side, the branch of Lancaster springs, with its red roses, and on the sinister side that of York, with its white roses. These branches unite in the upper division in the arms of Henry VIII., above which is a figure of the burly monarch himself. At either side, both above and below, are the arms and badges of individuals of the respective families of both branches; on the Lancaster side those of John Beaufort Earl of Somerset, John Duke of Lancaster, John Beaufort Duke of Somerset, Margaret Countess of Richmond, and Henry VII.; on the York branch, those of Edmond Duke of York, Richard Earl of Cambridge, Richard Duke of York, King Edward IV., and Elizabeth of York. The addition of this window is a great improvement to the general effect of the hall; but it makes us feel the nakedness of those at the sides, which are still plain white glass. As an assemblage of colours, the new window is brilliant and tasteful, but the ground should have been sufficiently dark to show distinctly the *white* roses. At present the roses are scarcely distinguishable, and in order to be intelligible to the visitors here, they should be as palpable as the red roses, which are conspicuous. If any alteration were made—and it seems very desirable—we would suggest that the figure of Henry VIII. should be relieved upon some darker ground. At our visit, we observed the "entayled" work or carvings on one of the spandrels of the roof "picked" out with various colours and gilding, giving a promise as though the rest would follow. All this is progress in a right direction. Cavendish speaks thus of Wolsey's palaces: (we modernize the spelling)—

> My buildings sumptuous, *the roofs with gold and bice*
> Shone like the sun in mid-day sphere,
> Craftily entailed as cunning could devise,
> With images embossed, most lively did appear.

But welcome as this colouring would be, we doubt if it should be preferred as the first of the works here remaining to be done. As pains seem to be taken from time to time to restore this Hall to its ancient splendour, we venture to offer a suggestion or two to the consideration of the authorities. At present there is a strange mixture of richness and poverty in the decorations, and a want of general harmony. As a little matter involving but a small outlay, we would first call attention to the present miserable walls. The drab wash is odious. To harmonize the general effect, the walls seem to us to demand the first notice. The stencilling of them in fit colour and patterns, when once suitably chosen, would be a cheap and most important improvement. Care should be taken that neither the colours nor patterns injure the effect of the tapestry below. Perhaps some hue of green or crimson would be found to be suitable, but this could only be determined by actual experiment. Next to the walls, the flooring calls for amendment. The naked, tasteless flag stones are altogether modern: even within the last forty years—and unfit for any ancient building. As late as the time when Lysons made his drawing of the Hall, it was paved with tiles—red tiles. There is conclusive evidence that it was "ypaved with tyles" when originally built; but we incline to think that these must have been green with white patterns, being the colours of the Tudor livery. Until the floor is coloured, the effect of the Hall can never be complete, and the revived manufacture of the encaustic tile offers a ready means of restoring this essential feature. Next in order, the remaining windows should be filled with coloured glass. Then we would get to the roof, which, whether more highly coloured or not, has always intrinsic merits enough to command attention; so that it may well remain the last to be touched. Before we got thus far, however, we should have taken down the banners and turned out the men in armour, whose places we would supply by statues of Henry VIII., Wolsey, &c.

There have been no recent changes of any importance in the pictures. Two of Sebastian Ricci's, which were removed to the new chapel at Buckingham House, have been returned to the palace. The mystery and excitement about the chapel of Charles I. (see *Athen.* No. 776), seems altogether exploded, and the room is given up, among others, to Lady Hill. Whether the old paintings in it have been taken down or not we have not heard: we certainly recommend that they should be, and cleaned.

OUR WEEKLY GOSSIP.

THE case of the old "legitimate" Drama seems to be hopeless: Tragedy is turned out of doors at Covent Garden, and not one of the score of metropolitan theatres, licensed by the Lord Chamberlain under the new Act, will give her house-room. Nor is Comedy in much better plight; being tolerated only until a troop of children and a posture master from Paris can be imported to prop up one patent theatre, as the ballet does the other. Sheridan, to be sure, has a field day now and then at the Haymarket: and the 'School for Scandal' has been played as an afterpiece this week in default of amusing farces, by way of prelude to the prize comedy, which is to show at the Haymarket about the time when the prize cattle show at Smithfield. The result of the late attempt, by the Covent Garden manager, to distribute the principal characters in Shakspeare's tragedies between three performers, of certainly not first-rate abilities, on the principle of "turn and turn about," was such as might have been expected—empty benches: Messrs. Vandenhoff, Phelps, and Anderson are respectable tragedians in their way, but no "combination of talent" such as they could offer, would attract audiences to a theatre whose very name conjures up recollections of Siddons, Kemble, and Young. In the case of a new play, people are content with the best actors the stage affords; but mediocre representations of comedies and tragedies with which the humblest playgoer is familiar, and which are associated with the fame of a host of great names, will never attract an audience in these days: it is idle to expect it. The time when people went to the play to pass an evening for want of better amusement at home or elsewhere, and were content to enjoy the entertainment, such as it was—and it was a vast deal better than any we have at present —is gone by: it must be something extraordinary, either for novelty or excellence (which is, indeed, the greatest of all novelties) to draw them to Drury Lane or Covent Garden. And why should they be obliged to go at night in search of amusement to a neighbourhood which they so rarely visit by day? It is troublesome enough for persons who live in the neighbourhoods of the parks and squares, to have to go so far out of their way to see a play: but for the thousands who reside in the outskirts of the town, it is so inconvenient as to amount to an interdiction, except on rare occasions, and then the expense and late hours disincline them for a repetition of the fatiguing pleasure. If the mountain will not go to Mohammed, Mohammed must go to the mountain; instead of having half-a-dozen theatres in the space of a square mile round Covent Garden, let the suburbs each have their playhouse, as well as their concert and assembly rooms—orchestras are ambulatory to a certain extent, and musicians are migratory; why not make Melpomene locomotive, and revive the Thespian cart in the shape of an actor's omnibus with a managerial conductor. At all events, since the old English Drama is driven from Drury Lane and Covent Garden, let us hope it will find a home somewhere else. One good result of the new Act may be to lodge Shakspeare under a roof where his poetry may be heard without being bawled out as if "the town-crier spoke the lines," and actors may depict the emotions of the character, without distorting their features to make the grimaces visible at the house-tops: in short, a better school of acting may arise, if the best performers are in the habit of playing together on a small stage. As yet, however, we see no signs of Shakspearian aspirations among the minor managers: opera and ballet, melodrama and burlesque, divide the metropolitan theatres; spectacle being a leading attraction at all of them. But the opportunity thus afforded to managers of making a choice of performances, and the necessity for excellence in quality, will probably lead to the introduction of the division-of-labour principle into the theatrical world. We cannot enter into the merits of the differences between Mr. H. Wallack and his company: by closing the season on Saturday and commencing a new one on Monday, he got rid of some engagements which he found unprofitable; and having done that, the accusation of "thwarting and crippling his plans" brought against persons who, though not named, were implied, might better have been spared; especially if, as would appear from some counter statements, it was hardly warranted by their conduct. The public, at any rate, will not hold the performers responsible for the failure of the manager's scheme: indeed they were actually interested in its success, since the closing of the theatre compels some of them to seek for engagements elsewhere.

That clever composer, M. Ambroise Thomas, has just produced in Paris a successful three-act opera, 'Mina,' at the *Opéra Comique*. The instrumentation of this work is praised as being unusually felicitous and delicately finished: the story seems to be droll, though over-complicated for music: a fault, by the way, into which the French *librettists*, encouraged by the neatness of their actors, and the quick apprehension of their audiences, are increasingly falling: risking thereby universal acceptance and permanent popularity. A new tenor, M. Mengis, whose success at the recent festival at Fribourg was great, is about to be tried at the *Académie*. M. Moscheles has given a *matinée* in Paris, with great success: some of his new compositions appear to have been more than usually welcome—a natural rebound in taste, after the long-drawn triumph of the sickly operatic *fantasia*. But a desire for what is sterling rather than showy in Art is certainly gaining ground in France. We find choruses by Handel, Mendelssohn, and Beetho-

Digitized by Google

ven, sung at the performances of the *Conservatoire* at Marseilles: and everywhere notices of a "movement" in the cause of church music. Here, by the way, we may announce the first step in the Copyright question which directly touches Music and the Drama, made in the treaty betwixt the French and Sardinian governments, which includes the rights of the musician and the dramatist, as well as of the author, the artist, and the designer.

At home, we have but a bad report of the Edinburgh Festival; the receipts of which, it is said, have fallen 2,000*l.* short of the expenses. Mr. Hatton, whose cleverness in many musical departments is well known, and whose compositions, as we have more than once observed, are above the average standard, has started for Vienna; there to bring out an opera under the auspices of Staudigl. We are told, too, that that eminent singer will return to us next year in his proper position—namely, as main prop to a German musical company, which is to be directed by Conradin Kreutzer.

On Thursday morning last there was a full performance at Westminster Abbey of Tallis's Service, which filled the church with unusual throngs. The choir was greatly augmented for the occasion, but though not absolutely at fault, performed many portions of the service timidly and uncertainly, as if the practice and the confidence which knowledge inspires were wanting. Yet, notwithstanding the imperfect execution, the penitential impressiveness of this ancient music was of too deep a character to be wholly lost.

The Rev. Dr. Wolff started on Saturday last, from Portsmouth, for Constantinople, *vid* Malta; from thence to proceed, as best he may, to Bokhara, to ascertain the fate of Colonel Stoddart and Captain Conolly. The Oriental Steam Packet Company gave the reverend gentleman a passage at one half the usual charge; and this liberality was, we are ashamed to say, of importance; for the subscription which is to determine the fate and (as many of the best informed believe) effect the release of two distinguished countrymen—officers who were thrown into prison so long since as 1838, when employed on public service—goes on but slowly: 500*l.* only was required, Dr. Wolff's services being gratuitous, and yet little more than half that amount has been raised.

A Correspondent just returned from the Pyrenees thus writes to us:—"In my wanderings this autumn I accompanied the director of the mines lately opened near the famous Port de Venasque, to within a few feet of the summit of the extraordinary natural obelisk, called the Pic de Picade, and we there discovered the remains of a gallery about 200 feet long, piercing a rich vein of lead ore. The director, a person of great intelligence, at once pronounced the work to have been executed by the Romans, and as it is well known that the latter were acquainted with the mineral wealth of the Pyrenean mountains, I have no doubt of the correctness of his opinion. The wonder consists in the situation of this shaft; and when I state that it occupied eight hours of almost perpendicular climbing, surmounting the most frightful precipices, to attain it, some idea may be formed of the difficulties attendant upon the execution of the work. The mines, which are at the base of the Pic, have only been opened during the summer, and when I visited them early in September, were yielding 1oz. of silver in 13lb. of lead."

The long-meditated project of piercing the Isthmus of Panama, for the junction of the two great Oceans, is daily more and more attracting the attention of nations, as its importance is continually enhanced by the new relations which the gigantic conquests of discovery abroad and Science at home, are establishing between the various portions of the globe. In addition to the active inquiries and experiments in which, as is well known to our readers, both England and America have long been engaged with this view, the French government has now despatched a mining engineer of distinction, M. Napoléon Garella, to make a careful examination of the Isthmus, and report on the most eligible direction which a canal of communication between the Atlantic and Pacific can take.

We had the pleasure lately to announce, that Her Majesty had conferred a pension on the widow of Sir Charles Bell. We are now enabled to give a copy of Sir Robt. Peel's letter, in which he communicated the circumstance to Lady Bell:—

"Whitehall, Sept. 4.

"Madam,—I have had great pleasure in recommending to Her Majesty, that in consideration of the high attainments of your lamented husband, and the services rendered by him to the cause of science, a pension of one hundred pounds per annum for your life, shall be granted to you, from that very limited fund which parliament has placed at the disposal of the Crown for the reward and encouragement of scientific labours. This pension, small in amount as it necessarily is, will perhaps be acceptable to you as a public acknowledgment, on the part of the Crown, of the distinguished merit of Sir Charles Bell. I have the honour to be, Madam, Your faithful and obedient servant,

Robert Peel."

Mr. Bernhard Smith has just put forth a clever and forcible medallion of Capt. James Ross. Possibly one or two of the characteristic traits of the original may have been a little exaggerated, but the general treatment of the head does the artist credit. We may as well add to this paragraph, as a circumstance not unlikely to have its influences on the talked-of North Polar Expedition, that the marriage of the gallant officer was yesterday announced in the daily papers.

The *Portsmouth Herald* mentions that a letter has been received from an officer of Her Majesty's surveying ship *Samarang*, Capt. Sir E. Belcher, reporting that the vessel had struck on a rock while surveying a river in Borneo, and would in all probability become a wreck. She was returning down the river, the current and tide setting out at the rate of twelve or thirteen miles per hour, when she was swept on a sunken rock; the tide leaving her so very rapidly that there was no time to get out shores to keep her upright, consequently she fell over on her side and filled with water. No lives were lost, but the stores and effects of the crew will be all damaged, if not lost. She sailed from Portsmouth for the China seas early last spring, and was expected to be absent six years, being fitted purposely for surveying, having on board most valuable and complete astronomical and surveying instruments.

As to the new British Museum, about which our correspondents so often inquire, we can only say that the building progresses, somewhat like the Sinking-fund, by fits, but we hope more towards its object. Dr. Franz Kugler speaks about "organic life and motion" as incident to architectural productions (*vide* our notice, No. 830); this may explain the slow advance of Sir Robert Smirke's edifice, whose dimensions are rather heavy, and its members, if indeed motive organs, not endowed with much animation, unless it be "still-life." But no doubt our great Doric architect builds, as Zeuxis painted, for posterity; at least his Museum appears little intended for the use of present times.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. Renoux, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. Bouton. Open from Ten till Five.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—FIRST PUBLIC EXHIBITION of Two important Discoveries in Science, viz.—ARMSTRONG'S HYDRO-ELECTRIC MACHINE, which produces eight times the quantity of Electricity of any other machine yet known, and which will be exhibited Daily at Three o'Clock, and at Eight in the Evening; and LONGBOTTOM'S OPAQUE MICROSCOPE, showing Objects in NATURAL HISTORY in all their varied Colours. LECTURES Daily on CHEMISTRY and NATURAL PHILOSOPHY by Dr. Ryan and Prof. Bachhoffner. The arrangement of the OPTICAL DEPARTMENT is under the management of Mr. Goddard. DISSOLVING VIEWS and COSMORAMIC PICTURES, MODELS of all kinds of MACHINERY in MOTION, DIVER and DIVING BELL, &c. Conductor of the Band, T. Wallis, Mus. Doc. Open Mornings and Evenings, except Saturday Evenings. Admission 1*s.*—Schools Half-price.

SCIENTIFIC AND LITERARY

Horticultural Society.—*Oct.* 3.—R. W. Barchard, Esq., in the chair. W. Aldam, Esq., M.P., W. Ainslie, Esq., and the Earl of Mansfield, were elected Fellows. From the Duke of Northumberland was a remarkable cut specimen of *Elate sylvestris*, one of those noble Palm-Trees which can only be cultivated in large conservatories. This plant possesses little beauty in its flowers, but produces panicles bearing a multitude of very pretty, oblong, orange-coloured berries, with a very curious flat stem, strong and tough, differing much from the usual form, and presenting a good subject for physiological investigation. Lord Blantyre sent, from Glasgow, Black Hamburgh Grapes, weighing 1lb. 7oz. and 1lb. 8oz., that had been grown on a flued wall in the open air, where, notwithstanding the unpropitious weather in spring and in the early part of summer, they finely swelled and beautifully coloured. The gardener stated that the vines produce an abundant crop and ripen their fruit in good time, and that some of the bunches which were not so ripe as those sent were twice as large, but that the berries were not quite so well swelled. From B. Maund, Esq., were specimens of Grapes grown on a wall protected by a glass case, which is fixed close to the face of the wall, with a hole in the end to allow the vine to pass without being bruised. The bunches, although beautifully coloured, were very small, but those unprotected in this manner were miserable little things. From Sir G. Staunton was a bunch of bananas, weighing upwards of 129 lb. The plant on which it grew was imported a few years ago from St. Helena, to the Edinburgh Royal Botanic Garden. Mrs. Mason sent a curious specimen of a Trumpet Gourd, measuring 4 feet 2 inches long. From G. T. Lay Esq., Interpreter to her Majesty's mission, China, was fruit of the Wung Kwo or Shan Le, the red fruit, or wild apple, of the Chinese, which appears to be a kind of Cratægus. These unfortunately were much decayed and shrivelled up, so that it was impossible to say what the quality once had been. It is stated by Mr. Lay that the pulp is made into red translucent cakes, which are very pleasantly tasted, and may be eaten freely without fear of indigestive flatulency or fulness. Mr. Green sent some excellent fruit of Williams's Bon Chrêtien Pear, also two Catillac Pears. Mr. Green stated that "the tree on which these grew was formerly a Catillac, and that it grew very vigorously, as this sort usually does, but did not bear well; the fruit was also small and cracked; in consequence of which the tree was headed back, and grafted with Williams's Bon Chrêtien, which has always produced fine fruit ever since it came into bearing." He also stated that "the two Catillac Pears sent grew upon a branch of the same tree, which was allowed to remain where one of the grafts had failed; this branch, ever since the grafts began to bear, has borne abundantly, and the fruit has been of much finer quality than what it was before the other sort was worked upon the tree."

Oct. 17.—R. W. Barchard, Esq., in the chair. The show of flowers was good. From Messrs. Veitch and Son, of Exeter, was a shrivelled specimen of *Dolichos purpureus*; it had arrived in bad condition, owing to its being packed in dry cotton, which in that state absorbs all the moisture of leaves and flowers. The best way of transmitting specimens of cut plants to a distance, is to wrap them up in damp coarse brown paper, which will preserve their beauty for a considerable length of time; or if cotton is used it should at all events be well damped and separated from the plants by folds of paper. The plant from which this specimen was cut, is said to have been only a few months old, and not more than two feet high, with no fewer than 10 spikes of bloom, besides the one that was sent. M. Wilson, Esq., exhibited two magnificent bunches of Muscat of Alexandria grapes; also a very large bunch of the white Nice, weighing no less than 5lb. 7oz. Sir G. Staunton, Bart., sent fruit of the purple *Guava Psidium Cattleyanum*, from a plant which has produced fruit in abundance since June; also fruit of the *Passiflora quadrangularis*, which measured 9 inches long by 5½ inches in diameter, and weighed 3lb.; together with fruit of the Akee tree, *Blighia sapida*, and of the Laurel-leaved Granadilla, or Water Lemon—the Pomme de Liane of the French. This plant is a native of the West Indies, and not very frequently seen in this country; the pulp, which is inclosed within a very pretty orange-coloured rind, marked with green spots, is what is eatable; it is rather acid to the taste, and agreeable in hot countries. From Mr. Osborn, was a cut specimen, from North America, of *Shepherdia argentea*, covered with clusters of pretty dark red berries, like those of the Pyracantha, which were said to have arrived to only about one-third their usual size when ripe. The tree from which this specimen was taken is stated to be 25 feet high, and about the same in breadth, quite covered with fruit; it never bears fruit in this country, because all the plants here are male. When the females shall have been procured from North America, they will be most valuable hardy shrubs. From the gardens of the Society were the following plants, viz., *Fabiana imbricata*, *Mahernia incisa*, *Phyllocladus asplenifolius*,

Digitized by Google

Berberis actinacantha, and *Fuchsia globosa*, which were placed in Brown's patent pots about the beginning of June, and were fully exposed to the sun, along with other plants in the common pots. These were flowering beautifully, the foliage was perfectly green and healthy, and the plants had never lost a leaf. The principal advantage in the double pots is, that plants placed in them in very hot weather, and exposed to the sun, only require watering, on an average, once, where those in the common pots require it three times; there must not, however, be any water admitted into the cavity in the side of the pots, as from their porous nature the water passes through and keeps the soil too damp. They seem to answer all kinds of plants very well, except in damp or continued wet weather, they require rather more drainage than the common pot in order to guard against excess of moisture.

MEETING FOR THE ENSUING WEEK.
Tues. Zoological Society, 8.—Scientific Business.

MUSIC AND THE DRAMA

Drury Lane.—Whether they be regarded as a musical plague or blessing, it is certain that Donnizetti's works are at this moment being played or in preparation all over Europe. He is understood to have promised an opera for next year's Carnival at Naples: his 'Maria di Rohan' is preparing at the Italian Opera House at Paris, his 'Don Sebastian' at *L'Académie Royale*. In every German town, where the *prima donna* imagines herself capable of a *roulade*, his 'Elisir' is a stock-piece: in many his 'Belisario.' Within the week, we in London have glanced over his 'Requiem,' the first fruits of the composer's Viennese *kapell-meister*ship, of which more on some future day. We have been everywhere arrested by announcements of an English version of his 'Don Pasquale,' to be given to-night at the Princess's Theatre, to replace his 'Lucia,' and we must now take pen in hand to report on the presentment of his 'Favorite' at Drury Lane on Wednesday last. This opera owes its success in England to the striking nature of one or two situations, and to the admirable manner in which it has been got up. The story is not agreeable. A young Spanish novice (Mr. Templeton) is dismissed from his monastery by its superior (Mr. Borrani), in compassion to "the wandering thoughts and vain imaginations," which make the impending vow intolerable. These centre upon a mysterious lady (Miss Romer), who accords him an interview on his release, and presents him with a commission in the army of *King Alphonso of Spain*. Next, in a scene between the aforesaid *King* (Mr. Leffler) and the aforesaid *Leonora*, we discover the latter to be a royal mistress; and we see her exposed to the anathema of the Church, which the monarch dares not brave by raising her to share his throne. By way of middle course, *King Alphonso* resolves to make over the lady to *Ferdinand*, who has just arrived from the wars, and to gild the shame of such a wedding by the additional gift of a marquisate. The unconscious soldier, happy to regain the mysterious lady of his vows, falls into the snare, and marries her: learns, on issuing from the chapel how he has been practised upon; throws off honours, titles, and bride with indignant scorn, re-enters the cloister, and takes the irrevocable vow. The lady becomes a nun, seeks the monastery in which he has taken refuge (rather a heterodox proceeding, but opera *scribes* are capable of breaking even the rule of La Trappe), and dies in his arms. The music to this tale of passion, though skilfully put together, is tame and unexciting. Here and there a glimpse of pretty melody occurs, as in the chorus and *ballet* of the second scene; here and there a large *cantabile*: the *finale* to the third act is according to Donnizetti's established effective receipt, and the opening of the fourth, grave and imposing; but the whole four acts together are not worth any dozen bars out of 'Guillaume Tell.' The opera was sung and acted with a finish and a propriety, most welcome, as indicating the general advance made in our musical performances. We never saw Miss Romer to such advantage: her personation of *Leonora* being full of feeling and clear of extravagance. The music (written for Madame Stoltz, a low *mezzo-soprano*) lies in too grave a scale for her voice, but she gave it with unusual refinement. We may say as much for Mr. Templeton, who had the heavy disadvantage of appearing in a part filled—and *how* filled!—by Duprez. Mr. Borrani, too, has gained certainty of intonation since he made his *début* at Covent Garden. The scenes are beautiful: especially the cloister picture in the fourth act, which is one of Mr. Grieve's happiest efforts. In the *ballet*, which is part of the opera, Mdlle. Carlotta Grisi and M. Petipa do wonders in a grand duett. After Elssler, the lady is *our* first *danseuse*, being more refined in style and various in step than Cerito. The popular *furore* for this part of the entertainment is a comical exaggeration of the enthusiasm of the past Italian opera season; Mdlle. Galby, and Miss Clara Webster, and Mad. Proche Giubelei each winning her own *encore!* The only blot on the 'Favorite' (the materials attainable being taken into the account) is in the translation of the *libretto*, which is bad beyond old-established precedent.

MISCELLANEA

Paris Academy of Sciences.—Oct. 9.—A letter was received from M. Demidoff, containing some meteorological observations made on his estate of Nijne-Taguilsk, in Russia. The tables for 1841 are remarkable. In the column under the head "Thermometrical Observations" we find that, during that year the temperature was at one time 99¼ of Fahrenheit, and at another 33¼ below zero of Fahrenheit.—A communication was received from M. Fournet, Professor of the Faculty of Sciences at Lyons, on zones without rains and deserts. His conclusions are—1. That, as regards tropical rains, we are to form two great atmospherical divisions, one comprising the regions subject to trade winds, the other those in which there are monsoons. 2. That the latter do not imply absolute deserts, as the alternate action of the monsoons brings rains. 3. That the effects of tropical heat, favoured by some accessory causes, may produce small local deserts, or at least great general aridity. 4. That, in the division of the trade-winds, lowlands of uniform structure situated between the zones of intertropical and subtropical rains, receive no rains, and are therefore condemned to absolute drought. 5. A great elevation of the land, in the form of a plateau, may determine rain: and, that a very great irregularity in the land may completely change the normal order of things, by causing rains out of season, even in the tropics.—A communication was received from M. Moreau de Jonnès, on the statistics of population and crime. According to M. Moreau de Jonnès, the number of crimes generally falls far short of what it is in England. He has found by the authentic tables published in England in 1842, with the sanction of the Home Office, that the number of persons there condemned, for crimes and offences of various kinds, was nearly four times greater, in the relative proportion of the population at large, than it was in France during the year 1841—the latest period up to which official returns have been made. He also communicated some curious facts respecting the amelioration which the physical condition of the people of France has undergone. He stated that in the year 1700 the number of persons who ate wheaten bread in France was 6,670,000, or 33 per cent. of the entire population of that period. In 1760, the proportion of the population who ate wheaten bread was as to that fed on inferior grain 40 per cent.; in 1818, 45 per cent.; and in 1840, 60 per cent.—A letter was received from M. Millot, stating that he had discovered a solvent for the stone in the bladder. M. Millot states that having been induced, in the course of some experiments, and reasoning by analogy, to suppose that the gastric juice of animals would dissolve a calculus, he tried this liquid repeatedly, and always with success. The information is thus far important; but it does not appear that M. Millot has ever tried the gastric juice upon the living organ. His experiments have been performed upon calculi in his own laboratory. Is it certain that the result would be as satisfactory if the experiment were tried upon the living subject?

Archæological Discovery, in different parts of the Continent, has of late furnished a variety of interesting particulars, some of which we may lay before our readers. M. Baër, who has recently returned from a journey undertaken, by desire of the Government, into the northern regions of Russia, for the purpose of making a geological survey thereof, has discovered in Lapland, Nova Zembla, and some of the islands lying near the coasts of Finland—particularly in Wiez, which is all but desert—several subterranean stone labyrinths. The natives whom M. Baër interrogated as to the origin or destination of these labyrinths, knew nothing of them, save that they were called *Babylons*, and held in such veneration that the people were afraid to touch them. M. Baër has brought away drawings, which he is about shortly to publish, for the speculations of the learned and curious.—The excavations in the forest of Bretonne, in France, continue to yield interesting results. A bath has been laid open, reached by a staircase in hewn stone. A bronze hatchet, fragments of mosaic, cups and rings in bronze, broken household vessels, oyster-shells, bones of human beings and of animals, continue to keep attention alive. A substance found in a vase broken by the pick-axe of a labourer, long puzzled the science of the Normans; but an elaborate analysis has shown it to be a composition of cobalt, known as *smalth*, mixed with carbonate of lime, and used, no doubt, for painting frescoes.—In the forest of Cornouet (Finistère), not far from the ruins of the castle of that name, which overhangs the waters of the Isole, have been discovered some valuable antiquities; amongst others, a tomb, composed of stones, joined together with a cement of a brown colour, partaking of the character of wax, but hardening to the consistency of stone on exposure to the air. The tomb contained a chain of massive gold, whose circular links are in good preservation. The rings are of different sizes, two and two, and formed each of four thick gold threads. On the pavement of the tomb were found as many small arrows, of sharp and transparent flint, as the chain has rings, a sword, and three lance-heads, one of silver. The tomb is supposed to be that of a distinguished Gaulish military chief.—A letter from Dieppe says:—"The excavations at St. Marguerite, have brought to light six rooms in mosaic, and some skeletons, near several of which were found pieces of armour, coins, and fragments of vases. A complete Roman villa, in fact, has been laid bare. The size of the skeletons is small, and it is conjectured that they were young men of from sixteen to eighteen years of age."—A student at Bayonne has made a curious discovery in a plain not far from the commune of Lalonquette, in the canton of Thèze. In the centre of a little hillock, a few feet only below the surface lay, and has lain for centuries, an admirable mosaic. The colours are three—red, white, and black. The divisions—the largest of which do not exceed twenty millimètres in length, by twelve in breadth,—affect the most varied forms, and compose in their arrangement, not landscapes nor scenes of animated nature, but figures perfectly regular, circles single or concentric, polygons, lozenges, trapeziums, and sometimes hearts. So admirably, too, are they combined, that in the whole extent of two hundred square mètres, which the mosaic covers, there is nothing approaching to monotony. This magnificent pavement rests on a bed of cement about three centimètres in thickness. Under the cement is a layer of mortar mixed with sand, brick, and quicklime, and the whole is on a pavement of large flint-stones, fixed in a bed of argillaceous earth.

Galileo.—Some manuscripts of Galileo which were presumed to have been lost, or burned by order of the Inquisition, have been found among some old archives in the Palazzi Pitti. This discovery has created a wonderful degree of interest in Florence. It proves that the Inquisition, which was accused, may be calumniated; a fact of which many persons entertained considerable doubt. Be that as it may, the manuscripts, besides being objects of curiosity, are likely to be useful to astronomical science, inasmuch as they contain information respecting the eclipses of former times, a course of the satellites of Jupiter, subjects to which Galileo directed great attention.—*Foreign Quarterly.*

Female Académie Française.—M. de Castellane has at length succeeded in carrying into effect his long-cherished scheme of founding in Paris a female 'Académie Française.' Among the objects proposed by the institution are—The distribution of medals to the authoresses of remarkable works; the encouragement of young females in their first literary essays, and the defrayal of the expenses of printing their

Digitized by Google

works; affording pecuniary aid to literary women in straitened circumstances, and providing for the children of those who die in poverty. Among the ladies who are already chosen members of the new Academy are, Mmes. Georges Sand, Emile de Girardin, De Bawr, Virginie Ancelot, Anna des Essarts, Clémence Robert, Charles Reybaud, Princesse de Craon, Eugénie Foa, Mélanie Waldor, Anaïs Ségalas, D'Helf, Comtesse Merlin, and several distinguished female painters and musicians.—*Foreign Quarterly.*

Extinguishing Fires.—A Vienna letter states that a M. Dietrich, of Gratz, has invented a powder which has the effect of extinguishing fire. Several very successful experiments are stated to have been made.

The Fate of Genius and of Widows.—From a sketch of 'Street Corner Loungers' in the *Democratic Review*, U. S.—"As for goin' home, Billy Bunkers," said he one day in confidence to the long lad with the short roundabout, who leans upon the opposite side of the lamp-post; "as for goin' home, Billy, savin' and exceptin' when you can't help it, why it's perfectly rediclis. If people's opinyins could be made to agree, that would be one thing, and you might go home. But as these opinyins don't agree, why that's another thing, and it's best to clear out and keep out, jist as long as you kin. What's your sitivation when you do go home? There's the old man, and there's the old woman, and the rest of them, hurtin' your feelings as bad as if they was killin' kittens with a brick-bat. As soon as you're inside of the door, they sing out, 'Eh, waggybone! Ho! ho! lazyboots! ain't you most dead a workin' so hard?—t'aint good for your wholesome to be so all-fired industrious!' That's the way they keep a goin' on, aggravatin' you for everlastin'. They don't understand my complaint—they can't understand a man that's lookin' up to better things. I tell you, Billy," exclaimed Nicholas, with tears in his eyes, "when a feller's any sort of a feller, like you and me—" "Yes," replied Billy, complacently; "we're the fellers—it takes us." "When a feller's any sort of a feller, to be ketched at home is little better than bein' a mouse in a wire-trap. Common people, Billy—low, ornery, common people, can't make it out when natur's raised a gentleman in the family—a gentleman all complete, only the money's been forgot. If a man won't work all the time—day in and day out—if he smokes by the fire or whistles out of the winder, the very gals bump agin him, and say, 'Get out of the way, loaf!' Now what I say is this—if people hasn't had genteel fotchin' up, you can no more expect 'em to behave as if they had been fotched up genteel, than you kin make good segars out of a broomhandle." "That are a fact!" ejaculated Billy Bunkers, with emphasis, for Billy has experienced, in his time, treatment at home somewhat similar to that complained of by Nicholas Nollikins. "But, Billy, never mind, and keep not a lettin' on," continued Nollikins, and a beam of hope irradiated his otherwise saturnine countenance; "the world's a railroad, and the cars is comin'—all we'll have to do is to jump in, chalked free. There will be a time—something must happen. Rich widders are about yet, though they are snapped up so fast. Rich widders, Billy, are 'special providences,' sent here like rafts to pick up deservin' chaps when they can't swim no longer. When you've bin down twy'st, Billy, and are jist off agin, then comes the widder a floatin' along. Why, splatterdocks is nothin' to it, and a widder is the best of all life-preservers when a man is most a case, like you and me." "Well, I'm not perticklar, not I, nor never was. I'll take a widder, for my part, if she's got the mint-drops, and never ask no questions. I'm not proud—never was harrystocratic—I drinks with anybody, and smokes all the cigars they give me. What's the use of bein' stuck up, stiffy? It's my principle that other folks are nearly as good as me, if they're not constables nor aldermen. I can't stand them sort." "No, Billy," said Nollikins, with an encouraging smile, "no, Billy; such indiwidooals as them don't know human natur."

To Correspondents.—S. T.—C.—T. W.—received.

We cannot publish Mr. Brook's letter. If we were to open our columns to every author who is inclined to dispute our judgment on all points in which that judgment is unfavourable to him, we should be obliged to pub-lish a controversial Supplement every week—which Supplement our readers would throw into the fire.

Just published, price 7s. 6d. cloth.

FIDELITY; or, a Town to be Let, Unfurnished. A Poem, in Six Books.
By GEORGE HATTON.
London; Simpkin, Marshall & Co. Stationers'-hall-court.
Manchester: Love & Barton, Market-street.

THE NEW BRITISH MUSEUM.
Just published, an Engraving on Steel of
THE NEW FRONT of the BRITISH MUSEUM.
Prints, 1s. each; India proofs, 2s.
Dimes & Elam, 91, Great Russell-street, Bloomsbury.

Just published, price 1s. 6d. square, sewed,
HINTS for PEDESTRIANS, Practical and Medical; with Illustrations. "Muscular exercise is conducive to longevity."

SUPPLEMENT TO THE CABINET EDITION OF SHAKSPERE.

THE DRAMATIC WORKS of SHAKSPERE are completed in the Ten Volumes published.

A Supplementary Volume will immediately follow, in Four Parts, at Sixpence, and bound, at Half-a-Crown, containing THE POEMS,

AND

A BRIEF LIFE OF SHAKSPERE,

By the Editor.

London: Charles Knight & Co. 22, Ludgate-street.

This day is published, price 3s.

THE CAMBRIDGE UNIVERSITY EXAMINATIONS for 1843.

Contents:—1. Senate-House Examination for Honours—2. Examinations for B.A. Degrees (not in Honours)—3. The Classical Tripos Papers—4. Previous Examination of Junior Sophs (Lent Term)—5. Smith's Prizes—6. The Chancellor's Medals—7. Bell's Scholarships—8. The Craven Scholarships—9. Subjects for Previous Examination 1844—and, 10. Classical Subjects for B.A. Degree, 1845.

London: Hatchard & Son, Piccadilly; George Bell, Fleet-street.

October 6, 1843.

FROM the last Official Stamp Returns just published, it appears that during the three months of April, May, and June, in the present year, the Stamps supplied to each of the undermentioned Journals gave them an average Publication of—

Gardeners' Chronicle	5,161
Morning Advertiser	4,872
Morning Herald	4,693
Mark Lane Express	4,154
St. James' Chronicle	4,000
Record	3,962
Sun	3,847
Morning Post	3,846
Spectator	3,539
John Bull	3,231
Standard	3,077
Globe	3,052
Observer	2,423
Atlas	2,308
Bell's New Weekly Messenger	1,943
New Farmer's Journal	1,469
Gardener's Gazette	1,019

The GARDENERS' CHRONICLE; a Weekly Newspaper of Rural Economy and General News. The Horticultural Part edited by Professor LINDLEY. Price Sixpence stamped to go free by post. Published every Saturday.

The very extensive sale of the 'Gardeners' Chronicle,' amongst the higher classes of society, makes it an especially valuable channel for all Advertisements which are addressed to the intelligent and wealthy. Another advantage is, that the work from its nature is one not only of daily reference but permanent value, so that Advertisements are constantly under the eye of the Subscribers.

To enable all to avail themselves of the columns of the 'Gardeners' Chronicle,' the scale of Charges has been fixed as low as possible.

PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh. In royal 4to. with 17 Plates and 38 Woodcuts, price 25s.

Lately published, by the same Author,

I.

The Natural Principles and Analogy of the Harmony of Form. In royal 4to. with 18 Engravings and Woodcuts. Price 15s.

II.

The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 8 coloured Diagrams, 8vo. Price 7s.

In so far as we know, Mr. Hay is the first and the only modern Artist who has entered upon the study of these subjects without the trammels of prejudice and authority. Setting aside the ordinances of fashion, as well as the dicta of speculation, he has sought the foundation of his profession in the properties of light, and in the laws of visual sensation, by which these properties are recognized and modified. The truths to which he has appealed are fundamental and irrefragable; and the conclusions which he has deduced from them will admit of no modification either from taste or fashion. Notwithstanding some trivial points of difference between Mr. Hay's views and our own, we have derived the greatest pleasure from the perusal of these works. They are all composed with accuracy and even elegance. His opinions and views are distinctly brought before the reader, and stated with that modesty which characterizes genius, and that firmness which indicates truth."—*Edinburgh Review*, October, 1843.

William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

CORPORATION of the AMICABLE SOCIETY for a PERPETUAL ASSURANCE OFFICE. Incorporated by Charter of Queen Anne, A.D. 1706. 13, Serjeants' Inn, Fleet-street, London.

Directors.

The Rt. Hon. the Earl of Devon	William Everett, Esq.
Benjamin John Armstrong, Esq.	John Hodgson, Esq.
John Barker, Esq.	Mr. Serjeant Merewether
Francis Boott, M.D.	James Mountague, Esq.
The Hon. Frederick Byng	Mark Beauchamp Peacock, Esq.
Cobbett Derby, Esq.	Theophilus Thompson, M.D.

Every person on whose life an assurance is effected for one or more Shares, whether for his own benefit, or by a contributor having an interest in his life, is admitted a member of the Corporation.

The *whole of the Profits* are divided among the representatives or nominees of the deceased members in proportion to the amount of their respective assurances, and without reference to the length of time during which the Policy may have been in force.

There is no proprietary body,—no commission is allowed to agents,—and the affairs of the Corporation are managed at the smallest possible expense; the profits are, therefore, the utmost the premiums can afford.

T. GALLOWAY, Registrar.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

Auditors.

John Chas. Burgoyne, Esq. | James Tilbury, Esq.
The Rev. Geo. Fisher, F.R.S. | John Walls, Esq.

Physician—Charles J. Roberts, M.D., 31, New Bridge-street, Blackfriars.

Surgeon—James M. Arnott, Esq. 2, New Burlington-street.

Solicitor—Thomas Burgoyne, Esq. 160, Oxford-street.

Bankers—Messrs. Cocks, Biddulph & Co. 43, Charing-cross.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1st JANUARY, 1843, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, Bridge-street, Blackfriars, London: established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq.	Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.

The following table will show the result of the last division of profits, as declared on the 10th of May, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduced Annual Premium.
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	24 8 4	12 4 2
40		1,000	31 10 6	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

(By order of the Board)

DAVID JONES, Actuary.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

NATIONAL PROVIDENT INSTITUTION, 48, Gracechurch-street, London, (established at 13, Nicholas-lane, King William-street, December, 1835,) for Mutual Assurance on Lives, Endowments, Deferred Sums, Immediate and Deferred Annuities, enrolled under the Acts of Parliament relating to Friendly Societies.

Directors.

C. P. Bousfield, Esq.	Robert Ingham, Esq.
John Bradbury, Esq.	Joseph Jansson, Esq.
William Cash, Esq.	S. Hayhurst Lucas, Esq.
Thomas Castle, Esq.	C. Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.
Thomas Hodgkin, M.D.	

Medical Directors.

J. T. Conquest, M.D. F.L.S. | Thomas Bevan, M.D. F.L.S.

Solicitors—Messrs. Hardwick & Davidson.

THIS INSTITUTION completed the Seventh Year of its establishment on the 13th of December, 1842, and, in accordance with a Rule made at its commencement, a careful valuation of its liabilities and assets has been made by an eminent Actuary (Charles Ansell, Esq.), for the purpose of making the first division of profits amongst its members, the gratifying result of which is exemplified in the following instances, showing the profit assigned to policies which have existed from one to seven years.

Policies in Existence.	Age at commencement.	Sum Assured.	Amount of Bonus.	Original Premium.	Reduction in Premium in lieu of Bonus.	Equal to a Reduction per ct. on the Original Premium of
Years.	Years.	£.	£. s. d.	£. s. d.	£. s. d.	
7	59	1,000	163 11 0	63 0 0	37 17 2	44
6	52	2,000	227 19 0	97 11 8	34 5 10	35
5	51	1,000	91 3 0	47 2 6	13 6 4	28
4	42	500	28 19 0	17 12 1	3 13 3	20
3	46	800	37 8 0	31 18 8	4 18 10	15
2	63	3,000	140 15 0	224 15 0	23 11 7	10
1	42	2,000	26 14 0	70 8 4	3 3 9	4

The Directors refer with great confidence to the above statement, as exhibiting the most satisfactory proof of the superiority of the principle on which this Institution is founded, namely, that of MUTUAL LIFE ASSURANCE, carried out under the protection and advantages afforded by the acts of Parliament relating to FRIENDLY SOCIETIES, and fully warranting them in thus directing the public attention to the peculiar privileges secured to all assurers.

Members, whose premiums became due on the 1st instant, are reminded that the same must be paid within 30 days from that time.

Prospectuses, and every other information, may be had on application at the Office, or to the Country Agents.

The next Division of Profits will take place in December, 1847.

London, October 5, 1843. JOSEPH MARSH, Secretary.

Digitized by Google

YORK AND LONDON LIFE ASSURANCE

COMPANY, King William-street, London. Empowered by Act of Parliament. *Directors.*

George Frederick Young, Esq. *Chairman.*
Matthew Forster, Esq. M.P. *Deputy Chairman.*

The superiority of the system of Assurance adopted by this Company will be found in the fact that the premium required by a bonus office to assure 1,000*l.* on the life of a person in the 30th year of his age, would in this office insure 1,391*l.* 7*s.* 6*d.*

Assurances at other ages are effected on equally favourable terms, and thus the assured has an immediate bonus instead of a chance dependent upon longevity and the profits of an office. In cases of assurance for a limited number of years, the advantage offered by this Company is still greater, no part of the profits of a bonus office being ever allotted to such assurances.

Prospectuses, containing tables framed to meet the circumstances of all who desire to provide for themselves, or those who may survive them, by assurance, either of fixed sums or annuities, may be had at the Office, as above, or of the agents.

J. REDDISH, Secretary.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman* | Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq. | Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 16, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

ANNUITIES.—In the AUSTRALASIAN

COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

Directors.

Edward Barnard, Esq. F.R.S. | C. E. Mangles, Esq.
Henry Buckle, Esq. | J. B. Montefiore, Esq.
John Henry Capper, Esq. | Richard Onslow, Esq.

JOSHUA MILNE, *Actuary.*

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office, in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

THE uncertainty of life ought strongly to influence those who have relatives and families dependent on them, to have recourse to the benefits of Life Assurance, no less as a matter of duty than of interest. The following actual cases quoted from the books of the SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY will place in a very strong view not only the ORDINARY BENEFITS of Life Assurance, but also the very great advantages derived from a connexion with this Society.

Age at Entry.	Date of Assurance.	Date of Decease.	Interval between Assurance and Decease.		Original sum Assured.	Amount of Additions by way of Bonus.		Total Sum paid.	
			Years.	Mos.					
43	1815, Jan.	1837, Feb.	22	1	£500	£256	16 1	£756	16 1
55	1816, Mar.	1834, Nov.	18	8	100	45	9 11	145	9 11
51	1817, Nov.	1831, Apr.	13	5	500	186	14 0	686	14 0
65	1818, June	1832, Apr.	13	10	800	313	16 9	1113	16 9
53	1821, Mar.	1835, Dec.	14	10	885	207	17 9	1092	17 9
36	1822, Apr.	1832, Oct.	10	6	1500	250	17 6	1750	17 6
25	1823, Dec.	1832, Dec.	9	..	2500	380	1 3	2880	1 3
40	1830, May	1830, Dec.	..	7	500	....		500	0 0
28	1832, Mar.	1832, Apr.	..	1	1000	....		1000	0 0

The Profits at 31st December, 1838, were sufficient to secure, I. A RETROSPECTIVE BONUS OF TWO PER CENT. PER ANNUM, not only on the original Sum assured, but likewise on the BONUS ADDITIONS PREVIOUSLY DECLARED. II. A CONTINGENT PROSPECTIVE BONUS OF TWO PER CENT. PER ANNUM on the accumulated amount of the original sum assured, and the Bonus Additions previously declared—to be paid from 31st December, 1838, on all Policies of 5 years' standing that may emerge before 31st December, 1845.

All information may be obtained on application at the Head Office, or at any of the Society's Agencies.

JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall.
HUGH M'KEAN, Agent.

LONDON, EDINBURGH, and DUBLIN

LIFE COMPANY, 3, Charlotte-row, Mansion House, and Chancery-lane, London.

The indisputability of the policies granted by this Company;
The obligation to pay the sum assured, although the debt for which the policy was taken may have been paid before the claim arises;
Whole-world policies not confined to the limits of Europe;
Option of half-premium payment for the first seven years;
These form a combination of advantages which can be obtained only from the London, Edinburgh, and Dublin Life Company. ALEX. ROBERTSON, Manager.

UNITED KINGDOM LIFE ASSURANCE

COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.

Hamilton Blair Lawrie, Esq. | F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident* | William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident* | John Ritchie, Esq.
Charles Downes, Esq. | F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esqs., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past 2.

PANTHYMIAN LEAVES. — VINER'S

FRAGRANT PANTHYMIAN LEAVES OF VERBANE, for Perfuming Apartments and Purifying the Atmosphere with this salutary scent.

"Its fragrant leaf has not its mate
Among the perfumes which the rich and great
Bring from the odour of the spicy East."

NOW READY, BERDOE'S WINTER VEN-

TILATING and REALLY WATERPROOF WRAPPERS, SHOOTING JACKETS, &c., in great variety. New and much approved Styles. Five years' extensive trial, a constantly increasing sale, the general and cordial recommendation of those who have adopted them, and a host of imitations of these gentlemanly and established garments, furnish the best evidence of their efficiency and value. An inspection is confidently invited, also, of an extensive assortment of first-rate materials and garments for the coming season, guaranteed to exclude any description or continuance of rain whatever. Made only by W. BERDOE, TAILOR, WATERPROOFER, &c. 69, CORNHILL (north side).

ARMSTRONG'S HYDRO-ELECTRIC MA-

CHINE.—WATSON and LAMBERT, NEWCASTLE-UPON-TYNE, having been intrusted by Mr. ARMSTRONG with the manufacture of the above machines (including that which is now exhibiting at the ROYAL POLYTECHNIC INSTITUTION of LONDON), and having the advantage of every improvement made by him, beg to announce to the public, that they make fixed HYDRO-ELECTRIC MACHINES of all sizes and of every degree of power; also machines of a portable size and suitable for a room or lecture table, capable of exhibiting nearly all the experiments that have been made illustrative of the subject, and having a power greater than that of the largest Plate Glass Machines in general use, and which are fitted up with apparatus for reversing the electricity, by introducing extraneous matter into the condensing pipes. As a means of producing electricity they will be found more economical than the ordinary machines, and as a novelty in science they possess the highest degree of interest. Full particulars and prices may be obtained on application, personally, or by letter.

Carlial-square, Newcastle-upon-Tyne.
October 18th, 1843.

MOULD CANDLES to BURN WITHOUT

SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

SMOKE PREVENTED, and VENTILATION

EFFECTED, by SPONTANEOUS ACTION.—Mr. JEAKES, 51, Great Russell-street, Russell-square, *Sole Agent in London* for the sale of DAY'S PATENT WINDGUARD, by the use of which he guarantees to cure all Chimneys smoking from wind, and also to prevent downward currents. It is admirably adapted for the ventilation of apartments of every description; also of ships, stables, dairies, and larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise, and not liable to derangement. It also offers no impediment to sweeping. Price, for general use, 30*s.*; larger size, 45*s.*; larger sizes, especially adapted for ventilation, 60*s.* and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the Trade in general, is especially invited.

F. ARNOLD'S

INDELIBLE MARKING INK, for Silk, Linen,

and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots.....6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

H. WALKER'S NEEDLES (by authority The

'Queen's Own') in the illustrated Chinese boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of her Majesty or his Royal Highness Prince Albert, in relief on coloured grounds. Every quality of needles, fish-hooks, books and eyes, steel pens, &c., for shipping. These needles or pens for the home trade are sent, free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value.—H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

THE OMBROSOME, or PATENT PORTABLE

SHOWER BATH, especially adapted for travelling and exportation. By this Bath an inexhaustible shower is produced from a few quarts of water: the height of the shower may be increased or lessened to suit adults or children, and occupying so little room, is peculiarly suited for bed-rooms and dressing-rooms; it is also an excellent Douche Bath. Being little larger than a writing-desk when packed, it will be a great desideratum for exportation to India and other hot climates. To Military Men and others of a migratory life, also to Students of the Universities, Inns of Court, &c. (where rooms are low and water scarce), the present invention cannot fail to be most acceptable. It is made entirely of brass, and is at once simple and elegant.—May be seen at the Royal Polytechnic Institution; and be had, with Prospectuses, wholesale and for exportation, at the Manufactory, 115, Old-street; and retail at the Bazaar, Panklibanon Iron Works, 58, Baker-street; Mr. J. L. Benham, 19, Wigmore-street; Mr. C. Bray, 16, Cranbourne-street; Mr. J. Deacon, 4, Moorgate-street; Mr. J. Evans, London Bridge; Messrs. Pallows & Adcock, 4, Halkin-street West; Messrs. Glenton & Chapman, 147, New Bond-street; and of all the leading Ironmongers throughout England.—Price 4*l.* 10*s.* and 5*l.* 5*s.*

BUTTER MADE IN TEN MINUTES, by

the NEWLY-INVENTED CHURN, registered according to Act of Parliament.

This Act imposes a penalty of from 5*l.* to 20*l.* for each imitation, piracy, or selling, recoverable by the proprietors before a magistrate, or by civil action. Half the penalty will be given to any person informing the proprietors of any infringement. The words of the Act are, "No person or persons shall copy or alter any design, either by adding to, or subtracting from," &c.

ATTWOOD, WIMBLE & WARNER, Manufacturers, LEWES, Sussex.

This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which insures the butter coming in ten or twelve minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the heat of summer, placing the churn in cold water will be the means of hardening the butter.

Sizes,	No. 1.	2.	and 3.
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London,	25*s.*	35*s.*	45*s.*

Metal Pans for Churns to stand in, 4*s.* 6*d.*, 6*s.*, and 7*s.* Larger sizes made to order.

To be seen in London, at Wright's Range Warehouse, No. 3, Arthur-street, near the Monument; Rigby's Brush Warehouse, No. 80, Gracechurch-street; Livermore & Son, Ironmongers, No. 30, Oxford-street; Benham, 19, Wigmore-street, Cavendish-square. Export Agents, Barnes & Co., 109, Fenchurch-street.

ALLNUTTS' FRUIT LOZENGES, for Coughs,

Colds, Sore Throats, Hoarseness, &c., prepared solely from the BLACK CURRANT.—In the above preparation the acidity of the Black Currant alone is introduced, and that in the highest degree of concentration. The Lozenges may therefore be strongly recommended (even to persons of the most delicate constitutions), in the above complaints, as they tend to allay inflammation, and particularly to promote a free expectoration. Public speakers and singers will find them of peculiar service. They have been also remarkably useful in cases of the Influenza. The annually increasing sale for the last 30 years of this article, notwithstanding the numerous attempts to equal it, will sufficiently prove its decided superiority to all other preparations of a similar description.—Be careful to ask for "ALLNUTTS' FRUIT LOZENGES," prepared only by the Proprietors, Allnutt & Son, Queen-street, Portsea.—Sold in boxes, at 1*s.* 1½*d.* each, by all Patent Medicine Vendors in the Kingdom.

TWENTY YEARS' LOSS of HAIR, and

WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennahy, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

VALUABLE STANDARD AND CLASS BOOKS ON MEDICINE AND SCIENCE,

PUBLISHED BY MR. CHURCHILL, PRINCES-STREET, SOHO.

The Student's Book of Anatomy.

THE ANATOMIST'S VADE-MECUM: a System of Human Anatomy. By ERASMUS WILSON, Lecturer on Anatomy and Physiology at the Middlesex Hospital Medical School. With 168 Illustrations on Wood. 2nd Edition. Fcap. 8vo. cloth, 12*s.* 6*d.*

"This is probably the prettiest medical book ever published, and we believe that its intrinsic merits are in keeping with its exterior advantages, having examined it sufficiently to satisfy us that it may be recommended to the student as no less distinguished by its accuracy and clearness of description than by its typographical elegance. The woodcuts are exquisite."—*British and Foreign Medical Review.*

The Student's Book of Surgery.

A SYSTEM of PRACTICAL SURGERY. By WILLIAM FERGUSSON, F.R.S.E., Professor of Surgery in King's College, London. With Two Hundred and Forty-six Illustrations. Fcap. 8vo. cloth. 12*s.* 6*d.*

"Professor Fergusson's work, we feel persuaded, will be as great a favourite as it deserves, for it combines the powerful recommendations of cheapness and elegance with a clear, sound, and practical treatment of every subject in surgical science. The illustrations, by Bagg, are admirable—in his very best style."—*Edinburgh Journal of Medical Science.*

The Student's Book of Human Physiology.

PRINCIPLES of HUMAN PHYSIOLOGY; with their chief Applications to Pathology, Therapeutics, Hygiene, and Forensic Medicine. By W. B. CARPENTER, M.D., Lecturer on Physiology in the Bristol Medical School. With numerous Illustrations on Steel and Wood. 1 vol. 8vo. cloth, 20*s.*

"It would be a dereliction of our bibliographical duty not specially to mention the highly meritorious work of Dr. Carpenter on the Principles of Human Physiology—a work to which there has been none published of equal value in the department of which it treats—embodying, as it does, an immense store of facts and modern discoveries in anatomy and physiology down to the present time."—*Dr. Black's Retrospective Address.*

The Student's Book of Comparative Physiology.

PRINCIPLES of GENERAL and COMPARATIVE PHYSIOLOGY, intended as an Introduction to the Study of Human Physiology, and as a Guide to the Philosophical Pursuit of Natural History. By W. B. CARPENTER, M.D. The 2nd Edition, considerably enlarged, with numerous Figures on Steel and Wood, 8vo. cloth, 18*s.*

"I recommend to your perusal a work recently published by Dr. Carpenter. It has this advantage, it is very much up to the present state of knowledge on the subject. It is written in a clear style, and is well illustrated."—*Professor Sharpey's Introductory Lecture.*

The Student's Book of Midwifery.

THE PRINCIPLES and PRACTICE of OBSTETRIC MEDICINE and SURGERY, in reference to the PROCESS of PARTURITION. By F. H. RAMSBOTHAM, M.D., Physician to the Royal Maternity Charity, and Lecturer on Midwifery at the London Hospital, &c. Illustrated with Eighty-four Plates on Steel, and Twenty on Wood; forming one handsome thick 8vo. volume, cloth, 22*s.*

"The work of Dr. Ramsbotham may be described as a complete system of the principles and practice of midwifery. The illustrations are numerous, well-selected, and appropriate, and engraved with great accuracy and ability. In short, we regard this work, between accurate descriptions and useful illustrations, as by far the most able work on the principles and practice of midwifery that has appeared for a long time."—*Edinburgh Medical and Surgical Journal.*

The Student's Book of Medicine.

PRINCIPLES of MEDICINE: comprehending General PATHOLOGY and THERAPEUTICS. 1 vol. demy 8vo. 12*s.* By CHAS. J. B. WILLIAMS, M.D. F.R.S., Professor of Medicine in University College.

The Student's Book of Chemical Manipulation.

With a PREFACE by PROF. LIEBIG.

ELEMENTARY INSTRUCTION in CHEMICAL ANALYSIS as practised in the LABORATORY of GIESSEN. By C. REMIGIUS FRESENIUS. Edited by LLOYD BULLOCK, Member of the Chemical Society, &c. 1 vol. 8vo. cloth, 9*s.*

"Dr. Fresenius conducts the course of elementary instruction in the laboratory of the University of Giessen. During the two last sessions he has followed the method described in his work. This method I can confidently recommend from my own personal experience to all who are desirous of obtaining instruction in inorganic analysis, for its simplicity, usefulness, and the facility with which it may be apprehended. I consider Dr. Fresenius' work extremely useful for adoption in institutions where practical chemistry is taught, but it is especially adapted to the use of Pharmaceutical Chemists. Further, a number of experiments and discoveries have been recently made in our laboratory, which have enabled Dr. Fresenius to give many new and simplified methods of separating substances, which will render his work equally welcome to those who already are familiar with the larger works on inorganic analysis."—T. LIEBIG.

The Student's Books for Examination.

By DR. STEGGALL.

1. A MANUAL for the Use of STUDENTS PREPARING for EXAMINATION at APOTHECARIES' HALL. 9th Edition, 12mo. cloth, 8*s.* 6*d.*

Sales by Auction.

MISCELLANEOUS BOOKS.

Mr. L. A. LEWIS will SELL, at his House, 125, Fleet-street, on THURSDAY, Nov. 2, and four following days (Sunday excepted),

AN EXTENSIVE COLLECTION of BOOKS, in every department of Literature.

SOUTHGATE'S ROOMS.

By HENRY SOUTHGATE & Co., at their Rooms, 22, Fleet-street, on FRIDAY, November 3, and three following days (Sunday excepted),

A MISCELLANEOUS COLLECTION of BOOKS, Ancient and Modern, in various departments of Literature, a large assortment of Modern Novels and Romances, a great variety of Magazines and Periodicals recently published, &c. &c.

THE SHAKESPEARE SOCIETY.

Established 1840.—Members who have not paid up their subscriptions are requested to forward the amount immediately to the Agent, Mr. Rodd, No. 9, Great Newport-street, Long-acre, London. Early attention to this is particularly requested, to enable the Council to make suitable arrangements for the ensuing year, and also to spare the Society the expense of collecting. Six books for 1841, seven for 1842, and five (now ready) for the current year, will be delivered by the Agent on payment of the subscription, which is twenty shillings for each year. Prospectuses can be had on application.—The Secretary will be obliged by a formal notice of retirement from the Society.

SALE OF ANTIQUITIES AT GOTHA.

A MAGNIFICENT COLLECTION of ANTIQUITIES (valued at from 12,000l. to 14,000l.); consisting of 345 Objects in Bronze, Iron, Lead, Marble, Silver, Ivory, Terracotta, &c.; also 52 Precious Stones, cut and set in gold, among which a Ruby of extraordinary size, ¾ inch in diameter.—WILL BE SOLD, at GOTHA, in the Grand Duchy of SAXE-GOTHA, in JANUARY NEXT.

The Catalogue, with 345 engraved representations of the objects, may be had of

WILLIAMS & NORGATE, FOREIGN BOOKSELLERS,
14, Henrietta-street, Covent-garden;
Price 1s.; post free, 1s. 4d.

THE PUBLISHING BUSINESS.—Messrs. PAGET & CO. beg to inform the Literary World that they have commenced business as PUBLISHERS, and will be happy to treat with AUTHORS for the purchase of MANUSCRIPTS upon the usual terms. As a Literary Gentleman of high standing has been engaged to peruse any MSS. submitted to Messrs. Paget & Co., Authors may rely upon an impartial opinion. Promptitude, liberality, and honour will also characterize all negotiations upon which the Advertisers may enter. The business of Messrs. Paget & Co. will be carried on at No. 2, Bury-street, Saint James's, until extensive premises, already engaged, can be suitably fitted up.

CONCHOLOGY.—LOVELL REEVE respectfully invites his Conchological friends to inspect his Cabinet of SHELLS, now newly arranged in systematic order, and especially rich in specimens of great novelty and interest, lately received from New Holland in H.M.S. *Beagle*.

CONCHOLOGIA ICONICA. The November Number (No. 10) of this popular work on Species of Shells, which proceeds with marked regularity and improvement, (published this day,) includes Species 148 to 163 of the genus *Conus*; Species 11 to 27 of the genus *Delphinula* (completing the monograph); and the entire monograph of the genus *Harpa*. Size quarto, price 10s. coloured; 5s. plain.

Lovell Reeve, Naturalist and Scientific Lithographer, 8, King William-street, Strand.

Also,

OLD ENGLAND. To be completed in Twenty-four Monthly Parts, with Three Thousand Woodcuts, and Twenty-four Coloured Engravings, forming two splendid folio volumes. Also published in Weekly Numbers.

By CHARLES KNIGHT.

The First MONTHLY PART of 'OLD ENGLAND,' has been advertised to appear on the 1st of November. Since that announcement, the Publishers have received some urgent recommendations to bring out the Work also in WEEKLY NUMBERS; and as they are anxiously desirous to meet the wishes of the Public, being quite aware that many persons prefer making a small weekly outlay to expending a monthly sum, however moderate, they have now to announce the following arrangements:—

'OLD ENGLAND,' Number I., to be continued every Saturday, printed of a uniform size with the 'Museum of Animated Nature,' and containing Four Pages of Engravings and Four Pages of Letter-press, price 2d., is

PUBLISHED THIS DAY.

A SUPPLEMENTARY NUMBER, containing an Illuminated Fac-simile of a highly-finished Architectural Drawing will be published, in a wrapper, on the last Saturday in every Month, price 6d. The First Supplement appearing on Saturday, Nov. 25.

The Monthly Part, containing Four Numbers and the Supplementary Number, will be published Monthly, with the Magazines, price 1s. 6d.

The First Part will appear on the 30th of November.

22, Ludgate-street, October 28, 1843.

4.

THE APPLICATION OF GEOLOGY TO AGRICULTURE,

and to the Improvement and Valuation of Land; with the Nature and Properties of Soils, and the Principles of Cultivation. By NICHOLAS WHITLEY, Land Surveyor. 8vo. 7s. 6d. cloth.

"Mr. Whitley's book appears to us like the commencement of a more philosophical review of our agricultural riches than has yet been given to the public; its utility is manifest, and on that score alone we earnestly recommend it to those who, from their pursuits, are much better able than ourselves to estimate its merits, and take advantage of its suggestions."—*Sunday Times.*

5.

A DICTIONARY OF ARTS, MANUFACTURES, AND MINES;

Containing a clear exposition of their Principles and Practice. By ANDREW URE, M.D., F.R.S., M.G.S., M.A.S., Lond.; M. Acad. U.S. Philad.; S. Ph. Soc. N. Germ. Hanov.; Mulil. &c. &c. Third Edition, corrected. 8vo. illustrated with 1,240 Engravings on Wood, 50s. cloth.

6.

AN ELEMENTARY GRAMMAR OF THE GREEK LANGUAGE.

By DR. RAPHAEL KÜHNER, Co-rector of the Lyceum at Hanover. Translated by J. H. MILLARD, St. John's College, Cambridge, late Second Classical Master at Mill Hill Grammar School. 8vo.

[*In a few days.*

*** This Work, which contains all that is most important in the author's celebrated 'Ausführliche Grammatik, was carefully prepared by him for the special use of the Gymnasiums in Germany, where it has been tried with great success.

7.

THUCYDIDES' HISTORY OF THE PELOPONNESIAN WAR.

A New Recension of the Text, with a carefully amended Punctuation; and copious NOTES, Critical, Philological, and Explanatory, almost entirely original, but partly selected and arranged from the best Expositors: accompanied with full Indexes, both of Greek Words and Phrases explained, and matters discussed in the Notes. The whole illustrated by Maps and Plans, mostly taken from actual surveys. By the Rev. S. T. BLOOMFIELD, D.D. F.S.A. 2 vols. 8vo. numerous Maps and Plans, 28s. cloth.

Separately, Vol. I. 18s. cloth; Vol. II., published this day, and completing the Work, 20s. cloth.

*** In introducing the present performance (now completed) to the notice of the public, the Editor offers it not as a new edition of his former Greek Thucydides, but as an entirely new work, on a far more extensive scale, in which he has exerted himself to present, *ex nova recensione*, a text as pure as possible, with a most carefully formed punctuation, accompanied with such critical Notes as should not only justify his editorial decisions, and furnish students with all necessary information, but occasionally open out important principles of criticism,—and with Exegetical ones, so framed as to form a continuous Commentary.

In the course of November,

THE PRISM OF IMAGINATION

FOR 1844.

By the BARONESS DE CALABRELLA, Author of 'The Prism of Thought for 1813.'

Post 8vo. price One Guinea, handsomely bound in morocco, and gilt.

*** The Ornamental Printing under the Superintendence of Mr. Owen Jones. Each page will be surrounded with rich and appropriate Ornamental Borders, printed in Colours and Gold. There will be Eight Ornamental Titles illustrative of the Tales, and Eight Lithographic Illustrations, designed by Henry Warren. The Letter-press will consist of a series of five Imaginative Tales, entitled The Miniature—The Ring—The Pen—The Armlet—The Watch.

NEW BOOKS AND NEW EDITIONS

JOHN W. PARKER, West Strand.

LECTURES ON THE

PRINCIPLES and PRACTICE of PHYSIC, delivered at King's College, London. By THOMAS WATSON, M.D., Fellow of the Royal College of Physicians, and Physician to the Middlesex Hospital. 2 vols. 8vo. 34s.

TABLES of CHEMICAL EQUIVALENTS, WEIGHTS, MEASURES, &c. By W. T. BRANDE, F.R.S., Professor of Chemistry at the Royal Institution. On Five large Sheets, 3s. 6d.

By the same Author,

I. A MANUAL of CHEMISTRY. Fifth Edition, (1500 pages, 8vo.) 35s.

II. A DICTIONARY of MATERIA MEDICA and PHARMACY. 8vo. 15s.

PRACTICAL CHEMISTRY for FARMERS and LANDOWNERS. By JOSHUA TRIMMER, F.G.S. 5s.

By the same Author,

Octavo, with Two Hundred Illustrations, 12s.

PRACTICAL GEOLOGY and MINERALOGY, and the CHEMISTRY of METALS, with an Introductory Discourse on the Nature, Tendency, and Advantages of Geological Pursuits.

PRINCIPLES of MECHANISM. By R. WILLIS, M.A. F.R.S., Jacksonian Professor in the University of Cambridge. With numerous Illustrations. 15s.

THE UNDULATORY THEORY, as applied to the Dispersion of Light. By the Rev. BADEN POWELL, M.A. F.R.S. F.R.A.S. F.G.S., Savilian Professor in the University of Oxford. 8vo. 9s., with a Coloured Chart of the Prismatic Spectra.

THE MECHANICS of ENGINEERING, intended for use in Universities and in Colleges of Engineers. By the Rev. Professor WHEWELL, F.R.S., Master of Trinity College, Cambridge. 9s.

By the same, 9s.

THE DOCTRINE of LIMITS, with its Applications: namely, The First Three Sections of Newton—Conic Sections—The Differential Calculus.

MATHEMATICAL TRACTS.

I. Lunar and Planetary Theories—II. Figure of the Earth—III. Precession and Nutation—IV. Calculus of Variations—V. Undulatory Theory of Optics, and Theory of Polarization. By GEORGE BIDDELL AIRY, M.A. F.R.S., Astronomer Royal. 8vo. Third Edition, corrected, 15s.

MATHEMATICAL TRACTS on Laplace's Co-efficients, the Figure of the Earth, the Motion of a Rigid Body about its Centre of Gravity, and Precession and Nutation. By the Rev. M. O'BRIEN, late Tutor of Caius College. 4s. 6d.

EXAMPLES of the PROCESSES of the DIFFERENTIAL and INTEGRAL CALCULUS. Collected by D. F. GREGORY, M.A., Fellow of Trinity College, Cambridge. 8vo. with Plates, 18s.

LECTURES upon TRIGONOMETRY, and the Application of Algebra to Geometry. 2nd Edit., 7s. 6d.

DYNAMICS; or, a TREATISE on MOTION. By SAMUEL EARNSHAW, M.A., of St. John's College, Cambridge. 8vo. 14s.

THEORY of HEAT. By Professor KELLAND, M.A. F.R.S., of the University of Edinburgh. 8vo. 9s.

THE ELEMENTS of ALGEBRA; for SCHOOLS, and the JUNIOR CLASSES in COLLEGES. By the Rev. T. G. HALL, M.A., Professor of Mathematics in King's College, London. 6s. 6d.

By the same Author,

I. AN ELEMENTARY TREATISE on the DIFFERENTIAL and INTEGRAL CALCULUS. 12s. 6d.

II. THE ELEMENTS of DESCRIPTIVE GEOMETRY; for Students in Engineering. 6s. 6d.

LONDON, SATURDAY, OCTOBER 28, 1843.

REVIEWS

Jamaica: its Past and Present State. By J. M. Phillippo, twenty years a Baptist Missionary in that Island. Snow.

UNTIL within the last few years little was known in England of the real state of society in the West India Islands; the missionaries, who were the first to bring the social condition of these colonies before the British public, were accused of "whitening the blacks, and blackening the whites," and the organs of the planters, which replied to their strictures, made no comment on their statements of facts, but only accused the writers of preaching treason and sedition. Independent of all observation and evidence, it would be no difficult task to predicate the condition of a society blighted by the double curse of slavery and monopoly; the experience of all ages has shown that compulsory servitude is equally injurious to the master and the slave; the very first element of civilization, "the family," is all but banished from such a community; concubinage takes the place of domestic union; parental affection is unknown, and filial piety has no existence. So late as the year 1832, Mr. Baillie, a large West India proprietor, when examined before a Committee of the House of Lords, declared, that "he could not name any overseer, driver, or person in authority, who did not keep a mistress;" and Mr. Phillippo states, that if subordinate white servants had formed any more reputable connexion, they would instantly have been turned out of their respective employments.

The abolition of slavery was, in fact, a greater moral boon to the white population of Jamaica than to the negroes themselves. Since the 1st of August 1838, a great revolution has been effected among the old ruling class; which, we trust, is destined to spread rapidly through the island:—

"It is delightful to contemplate the change which in this respect has taken place in the towns. Here a goodly and rapidly increasing number have abandoned their former licentious habits, and have entered the marriage state. Amongst these it must be confessed that the Jews furnish the most numerous and reputable examples. Among them marriages with persons of their own nation have always been common, and are obviously on the increase; whilst the disgrace formerly attached to a matrimonial alliance of a white man with a female of colour no longer exists, numbers of the most influential individuals in the colony having broken down the barrier which a popular, but corrupt, prejudice had raised against it. Hence some of the highest civic officers and merchants, with others in all classes of society, have lately married the mothers of their families, and have availed themselves of the advantages of a retrospective clause in a recent Marriage Act, which, under such circumstances, legitimatizes their children. Embracing all these redeeming features, however, even with regard to the more densely populated and more highly civilized parts of the island, and placing them in the most conspicuous and advantageous light, it must still be confessed that they are but as specks of verdure amidst universal barrenness and desolation—as obscured and scattered lights amidst thick and prevailing darkness."

Monopoly has been as fatal to industrial improvement as slavery was to moral advancement; it is only now that the plough is beginning to be introduced on the plantations, and the steam-engine in the sugar-factory:—

"*The resources of the country are not at present more than half developed.* Its variety of soil and climate is adapted to the cultivation of almost every article that is grown within the tropics and the milder regions of the temperate zone; whilst its resources of raw material for manufactures of almost all kinds, and which are almost innumerable, may be said to be entirely unemployed, except for local purposes by the peasantry. The old methods of cultivation are the rule—the improvements the exception. The hoe, the cutlass, and the tray,* and others of equal antiquity, still usurp the place of the plough and the spade, the muck-fork, the wheelbarrow, and the tumbril: whilst the practical knowledge of the last century is still regarded by many as superior to the experience and science of the present day."

In consequence of the bad roads and the uneven surface of the country, mules are more frequently employed as beasts of burthen than horses. Though these animals are often vicious and untractable, they generally find their match in the ingenuity and adroitness of the negro riders. The following illustration of negro cleverness was related to Mr. Phillippo by the captain of a merchant vessel:—

"While my vessel was lying at St. Anne's Bay, Jamaica, I had to go to Port Maria to look for some cargo; and on my way thither, near Oracabessa, I came to one of the numerous small rivers that empty themselves into the little bays along the coast. When at some distance, I observed a negro boy flogging his mule most severely, but before I got up, he had dismounted and appeared in earnest talk with his beast, which, with fore-legs stretched out firm, and ears laid down, seemed proof against all arguments to induce him to enter the water. Quashie was all animation, and his eyes flashed like fire-flies. 'Who-o! you no go ober? Bery well—me bet you fippenny me make you go. No? why for you no bet? Why for you no go ober?' Here the mule shook his ears to drive away the flies, which almost devour the poor animals in that climate. 'Oh! you do bet—bery well; den me try.' The young rogue (he was not more than ten years old) disappeared in the bush, and returned in a few seconds with some strips of fanweed, a few small pebbles, and a branch of the cactus plant. To put three or four pebbles in each of the mule's ears, and tie them up with the fanweed, was but the work of a minute. He then jumped on the animal's back, turned round, put the plant to the animal's tail, and off they went, as a negro himself would say—'*Like mad, Massa!*' Into the water they plunged—the little fellow grinning and showing his teeth in perfect extacy. Out they got on the other side; head and ears down—tail and heels up—and the boy's arms moving about as if he was flying; and I lost sight of him as he went over a rocky steep at full gallop, where one false step would have precipitated them into the sea beneath, from whence there would have been but small chance of escape. A butcher's boy is nothing to a negro boy in these exploits. About two hours afterwards I reached Port Maria. There I saw, in an open space near one of the stores, standing, or rather leaning against the wall, Quashie, eating cakes; and there also stood the mule, eating Guinea grass, and looking much more cheerful than when I first saw him at the river side. 'Well, Quashie,' I said, 'you have got here, I see; but which of you won?' 'Quashie win, Massa—Quashie never lose.' 'But will he pay?' I inquired. 'Quashie pay himself, Massa. You see, Massa Buccra, masser gib Quashie tenpenny bit for grass for mule: Quashie bet fippenny him make him go ober de river. Quashie win. Quashie heb fippenny for cake—mule heb fippenny for grass.'"

Mr. Phillippo dwells at great length on the defects in the legislature and local administration of Jamaica. Its constitution, originally framed to maintain slavery, is now modified to support white ascendancy, and thus perpetuate the distinctions of class. The temper in which the ascendant class in Jamaica exercises any exclusive power conceded to it by law may be estimated by a short account of the working of the apprenticeship system:—

"During the short period of two years, 60,000 apprentices received, in the aggregate, one-quarter of a million of lashes, and 50,000 other punishments by the tread-wheel, the chain-gang, and other means of legalized torture; so that, instead of a diminution, there was a frightful addition to the miseries of the negro population, inducing a degree of discontent and exasperation among them never manifested under the previous system; and which, but for the influence exerted by the Governor, the missionaries, and some of the special magistrates, would, in all probability, have broken out into open and general rebellion."

Efforts were even made to render emancipation itself more onerous than slavery:—

"Most of the estates, from the *increased* labour that had been expended on them previously, and which had been obtained at a high price from the apprentice in his own time, to the neglect of his own provision-grounds, were not in immediate need of labourers; and thus, to the astonishment of the newly-made freemen, their offers of service were in some cases rejected, and they themselves treated with indifference or *hauteur*. It soon became evident that a general determination had been formed to take advantage of the feelings and dispositions thus displayed, and render them available to an uncontrollable lust of avarice and power. In a word, freedom was sought to be made more abundantly compensative than slavery; and now was the time to make the attempt. For this purpose the most oppressive and impolitic expedients were adopted. In many cases the domestic stock of the peasantry, their provision-grounds, and even their houses were destroyed. In others, and which was general, demands were made for rent of houses and grounds from every inmate of a family, and to an extent which more than equalled in a given time the amount of wages received by them conjointly—exactions which would have produced a larger revenue to the proprietor than the agricultural products of his estate. These, and similar acts of oppression, were justly but temperately resisted. Bickerings and heartburnings were the result. The planters persisted in their design; and at length multitudes of the labourers were compelled to sacrifice their feelings of attachment to their domiciles, and to establish themselves in their own freeholds. HENCE, and from no *other cause*, arose those reports of insolence and idleness which were so widely and perseveringly circulated against the peasantry. It is delightful to add, that the injustice and impolicy of such conduct have now become generally manifest; so that the causes of mutual dissatisfaction are now to a considerable degree extinct."

Some amusing anecdotes of negro shrewdness are narrated, to disprove the mental inferiority attributed to this calumniated race:—

"Nor are the intellectual faculties of this calumniated and oppressed people in any respect inferior to the rest of the species; they have simply been suspended, from inaction and the absence of those influences which were necessary to their development. Many of their common adages are as much distinguished by shrewdness and sagacity as the maxims and proverbs of more civilized nations. * * Mr. Edwards mentions an instance of shrewdness and sagacity on the part of a negro servant which is not often surpassed. Exhausted by a long journey, he had fallen asleep. On being awoke, and told somewhat sharply that his master was angry because 'him da call, call, and him keep on sleep, and no heary,' he facetiously replied, 'Sleep no heb massa.' 'Wilberforce,' said a negro, on one occasion, in the midst of a group of his companions—'Wilberforce—dat good name for true; him good buckra; him want fo make we free; and if him can't get we free no oder way him *will by force*.' A negro, having purchased a hat, was observed to take it from his head on the fall of a shower of rain, and to manifest considerable anxiety to preserve it from the wet. On being remonstrated with for his supposed stupidity in thus leaving his head exposed, he wittily observed, 'Hat belong to *me*—head belong to *massa*.' During an examination of a black servant in the Catechism, he was asked by the clergyman what he was made of. 'Of mud, massa,' was the reply. On being told he should say, 'Of dust,' he answered, 'No, massa, it no do, no tick togedder.' A negro, when in a state of heathenism, contracted a debt to a considerable amount.

"* A gentleman purchased a lot of wheelbarrows, with the intention of having the negroes use them instead of trays, in carrying out manure; but they not taking a fancy to the rolling part, loaded them, and mounted the whole on their head. It is, however, scarcely necessary to remark how rapidly this prejudice will vanish with the progress of intelligence and enterprize."

Being frequently importuned for payment, he resolved to be christened, and afterwards, on the application being made, replied, with considerable *naïveté*, 'Me is new man now; befo me name Quashie, derefo me no pay Quashie debt.' * * The following anecdote in illustration can scarcely be withheld. It was related to the author by the son of the principal party, as an evidence of the ingratitude and ferocity of the negro character. A white man had often beaten one of his slaves very unmercifully for the most trifling offences; the latter, after a punishment unusually severe, preferred a complaint against him before a bench of magistrates, which had the effect of securing a reprimand by them to the master. Highly provoked with the presumption of the slave for thus daring to oppose him in open court, the master meditated the most determined revenge. Some time after, sending the slave into a summer-house situate in a secluded spot in his garden, he resolved to wreak upon him the vengeance he had meditated. Instantly seizing a large stick, he entered the house, and, securing the door, vociferated, 'Now, villain, I'll teach you to take me before the magistrates. You try to injure my character, do you?—I'll make you pay dear for it, I'll warrant you. Nobody can see me here, and you'll have no witnesses now,' at the same time beginning to beat him unmercifully. The slave, being a powerful man, on hearing the latter sentence, immediately siezed the weapon, and wresting it from the master's hand, retaliated on him, saying, 'If me no heb witness to prosecute massa, massa no heb witness fo prosecute me,' and continued the flagellation until the assailant was obliged to cry for mercy, which was shown him by the victorious Quashy, on condition of a solemn pledge by the master that he would never notice the circumstance to his disadvantage; a promise which, from selfish motives, he was induced to preserve inviolate. * * The idea of their inability, even in their most untutored state, to combine ideas and pursue a chain of reasoning, is equally erroneous, as is evident from the following defence, said to have been made before a bench of justices in one of the country parishes by certain negroes who had run away from their work. The judges on the occasion were two medical men. The complaint having been preferred, the defendants were severally called upon to state their case. * * The one illustrates the hardships of his case, by instituting a comparison between his own lot and that of a woodpecker, and urges, that having been born as free as that bird, the overseer had no more claim to his services than he had to those of the woodpecker. He draws a comparison between the condition of the two, to the advantage of the latter, and ridicules the idea that he was neither to build his own house nor to have any shelter before going to work for the overseer, concluding his defence by a recital of the punishment inflicted on him. The other had been charged with inattention to poultry committed to her care, owing to which many of them had died. She was required by the overseer to pay for them, and in default of it was to be punished. Indisposed, or unable to pay, and dreading the threatened punishment, she had absconded. It will be observed, that she attempts to conciliate the chief magistrate, by flattering him with her opinion of his medical skill; proves his inability to counteract the designs of Omnipotence, with regard to the death of any of his patients; appeals to him if, under such circumstances, he would be justly charged with a want of attention, or required to pay any penalty for the loss of his patients, and hence infers the injustice of the demand made upon her under similar circumstances. * * 'Massa,' said the first of them, addressing the senior judge, 'me bin no heb no house, and when me bin cut one bread-nut tree, me see how one woodpecker bin build him house in the tree, and me tink say, poor me boy! The woodpecker is better off than me, him hab plenty time for build him house and mind him pickinniny, and when woodpecker da sleep in the mornin, him no fraid of bad busha for flog him because him no turn out before day to do buckra work, and me tink it was berry hard me for live worse than woodpecker, and busha say me lazy, and him will build house for me, and me tell him say, him must look at woodpecker house, so say if busha bin build it, and me ax him why him no make woodpecker cut brend-nuts, and dig cane-holes, so busha flog me till me most dead. Posin you yourself, handsome somebody like you, blong to him, him would flog you till you most dead too.'—'Massa,' said the other, 'me bin fowl-house woman, and the truckies (turkeys) dead na me hand eberry day, so busha say me must pay for dem. Now, massa doctor, you is cleber person to cure sick somebody, and if dem *can* cure, you will cure dem, but if dem time come for dead, dem must dead, for though massa doctor berry cleber, him can't do more dan God. Same fashion, massa, if da trucky time for dead come, dem must dead. Now, massa doctor, pose neger sick in the hot-house, and dem time for dead come, and God make dem dead, it no would be berry hard you for pay cause dem dead? So it berry hard me for pay for de trucky dead, and busha say him will flog me, so me run away.'"

The most interesting portion of this volume to the philanthropist, is the description of the new villages which have been established by the free negroes; we shall only quote the recent testimony of a medical gentleman to the condition of Sligoville, which derives its denomination from the Marquis of Sligo, one of the most eminent benefactors of the negro race:—

"I visited Sligoville, and remained there a week. Every allotment of land is now sold, and many of the people are applying in vain for more. This township is in a very prosperous condition, the canes, provisions, and fruit, are equal, if not superior, to any in the island. Many of the settlers had not a penny when they came; but they worked and paid for the land by its produce. They have erected comfortable cottages, and are now living in perfect happiness, as far as human happiness can be perfect. They have no anxieties; and are eminently grateful, both to Christians who worked for, and to the God who gave them freedom."

Mr. Phillippo enters at great length into the history of the religious improvement effected by the Baptist and Methodist missionaries; he states, with more temper than could be expected under the circumstances, the history of the persecutions to which they were so long subjected, and he obscurely hints, that the colonial legislature and magistrates were encouraged to persecution by what is called the West India interest in this country. We doubt whether the sugar lords of Mincing Lane ever bestowed a thought upon the subject; it is true that they never interfered in the way of repression, but this neglect is very far from supporting the charge of direct instigation.

There is valuable information in this work, but there is also a superabundance of matter, which might have been advantageously omitted. Missionary intelligence, descriptions of the death-beds of pious negroes, and details of the experience of recent converts, should be reserved for publications exclusively of a religious cast. They harmonize badly with discussions on taxation, tenure of land, and agricultural improvement, and they are likely to provoke discussions which would inevitably divert public attention from that which it is the author's great aim to advance—the economic, the moral, and the social improvement of Jamaica.

Jessie Phillips: a Tale of the Present Day. By Mrs. Trollope. 3 vols. Colburn.

Four years ago (*Athen.* No. 615), on the appearance of Mrs. Trollope's 'Factory Boy,' we entered a protest against the mode of dealing with popular questions followed in that bad book, and we set before the authoress the dangerous responsibility of such one-sided appeals to passion and prejudice. These arguments returned to us in full force, while reading the first part of 'Jessie Phillips,' which was started periodically as a tale of the "*New Poor Law*"; but we were not prepared for a revelation like the following, which closes the work.—

"The story of Jessie Phillips would have wandered less widely from what was intended, when the first chapters were written, had not the author received, during the time it was in progress, such a multitude of communications urging various and contradictory modes of treating the subject, that she became fearful of dealing too closely with a theme which might be presented to the judgment under so great a variety of aspects. *The result of the information which has been earnestly sought for by the author*, and eagerly given by many, appears to be that a new Poor Law, differing essentially from the old one, was absolutely necessary to save the country from the rapidly corroding process which was eating like a canker into her strength; but that the remedy which has been applied lacks practical wisdom, and is deficient in legislative morality, inasmuch as expediency has, on many points, been very obviously preferred to what the Christian law teaches us to believe right. * * The constantly increasing evils arising from the attempt to generalise regulations upon points so essentially requiring variety of modification, as well as the radical mischief and obviously demoralising effect of substituting central in the place of local authority, are already so strongly felt that it were a sin to doubt their ultimate reform; *and on a subject both of such enormous difficulty and such stupendous importance it is quite evident that patience is equally required in those who make the laws and in those for whom they are made.*"

We cannot forget the raptures expressed, in the announcements of this novel, at the prospect of the Poor Laws being "arranged" by the same truth-telling and powerful writer as had attacked American Democracy and Slavery—the Jew of Vienna—the Evangelical Clergyman of England—the Dissenter of every country! Mrs. Trollope's projected demolition of the Union Workhouses was a labour of conscience, not hire; yet the course pursued on the occasion by this Rebecca of novel-writers is remarkable. The machinery of incident by which the Poor Law was to be exposed was planned, the actors introduced, some highly-spiced scenes completed, and some forcible pictures etched, so as to bring the horrors home to the eye of the print-shop lounger; and then, *and not till then*,—after the press had blown its trumpets of applause—came "the earnestly sought and the eagerly given information"! and the authoress, taking fright, was compelled to soften the grim features of her tale, to draw out the fangs of its scornful argument, until the work—undertaken as a task of high philanthropic import—drivelled down into as mere a piece of Minerva Press maudlin, as was ever put forth by Anne of Swansea or Mrs. Golland. The frankness of Mrs. Trollope's apology reminds us of her own freedom in exposing the secrets of Widow Barnaby's American authorship.

We may comfort her with the assurance, that 'Jessie Phillips' will be no sooner "out of sight" than it will be "out of mind." Apart from its malice prepense,—apart from the startling change of intentions and its acknowledgment,—considered as a mere novel, its faults are flagrant and numberless. In illustrating the iniquity of "the law," Mrs. Trollope could not turn away from so tempting a subject as its dealings with Woman and her Seducer; and 'Jessie Phillips' is accordingly the old tale of the Lamb and the Wolf. But when it became necessary to strip the village tragedy of its politics, it was needful to devise some other means for complicating its scenes. The following is one expedient chosen:—A young lady, who has been sought in marriage by Jessie's seducer, becomes acquainted with this passage of his adventures, accepts him (in jest), and forces a written promise of marriage from him (in jest), in the Quixotic hope of shaming or terrifying him into doing justice to the ruined maiden. Nay, more, to work out her delicate scheme of benevolence, she takes another young unmarried man into her confidence, acquaints him with the Squire's offence in full, consults him on the feasibility of her expedient, and ends by marrying him! We must add, too, that while poor Jessie is dying of her shame, and Martha Max-

well benevolently busy in comforting her, that eccentric young lady is described as finding "great amusement" in "the innumerable tricks and seemingly playful caprices" by which she keeps the villain on the rack. Mrs. Trollope has done much in enlightening the circulating library world as to the manner in which her sex can act, but this last display of feminine ingenuity *out-Barnabys* Barnabyism! and should decide her merits as a painter of manners, as surely as the postscript of 'Jessie' ought to determine her true value as a political writer.

The Empire of the Czar; or, Observations on the Social, Political, and Religious State and Prospects of Russia, &c. By the Marquis de Custine. Translated from the French. 3 vols. Longman & Co.

THERE are men who believe that they reason when they only feel, and who mistake a series of vivid impressions for a series of arguments: they start with a preconceived set of opinions, which cannot well be called a theory, inasmuch as it has been formed anterior to all consideration of facts; and when they have set before you the pictures deeply coloured by their own prejudice, they call upon you to admire the accuracy with which they had predicted the result of their observations. In this school of preconception, every writer starts with being extravagantly something, and he can rarely be induced to see or hear anything save what will nurture and justify his extravagance. The Marquis de Custine, for example, has persuaded himself that the salvation of Europe is to be effected only by reviving the court of Louis XIV. and the church of Leo X.: a semi-feudal nobility and a semi-papal clergy are, in his opinion, the only barriers which can save Europe from being destroyed by western democracy or oriental despotism; and starting with this as a first principle, he sets out upon his travels not to make observations on what passes before his eyes, but to seek confirmations of what is already established in his mind.

Russia was about the most perplexing country in Europe for a philosophic traveller of such a cast; for Russia is, from beginning to end of its history, and from frontier to frontier of its territory, a mystification. It is Asiatic barbarism calling itself European civilization; it is the mightiest of empires defied by a handful of Circassian mountaineers; it is good order credited by the simple expedient of preventing atrocities from being published; it is despotism obeyed and fettered; it is an aristocracy impotent for good, and omnipotent for evil; it is a people ostentatiously flattered by the ruling powers, and just as deliberately trampled upon and insulted. The worthy Marquis took all these anomalies as he found them; some he forced into a kind of accordance with his theory; others were too obstinate, and he left them as they were: his work is consequently full of inconsistencies and contradictions; but it is not the less both amusing and interesting, the former quality being chiefly derived from the self-complacency of the author; the latter from the distinct views which he affords of the nature of a power, which it has of late been the fashion for statesmen and politicians to regard with real or affected alarm.

Passing over the introductory chapters relating to the Marquis's domestic history,—the sufferings of his family during the Revolution—his conversation in coaches and steam-boats—his annoyances from police and customs, and his early detection of the spy system in Russia,—we turn to his description of an edifice in St. Petersburg, which may be taken both as a sample and symbol of Russian despotism:—

"I saw the façade of the new winter palace—a mighty result of human will applying human physical powers in a struggle with the laws of nature. The end has been attained, for in one year this palace has risen from its ashes; and it is the largest, I believe, which exists—equalling the Louvre and the Tuileries put together. In order to complete the work at the time appointed by the emperor, unheard-of efforts were necessary. The interior works were continued during the great frosts; 6000 workmen were continually employed; of these a considerable number died daily, but the victims were instantly replaced by other champions brought forward to perish, in their turn, in this inglorious breach. And the sole end of all these sacrifices was to gratify the caprice of one man! Among people naturally, that is to say, anciently civilised, the life of men is only exposed when common interests, the urgency of which is universally admitted, demand it. But how many generations of monarchs has not the example of Peter the Great corrupted! During frosts, when the thermometer was at 25 to 30 degrees below 0 of Réaumur, 6000 obscure martyrs—martyrs without merit, for their obedience was involuntary—were shut up in halls heated to 30 degrees of Réaumur, in order that the walls might dry more quickly; in entering and leaving this abode of death, destined to become, by virtue of their sacrifice, the abode of vanity, magnificence and pleasure. Thus these miserable beings would have to endure a difference of 50 to 60 degrees of temperature. The works in the mines of the Uralian mountains are less inimical to life; and yet the workmen employed at Petersburg were not malefactors. I was told that those who had to paint the interior of the most highly heated halls were obliged to place on their heads a kind of bonnet of ice, in order to preserve the use of their senses under the burning temperature. Had there been a design to disgust the world with arts, elegance, luxury, and all the pomp of courts, could a more efficacious mode have been taken? And yet the sovereign was called father, by the men immolated before his eyes in prosecuting an object of pure imperial vanity. They were neither spies nor Russian cynics who gave me these details, the authenticity of which I guarantee."

The Marquis had several interviews with the Emperor and the Empress. It is sufficiently obvious, from his account of these audiences, that he was known to be an author, and that their imperial majesties were anxious that he should make a favourable report of the country and the government. The purpose, indeed, was scarcely concealed in the first interview:—

"The Emperor received us with a refined and graceful politeness. At the first glance it was easy to recognise a man who, notwithstanding his power, is obliged and accustomed to humour the self-love of others. In order to intimate to me that I might, without displeasing him, survey his empire, his majesty did me the honour of saying that it was at least necessary to see Moscow and Nijni before a just idea of the country could be formed. 'Petersburg is Russian,' he added, 'but it is not Russia.' These few words were pronounced in a tone of voice that could not be forgotten, so strongly was it marked by authoritativeness and firmness. Every body had spoken to me of the imposing manners, the noble features, and the commanding figure of the emperor, but no one had prepared me for the power of his voice: it is that of a man born to command. In it there is neither effort nor study—it is a gift developed only by habitual use. The Empress, on a near approach, has a most winning expression of countenance; and the sound of her voice is as sweetly penetrating as that of the emperor is naturally imperious. She asked me if I came to Petersburg with the simple object of travelling. I replied in the affirmative. 'I know that you are a curious observer,' she continued. 'Yes, Madame,' I answered, 'it is curiosity which brings me to Russia; and this time, at least, I do not regret having yielded to a passion for travel.' 'You really think so?' she replied, with a gracefulness of manner that was very charming. 'It appears to me that there are such wonderful objects in this country, that to believe them requires that we should see them with the eyes.' 'I should wish you to see much, and to view favourably.' 'This wish of your majesty's is an encouragement.' 'If you think well of us, you will say so, but it will be useless; you will not be believed: we are ill understood, and people will not understand us better.'"

At first our author does not appear to have penetrated the motives which procured for him so abundant a share of imperial favour; but he soon learned that all the public authorities, from the highest to the lowest, were nervously sensitive on the subject of publicity, and dreaded nothing more than the making known to Europe those circumstances of state policy and social condition which, ever since the days of Peter the Great, have been varnished over by a surface polish of civilization. A singular incident will serve to illustrate the veil of secrecy which in Russia is thrown over events that in no other country could be kept concealed:—

"About three o'clock, while at dinner in the English palace, a squall of wind passed over Peterhoff, violently agitated the trees, and strewed the park with their branches. While coolly watching the storm, we little thought that the sisters, mothers, and friends of crowds seated at the same table with us were perishing on the water, under its terrible agency. Our thoughtless curiosity was approaching to gaiety at the very time that a great number of small vessels, which had left Petersburg for Peterhoff, were foundering in the gulf. It is now admitted that two hundred persons were drowned; others say fifteen hundred or two thousand: no one knows the truth, and the journals will not speak of the occurrence; this would be to distress the empress, and to accuse the emperor. The disaster was kept a secret during the entire evening, nothing transpired until after the fête; and this morning the court neither appears more nor less sad than usual. There, etiquette forbids to speak of that which occupies the thoughts of all; and even beyond the palace, little is said. The life of man in this country is such as to be deemed of trifling importance even by themselves. Each one feels his existence to hang upon a thread."

A still more remarkable instance of the extent to which dissimulation is carried, deserves to be noted:—

"At the last carnival, a lady of my acquaintance had permitted her waiting-woman to go out on the Sunday. Night came, and this person did not return. On the following morning the lady, very uneasy, sent to obtain information from the police. They replied that no accident had occurred in Petersburg on the preceding night, and that no doubt the *femme-de-chambre* had lost herself, and would soon return safe and sound. The day passed in deceitful security. On the day following a relation of the girl's, a young man tolerably versed in the secrets of the police, conceived the idea of going to the Hall of Surgery, to which one of his friends procured him an admission. Scarcely had he entered when he recognized the corpse of his cousin, which the pupils were just about to commence dissecting. Being a good Russian, he preserved self-command sufficient to conceal his emotion, and asked—'Whose body is this?' 'No one knows: it is that of a girl's who was found dead the night before last, in —— street; it is believed that she has been strangled in attempting to defend herself against men who endeavoured to violate her.' 'Who are the men?' 'We do not know: one can only form conjectures on the event; proofs are wanting.' 'How did you obtain the body?' 'The police sold it to us secretly; so we will not talk about it.' This last is a common expression in the mouth of a Russ, or an acclimated foreigner. I admit that the above circumstances are not so revolting as those of the crime of Burke in England; but the peculiar characteristic of Russia is the protective silence in which similar atrocities are shrouded. The cousin was dead. The mistress of the victim dared not complain; and now, after a lapse of six months, I am, perhaps, the only person to whom she has related the death of her *femme-de-chambre*. It will by this be seen how the subaltern agents of the Russian police perform their duties. These faithless servants gained a double advantage by selling the body of the murdered woman: they obtained a few roubles, and they also concealed the murder, which would have brought upon them severe blame, if the noise of the event had got abroad."

Our author visited the state-prisons, but he could get no farther than the public apartments of the governor, and no functionary would enter into the slightest conversation on the topics respecting which a stranger would naturally inquire in such a place. He had, however, reason to conclude, from other investigations, that this dissimulation is a mask for profound inhumanity.

"I am assured, on good authority, that the submarine dungeons of Kronstadt contain, among other state prisoners, miserable beings who were placed there in the reign of Alexander. These unhappy creatures are reduced to a state below that of the brute, by a punishment the atrocity of which nothing can justify. Could they now come forth out of the earth, they would rise like so many avenging spectres, whose appearance would make the despot himself recoil with horror, and shake the fabric of despotism to its centre. Everything may be defended by plausible words, and even by good reasons: not any one of the opinions that divide the political, the literary, or the religious world, lacks argument by which to maintain itself: but, let them say what they please, a system, the violence of which requires such means of support, must be radically and intensely vicious. The victims of this odious policy are no longer men. Those unfortunate beings, denied the commonest rights, cut off from the world, forgotten by every one, abandoned to themselves in the night of their captivity, during which imbecility becomes the fruit, and the only remaining consolation of their never-ending misery, have lost all memory, as well as all that gift of reason, that light of humanity, which no one has a right to extinguish in the breast of his fellow-being. They have even forgotten their own names, which the keepers amuse themselves by asking with a brutal derision, for which there is none to call them to account; for there reigns such confusion in the depths of these abysses of iniquity, the shades are so thick, that all traces of justice are effaced. Even the crimes of some of the prisoners are not recollected; they are, therefore, retained for ever, because it is not known to whom they should be delivered, and it is deemed less inconvenient to perpetuate the mistake than to publish it. The bad effect of so tardy a justice is feared, and thus the evil is aggravated, that its excess may not require to be justified."

The physical aspect of the country is not less dreary than its moral desolation. During a halt on his road from St. Petersburgh to Moscow, the Marquis thus pourtrays the scenery through which he had passed:—

"There are no distances in Russia—so say the Russians, and all the travellers have agreed to repeat the saying. I had adopted the same notion, but unpleasant experience obliges me to maintain precisely the contrary. There is nothing but distance in Russia; nothing but empty plains extending farther than the eye can reach. Two or three interesting spots are separated from each other by immense spaces. These intervals are deserts, void of all picturesque beauty: the high road destroys the poetry of the steppe; and there remains nothing but extension of space, monotony, and sterility. All is naked and poor; there is nothing to inspire awe as on a soil made illustrious by the glory of its inhabitants,—a soil like Greece or Judea, devastated by history, and become the poetical cemetery of nations; neither is there any of the grandeur of a virgin nature; the scene is merely ugly; it is sometimes a dry plain, sometimes a marshy, and these two pieces of sterility alone vary the landscape. A few villages, becoming less neat in proportion as the distance from Petersburg increases, sadden the landscape instead of enlivening it. The houses are only piles of the trunks of trees, badly put together, and supporting roofs of plank, to which in winter an extra cover of thatch is sometimes added. These dwellings must be warm, but their appearance is cheerless. The rooms are dark, and tainted for want of air. They have no beds; in summer the inmates sleep on benches which form a divan around the walls of the chamber, and in winter, on the stove, or on the floor around it; in other words, a Russian peasant encamps all his life. The word *reside* implies a comfortable mode of life; domestic habits are unknown to this people."

From this circumstance it would be natural to conclude that the moral sentiments connected with domestic ties have been banished from the breasts of Russian peasants, and our author has collected facts to justify such an inference.

The Marquis was far more pleased with Moscow than St. Petersburgh; the ancient capital is native and Russian; the granite camp which Peter the Great erected on the banks of the Neva, is foreign and unnatural. The Kremlin is regarded by M. de Custine as the type of the Tartar dominion of the ancient Czars, and the description is written in his most flowery and flourishing style:—

"The fear of a man possessing absolute power is the most dreadful thing upon earth; and with all the imagery of this fear visible in the Kremlin, it is still impossible to approach the fabric without a shudder. Towers of every form, round, square, and with pointed roofs, belfries, donjons, turrets, spires, sentry-boxes upon minarets, steeples of every height, style and colour, palaces, domes, watch-towers, walls, embattlemented and pierced with loopholes, ramparts, fortifications of every species, whimsical inventions, incomprehensible devices, chiosks by the side of cathedrals—everything announces violation and disorder, everything betrays the continual *surveillance* necessary to the security of the singular beings who were condemned to live in this supernatural world. Yet these innumerable monuments of pride, caprice, voluptuousness, glory, and piety, notwithstanding their apparent variety, express one single idea which reigns here everywhere—war maintained by fear. The Kremlin is the work of a superhuman being, but that being is malevolent. Glory in slavery—such is the allegory figured by this satanic monument, as extraordinary in architecture as the visions of St. John are in poetry. It is a habitation which would suit some of the personages of the Apocalypse. In vain is each turret distinguished by its peculiar character and its particular use; all have the same signification,—terror armed. Some resemble the caps of priests, others the mouth of a dragon, others swords, their points in the air, others the forms and even the colours of various exotic fruits; some again represent a headdress of the czars, pointed, and adorned with jewels like that of the Doge of Venice; others are simple crowns: and all this multitude of towers of glazed tiles, of metallic cupolas, of enamelled, gilded, azured, and silvered domes, shine in the sun like the colossal stalactites of the salt-mines in the neighbourhood of Cracow. These enormous pillars, these towers and turrets of every shape, pointed, pyramidical, and circular, but always in some manner suggesting the idea of the human form, seem to reign over the city and the land. To see them from afar shining in the sky, one might fancy them an assembly of potentates, richly robed and decorated with the insignia of their dignity, a meeting of ancestral beings, a council of kings, each seated upon his tomb; spectres hovering over the pinnacles of a palace. To inhabit a place like the Kremlin is not to reside, it is to defend one's self. Oppression creates revolt, revolt obliges precautions, precautions increase dangers, and this long series of actions and reactions engenders a monster; that monster is despotism, which has built itself a house at Moscow. The giants of the antediluvian world, were they to return to earth to visit their degenerate successors, might still find a suitable habitation in the Kremlin. Everything has a symbolical sense, whether purposely or not, in its architecture; but the real, the abiding, that appears after you have divested yourself of your first emotions in the contemplation of these barbaric splendours, is, after all, only a congregation of dungeons pompously surnamed palaces and cathedrals. The Russians may do their best, but they can never come out of the prison. The very climate is an accomplice of tyranny. The cold of the country does not permit the construction of vast churches, where the faithful would be frozen at prayer: here the soul is not lifted to heaven by the glories of religious architecture; in this zone man can only build to his God gloomy donjons. The sombre cathedrals of the Kremlin, with their narrow vaults and thick walls, resemble caves; they are painted prisons, just as the palaces are gilded gaols. As travellers say of the recesses of the Alps, so of the wonders of this architecture—they are horribly beautiful."

But the conversion of cathedrals into something like prisons, and preventing discussion even in the pulpits, have not saved the Russian church from dissent. An intelligent nobleman assured the Marquis that there was a countless variety of sects in Russia; but the curious on this subject may refer to a former volume of the *Athen.* (Nos. 474–479). Profligacy of manners might naturally be expected in a land where religious and moral discussion is prohibited, on account of its approaching too nearly to reason and argument. The Marquis has given anecdotes of the licentiousness of nuns, the orgies of noble profligates, and the disregard for all the decencies of life in aristocratic *réunions*. But we gladly pass over such details, and shall only quote an illustration of the Russian moral code respecting theft:—

"Men are pretty safe on Russian highways, but equipages and all their appurtenances are viewed as lawful prizes by the Slavonian serfs; and, without extreme vigilance, I should find my calèche in the morning, stript of cover, braces, curtains, and apron; in short, transformed into a primitive tarandasse, a real telega; and not a soul in the village who would have any idea what had become of the leather: or if, by means of rigid searches, it should be found at the bottom of some shed, the thief, by stating that he had found it and brought it there, would be acquitted. This is the standing defence in Russia: theft is rooted in the habits of the people, and consequently the robber preserves an easy conscience and a serene face that would deceive the very angels. 'Our Saviour would have stolen,' they say, 'if his hands had not been pierced.' This is one of their most common adages. Nor is robbery the vice alone of the peasants: there are as many kinds of theft as there are orders in society. The governor of a province knows that he is constantly in danger of something occurring that may send him to finish his days in Siberia. If, during the time that he continues in office, he has the cleverness to steal enough to defend himself in the legal process which would precede his exile, he may get out of the difficulty; but if he continue poor and honest he must be ruined. This is not my remark, but that of several Russians whom I may not name, but whom I believe to be worthy of faith. The commissaries of the army rob the soldiers, and enrich themselves by starving them: in short, an honest administration would be here both dangerous and ridiculous."

One reason why peculation is so generally tolerated is, that the Emperors encourage the acquisition of land and title by new men of wealth as a counterpoise to the power of the old Tartar aristocracy, which still possesses considerable influence. It is, however, an unparalleled circumstance in the history of man, that the serfs accord to their new lords the same homage and respect which they yielded to the representatives of their ancient chiefs. Feudal vassalage is in Russia dissevered from feudal attachment; the serf clings only to the land, and cares not who may be its lord.

"The reader can form no conception of the manner in which a lord, when taking possession of some newly-acquired domain, is received by his peasants. They exhibit a servility which would appear incredible to the people of our country: men, women, and children, all fall on their knees before their new master—all kiss the hands, and sometimes the feet, of the landholder; and, O! miserable profanation of faith!—those who are old enough to err, voluntarily confess to him their sins—he being to them the image and the envoy of God, representing both the King of Heaven and the emperor!"

A country in which the whole system of government and all the arrangements of society resolve themselves finally into drill and military discipline, must frequently afford ludicrous instances of minute attention to puerile punctilio: The following anecdote may serve as an illus-

Digitized by Google

tration of the extent to which such absurdity is carried:—

"A descendant of ancient boyards, who was rich and elderly, lived in the country, not far from Moscow. A detachment of hussars was, with its officers, quartered in his house. It was the season of Easter, which the Russians celebrate with peculiar solemnity. All the members of a family unite with their friends and neighbours, to attend the mass, which on this festival is offered precisely at midnight. The proprietor of whom I speak, being the most considerable person of the neighbourhood, expected a large assembly of guests on Easter-Eve, more especially as he had, that year, restored and greatly beautified his parish-church. Two or three days before the feast, he was awakened by a procession of horses and carriages passing over a pier that led to his residence. This castle is, according to the usual custom, situated close upon the borders of a small sheet of water; the church rises on the opposite side, just at the end of the pier, which serves as a road from the castle to the village. Astonished to hear so unusual a noise in the middle of the night, the master of the house rose, and to his great surprise, saw from the window, by the light of numerous torches, a beautiful calèche drawn by four horses and attended by outriders. He quickly recognised this new equipage, as well as the man to whom it belonged: he was one of the hussar officers lodged in his house, an individual who had been recently enriched by an inheritance, and had just purchased a carriage and horses, which had been brought to the castle. The old lord, upon seeing him parading in his open calèche, all alone, by night, in the midst of a deserted and silent country, imagined that he had become mad: he followed with his eyes the elegant procession, and saw it advance in good order towards the church, and stop before the door; where the owner gravely descended from the carriage, aided by his people, who crowded round to support the young officer, although he, appearing quite as nimble as they, might have easily dispensed with their assistance. Scarcely had he touched the ground, than, slowly and majestically, he re-entered his coach, took another turn on the pier, and came back again to the church, where he and his people recommenced the previous ceremony. This game was renewed until daybreak. At the last repetition, the officer gave orders to return to the castle without noise. A few minutes after, all were in their beds. In the morning, the first question that the wondering owner of the house put to his guest, the captain of hussars, was, as to the meaning of his nocturnal ride, and of the evolutions of his people around his person. 'O! nothing!' replied the officer, without the least embarrassment: 'my servants are novices; you will have much company at Easter; people are coming here from every quarter; I therefore merely thought it best to make a rehearsal of *my entrée* into church.'"

Although the Marquis was unable to obtain permission to inspect the state prison, one of his countrymen had the misfortune to awaken the jealous suspicions of the Russian police by some incautious act or expression—what, he never was able to ascertain. He was thrown into a cell, separated only by a slight partition from the place where unhappy slaves are tortured at the command of their masters. His gaolers must have believed that M. Pernet had no chance of liberation, or they never would have given him such an opportunity of witnessing the fearful secrets of the prison house, and the unmitigated exercise of the rod.

"M. Pernet understands Russian; he was therefore present, without seeing anything, at many private tortures; among others, at those of two young girls, who worked under a fashionable milliner at Moscow. These unfortunate creatures were flogged before the eyes even of their mistress, who reproached them with having lovers, and with having so far forgotten themselves as to bring them into her house—the house of a milliner!—what an enormity! Meanwhile this virago exhorted the executioners to strike harder: one of the girls begged for mercy: they said that she was nearly killed, that she was covered with blood. No matter! She had carried her audacity so far as to say that she was less culpable than her mistress; and the latter redoubled her severity. M. Pernet assured me, observing that he thought I might doubt his assertion, that each of the unhappy girls received, at different intervals, a hundred and eighty blows. 'I suffered too much in counting them,' he added, 'to be deceived in the number.' A man feels the approach of insanity when present at such horrors, and yet unable to succour the victims. Afterwards, serfs and servants were brought by stewards, or sent by their masters, with the request that they might be punished: there was nothing, in short, but scenes of atrocious vengeance and frightful despair, all hidden from the public eye. The unhappy prisoner longed for the obscurity of night, because the darkness brought with it silence; and though his thoughts then terrified him, he preferred the evils of imagination to those of reality."

M. Pernet was liberated by the interference of the French ambassador, to whom our author communicated his case; he was liberated without a word of explanation, and commanded to quit Russia without delay.

We shall now take leave of M. de Custine. His style is much too high flown to suit our sober taste; but his book will help to show that the Russian empire is maintained by a system of dissimulation and hypocrisy, enforced by cruelty and terror, to conceal the secret of its internal rottenness. In the greatest excitement of Russo-phobia some years ago, we maintained that the alarm was unfounded, and that Russia had not the elements by which a country can be raised to universal empire. Voltaire discovered, and Napoleon proved, its internal weakness; the elements, not valour, destroyed the French invaders; English gold, and not their own energies, brought the Russians to encamp in Paris. Most travellers who have hitherto described the empire have been military men, and they have been led away by the military discipline which reigns everywhere. They have more or less of the officer's prejudice, that strict drill makes good soldiers; and they are ignorant of the moral loss that is incurred when men are degraded to machines. Men of the camp over-rated Russia, because it appeared to them an empire of camp; had they gone a step further, and asked some questions respecting the commissariat and finance, they would have made considerable abatements in their estimate of Moscovite strength and grandeur.

The Burgomaster of Berlin. Translated from the German of W. Alexis. 3 vols. Saunders & Otley.

Willibald Alexis—alias Herr Hering—is the romancer who, in his salad days, had the audacity to write a Waverley novel for the Leipsic Fair,—a genuine *Scott*ish tale not coming forward at the serviceable moment. That novel, 'Walladmor,' was even translated into English, and, like the spurious 'Pontefract Castle,' the translation, for nine days or thereabouts, imposed upon some hundreds of credulous readers, whose wonder at the "falling off" in the magic powers of the Great Unknown was hardly louder than was generally expressed on the appearance of 'The Antiquary,'—now by many conceived to be Sir Walter's best novel! The bare mention of this imposture and its momentary success, is sufficient to stamp its executant as a young man of promise. Here we have a performance of his more mature years, in which few readers, who have patience for forms of composition a little different from their own, will be disappointed. 'The Burgomaster of Berlin' was worth the trouble of translating.

The patience called for, is on the score of a certain prosiness of manner. Our dear friends the Germans do not exactly acquiesce in our English creed, as regards the value of time. Their very railway carriages go slowly as compared with ours; their learned men harangue in exhausting disquisitions where ours converse; even their meals are pleasantly deliberate. In this same 'Burgomaster' Willibald Alexis proveth himself something of a button-holder: full of knowledge, full of instruction, fresh in matter, and earnest in manner,—but still a button-holder. Nay, trifles become ponderous by his manner of narration. Hear him discourse, for instance, when he is doing little more than measuring the ground, as it were, and laying down the green cloth for his *dramatis personæ* to figure upon. The tale is one of strife between the twin towns of Berlin and Koeln, now merged in one city,—the time the fifteenth century; and he is announcing the Montagus and Capulets who are to take prominent parts:—

"A great marriage was on foot between Berlin and Koeln; for, however suspiciously the two towns might regard one another, still they were not like the parties of the red and white roses, nor the Guelfs and Ghibellines. A marriage at that time was a ceremony a good deal thought of; and when it was in high life, the whole town had reason to rejoice, for they who were not invited had confectionery and fruits sent to them, and the whole town was supplied with music, dance, and masquerade. Riches, to be sure, married riches, and poverty married poverty; but the long marriage processions over 'the long bridge,' with their fifings and fiddlings, were often the means of bringing back extreme parties on either side. Such a marriage was now in contemplation between the son of the rich burgher of Koeln, Bartholomew Schumm, and the only child of the worshipful the Burgomaster, Johannes Rathenow. Such an event would be accompanied by a festivity of which children's children might well talk, though there were many who were not pleased that the Rathenows were the parties. For Bartholomew Schumm sat like a lord of glory in his stone house in the Friar's street. To the citizens who lifted their bonnets reverentially, as they passed under his window he scarcely vouchsafed a nod, and any one to whom he said, 'How is it with you, good gossip?' might well hold himself a foot higher; but on rent-days, many thought him more than a prince, when the farmers from his many estates came in long rows, each with his money bag under his arm, taking their places in the antechamber, and when the door was opened, treading forward with a low bow to where Herr Bartholomew sat at his great oak table, two clerks on either side, with their notched sticks, books, and money boxes. The crossing out of the book by the clerk, or the notching of the stick, was by no means so satisfactory an acquittal as when Herr Bartholomew tapped upon the table with his middle finger, as he did without fail when the exact amount had been told down. Like the rich merchant of Bremen, he was one who could pave his ground-floor with hard dollars, and in those days a hard dollar was worth something in Berlin, worth waiting for in a market when a buyer was seen to pull one out. His estates went far over the Berlin boundary, away to the Oder and the Uckermark; at his own cost he had carried on a feud of a year long with the rich Itzenplitzens; five villages had been burnt and sacked, and never had Herr Bartholomew stirred himself from his arm-chair in Friar's street. Such an one was Bartholomew Schumm. And as to who Johannes Rathenow, the Burgomaster of Berlin, was, had any stranger ventured to ask any citizen the question, such an one would have been looked upon curiously, and have done well to hurry to go his way."

Our readers must be able to bear with this overflow of words, or they had better not proceed further with 'The Burgomaster.' Under the supposition that they are thus tolerant, we will go a page or two further, and show them the heroine of the tale, in a rich old German picture:—

"The chroniclers have not given us the street and house where Johannes Rathenow lived, but it was not far from the church of Saint Nicholas, the oldest in Berlin. The house, narrow and high, built in the ornamented style of the old times, for it was very old, was situated, we rather think, in one of the corners of the buildings surrounding the church, a place where no burgomaster of the present day would fix his dwelling, nor any patrician, of rank equal to those of that time in Berlin. But in the pious times when

Digitized by Google

it was built, the richer families thought it a point of honour to live near a church, and to have an aspect of it from their high narrow windows. What they suffered in the loss of the light of the sun, they gained in the hallowed light which streamed forth through stained windows painted with a hundred saints. It is likely that the family of the Rathenows, formerly more wealthy, had done a good deal towards building this principal parish church. * * From what has been said, we must not think that the Burgomaster's house was unsightly or uncomfortable; on the contrary, there was all that about it, which low rooms, small doorways, and passages running backward and forward, could give it. And these tell their tale in winter time, and thus the small chamber in which Johannes Rathenow was sitting, on the cold morning in February, was indeed most habitable. To be sure, it was so low that his daughter standing on her toes could almost touch the beams with the tips of her fingers; but the beams and the ceiling were nicely pasted over with picture-paper from Nürnburg, representing towns and countries, heroes and saints. The walls, it is true, were only washed, but there was scarcely a single spot where the plaster could be seen through; and it was crowded with smart tables, cabinets of ebony and walnut-wood, richly inlaid with ivory and mother-of-pearl; sundry clocks and old pictures hung above, and in two arched recesses were sculptures in wood of the Virgin Mary and Saint Nicholas. On the floor lay a splendid carpet of Bruges, upon which was depicted, as large as life, the pilgrim Gotfried of Bouillon making his way barefoot to the holy sepulchre. But the greatest ornament of all was a huge black stove, many wise adorned with coloured tiles, pourtraying the building of the tower of Babel; but yet better than all, on a morning like the one we tell of, was the sight of the clear blazing fire shining into the room through its open door. A red light fell on the high forehead of the master of the house as he sat in his fur and velvet, immersed in thought. There was many a deep wrinkle on his brow: sealed parchments and many books and writings, on the ebony table beside him, told of the duties of his office as burgomaster. Not perhaps quite such a mountain as weighs down the table of a burgomaster of the present day, but a goodly heap, considering the little that was then written, and the difficulties in deciphering. But Herr Johannes was not occupied with these, his eye was gazing through the window, and might seem to be measuring the masses of snow which covered the church roofs, weighting the buttresses and the stony shoulders of the great Roland. They were singing matins in the church, and the windows were lighted from the tapers inside. One of these windows belonged to his family, that is to say, the costly coloured glass, stained with heraldry and various pictures, had been the gift of his ancestors, and the Rathenows took the trouble and had the honour of keeping it up. Next to it was another more gay in colours, but in worse preservation. The donors of this were the Wardenbergs, relations by blood to the Rathenows, and once very powerful in old Berlin. The coloured reflection from both windows shone on the statue of Roland; his rude features seemed grimly smiling, and the iron sword in his out-stretched hand was tinted red."

Here enters the Sycorax of the story,—an old family connexion, who torments the unquiet Burgomaster by allusions to ancient family secrets and crimes; and who menaces his future happiness by prophecies and dark sayings, such as Meg Merrilies was the first to utter. We can make no room for her oracles.

"The bell of Saint Nicholas proclaimed the matins over; and the untiring bell clatter of Aunt Gertrude's tongue now also ceased. It was ever the same, morbid and out of tune; but they who live near a church cease to notice the passing-bell. She clasped her hands devotionally, and bent her knees and looks to the ground. Herr Johannes wiped from the windows the moisture which had condensed on them, and watched the train of worshippers issuing from the temple. Just then a maiden trod through the portal, and reverentially curtseying, dipped her fingers in the holy water. Her figure was straight and well-formed, and her face, as if February had strewn it with roses; she was such an one as others, so much more her father might joy to look upon, and in doing so, forget much else: and thus it was, that even on the threshhold of the church, where one ought to have other thoughts, old and young looked round or stood still to see her pass. There is a likeness of her, which many have seen, but I will not name it; but whoever had seen the picture, could judge that that fine formed face was not one to keep the eyes always so humbly lowered, and indeed it was only for the first moment on leaving the gate. After that, she was not sparing of her glances, of which she might perhaps know the power. Might she have been meditating under her half-closed lashes where her next glance should fall? In the circle thus intuitively formed round her stood a young man, seemingly lost in beholding her. On seeing him, a slight tinge spread over her cheeks, and perhaps she might have made a false step, for her prayer book fell from her hand. The young man went on his knee to pick it up, and in the same attitude he gave it to her. She half smiled as she took it, and drawing her many folded dress together, which rustled against him as she passed on, she nodded to him kindly, but somewhat haughtily. Amongst the many who beheld her as she took her way direct towards the house of the Burgomaster, upright in her gait like a queen, yet lovely and gentle as ever a maiden of eighteen years, and not appearing to notice the admiration she elicited, though surely not unconscious of it, no one looked upon her with more interest than the Burgomaster himself, for he was her father. But it was not with fondness alone; there was anxiety mixed with it. He made an involuntary motion backward with the hand, which one would scarce have been able to account for, had it not been at the moment when the young man handed her the book and she received it; and Herr Johannes did not regain his former attitude until the girl, without looking round, had continued her way: then, he sank back in his chair to await her approach, with that dignity and calmness which beseems a father who is at the same time burgomaster. She trod in; and it was as when grace and nobleness enter the lowly hut; where they are, the spot seems larger, and indeed the room did appear magnified; that about it which was indifferent seemed to draw back, and the more pleasing objects to come forward. But the appearance of self-esteem seemed to vanish at once from her bearing as she approached her father, and kneeling down, took his hand, and kissed it. He let her do it, and then he gently stroked her forehead and parted her hair. He asked her indifferent questions, and her answers were modest, short, but to the point; a father's joy was more and more perceptible, and a smile played about the old man's lips. He made a sign to the matron to leave them together, and when she was gone, he imprinted a kiss upon his lovely daughter's forehead."

The young man on whom the beautiful Elizabeth Rathenow smiled haughtily, is an aspiring apprentice, one Henning Mollner; whose honesty, ready wit, and strong arm could not fail to win distinction for their owner, and, with distinction the love of a fair maiden, were she even so proud or so high in rank as a Burgomaster's daughter. With the vicissitudes of a turbulent time of civil war, in the midst of which this feat was wrought, we will not meddle; they are forcibly but cumbrously described, individual character being too much lost sight of in the *mêlée*. The simple and less crowded episodes are better. A borrowing scene, in a Jew's house, is done in the rich tints of Rembrandt; and the punishment of Red Hannah and Salome, and their subsequent encounter with the Free Companions, though repulsive, is striking. The translator seems to have fulfilled his duty well. Though no one could mistake his version for a historical romance by an English hand, it is still clear of all those tricks and that slovenliness of language, by the introduction of which too many among the "oversetters" fancy they are authenticating their familiarity with foreign modes of thought and expression.

Ireland and its Rulers since 1829. Newby.

A dispassionate survey of the existing condition of Ireland, and the circumstances which have had a principal share in producing its present state of excitement, is a novelty. We are unable to conjecture who the author may be, but he has clearly been no inactive spectator of the scenes which he describes; his acquaintance with the political movements in the city and county of Cork is far too intimate to have been acquired in front of the curtain; he has been behind the scenes, and shared in settling the cast of the drama, if he has not appeared on the stage as an actor. We have always avoided discussions that were purely political, and assuredly we shall not be tempted to enter upon the most uninviting and hazardous of all politics, those connected with the movement in Ireland. But there is a historical incident, of which our author has given the only intelligible account yet laid before the public, and which has been to a great extent the moving power that has pushed the leaders of parties into their present places, deserving attention, and capable of being examined without irritating party feeling. We allude to what has been called "the Doneraile Conspiracy."

Soon after the passing of Catholic Emancipation, the isle was frightened from its propriety by an announcement that a conspiracy had been formed by the peasantry, in the neighbourhood of Doneraile, to massacre the neighbouring magistracy and gentry. Several persons were arrested, but as two assizes were allowed to pass over without their being brought to trial, it began to be whispered that the conspiracy existed only in the heated imaginations of the magistrates, worked into alarm by the artifices of the spies whom they employed. This appears to have been at first the opinion of the chief officers of state; but when agrarian disturbances and attempts at murder began to increase, and when many of these acts of violence were found to be startlingly consistent with the information given by the spies, and in fact corroborations of their accuracy, the Government changed its opinion, and sent down a special commission to Cork. This was in the month of October, when Mr. O'Connell, who had been retained at a previous assizes to defend the prisoners, had retired, after a year of great fatigue, to Derrinane. Believing the conspiracy to be a hoax, and that his clients were therefore in no danger, O'Connell refused to attend the Special Commission, and the friends of the accused trembled when they heard of his absence:—

"And well they might have trembled, when they heard the terrific speech of Solicitor General Doherty, in stating the case for the Crown. The prisoners were tried by batches, and the first lot consisted of Leary, Roche, Magrath, and Shine; the first of whom, Leary, was a decent and comfortable farmer, of honest and inoffensive aspect, with an open, prepossessing countenance, and represented to have been the Catiline of the band. These four were put to the bar; a jury of men of great respectability having been sworn, Mr. Doherty, with the most imposing and sustained solemnity of manner, rose to open the case for the Crown. As far as eloquence is regarded, his speech was strikingly brilliant. A very high tone was taken, and his language exhibited marks of careful elaboration; the facts were stated with all the artifices of a pompous rhetoric, and the delivery of the speech was even more effective than its matter. The court house was thronged with the gentry of the county, and its doors besieged with all persons of all classes, anxious for admittance. The interest taken by the public in both countries acted on Mr. Doherty's susceptible mind, and having a grand opportunity for displaying his eloquence, he could not forego the desire of making 'a powerful speech.' Besides he was himself thoroughly convinced that a dreadful conspiracy existed; he believed that it was his duty to assume a determined tone, and, perhaps unconsciously, he adopted a horrifying one. It is impossible, even at this distance of time, to read that speech without being carried away for a moment by its vehe-

Digitized by Google

ment and incendiary eloquence. It was such a speech as a brilliant rhetorician would make on such an occasion, having first worked up his fancy by a perusal of Sallust's Catiline Conspiracy, and the more fearful parts of the history of French Jacobinism."

This speech, abounding in passionate declamation, was unfortunately quite consistent with forensic habits in Ireland; and those who blamed Mr. Doherty should have remembered the precedents given on nearly all previous state trials. It had the effect of withdrawing the attention of the court and the jury from some improbabilities in the tale told by the approvers; but it must be stated, that their story, as a whole, had a plausible consistency; that the leading circumstances of their evidence were corroborated by the magistrates, and to some extent by the witnesses, whom the prisoners themselves called for their defence. The jury brought in a verdict of guilty against the four prisoners, who were sentenced for execution within a week. It was now Saturday; a day's respite was allowed, and the friends of the remaining prisoners sent off an express to Derrinane, which arrived there on Sunday. O'Connell glanced over the Solicitor General's speech, and the evidence of the approvers; in the latter he detected symptoms of rottenness, and ordering out a light gig, the only vehicle that could travel the mountain roads of Kerry, started at once. He reached Cork at ten o'clock on the Monday, and as he descended from the vehicle his horse dropped dead between the shafts. The Court was already sitting; an application to postpone the trials until Mr. O'Connell should arrive had been refused, the Solicitor General had begun to state his case, when the shout of a thousand voices, "He's come! he's come!" announced the arrival of the last hope of the prisoners, who in a few moments entered the court:—

"O'Connell at once bowing to the judges, and saluting Baron Pennefather with the most marked and respectful courtesy (which was cordially returned) apologized for not having appeared in a more professional costume, and craved permission to refresh himself in court. A bowl of milk, and some bread and meat were sent in to him, and while at either side of him, a young barrister filled each ear with all that had been done, and how the case of the accused stood, O'Connell gratified his appetite for breakfast with evident relish after his long morning drive. 'Twas rather a contrast, the big, massive Agitator slabbering his meal in a court house, and the graceful, aristocratic Mr. Doherty talking in the most refined manner to the jury! What led to the enmity between O'Connell and Mr. Doherty is not publicly known, but they appeared on that day to be enemies with no ordinary hatred and animosity. As the Solicitor General laid down a doctrine of law, O'Connell, with a marked contempt, cried out in the middle of his breakfast, '*That's* not law.' The bench was appealed to, and the point ruled with O'Connell, who, as the pugilists say, 'drew first blood.' The Solicitor General resumed his statement, but he had not gone much further, when O'Connell jumped up—'The Crown cannot make such a statement as that—it has no right to put in such evidence to the jury,' and again the Bench decided with O'Connell. Mr. Doherty's statement of the second case was certainly much less imposing and successful than when, without powerful opposition, he harangued the jury against Leary and the first batch of prisoners."

Mr. Doherty's speech on the second trial was far more subdued in its tone than that which he made on the former occasion: still he professed himself confident of establishing his case, and displayed something like an air of triumph as he proceeded to call his witnesses:—

"The tale was the same, but the infamous character of the witnesses was laid bare by O'Connell in a cross-examination, never surpassed for dexterity. The witnesses trembled under him, and Nowlan, the most infamous character of the lot, cried out, 'Ah! indeed, sir, it's little I thought I'd have to meet you here today, Mr. O'Connell!' Yet powerful as was the impression produced by O'Connell, he failed in showing that there was not much truth in the narrative of the witnesses. His great success was over the Solicitor General, whom he browbeat and bullied in the most approved forensic fashion. In fact, on all the legal points that were incidentally raised, he knocked about Mr. Doherty with as much ease as a schoolboy slashes a spinning-top. The humiliation of the Solicitor General was complete. On nearly every question raised O'Connell triumphed. His bearing towards Mr. Doherty was even more insulting than his mere legal success. To his face, O'Connell mimicked his manner in the most grotesque way. 'You may go down, sir,' said Mr. Doherty, waving his hand contemptuously, to one of the prisoners' witnesses, and pronouncing the words in a certain fashionable and aristocratic manner. 'Naw! daunt go daune sir!' cried O'Connell, ludicrously burlesqueing the style of his adversary. Another time, the Solicitor General said, 'The allegation is made upon false facts.' 'False facts,' cried O'Connell, 'What a bull! How can facts be false?' The Solicitor replied, 'I have known false facts, and *false men, too*.'"

This scene lasted during the entire day; it was viewed as a kind of intellectual gladiatorship between Doherty and O'Connell, so that many who were present declared, that until the judge began his charge they had forgotten that the lives of four prisoners at the bar were in issue. In this case the jury could not agree to a verdict; they were locked up for a day and a night without food, and were only discharged when the strongest medical evidence was given, that the life of one of them would be endangered by further confinement.

The next trial was looked for with intense anxiety; not only was the court-house crowded to the utmost extent of human endurance, but all the adjacent streets were packed with multitudes of men, who looked as if their own fate was involved in the issue:—

"The Crown proceeded with a third case, and put John Burke and John Shine to the bar, offering to the jury the same evidence as had been given in the previous cases. O'Connell was in the act of cross-examining the spy, Patrick Daly, when Baron Pennefather beckoned to him, and handed the informations sworn by the spy before the magistrates at Doneraile. In these informations not a word was said about the dramatic scene in the tent where Leary swore the parties into the conspiracy, all of which was just then so glibly told in the witness-box by the spy. This great discrepancy in the evidence struck the jury very much, especially when suggested to them by one of O'Connell's best examinations; and a verdict of 'Not Guilty' was within an hour pronounced by a jury upon the same evidence as that on which Leary and others had been found guilty."

To add to this triumph, the jury was composed entirely of Protestants, the Crown having very rigidly exercised its right of challenge. It must, however, be added, that the existence of the Doneraile conspiracy was affirmed by the verdict of the jury at the subsequent assizes, when all excitement had died away, and that though the lives of the four persons convicted on the first trial were spared, they were all transported for life.

Not content with his forensic triumph, Mr. O'Connell denounced the Solicitor General at several public meetings, and menaced him with impeachment at the bar of the House of Commons. From the confidence of his tone it was generally believed that he had obtained evidence which would show that there had been tampering with witnesses, and in fact there is little doubt that communications to that effect were made to Mr. O'Connell, which he did not sift thoroughly until he had fairly committed himself to the country. When the time for assembling Parliament drew near, he found his supposed evidence against the Solicitor General vanish into empty air. Under such circumstances he ought publicly to have retracted the charges; by not doing so he exposed himself to bitter taunts for shrinking from the menaced impeachment, and when he at last brought forward an insignificant motion for the judge's notes, he laid himself open to a reply from Mr. Doherty such as rarely has occurred in political life:—

"So much polite venom was, perhaps, never uttered in Parliament. The harshness of the insinuations against O'Connell was carefully veiled in conventional phraseology, but the criminatory character of the whole speech, with its jeering, scoffing, jibing tone, and its contemptuous insolence, have never been surpassed even by the most approved masters of Parliamentary Billingsgate."

The author of the volume before us declares it to be his opinion, that it was this damaging blow to his parliamentary reputation that induced Mr. O'Connell not to look on the House of Commons as his proper sphere, and to seek the establishment of his greatness upon influence outside the house of parliament. He indicates, also, as a further reason, the many points of difference between Mr. O'Connell and the "liberal" party with which he acted in England, ascribing these differences to Mr. O'Connell's attachment to the very highest church principles of the Papacy. He instances the advocacy of Charles X., the denunciation of Espartero, the proposal of a crusade to restore Charles X., and the persevering misapplication of the term Saxon to the English ascendancy in Ireland, which in its origin and nature was purely Norman, merely because in the Irish language *Sassenach* is used to designate both an Englishman and a Protestant. These abatements from Mr. O'Connell's fame are made in no spirit of detraction; the author of the volume before us speaks of his abilities with admiration, asserts the purity of his intentions and the unselfishness of his patriotism; his praise is hearty, and his censure reluctant, but there is nevertheless a tone of fearlessness in his strictures which seems to be the result of accurate knowledge.

We shall not follow the author through his analysis of the last ten years of Irish history, but briefly glance at what is nearest to an "open question," the position of the Catholic priesthood in Ireland. On this point he endeavours to show that their social rank is lower than is consistent with the importance of their spiritual functions, and the moral influence which ministers of religion, but particularly of a religion which attributes powers little short of miraculous to its priesthood, must necessarily possess in the community. From this inconsistency he thinks that the Catholic clergymen are necessarily restless and uneasy; their religion excludes them from domestic ties, and untoward circumstances shut them out from the grade of society in which they should properly find a place. He attributes the chief blame of this evil to the nature of the education given at Maynooth, which he deems too limited in its quantity and too exclusive in its quality. Were the candidates for the priesthood compelled to graduate in arts in the Dublin University, and to receive religious instruction only in Maynooth, their education would embrace a wider range of subjects, and they would gain valuable opportunities of mixing in general society. The introduction of such a measure would not necessarily separate its present divinity school from Trinity College; it would only establish the distinction between the College and the University, which has been permitted to fall into desuetude.

The author discusses, as new features in the present agitation, the corporate character which temperance societies have given to the masses of the Irish people; the favour which the proposal for giving greater security to occupying tenants must naturally find in an agricultural population, the cessation of the "No-Popery"

Digitized by Google

cry since Sir Robert Peel's advent to power, and the great advance of the Irish press in intellectual power and literary ability. For obvious reasons we shall not enter into any discussion of these points, but shall only say that they are examined by the author with candour, temper, and judgment.

The Gallery of Antiquities, selected from the British Museum. Part II. *Egyptian Art.* Historical Illustrations, by F. Arundale, Architect; with Descriptions by J. Birch, of the British Museum. Weale.

In the present state of hieroglyphic discovery, it would not be safe to pronounce very positively on the accuracy of the interpretations of the inscriptions on the Egyptian historical monuments given in these volumes; but the publication of faithful transcripts of the monuments deserves our warmest thanks. This volume will open the field of investigation to the many zealous and devoted students who are anxious to test for themselves the reality of the discoveries made by Champollion, Rosellini, and Wilkinson. The editor has wisely avoided all the inconsistent theories that have been started on the subject of Egyptian chronology, and the countless attempts that have been made to reconcile the imperfect records of the monuments with the tables of dynasties given by the Greek historians. The plates are accurate copies of the objects represented, and the descriptions are written by a gentleman who has manifestly devoted enthusiastic attention to the subject.

OUR LIBRARY TABLE.

Sir Cosmo Digby; a Tale of the Monmouthshire Riots, by James Augustus St. John, 3 vols.—It might be presumed that the publication of this novel has been timed so as to meet the interest excited by the recent proceedings in Wales. In a dedicatory preface, however, the author informs us, that the materials for it imperceptibly accumulated while he was engaged on the 'Manners and Institutions of the Athenians;' and he puts it forth in proof that a scholar need not be ignorant of the manners of the world in which he lives. There may be differences of opinion as to the success with which 'Sir Cosmo Digby' makes out Mr. St. John's case. We have many "worlds" of feeling and society—and who among us dare boast that he is familiar with the aspects and internal structure of all of them? Moreover, the especial district in which Mr. St. John has laid the earlier scenes of this strange book is, we are aware, less familiar to English experience than the banks of the Rhine, or the *boulevards* of the cities of France. Yet—thus much admitted in modest acknowledgment of our fallibility, to which our author will doubtless subscribe—we cannot but add, that Mr. St. John's South Wales is not our South Wales—his London Life not the London Life of our experiences—his Chartists not the Chartists who figure in our newspapers—his broken English (the main prop of a main character) not broken *à la Française*; that his Sir Cosmo is a humourist unique in pattern, and his Isabella a heroine whose toilette will set the whole world of lady readers in arms and alarms! The old superstitions of a picturesque and credulous district appear to be dragged in, head and shoulders, by way of imparting to the tale an air of *costume*. In short—referring dissentients to our modest admissions—we must conclude by saying that the story seems to us deficient in aim, construction, and probability.

First Elements of Sacred Prophecy, by Rev. T. Birks.—This is a controversial work on prophecy, being devoted to an examination of various theories of recent date, the tendency of which is to set aside the established protestant view of prophecy. Mr. Birks enters very minutely into several questions, especially into that known to the student of prophecy under the name of the year-day theory. We must leave to theologians to pronounce on the merit of the work, but may bear testimony that it is free from that bitterness which so often disgraces controversial writings.

Ruins and Old Trees, associated with Remarkable Events in English History, by Mary Roberts.—The authoress has got hold of a good subject in remarkable trees: and gossips touching the Oak of Chatsworth—Melksham Court—the Ruins of Bradgate Palace—the Oak of Chertsey—the Yew Trees of Skelldale—the Oak of Howel Sele—the Chesnut of Tortworth &c. &c., in amiable but somewhat sickly prose, and in feebly pleasant verse. Her book may be recommended as a safe companion to the young on their country rambles. It is carefully brought out; and illustrated with some clever wood-cuts after designs by Mr. Gilbert.

An Address to the Royal Academy, by W. V. Pickett.—So far as we understand this Address, the writer professes to have discovered "a new and independent species of architecture, possessing to a greater extent the character of a Fine Art" than any style of Architecture hitherto practised; also "a new and distinctive species of Fine Art from that of either Painting, Sculpture, or Architecture;" that this discovery has reference to some developement of the properties of Metals; and that he is willing to make it known to the Council of the Royal Academy on conditions—one of which is, that they will guarantee to him remuneration for the surrender of his secret.

A Plea for Liberty of Education, by J. H. Hinton.—In this 'Second Letter to Sir James Graham,' Mr. Hinton complains strongly of government interference in education, and deprecates the "paternal" theory of government. There is much truth in what he says; but he does not allow sufficient weight to the arguments on the other side of the question.

FOREIGN CORRESPONDENCE.

Dr. Lindley announces in the *Gardeners' Chronicle* that Mr. Fortune's mission to China is proceeding satisfactorily; that he has everywhere been received with kindness and attention; that the difficulty of intercourse with the Chinese is rapidly wearing off; that Mr. Fortune had hired boats, and landed on the islands near Macao, and on the mainland of Couloon, opposite to Hong Kong, and had nowhere been in the slightest degree annoyed or inconvenienced; and was preparing for a visit to the northern provinces. Colonel Malcolm, just arrived, obligingly took charge of a box of plants, the first fruits of his Chinese explorations, which has been received by the Horticultural Society in excellent condition.

Anger, June 16.

We anchored abreast the little town or village this afternoon: I went on shore in one of the native canoes, of which a great number were now alongside, full of the animal and vegetable productions of the island for sale. I was much struck and amazed with their varied contents [see former letter, *ante*, p. 944]. As we neared the shore, the cocoa-nut and banana trees, which are growing in great numbers all along the coast here, formed a striking contrast with our European vegetation, and reminded us that here we were in a tropical region, in the land of the East, the climate of the sun. A splendid banyan-tree (*Ficus indica*), having the flag-staff upon its top, is growing close by the pier or landing place, and has a very pretty appearance. The government authorities have some very handsome shrubs and trees growing in their gardens, the principal of which are the double pomegranate, the Barbadoes flower-fence (*Poinciana pulcherrima*), *Jatropha multifida*, covered with its scarlet blossoms, and forming quite a tree, several kinds of Justicia, *Ixora coccinea*, *I. rosea*, and *Michelia champaca*, full of its sweet-scented yellow blossoms. I also observed a curious little water plant indigenous to Java, growing in the garden at the Fort, named *Pistia Stratiotes*. The hills which form a half circle round the plain on which Anger is built, are covered with a most luxuriant vegetation, and present to the eye a number of views of great beauty. The little town or village is much scattered, having the houses built open and airy, a condition which is absolutely indispensable to the comfort and health of the inhabitants in a warm country like this. Here and there amongst the houses we observed cocoa-nut and plantain trees growing, as well as several other kinds, planted for the purpose of affording shade. The roads or avenues are very broad, straight, and generally at right angles near the town; some of them have hedges of the coral tree (Erythrina), and others have only fences made of earth and turfed over, presenting the appearance of our common turf dykes. The teak tree (*Tectona grandis*), and the *Casuarina equisetifolia*, with various other trees, are planted at regular distances in the fences, and the Casuarina particularly has a most graceful appearance. The prickly pear (*Opuntia vulgaris*) was also growing, and forming fences in some places. The principal article of agricultural produce is rice, which is produced in great quantities, particularly in the low marshy districts; and here, as in China, the water is conveyed from the heights to irrigate the crops when necessary. The paddy fields are perfectly level, and if not naturally so, are carefully levelled and surrounded by embankments to retain the water. Indian corn, sugar-cane, sweet potatoes, and yams are also grown in great quantities upon the island. The buffalo is used in the plough, and for various other agricultural purposes; but, forming an opinion from the specimens of ploughing which came under my observation, they are far behind the English in this respect. In our rambles we met hundreds of the natives, coming towards the village from the fields, loaded with paddy, which they carry across their shoulders on a bamboo-cane, in the same manner as the Chinese appear in the prints with their loads of tea-chests. The bamboo, which grows in great quantities all over the woods, seems to be used for a variety of purposes: all the bridges which I saw were constructed with it; it made the roofs of the houses, ladders, doolies—a kind of sedan chair for conveying persons of rank from place to place,—and formed the little masts for the boats. I was much amused at the mode which the natives took to cool themselves, several times during our ramble, in the heat of the day, when the thermometer in the shade stood at 90°, and when it was probably 130° in the sun. By the sides of the streams or wells of water, which were scattered all over the plains, ladles, made from the shell of the cocoa-nut, with a handle of bamboo, were left, seemingly for the public good. These the natives filled with water several times, and poured over their heads and naked bodies: immediately afterwards covering themselves with their *kubaya*, or slight covering, which is commonly worn round their waist, they walked away seemingly much refreshed. The fruits commonly grown on the island, besides those already mentioned, are mangosteen, mangoes, guavas, sour sop (*Anona muricata*), tamarinds, and the papaw tree. The cocoa-nut trees are, in some instances, notched at regular distances on the stem, by which the natives walk up with great ease to cut down the fruit. These trees are quite unlike their

Digitized by Google

representatives in the stoves in England, where they rarely form a woody stem. In Java the stems are woody, having a tuft of leaves on the top, in many instances forty feet from the ground. Coffee is grown in great quantities, and forms an article of commerce. Cinnamon, chocolate, and pepper are also grown on the island. I had an opportunity of seeing the operation of husking, or cleaning the coffee beans. This is done in a machine driven round by a buffalo; the machine rolls or presses and ploughs up the beans alternately, by which means the outer covering is broken off; the beans are then picked and sorted by the natives. The fruit of the Areca is much used by the natives, and vulgarly called the betel-nut, from being rolled up in the leaves of Piper betel, and carried in a box like a snuff-box. They chew this nut, which turns their teeth quite black, and gives them a curious appearance to Europeans; but they consider this as a mark of beauty. Many beautiful well known plants grow all along the shore, as well as upon the hills. *Vinca rosea* covers whole acres of ground in company with *Ipomœa pes-Capræ* upon the beach; *Asclepias gigantea* was also very abundant; a species of Lawsonia, *Guaiacum officinale*, screw-pine, and various other things, which I had seen a little farther up the coast. But the most beautiful plant which I saw in my rambles was a species of Dendrobium, very near *D. secundum*, with deep purple flowers; it was growing on a tree *fully exposed to the sun* and covered with blossoms. R. F.

AMERICAN COPYRIGHT.

WHEN rogues fall out——but no matter; the proverb is somewhat musty. The last letters from America contain tidings as amusing as they will be interesting to all who are concerned in the Copyright Question. It appears that the Pirates have fallen out among themselves; the booksellers, having been distanced by those bolder and quicker speculators, the newspaper proprietors, are now earnest to have literary property protected,—Messrs. Harper & Brothers being, we are informed, the only firm of any consequence which is adverse to the memorial about to be laid before Congress, a copy of which, just received, we subjoin:—

A Memorial of American Publishers and Booksellers.

To the Honorable the Senate and House of Representatives of the United States, in Congress assembled:

The undersigned, Publishers and Venders of Books in the United States, respectfully represent to your Honorable Body, that deeply interested as they are, not only as booksellers in particular, but also as American citizens in general, in the greatest possible diffusion of knowledge and sound literature, they feel fully convinced, by their experience as traders in books, that the present law regulating literary property is seriously injurious, both to the advancement of American literature, and to that very extensive branch of American industry which comprehends the whole mechanical department of book-making. It is alike injurious to the business of publishing, and to the best and truest interests of the people at large.

Your memorialists, after a careful and mature consideration of the important subject, are fully satisfied that the great interests of knowledge and industry, of those who provide the community with reading, and of the vast reading community itself, would be most essentially promoted by the passing of a Law which would secure to the authors of all nations, the sole right to dispose of their compositions for publication in the United States, (whether they may be published in foreign countries or not); provided always, the book be printed in the United States within a certain time (to be settled by law) after its publication in a foreign country; and provided also, that the copyright for this country shall be transferable from the author to American resident publishers only.

Your memorialists are satisfied, that this equitable protection would enable the publishers to furnish their fellow citizens both with foreign and American literature in such forms and at such prices as would truly meet the wants as well as the means of the people; while the writers of books would receive the just compensation for their labour and talent, wherever their works may be read. Your memorialists are of opinion that the interests of the authors, the publishers, and the purchasers, are reciprocal, as those of the producer and consumer always are.

Your memorialists would also refer to the fact, that no more than a measure such as they respectfully but urgently desire, is necessary in order to secure at once to the American authors a copyright for their books in Great Britain.

Your memorialists, therefore, respectfully request your Honorable Body to take into consideration the present law of copyright in the United States, and to enact such law as may secure to the authors of foreign nations, the right to dispose of their works to American publishers to be printed in this country, providing that such right shall extend to the authors of those countries only, whose governments have granted or may grant a reciprocal privilege to our authors; and with such other provisions as may seem to your wisdom to be desirable and just.

And your memorialists, &c. &c.

OUR WEEKLY GOSSIP.

WE regret much to observe that the celebrated bronze *Hercules* of the British Museum has suffered great and irreparable injuries from what appears more like wilful maltreatment than any other cause—negligence, mischievous thoughtlessness, accidental fracture, or awkward patching-up. Still we rejoice, or regret still further, that it was not the public who committed these injuries, not even the attelier boys and hobbledehoys privileged to draw at the Museum, but the care-takers and conservators of the Collection itself! We charge the deed upon them, because they perpetrated it through their agent. Some foreigner, we are told—it is always foreign cats that throw down the cream!—got leave to take a cast of this statue in a new composition, and when the plaster-coat proved over-adhesive, a servant of the Institution (doubtless a servant, perhaps the charwoman?) got orders to peel it off. Whatever process he (or *she*) may have used, has been very efficacious towards removing the beautiful surface of the bronze and many of its most important details. We should conjecture, from its present appearance, that instead of the notable gentlewoman above-mentioned having scoured it with Kensington gravel, or scraped it with an oyster-knife, she lent it to her imp as a plaything, who scratched and scarified with a rusty nail all of it he was unable to smash. Our description sounds like exaggeration—let any one without scales on his corporeal or mental eyes, go and test it. The upper half of the Hesperidean tree is gone, besides the emblematic Serpent—both are melted now into thin air, or peradventure the snout of a door-knocker! We principally grieve for the loss of that "precious *ærugo*" as Scriblerus would call it—that fine dark-green crust which mantled the figure itself, and gave such a softness to its contours; that venerable *patina* spread over them by Time which veiled their asperities beneath its semi-transparent tissue. Amateurs may, however, still recognize, in this statue, Hercules the golden-apple stealer, late returned from the Gardens of Hesperides, where he had slain the sleepless dragon delineated by Lucan—

> Nunquam somno damnatus lumina serpens
> Robora complexus rutilo curvata metallo.

A splendid passage, splendidly paraphrased by Milton, in his original draught of 'Comus,' where he describes the African orchard—

> On whose faire tree
> The scalie-harnest dragon ever keeps
> His unenchanted eye.

Perhaps the crocodile, with its natural plate-armour, and its lidless eyes, and its local habitation, may have suggested this fabulous creature. Connoisseurs pronounce the bronze a *Tyrian* Hercules, because its features resemble those of the Grecian type less than those which coins of Tyre exhibit; and its having been found in Syria favours the hypothesis. Both for that reason, and as it is one of the very few bronze statues amongst the collection, it should have been guarded like a golden apple by the dragons of the Museum, had it even possessed no intrinsic merits; we, however, can hardly cite a specimen of sculpture, not Greek, displaying a finer movement, or, if the phrase be allowable, expression of attitude. Should either it or its admirable pendant, the bronze Apollo, meet any future mischance, let us hope the trustees will intrust it, at least, to a careful tinker.

The Temple Church, which has been closed for some weeks, will be re-opened for divine service to-morrow. During the period of its being closed some slight works have been executed,—the completion of the pulpit, the staining of the oak stalls and benches a darker hue, &c. This last measure is an improvement, and relieves the wood-work from the walls, with which they assimilated too much in colour. The addition of more stained glass in the Round Church is still, we are sorry to say, a subject under consideration.—The National Gallery re-opens on Monday to the public, who have been excluded by a bungling arrangement, in order nominally to give the officers holidays, which, as respects the subordinates, are not we believe granted for the full time.—The Church of the Old Savoy Hospital also, we believe, will re-open to-morrow, having undergone extensive repairs and some embellishments. Its position is remarkable among sacred edifices, as being north and south, instead of east and west, which leads to the supposition that the original purposes of this building must have been other than that of a church. It is clear from the character of many of the internal ornaments, that it underwent extensive repairs in the reign of Henry VIII., and during that period of lax ecclesiastical discipline perhaps the structure was first converted into a church. It is certainly the only church we can call to mind where the altar stands at the *north* end. It is now, we believe, the solitary vestige left of the Savoy Hospital, which was in great part removed to make way for the erection of Waterloo Bridge. Being part of the Savoy, it is in the possession of the Duchy of Lancaster, and the recent works have been executed at its cost, and under its direction. We are sorry that we cannot commend them; a good opportunity seems to have been thrown away for effecting an interesting and complete restoration. The church is a narrow oblong building, lighted chiefly at the sides, which are extremely plain. But the ceiling—flat, though coved at its junction with the walls—is elaborately ornamented with panels and heraldic insignia, and the altar, with its pinnacles, is elegant. Some considerable pains have been taken to restore the roof, apparently, to its ancient state. The ground of the panels has been coloured an azure blue—the ancient "bice,"—whilst the quatre foils, and shields, and badges, and sacred emblems—the spear and sponge, the dice and garment, the ear of St. Peter, the kiss of Judas, &c.—which abound above the altar, have been picked out with gilding and bright positive colours. The effect of the roof, *per se*, is gorgeous, and interesting as a handsome specimen of decoration of the Tudor period; but its effect is much lessened by its association with bare washed walls. It shows a most imperfect acquaintance with ancient decorations, and most illogical reasoning, to suppose that the roof was the sole piece of ornament. It is likely enough that the most perfect traces of colouring would be found on the ceiling, as being most out of the reach of mischief, but it does not by any means follow that the walls were bare, because only whitewash was found upon them. There was far too much consistency in the decorations of the period for such an unseemly union of splendour and poverty. The glittering roof above, and cold mechanically-marked stone-work below, suggest the idea of a crowned figure in a smock frock. In the present case, as there could be no lack of funds on the part of the Crown, the mean and imperfect state of the rest of the church can only have been the result of ignorance. An opportunity here presented itself of giving the public a good specimen of a certain class of ancient decoration, but we fear it has been lost, unless indeed these remarks should operate in inducing my Lord Granville Somerset and Mr. Sidney Smirke to reconsider the subject, and the propriety of making the works more generally consistent and appropriate. In its present state, the church is a medley, offensive to the proprieties, and misleading as a work of restoration. At the south end of the church an ugly and incongruous daub of little cherubs has been allowed to remain; and instead of removing the high pews altogether, some pains have been taken to repair and patch up those which had gone to decay. The altar window, it is said, will be filled with stained glass, furnished by subscription: at present the glazing is plain. To enter this church you *descend* some fifteen steps,—an instance, among many, of the progressive elevation of the ground in that part of the Strand.

The popularity of lectures on Music is not one of the least interesting signs of the art's progress in England. It is a healthy consequence of the diffusion of interest and instruction that analysis, as well as anecdote, should be eagerly relished by those who, themselves performers, desire to have some knowledge of the proportion one composer bears to another, and of the order of succession among the schools. We have heretofore adverted to the lectures on these subjects, delivered in London, by Professor Taylor and Doctor Gauntlett. On Thursday evening a new musical lecturer was added to their company, in Mr. Henry Lincoln, who commenced a series of four lectures at Crosby Hall, by a discourse on the genius and works of Sebastian Bach, which was clearly and sensibly composed, copiously illustrated, and followed from first to last by the sympathetic attention of a crowded audience.

Not wishing to be critical, it is better that we should gossip rather than report on the *Second Soirée* of the Society of British Musicians, held at Mr. Erat's rooms, which, by the way, according to a characteristic blunder of the Paris *Gazette Musicale*, meets in no less classical and high-sounding a locality than the *Harp of Erato!* Mr. Westrop's new pianoforte quintett was the best English music of the evening, and met with great applause;—a quartett for stringed instruments, by Mr. Stephens, was too immature a composition for Goodnature's self to pass, without a word of wonder at its being selected. The classical works performed were Spohr's Quintett for pianoforte and wind instruments, which went well, the pianoforte part being taken by Miss Calkin; and a quartett by Mozart. Miss Rainforth was the principal singer.

The week's musical news from Paris does not amount to much; yet that a decided step has been made in popular vocal instruction, is to be inferred from the recent public examination of some of the regiments, among whom the pleasure of singing and the desire to learn seem to be slowly spreading. There are rumours of a young workman, Alphonse Gilbert, who is to prove a second Poultier; a promise of a two-act comic opera, to succeed 'Don Sebastian' at *l'Académie*, by MM. St. Georges and Halévy; and tidings, from a distance, of the approaching *début*, at Milan, of a Signora Caterina Delci, pupil of Pasta. If this be our own Miss Delcy, we hope that the return home of a third English *prima donna* is not far distant. An anecdote of modern musical enthusiasm is worth recording. It was given out that the fifty-one unclaimed tickets for the concerts of the *Conservatoire* would be sold on the 20th ult., at eight in the morning. At seven o'clock in the evening of the 19th a body of young men, principally Germans, stationed themselves before the office for distribution, and remained there all night, calling over their numbers every two hours, it being understood that any one who was missing should forfeit his chance. All, however, are said to have remained. When the last presented himself to purchase, he was told that all the tickets were gone. "That cannot be," was the answer; "only fifty have passed. We have kept strict count." Upon examination this proved to be correct; and the much desired ticket was delivered to him. When we couple with this the anecdote of young Germans who have walked on foot fifty English miles to hear M. Liszt play, no one will for a while venture to complain that our age is altogether given up to a utilitarian and mechanical spirit.

Interesting accounts have reached us from Berlin, of the recent performance of the 'Midsummer Night's Dream,' with scenic music by Dr. Mendelssohn Bartholdy. The composer of the unparagoned overture could hardly fail to enter rightly into the spirit of the drama; and what he has done is described as alike characteristic, original, and popular. The first act, of course, offers no scope to the musician; but the three following, in the Athenian wood, have been embellished with rich and fantastic elfin music. In the fifth there is a brilliant bridal march; and caricature music to the "parlous" tragedy of Pyramus and Thisbe, written in the sublimest style of false sentiment. The whole performance seems to have been finished with Berlin care—the best actors employed—Madame Hagen (the Vestris of Berlin) taking the part of *Puck*, and Mdlles. Marx and Grünbaum—two of the principal operatic artists—assisting the elfin singers. We note this last fact to help certain of our own vocalists to a better chance of permanent success than they at present possess; co-operation and subordination being secrets of theatrical stability too much overlooked in this country.

We regret to hear that apprehension is felt of the loss to the stage of our first comedian, Mr. W. Farren, who was suddenly seized with an attack of paralysis while performing his last new part of 'Old Parr,' on Tuesday night, at the Haymarket Theatre. It was in the last scene, where he has to fall back exhausted; and though the actors noticed an unusual tremor and sinking, the audience supposed that the weakness was feigned; but on the fall of the curtain he was found to be speechless and insensible. One side and arm are affected, and the alarming symptoms had not abated when the last account was published; this is the third attack of a similar kind.

The *Bombay Times*, of the 29th of July, just come to hand, contains a curious and elaborate calculation made by one of the Hindoo pupils of the Elphinstone College, in which not only the absurdity, but the impossibility, of Mr. Henson's aerial ship is mathematically demonstrated.

Letters have this week arrived from Cairo, which contain an account of the explorations in some of the smaller chambers in the Pyramids, but add little of interest to what has already appeared, especially in the last letter of our correspondent (*ante*, p. 844.)

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

To the Managers of Schools in London and its Neighbourhood, and also to the Visitors of the Royal Polytechnic Institution.

THE PUBLIC LECTURES, by Dr. Ryan, Professor Bachhoffner, Mr. Goddard, and others, are delivered at Twelve, One, Two, Three, Half-past Four, and at Eight o'Clock in the Evening, and usually occupy about half an hour each. They are generally ELEMENTARY LECTURES, and are delivered in the most simple and inviting form with a view to combine entertainment with instruction. The subject of the Lectures for each day is suspended in the Hall.—To the valuable APPARATUS for ILLUSTRATION has been added ARMSTRONG'S HYDRO-ELECTRIC MACHINE and LONGBOTTOM'S OPAQUE MICROSCOPE.—The EXHIBITION ROOMS, with continued novelties, are Open Mornings and Evenings, except Saturday Evenings.

Admission, One Shilling. Schools, Half-price.

For Instruction in the Private Classes apply to Mr. R. I. Longbottom, the Secretary.

SCIENTIFIC AND LITERARY

MICROSCOPICAL SOCIETY.—*Oct.* 18.—A paper by E. J. Quekett, Esq. 'On an Instance of Monstrosity in a Moss,' was read. After some observations on the fact, that the several organs that constitute the flower and fruit of a plant, are only modifications of leaves, and also on the formation of double flowers by the conversion of the parts of reproduction into leaves, Mr. Quekett stated, that although instances of these changes were common in "flowering" plants, they are but rarely met with among those which are "flowerless," still, however, they occur sufficiently often in the latter to prove that the same law which operates in the former instances, obtains also in some of the higher orders of flowerless plants, as in the instance of certain ferns, in which minute leaves occasionally occupy the position of the part appropriated to the organs of reproduction. Professor Lindley, speaking of the mosses, suggests that the calyptra, the operculum, and the peristomium, may be nothing more than modifications of leaves, and that even the theca itself may also be the distended apex of the stem. No specimens of mosses, however, illustrating this identity of the organs of reproduction with those of nutrition, appear to have been observed until Mr. Quekett discovered some which go far to prove that these minute organs are capable, under certain circumstances, of being converted into leaves, thus leaving but little doubt that modifications of leaves are here employed, as in the ferns and in the higher orders of plants, to constitute the parts concerned in the duty of reproduction.

Mr. Varley described a new form of Microscope. The principal novelty was a stage composed of one plate being made to move on the surface of a fixed plate by means of a lever, this arrangement being well adapted to watch the movement of living creatures when submitted to magnifying powers. To effect this object, Mr. Varley had the moveable plate, connected with the fixed one by guides, furnished with ball-and-socket joints, which allowed it freedom of motion in all directions of a smooth and uniform character.

MEETINGS FOR THE ENSUING WEEK.

THUR.	Zoological Society, 3.—General Business.
FRI.	Botanical Society, 8.

FINE ARTS

NEW PUBLICATIONS.

THE group of embellished publications covering the table before us may be divided into two classes; one consisting of such as relate to antiquarian research, the other including those devoted to natural science. The productions of Art, judging from the preponderance of antiquarian illustrations, appear to be more extensively studied than the works of Nature. The retrospective character of artistic studies, strikingly contrasts with the onward progress of scientific investigations: the literature of Art is almost exclusively engaged with the monuments of past ages; and advancing taste casts fond backward glances on what has been. It has received a powerful impulse in this direction by the revival of a preference for the Gothic, Elizabethan, or Old English style of architecture and decoration, to which the erection of the new Houses of Parliament and the progress of Anglo-catholicism have materially contributed. The charms of antiquity are enlisted into the service of proselytism, and Art is again become the handmaid of Religion.

Mr. Joseph Nash infused a living and national character into antiquarian and architectural research, and gave a popular interest to the "winding paths of hoar antiquity," before frequented by the student only, by his picturesque delineations of Old English Mansions; thus extending and fostering the growing taste for recalling the life and manners of our forefathers in the scenes of their domestic existence. But the large scale and costliness of his work confines it to the wealthy few, while Mr. Knight, in his forthcoming cheap publication, entitled 'Old England,' will open up the highways and byeways of antiquarian knowledge, and, by the combination of wood-engravings with description, present to the popular understanding pictures of the state of English society and habits in bygone times. Meanwhile another work has commenced, intermediate between these—popular and picturesque—with pretensions on the score of art beyond merely useful illustration, yet not on too large and expensive a scale for general purchasers: it is entitled the *Baronial Halls, Picturesque Edifices, and Ancient Churches of England*, and consists of views of these buildings as they now exist, executed by Mr. J. D. Harding in lithotint, with guide-book sort of descriptions by Mr. S. C. Hall. The probable extent of the work is not stated, but a wide field is opened by its title and division into counties. It begins with Kent, and the first Part is occupied with Cobham Hall. On this ground Mr. Hall has been preceded by Felix Summerly, whose unpretending little volume, so full of information and critical remark, and withal so suggestive of thought and enjoyment, places any other cicerone at a disadvantage. Mr. Harding has not been equally forestalled; at least his expert pencil gives novelty and freshness to the views of the exterior of the ancient portion of the Hall and the interior of the Chapel: his vigorous and elegant style is not cramped by the limitation of scale in the prints, and the material of lithotint affords every facility for that dexterous freedom of touch in which he delights, which, however, is held in due subjection to the minute forms of sculptured tombs and architectural details by a delicate outline of ink or etching, which gives firmness and sharpness to the washes of the brush. This is a striking improvement in the new process of lithotint, which should recommend it to the attention of the "Etching Club," as much as its liquid tints do to the adoption of water-colour painters. The addition, however, of neutral tints and raised lights is more favourable to "keeping" and mellowness of effect than to brilliancy; and there is a mistiness in the atmosphere of these views too closely analogous to our climate to be objected against, but which, nevertheless, eyes accustomed to the sparkling opposition of black and white in engravings may regard as a defect. The pic-nic party introduced in the foreground of the outdoor view is not unpicturesque, but the figures in the chapel, though characteristic perhaps of the visitors, are not felicitously introduced. In the front of the gateway of West Stow Hall, which forms the subject of the third plate, a group of hunters is represented in the ancient costume, which is more congenial with the quaint character of its architecture: but every subject may not admit of this painter's licence.

One of the most notable instances of the increasing study of ecclesiastical architecture is the appearance of a series of *Illustrations of Baptismal Fonts*, in a cheap and popular form: they are engraved on wood in the most finished manner, uniform in size and style with the beautiful works on Natural History, brought out by Mr. Van Voorst, whose name has become a synonyme for neatness in book-embellishment. The drawings are made on the wood by artists, from sketches contributed from various sources, and the sixteen which constitute the first Part appear so characteristic that we are not disposed

Digitized by Google

to doubt the accuracy of the details, especially as on the correctness depend the value and interest of the work; still, the fewer the sources whence they are derived, the better the security for authenticity. All varieties of style—from the rude and enriched Norman to the perpendicular and decorated English—are to be found in this Part. The designs are mostly remarkable for fanciful devices, exemplifying the quaintness, originality, and occasionally the elegance of the early church builders; the decoration of the font seems to have been a labour of love, on which they delighted to expend their ingenuity.

The pictorial treasures of the old illuminated writings have yielded stores of curious and useful information touching the costumes, furniture, and habits, as well as of the arts of the Middle Ages, of which Mr. Shaw has abundantly availed himself in his various works, and from which Mr. Smith has gleaned materials for his *Illuminated Illustrations of Froissart*. But this mine of wealth is far from being exhausted, and Mr. J. O. Westwood has opened a new and beautiful vein, with widely extended ramifications, which promises some rich ore; his *Palæographia Sacra Pictorea; or, Select Illustrations of Ancient Illuminated Biblical and Theological Manuscripts*, are intended to "afford an idea of the caligraphy, ornamental illumination, and artistic design and composition exhibited in the MSS. executed in various countries and at different periods"—in short, an epitome of the written and pictured books before the art of printing was known. The various versions of the Old and New Testaments, in the Hebrew, Greek, and Latin texts, of the Eastern and Western Churches, will afford examples of the characters of Armenian, Syriac, Ethiopic, Coptic, German, Frankish, Anglo-Danish, Hungarian, Sclavonic, Irish, and early English writing; and also of the miniature painting and pictorial blazonry of these different nations. The specimens are accompanied by a written account of the contents, condition, and other particulars of the several manuscripts, and the work will thus form a catalogue raisonné of illuminated literature, while it exhibits the art of bibliographical embellishment in its successive stages.

We have seen a lithograph published by P. and D. Colnaghi, and drawn by J. T. Linnell, from a 'Flora,' said to be by L. da Vinci, which has given us much pleasure, as an earnest of what we may expect from the young artist, who has been selected to make the drawings of the prize Cartoons. Mr. Linnell, it appears, had never drawn on stone before, and this work must be considered as an experimental trial of his skill. As might have been foreseen, the mechanical execution is open to objection: but the artistic effects are given with truth and vigour; and on the whole it is a work from which we augur well.

We need only enumerate such popular publications as *Knight's London*, *Pictorial History of England*, and *Pictorial Museum of Animated Nature*, for they are too well known to require description. The *Ancient and Modern Architecture* is one of those unpretending but useful works, combining archæological research with popular information, that are at once valuable to the student and interesting to the general reader; plans, elevations, and sections of such buildings are given as serve to illustrate the several styles of architecture by means of the finest examples of each; and the dissertations by French writers are of a character that entitles them to closer attention and higher respect than the common run of "letter-press descriptions." Mr. Brockedon's *Italy* is advancing towards its close, maintaining the respectable character of the plates to the last, and proving itself worthy to form part of the series of engraved continental views by Batty, Hakewill, Nash, &c. including Mr. Brockedon's 'Alpine Passes.' Mr. Westwood's *British Moths*, nicely drawn, grouped, and coloured by Mr. Humphreys, and Mrs. Loudon's *Ladies' Flower Garden*, with its coloured portraits of choice flowers, are pretty books for the drawing-room table as well as serviceable for practical use.

MUSIC AND THE DRAMA

SOUTHWARK SUBSCRIPTION CONCERTS, under the Patronage of the Right Hon. the Lord Mayor and Lady Mayoress. Mr. CARTE begs to announce that the celebrated Violinist, Signor Camillo Sivori, Miss S. Novello, Miss Emma Lucombe, Signor Gallinari Rubini, and Mr. John Parry, will perform at the first Concert at the Bridge-House Hotel, London-Bridge, on Monday Evening, 30th of October. Mr. Carte will also perform for the first time in London on the new Boehm Flute, as manufactured by Messrs. Rudall and Rose. The particulars are given in the small bills. 61, Greek-street, Soho.

NEW PUBLICATIONS.

Pianoforte Music.

First Sonata for the Pianoforte, by Louis Spohr op. 125. Dr. Spohr appears resolved to assert his claims to versatility: his latest ventures having been made in a style of chamber-music, with which other symphonists and oratorio writers have begun their career. But determination does not always command success, and our author's essays for the pianoforte are more calculated to excite admiration for their writer's industry than delight by their intrinsic beauty. None of them are so interesting and effective as the well-known Quintett with wind-instruments. The Trio in E minor, though admirably composed, is difficult to play and wearisome to hear (even when Spohr himself takes the violin part), and the *solo* Sonata before us will be more often placed respectfully on the musician's shelves than heard at his pianoforte, in turn with the works of Mozart, Beethoven, Clementi, Dussek, Hummel, Moscheles, and Mendelssohn. The first movement, *an allegro moderato* in A flat, ¾, is the best; the leading phrases and melodies are, it is true, surcharged with Spohr's peculiar harmonies; in the conduct of the movement, however, we have less mechanical reiteration than is customary. But, having laid aside his usual resources, the meagreness of Spohr's invention becomes curiously evident, (pp. 6 and 7) in the second part of the *allegro*, which consists of little more than two dozen bars, leading back to the first part as per receipt. As regards contrivance, this amounts to little more than the form of the flimsy modern Italian *cabaletta*. The *romanza*, or second movement, in F minor, ⅜, seems to us at once *fade* and dull, and the *scherzo*, in C minor, as among the most ponderous of Spohr's inspirations. The final *rondo* is happier in its melodies and freer in its forms, being carried on by the introduction of new *tempi*: but this artifice, however well employed, can hardly ever stand in the stead of continuous thoughts varied by episodes, which shall relieve the ear without breaking the thread of the interest. On the whole, the merit of design in this Sonata, is as curiously small as the excellence of detail is great. The perversity with which these qualities are too often confused in popular judgment, leads to incalculable evil as regards the progress of Music.

Quatre Morceaux de Salon sur des Mélodies de François Schubert, composés par Stephen Heller, give us an opportunity of calling the attention of our pianists to one of the most deserving writers of the new picturesque school. We had already found great pleasure in M. Heller's Studies, and in the series of movements for piano and violin, written in conjunction with M. Ernst; admiring, in both works, a completeness which does not always distinguish the productions of the rhapsodists, and a freshness of idea too often dispensed with under pretence of some imaginary under-current of mystical meaning, which, with the uninitiated hearer, amounts to nothing more than mere *galimatias*. Neither is M. Heller's music impossibly difficult. The amplifications of Schubert's songs, before us, display, of course, less invention, but not less taste. 'Die Forelle,' 'Der Erl König,' 'Das Lob der Thränen,' and 'Die Post,' are the melodies treated—the second and fourth with most success. The forms of the composer and the spirit of the poet have been entered into with intimate appreciation and great freedom, but without extravagance. Enough, too, of M. Heller's own is to be found in these romantic rondos to raise him far above the level of the myriad fashionable arrangers of operatic airs. To all such players as have poetical tastes and tendencies, these 'Morceaux' cannot but be welcome.

As the works here noticed have led us from one of the veteran composers of classical music to a romancist of a younger dynasty, we may here introduce the names of two other recent pianoforte composers worth inquiring for, whose works, however, have hardly reached this country. One is Herr Kufferath, some of whose Studies are so neat in form and individual in style as to promise a composer with a way of his own. The other is Herr Vollweiler, a Russian, to whom the wonder-players are indebted for a fantastic March, written in the style of Liszt and Schubert's 'Marche Hongroise'; but still so fine, so bold, and (in places) so original, as to be very distinguishable from those mere mechanical imitations, suggested by the performance of every new pianist to those whom Nature hath sparingly blessed with ideas of their own. This march, however, is extravagantly difficult.

DRURY LANE.—The *Cinderella* of Mrs. Alfred Shaw is a finished display of brilliant singing and lively operatic acting. That touch of the pathetic, however, which distinguishes *our* 'Cinderella,' is wanting to her conception of the character; but in this requisition, we are fastidious beyond our fellow audiences who applaud to the echo, the actress as well as the songstress, and rejoice—well they may!—in the youth and freshness of Rossini's music, after the dreary and characterless monotony of Donnizetti's 'Favorite.'

The only new pieces have been furnished by the well known manufacturer of British Dramas and translator of foreign farces, Mr. Madison Morton, who within a few days has had three fresh fun-making machines at work; one at each of the principal theatres. Harley at Drury-Lane, Keeley at Covent-Garden, and Buckstone at the Haymarket, assisted by their respective crews, exerted their mirth-producing powers to the utmost, and managed to get up the steam of merriment; but neither of the three engines of drollery is likely to run any length of time, though one of them is started on a French railroad, and constructed after a Parisian model. This comparison of a farce to a piece of machinery, is neither so far-fetched nor infelicitous as would seem at first sight—at least not in this case; for the fun-making apparatus is so cumbrous and complicated, and works so mechanically—though requiring a number of persons to set it in motion, and constant labour to keep it going—there is such a continual noise and bustle of people running to and fro, and shouting, and such desperate efforts are required to overcome the resisting force of gravity in the audience, owing to the small supply of unctuous humour, that the simile may perhaps be allowed. One merit they have certainly, they do go, though it is but for a little while; and though Mr. Morton seems to enjoy a monopoly, it is only because there are not enough expert craftsmen in the laugh-raising line, to compete with him successfully. The names of these ponderous joke-cracking contrivances are 'Slight Mistakes'—which the closing of Covent-Garden has stopped running; 'My Wife's Come,' which is still shoved on the stage at Drury Lane occasionally, though it has run five or six times; and the 'Railroad Trip' which was first made at the Haymarket on Monday last, being in two stages, so wearied the patience of the company that the dissatisfaction was general, and loudly expressed. To drop metaphor, and be serious for a moment on a jocular subject: have we no wit or humorist capable of showing up in a dramatic form some of the ever fresh absurdities of individual character and social customs? Is there no marksman clever enough to "shoot Folly as it flies," and hold it up to ridicule on the stage? Must the active and potential baton of *Punch* be the sole staff to knock knavery on the head, and rap the knuckles of hypocrisy and humbug? Not that *Punch* is either remiss or inefficient in the discharge of his duties as jester general, and head of the correctional police for the detection and exposure of quacks and pretenders; but we would fain see the stage made a pillory for popular delinquencies to be pelted with jokes and shouted at with laughter. Apropos of *Punch*, Mr. Hammond essayed to personate the champion of drollery, and invited the public to enjoy 'A Night with Punch' at the New Strand Theatre; but his resources are not equal to the arduous task of fulfilling such expectations as were raised by the name.

MISCELLANEA

Paris Academy of Sciences.—Oct. 16.—A communication was received from M. Fourneyron relative to the application of floodgates to one of the bridges of Paris. A committee of the municipal council of Paris, of which M. Arago was president, was formed a long time ago for the purpose of discussing the practicability of a plan for closing the arches of the Pont Neuf, or the bridge of Notre Dame, with gates, by which the current of the river could be regulated

Digitized by Google

at will, and which, by raising the level at a certain part, would give a fall of sufficient force to work powerful turbines for the supply of water to all parts of Paris. In 1841 M. Fourneyron submitted a plan of gates of such construction that they could be worked with ease by one man; but as it was impossible to pronounce fairly on the merits of his invention without absolute experiments, the Academy and the committee of the city of Paris resolved to suspend the expression of opinion until experiments could be tried. M. Fourneyron now announces that for more than two months past one of his gates has been in use at Gisors, and that it has proved successful.—A communication on the effects of sugar in diet was made by M. C. Chossat. The author states that he made seventeen experiments on dogs, and ascertained that in some cases the sugar tended to fatten the animal, and in others turned to bile. In the first case there was in general a tendency to constipation; in the other, the bowels were relaxed. The author observes that milk as well as sugar has the tendency of fattening or creating bile, according to the different systems of the persons who use it exclusively, or make it the principal article of food; and that where bile is thus created a diarrhœa ensues, which causes a wasting of the solids. The value of his experiments consists in their having been made under circumstances favourable to the elucidation of the question as to the degree to which this article may be used in diet with due regard for health. Few of our own species have ever made sugar exclusively their diet; and we have had comparatively but uncertain evidence as to its effects. The reporter in *Galignani* observes, that the celebrated Bolivar had, by fatigue and privations, so injured the tone of his stomach, that he was unable at times to take any other food than sugar, which in his case was easy of digestion. It has been stated by his personal friends, that in some of his last campaigns he would live for weeks together upon sugar alone as a solid, with pure water as a liquid; but, probably, in 999 cases out of 1000, this diet would have soon brought the person adopting it to the grave; for although the nutritive powers of sugar are well known, inasmuch as saccharine matter forms one of the bases of our sustenance, yet it is equally true that with many the excessive use of sugar brings on indigestion in its worst forms. Where the digestion is feeble, excess of nutriment, instead of being absorbed generally in the system, turns to bile, and causes debility and wasting to a high degree.—It was announced that the Viscount de Barreul-Beauvert, director of some agricultural establishments in Central America, had forwarded a packet of rice of a variety altogether unknown in France; and a case of the root of an *arum*, named by the inhabitants *kikishé*, of which the nutritive qualities are exceedingly great, M. de Barreul having obtained 27 per cent. of fecule from it. It likewise possesses the property of keeping longer than the potatoe. He has also sent to M. Vilmorin an entirely new species of haricot.—A communication has been forwarded to the Academy by Mr. Thomas Wroughton, an Englishman, on a self-acting ventilator for hospitals, public schools, theatres, and other places of public resort. It consists of a ventilator connected with a mercurial valve, which is acted upon by heat, and by means of a float acting upon a sort of slide a spring opens the ventilator, so as to admit precisely such a quantity of external air as will purify the internal atmosphere, and bring it down to a determined point. We will suppose, for instance, that it is desired that the temperature should be a fixed one of sixty degrees of Fahrenheit. The thermometer connected with his mercurial valve is fixed at sixty. As soon as the heat of the place, from the breathing of the persons assembled, or from any other cause, has raised the temperature beyond this point, the valve opens of itself, and admits as much pure air as will cool down the temperature to the point desired, whilst the heated and foul air escapes.

To Correspondents.—P. L.—S. T.—J. B. D.—A Hinter—Sligo—received.

Our Correspondent at Cranbrook may send a *stamped* copy of the paper to Nice—may order it of her news-agent or bookseller, may retain it a week, and it will pass *free* by the English post, and be charged about one penny on delivery in France.

13, *Great Marlborough-street, Oct.* 28.

MR. COLBURN'S NEW PUBLICATIONS.

I.

DIARY of TRAVELS and ADVENTURES in UPPER INDIA, from Bareilly in Rohilcund to Hurdwar and Nahun in the Himalaya Mountains, with a Tour in Bundelcund—a Sporting Excursion in the Kingdom of Oude—a Voyage down the Ganges, &c. By LIEUT.-COL. DAVIDSON, Bengal Engineers. 2 vols. small 8vo. 21*s.* bound. (On the 1st of November.)

II.

THE PERILS of BEAUTY: a Tale. By Captain Frederick Chamier, R.N. Author of 'The Life of a Sailor,' &c. 3 vols. (Now ready.)

III.

JESSIE PHILLIPS: a Tale of the Present Day. By Mrs. Trollope. Complete in 3 vols. with Illustrations by Leech. (Now ready.)

"A tale of strong interest and striking power."—*Edinburgh Evening Post.*

"We have read this work with an interest which Mrs. Trollope's present literary competitors might strive in vain to excite."—*Weekly Chronicle.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

SMITH'S STANDARD LIBRARY.

STRIFE AND PEACE: A TALE.

From the Swedish of Frederika Bremer. Price 1*s.* 6*d.*

also,

THE H—— FAMILY. From the Swedish of Frederika Bremer. Price 2*s.*

These Translations are from an American source, having been issued by Messrs. Munroe, the intelligent publishers of Boston. They will be immediately followed by 'The President's Daughters,' and 'Nina'; when new Translations of 'The Neighbours,' 'The Home,' and others will be added, to complete the most delightful series of prose fictions in the foreign literature of modern Europe.

These Works, translated from the original Swedish, and in which many passages suppressed in the German versions have been carefully restored, will be found in no respect, it is hoped, unworthy of the original. Should this expectation prove well grounded, it is believed that the public will require no better reason, and certainly no apology, for their appearance in this cheap form.

The cheerful family pictures which are the charm of these books; the healthy lessons of the world which are taught in them; the beautiful Christian virtues, and, as a consequence of these, the calm sufficing pleasures, which they would make the earnest duty and happy reward of all conditions of life,—seem in an especial manner to recommend them for circulation in those quarters, which books of the more expensive class unhappily fail to reach.

London: published by William Smith, 113, Fleet-street.

MR. NEWBY'S NEW WORKS OF INTEREST.

A NEW NOVEL BY MISS ELLEN PICKERING.

Nearly ready, in 3 vols. post 8vo.

THE GRUMBLER.

By the Author of 'Nan Darrell,' 'The Expectant,' 'Friend or Foe?' &c.

Nearly ready, in 3 vols. post 8vo.

ALLANSTON; OR, THE INFIDEL.

Edited by LADY CHATTERTON, Author of 'A Tour in the Pyrenees,' &c.

Nearly ready, in 3 vols. post 8vo.

THE GRAVE-DIGGER.

By the Author of 'The Scottish Heiress.'

NEW WORKS JUST PUBLISHED.

In 3 vols. post 8vo.

THE BELLE OF THE FAMILY.

By Mrs. GRAY, Author of 'The Young Prima Donna,' &c.

"Her tale of modern life is executed with truth and feeling. It is a great advance upon any of her previous works. Nor is this mean praise, when we say that nothing can be more trite than the arrangement of the incidents. Without the slightest sermonizing, the tale is one to make the chaperon think and feel."—*Athenæum.*

"The plot is simple, but natural; the dialogue free and spirited. Some of the scenes are powerfully written; and the work shows talent and fertility of imagination, as well as an accurate knowledge of life."—*Morning Chronicle.*

"The author is possessed of fine original powers of conception, as well as much shrewdness of observation."—*Court Journal.*

In 3 vols. post 8vo. Published this day, NEW HISTORICAL NOVEL OF THE DAYS OF QUEEN ELIZABETH,

LORD DACRE OF GILSLAND.

By ELIZABETH M. STEWART.

In 1 vol. post 8vo. price 10*s.* 6*d.*

IRELAND AND ITS RULERS SINCE 1829.

"This is a dashing, broad, and leader-looking series of articles upon Irish affairs. Its author reminds us of an Edinburgh Reviewer; though he has more nerve and less conventional verbiage than the modern Edinburgh contributors."—*Spectator.*

"This is a work likely to be popular, for it deals with persons and things which engross public attention, and deals with them in a lively, spirited, and amusing manner."—*John Bull.*

"The author sees clearly enough the existing state of society, and possesses considerable skill in depicting it."—*Examiner.*

In 3 vols. post 8vo.

THE SMITHS.

By the Author of 'The Maid's Husband,' &c.

In 2 vols. post 8vo.

REMINISCENCES OF SYRIA.

By Lieutenant-Colonel NAPIER.

In 3 vols. post 8vo.

FRIEND OR FOE?

By Miss ELLEN PICKERING.

T. C. Newby, Publisher, 65, Mortimer-street, Cavendish-square.

"Surely such an illustration of some of the noblest monuments of human invention and skill must command unbounded patronage."—*Eclectic Review.*

D. Bogue (late Tilt & Bogue), Fleet-street.

ELECTRO-PLATED and GILT ARTICLES.—ELKINGTON & CO., Patentees, gratefully acknowledging the distinguished patronage the articles of their manufacture have hitherto received, beg to announce that their stock, embracing every variety of NOVELTY for the SIDEBOARD, DINNER, DESSERT, and BREAKFAST TABLE, may be inspected at their Establishments,

WEST-END,—22, REGENT-STREET, corner of Jermyn-street.
CITY,—45, MOORGATE-STREET.

The Patentees beg expressly to state, that their electro-plated goods differ entirely from any hitherto offered to the public as 'plated goods,' or 'substitutes for silver.' Both in appearance, sound, and wear, these goods are equal to SOLID SILVER; they are cast and chased in SOLID WHITE METAL, and strongly plated with silver by their PATENT ELECTRO PROCESS; all joints are made with hard silver solder, which cannot be used in ordinary plated goods, and neither acids nor heat affect them.

Their ELECTRO-GILDING, for beauty of colour and facility of application to ALL METALS, is much superior to the old method of water-gilding.

Old Sheffield plate restored and re-plated; plating and gilding, on old or new articles, promptly executed, at the Manufactory, 45, Moorgate-street.

Every article made and warranted by the Patentees bears their stamp, E. & Co. over a crown.

MUTUAL ASSURANCE. SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE, Founded A.D. 1815. Constituted by Act of Parliament.

HEAD OFFICE, EDINBURGH, 5, ST. ANDREW-SQUARE.

Capital accumulated and invested, upwards of ONE MILLION THREE HUNDRED THOUSAND POUNDS. Annual Revenue upwards of TWO HUNDRED THOUSAND POUNDS.

President—The Right Hon. the Earl of Rosebery, K.T.

Vice-Presidents.

The Marquis of Tweeddale, K.T. | The Hon. Lord Moncreiff
Sir Thomas Dick Lauder, Bart. | His Grace the Duke of Buccleuch, K.G.

The rules for the distribution of the Surplus Funds or Profits in this Society are framed on the most equitable principles; the Assured participating therein according to the amount and endurance of their respective Policies. By the laws of the Society, regulating the distribution of the Surplus Funds, Additions fall to be made to the Policies at each period of investigation, in proportion to the amount assured, and the number of annual premiums previously paid: and a Contingent Prospective Addition is also declared, to meet the case of persons dying between two periods of investigation, such Contingent Prospective Addition being calculated in proportion to the number of annual premiums paid, during the interval, not only on the Sum Assured, but also on the VESTED ADDITIONS previously declared. Parties dying within five years after the date of their Assurances receive no Additions, any order previously made for Additions to such Policies becoming thereby vacated; but in the event of the parties *surviving* the period of five years, the Additions *previously* declared *take full effect from the date of the Policy.*

The next Periodical Investigation takes place on 1st January, 1846.

Amount of Capital Sums insured since the commencement of the Society, is nearly SIX MILLIONS STERLING. Whole profits belong to the assured, and are divisible septennially.

JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall,
HUGH M'KEAN, Agent.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

Richard E. Arden, Esq.	Rupert Ingleby, Esq.
William Banbury, Esq.	Thomas Kelly, Esq. Ald.
Edward Bates, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
Thomas Camplin, Esq.	Lewis Pocock, Esq.
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

ANNUITIES.—In the AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

Directors.

Edward Barnard, Esq. F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	Robt. Brooks, Esq.
John Henry Capper, Esq.	Richard Onslow, Esq.
Gideon Colquhoun, Esq.	William Walter, Esq.

Bankers—The Union Bank of London.
Colonial Bankers—The Bank of Australasia, (incorporated by Royal Charter, 1835.) No. 3, Moorgate-street.
Solicitors—Messrs. Maples, Pearce, Stevens & Co.
Physician—Dr. Fraser, 62, Guildford-street.

Prospectuses, with Tables, Forms of Proposal for the purchase of an Annuity or for making an Assurance, and every information, may be obtained by application at the Office of the Company, No. 126, Bishopsgate-street, City.

EDWARD RYLEY, Sec.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 132 years. W. & Son have removed to 74, CORNHILL, where the advantages of the premises will enable them personally to superintend their workmen. An extensive Stock, finished with the utmost care, and at the lowest possible prices consistent with maintaining their reputation supported during so many years for the finest work; consisting of COMPENSATED DUPLEX and LEVER WATCHES, on the principle of their Chronometers, to which Government awarded the prizes three years in succession. The Detached Lever and Horizontal Watches for ladies, of the smallest and most elegant patterns. Marine and Pocket Chronometers with long and accurate rates, also a large selection of second-hand Chronometers and Watches by the most eminent makers. Superior workmen are employed on the premises in the repairing department, for English and foreign work.—Webster & Son, 74, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Sloddon & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

F. ARNOLD'S

INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots.....6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

SMOKE PREVENTED, and VENTILATION EFFECTED, by SPONTANEOUS ACTION.—Mr. JEAKES, 51, Great Russell-street, Russell-square, *Sole Agent in London* for the sale of DAY'S PATENT WINDGUARD, by the use of which he guarantees to cure all Chimneys smoking from wind, and also to prevent downward currents. It is admirably adapted for the ventilation of apartments of every description; also of ships, stables, dairies, and larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise, and not liable to derangement. It also offers no impediment to sweeping. Price, for general use, 30*s.*; larger size, 45*s.*; larger sizes, especially adapted for ventilation, 60*s.* and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the Trade in general, is especially invited.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

CIRCULATION 16,000 WEEKLY.

BELL'S
WEEKLY MESSENGER,
ENLARGED

To the Extent of Eight Entire Columns,

BEING AN ADDITION OF ONE FIFTH TO THE FORMER LARGE EDITION.

AFTER nearly half a century, and many changes, the BELL'S MESSENGER, established in 1796, is *amongst the four first Weekly Newspapers of the largest circulation*, and decidedly at the

HEAD OF THE CONSERVATIVE WEEKLY PRESS.

Anxious to keep pace with the spirit of the times, the Proprietors, about ten years since, increased their Paper to double its original size, and made it

THE FIRST LARGE WEEKLY PAPER OF THE DAY.

Other Journals have followed their example; but in order to comprehend a greater variety of Original and Miscellaneous matter in their Paper, and diversify its features, the Proprietors lately determined on

A STILL FURTHER ENLARGEMENT OF THEIR PAPER,

to the extent of one fifth, *i. e.* to Forty-eight columns instead of Forty.

But not confining this improvement to a mere extension of space only, the BELL'S WEEKLY MESSENGER, under this new arrangement, combines

A POLITICAL PAPER,

comprising the fullest Report of all Parliamentary and Political Intelligence, with observations distinguished by the same accurate knowledge, and sobriety, and soundness of judgment, which have always marked the leading articles of this Journal. Impartial, without being indifferent, and totally exempt from all bias or influence whatever—as regards the Church, a steady friend to all its rites and discipline, but opposed to those modern innovations which endanger its Protestant character and purity—as regards the State, constitutional, but still vigilant;—imputing praise and blame only to measures and not men,—this paper will be found to advocate the almost forgotten principles of political truth.

A GENERAL NEWSPAPER.

In this respect the true character of a Newspaper is not lost sight of. It is not crowded with lumbering articles on Statistics and Political Economy, more properly belonging to annual Registers than to the Records of the day. From the particular circumstances of its connexion, it has access to the latest Foreign News: and no expense is spared in procuring DOMESTIC INTELLIGENCE in the multiform shapes in which it exhibits itself, viz., Courts of Law, Police, Theatres, and the popular Entertainments of the day.

BELLES LETTRES AND THE FINE ARTS.

The taste of the public having become recently more inquisitive and refined as respects these subjects, a larger space in the BELL'S MESSENGER is devoted to this department; not only with a view of affording more ample means of information and instruction, but with a hope of giving a proper direction to the popular judgment, and enforcing those sound rules of Criticism, which, having their foundation in truth and nature, tend alike to purify and invigorate the public taste.

HORTICULTURE.

On this subject, a series of Original and Practical Essays have appeared weekly in this Paper, and have deservedly drawn so much notice, that it is the intention of the Proprietors to enlarge them, as new space is now afforded to them.

COUNTRY AND PARISH LAWYER.

This division of the Paper, which, for so many years, has given universal satisfaction, and has been acknowledged to have saved many persons from the expense of litigation—within its usual limits communicates still further and more general information; not only by a practical analysis of all new Acts of Parliament, but also by the answers given to Correspondents in the most difficult cases, by a practical lawyer of high reputation and long standing.

A LITERARY NEWSPAPER.

This department is greatly increased; and in order to avoid any direct praise of themselves, the Proprietors only beg to refer to any number of their Paper—taken up at random—to show the labour and impartiality with which this branch of BELL'S MESSENGER is conducted.

AGRICULTURE AND COMMERCE.

All that intelligence which interests so large a class of persons, embracing, indeed, the whole community,—and which was first introduced in this Paper in the year of its establishment, 1796,—meets with, if practicable, still greater attention and care, so as to render BELL'S MESSENGER both a

TRADESMAN'S AND MERCHANT'S NEWSPAPER;

containing Price Currents, Markets, &c., from the best authorities, and satisfying, as the Proprietors trust, all the most sanguine expectations of their readers. Thus, it is confidently presumed, both that in its parts, and as a whole, this Paper forms one well digested mass, and has become

A FIRST-RATE FAMILY NEWSPAPER,

comprising a vast body of Information, Intelligence, and Amusement. It is, indeed, principally with this object that the Proprietors have been induced to enlarge their Paper.

Without undue reflection on their competitors, the Proprietors of BELL'S MESSENGER may be allowed to observe, that many Journals have obtained large circulations, from the mere fact of their containing masses of news, without reference to the dangerous and irreligious tendencies of the principles studiously inculcated in their columns. And as there can be no question that Intelligence and News should always form the staple of a Paper, the Proprietors are sanguine enough to hope, that a Newspaper like BELL'S MESSENGER, will be readily welcomed by the heads of families—since, while by the copiousness of its intelligence, it will render any other Newspaper unnecessary, it will especially guard against that corruption and contagion which are so apt to infect the channels of public information.

BELL'S WEEKLY MESSENGER has for years ceased to be published on a Sunday. It infringes on no portion of the Sabbath; nor, with the consent of the Proprietors, are any copies sold on the Sunday. At the same time, being made up from the latest sources of intelligence up to Saturday evening, it contains to the full as much information as the Sunday Newspapers, which, though they bear, with an unnecessary contempt of the sanctity of the day, the imprint of Sunday, are nevertheless all of them made up in the same manner on Saturday.

An Edition of BELL'S MESSENGER is published on Monday, with Mark-lane, Smithfield, and other Market Intelligence.

The Subscription to this paper (paid, or sent by Post Office Order, to any Newsman, or the Publisher, in advance,) is

YEARLY ..... £1 6 0 || HALF YEARLY £0 13 0

QUARTERLY £0 6 6

which will be received by any Newsman in London, or the Country; and by the Publisher, at the Office.

*** *The price remains the same—SIXPENCE.*

BELL'S WEEKLY MESSENGER can also be received within the circuit of TWELVE MILES round London, FREE OF POSTAGE, by five o'clock every Saturday afternoon, on ordering it of any Newsman in Town or Country, or by applying to T. MASTERS, the Publisher, at the Weekly Messenger Office, No. 2, Bridge-street, Blackfriars, London.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh;—for IRELAND, J. Cumming, Dublin.

HYACINTHS AND OTHER BULBS.—HUMPHREYS'S COMPOUND to promote the BEAUTY and PRESERVATION of PLANTS, may be used either in the drawing-room, or in the conservatory, and, from its condensed fertilizing power, a few grains dissolved in water at intervals are effective. Applicable to all green-house plants, to hyacinths, and other bulbs, and to promote the growth of cuttings and the germination of seeds.—Sold in bottles, 1*s.* 9*d.* each, by all the leading chemists and seedsmen in town and country.—Wholesale Agents: DAVY, MACKMURDO & CO., 100, Upper Thames-street, London.

ARMSTRONG'S HYDRO-ELECTRIC MACHINE.—WATSON and LAMBERT, of NEWCASTLE-UPON-TYNE, who were intrusted by *Mr.* ARMSTRONG with the manufacture of the HYDRO-ELECTRIC MACHINE, now exhibiting at the ROYAL POLYTECHNIC INSTITUTION of LONDON, and who have the advantage of being acquainted with every improvement made by him, beg to announce to the public, that they make these Machines of a portable size and suitable for a room or lecture table, fitted up with an apparatus for reversing the electricity, by introducing extraneous matter into the condensing pipes, and capable of exhibiting nearly all the experiments that have been made illustrative of the subject, as well as affording a power equal to the best Machines of the old construction in general use.

As a means of producing electricity they will be found more economical than the ordinary machines, and as a novelty in science they possess the highest degree of interest.

Fixed HYDRO-ELECTRIC MACHINES of all sizes and every degree of power, are also manufactured by W. & L., from whom the prices and other particulars may be obtained on application, personally, or by letter.

Carlisle-square, Newcastle-on-Tyne, Oct. 1843.

SHARPE'S SOLUBLE QUININE DENTIFRICE. Recommended and used by the FACULTY, for preserving the TEETH to the latest possible period. The advantages of this truly scientific preparation arise from its holding, in a state of quintessence, the medicinal properties of Bark and Myrrh, which, by a chemical combination, known only to the proprietor, are rendered instantly soluble in the juices of the mouth; at the same time, it is perfectly free from acid, grit, or any pernicious ingredients. By its astringent qualities it prevents decay, eradicates scurvy, and, by exciting healthy action of the gums, prevents their separation from the teeth; or, if subject to bleeding, gives, in most cases, immediate, and, by continued use, permanent relief. It is strikingly beneficial in affections of the mouth, the result of a mercurial or medicinal course; and, when subject to tenderness of the gums arising from cold, its use is a positive preventive of future attacks. The virtue of this celebrated Dentifrice in cleansing, removing incrustations, and speedily giving a beautiful whiteness to the teeth, as well as sweetness to the breath, is unrivalled by any other Tooth Powder, whilst its refreshing bitter imparts an agreeable sensation to the most discriminating palate.

Be careful to observe the Proprietor's Signature on the Government stamp.—Prepared and sold by G. Y. SHARPE, Chemist, Islington-green, London. To be procured of all respectable Medicine Venders, in boxes at 1*s.* 9*d.* and 2*s.* 9*d.* each; and through the following Agents:—Sanger, 150, Oxford-street; Butler, 4, Cheapside; Hannay & Co. 63, Oxford-street; Edwards, 67, St. Paul's Churchyard; Barclay & Sons, 95, Farringdon-street; Sutton & Co. 10, Bow Churchyard; and J. D. Best, 14, Grosvenor-street West, Eaton-square.

N.B. Orders by post immediately attended to.

In a handsome volume, embellished with 12 Engravings, price 16*s.* cloth; 20*s.* morocco,

ELIZA COOK'S POETICAL WORKS. Beautifully Illustrated Edition.

THE WESTMINSTER REVIEW. 8. Clarke, Publisher, 13, Pall Mall East.
TWENTY years have now elapsed since the first appearance of the 'Westminster Review,' in which the first article of the first number (from the pen of W. J. Fox) was entitled 'Men and Things in 1823.' A literary organ, which, in the discussion of all the varied questions in the moral and physical sciences connected with human progress, should be free from the party bias of the 'Edinburgh' and 'Quarterly' Reviews, was then called for; and such a medium for the utterance of honest convictions is perhaps more indispensable at the present moment than at any former period. The late reaction in favour of the Conservative leaders of the aristocracy has ceased; the hopes which were entertained of a strong government, willing to govern in accordance with the spirit of the times, have proved delusive. It was said of the French *noblesse*, when they returned to France after forty years of exile, "These men are unchanged; the world with them has stood still; they belong not to the present century, but to the past;" and the same remark may unhappily be applied to a large portion of the English nobility and their instruments in office. It has become obvious that the members of the present cabinet and their immediate supporters are still the men of 1798,—dreamers of conspiracies and rebellions; promoters of agitation by the means chosen to suppress it; men who believe in military demonstrations, in state prosecutions, in the power of class interests, in the strength of old-established abuses, in the shifts of expediency, in popular credulity, in electoral corruption, but have no faith in moral influences, none in the divinity of truth, none in the growing intelligence of the people, none in the necessity of improved institutions adapted to the new wants of society, none in the stability of that government which should honestly take justice for its basis, and win, by deserving, the affections of the governed. They are men who, in an age of earnest convictions, are without earnestness of purpose,—who occupy a position which they do not understand, and one which it will soon be impossible for them to retain.
The time has arrived when, amidst the most encouraging prospects of continued usefulness, the 'Westminster Review' may prefer, with confidence, its claims to the support of every section of the Liberal interest. The service it rendered in bygone days, when, in the advocacy of free trade principles, it stood almost alone, will not be forgotten now that those principles are on the eve of practical realization. The services it may yet render, not only in aiding the present movement, but in helping to ensure those further objects of good government which on the annihilation of monopoly will become attainable, need not be pointed out. With the new number in the press will have been completed forty volumes of Essays and Criticisms, amongst which have appeared acknowledged contributions by Bentham, Mill, Grote, Carlyle, Colonel Perronet Thompson, C. Buller, Molesworth, Roebuck, and Bowring; and no labour will be spared to sustain in the future conduct of the work the reputation of the past series.

TAIT'S EDINBURGH MAGAZINE for NOVEMBER, price 1s., contains:—Lord Brougham and his Detractors—Young Scotland; or an Evening at Treport—De Custine's Empire of the Czar—The Banker's Wife; by Mrs. Gore—Australian Sketches; No. II. The Bush-Rangers—Recent Biographies: Dr. E. Cartwright; John Sydney Taylor—The Emigrant's Song—Railway Reform—Literary Register: Col. Napier's Syria; Taylor's Life in the Ranks; &c. &c.
William Tait, Edinburgh; Simpkin, Marshall & Co. London.

CYCLOPÆDIA of BIBLICAL LITERATURE. By JOHN KITTO, Editor of 'The Pictorial Bible,' &c. Assisted by various able Scholars and Divines, British, Continental, and American, whose Initials are affixed to their respective Contributions.
A. & C. Black, Edinburgh; Longman & Co, London.

ENCYCLOPÆDIA BRITANNICA. SEVENTH EDITION.
Edited by PROFESSOR NAPIER.
A recent writer in the *Quarterly Review*, in adverting to the pre-eminent value of this Encyclopædia as a Dictionary of Universal Knowledge, observes, that "an Australian or New Zealand Settler, who left his home with no other accomplishment but that of being able to read, write, and count, might, with such a companion, beguile his long and weary voyage, and become a well-informed man before he reached his destination."
An Index of 65,000 references, compiled with great industry and judgment, is appended to the work, forming a ready key to its multifarious contents.
Adam & Charles Black, Edinburgh; Simpkin, Marshall & Co., Whittaker & Co., and Hamilton, Adams & Co. London.

Messrs. WILEY & PUTNAM beg to announce the Publication of the following important Works:

II.
Small 8vo. price 7s. cloth,
HOURS of MEDITATION and DEVOTIONAL REFLECTION: upon various subjects connected with the Religious, Moral, and Social Duties of Life. By H. ZSCHOKKE. Translated from the German by JAMES D. HAAS.
"Every German student is familiar with one of the most popular works in the literature of that country, *Die Stunden der Andacht*. It is said, and we believe it to be the fact, that upwards of 200,000 copies of the work have been printed, including the last, which was the twenty-third edition. The volume before us is a selection from the original, but contains enough to give the English reader a notion of the author's deep, original thinking, and of the noble simplicity of his style."—*John Bull.*
III.
2 vols. post 8vo. price 21s.
THE IRISH SKETCH-BOOK. By Mr. M. A. TITMARSH. With numerous Engravings on Wood, from the Author's designs.
"One of the most valuable books of travelling sketches that has been published for many a day; and, excepting 'Inglis,' it presents the best idea of Ireland and the Irish that we have met with....Taken as a whole, the book is capital."—*Spectator.*
Chapman & Hall, 186, Strand.

By Mr. TURLE, Organist of Westminster Abbey, and PROF. TAYLOR, Gresham College.
1. PSALM TUNES.
2. SACRED MUSIC.
3. GLEES, MADRIGALS, DUETS, SONGS, &c.
THE PEOPLE'S MUSIC BOOK.—A Work intended to meet the growing demand for Music among all classes of the community. Principally arranged for Four Voices, and, where admissible, with an Accompaniment for the Organ or Pianoforte. Each number contains three separate portions, forming, respectively, a complete body of the best Music for the Cathedral, the Church or Chapel, the Family, the Glee Club, and the Madrigal Society.
Published Monthly in Parts, comprising 32 pages super-royal 8vo. price One Shilling.

The 20th Edition, of 1,000 each.
FLETCHER'S FAMILY DEVOTION; containing the Morning and Evening Service of a Family for every Day throughout the Year. Embellished with 17 elegant Engravings. Bound in cloth, gilt edges, price 1*l.* 6*s.* Recommended by 25 distinguished Ministers in England, and upwards of 100 Clergymen in the United States of America.
"Our attention has lately been called to an advertisement of a book of 'Family Devotion, containing the Morning and Evening Service of a Family for every Day throughout the Year.' According to the advertisement, this new Order for morning and evening prayer daily throughout the year, is already in its 20th edition of 1,000 each. 20,000 copies of a book of common prayer for Dissenters, recommended by twenty-five distinguished ministers, whose names are given, and who include some of the most prominent of the day, cannot be dispersed throughout England without working some considerable change in the minds of probably 200,000 persons."—*Times*, Sept. 17, 1843.

Just published,
A PORTRAIT of the REV. JOHN CUMMING, M.A., Minister of the Scottish National Church, Crown-court, Little Russell-street, Covent-garden; engraved by Thomson, from a Painting by W. Booth, Esq., in the possession of Mr. Cumming. Large paper, India proofs, 10s.; small paper, plain proofs, 7s. 6d.
London: George Virtue, 26, Ivy-lane, Paternoster-row.

This day is published, price 2s. 6d. illustrated with a coloured Frontispiece, Six Steel Engravings by LEECH, and numerous Woodcuts,

PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh. In royal 4to. with 17 Plates and 38 Woodcuts, price 25s.

Lately published, by the same Author,

I.

The Natural Principles and Analogy of the Harmony of Form. In royal 4to. with 18 Engravings and Woodcuts. Price 15s.

II.

The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 8 coloured Diagrams, 8vo. Price 7s.

In so far as we know, Mr. Hay is the first and the only modern Artist who has entered upon the study of these subjects without the trammels of prejudice and authority. Setting aside the ordinances of fashion, as well as the dicta of speculation, he has sought the foundation of his profession in the properties of light, and in the laws of visual sensation, by which these properties are recognized and modified. The truths to which he has appealed are fundamental and irrefragable; and the conclusions which he has deduced from them will admit of no modification either from taste or fashion. Notwithstanding some trivial points of difference between Mr. Hay's views and our own, we have derived the greatest pleasure from the perusal of these works. They are all composed with accuracy and even elegance. His opinions and views are distinctly brought before the reader, and stated with that modesty which characterizes genius, and that firmness which indicates truth."—*Edinburgh Review*, October, 1843.

William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

THE FIRST OF THE ANNUALS.
Now ready, elegantly bound, price 12s.
ACKERMANN'S

Within the heart like gold."—*L. E. L.*

Among the contents of this volume will be found:—Funeral of Southey, by E. Quillinan—Letter of Lord Byron's to the Ettrick Shepherd—Lisy parting with her Cat, by James Thomson, Author of The Seasons—Love's Signal Flower, by L.E.L.—and Poems and Tales by the Countess of Blessington, Lady E. S. Wortley, Agnes Strickland, Miss Mitford, Eliza Cook, Mrs. Gore, Delta, Mrs. S. C. Hall, Miss Power, Robert Bell, Miss Pardoe, Mary Howitt, John Clare, C. Swain, &c.

TRAVELS IN THE INTERIOR OF NORTH AMERICA. By MAXIMILIAN, PRINCE OF WIED.

Accompanied by 81 elaborately-coloured Plates, imperial folio, numerous Engravings on Wood, and a large Map. Translated from the German by H. EVANS LLOYD. 2 elegantly-bound volumes. Price Twenty-five guineas.

This splendid work must prove highly gratifying to all persons who feel interested in the fate of the Red Men; in it will be found a mass of information respecting their traditions, manners, customs, character, illustrated by a volume of coloured plates, far superior in every respect to anything that has hitherto accompanied a similar work.

THE CLANS,

Consisting of highly-coloured Plates, representing full-length figures of Chiefs and other personages in their respective costumes; from paintings by R. R. M'IAN, Esq., with descriptive letter-press, by JAMES LOGAN, Esq., F.S.A. Sc. It will be completed in Fifteen Numbers (six of which are out), price 12s. each. A few copies, Imperial Folio, price 21s. each Part.

THE LADY'S ASSISTANT IN KNITTING AND NETTING.
By Mrs. GAUGAIN.
Vol. 1st, price 5s. 6d. Vol. 2nd, price 10s. 6d.
Ackermann & Co, 96, Strand.

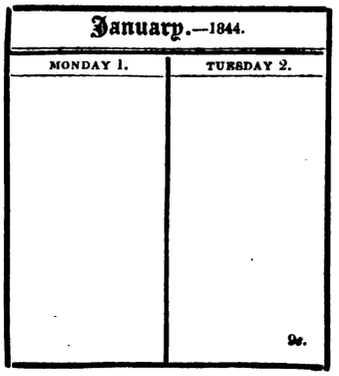
50, CONDUIT-STREET, *November* 4.

NEW WORK BY MR. JAMES GRANT.

On Tuesday, the 7th instant, will be published, in 2 vols. post 8vo., with a Portrait of the Author,

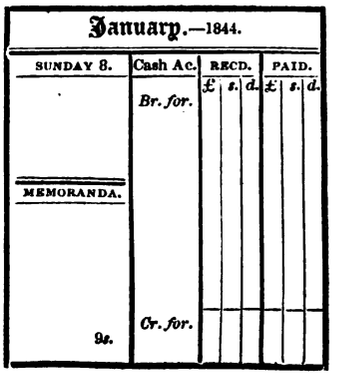
PARIS AND ITS PEOPLE.

By the Author of 'Random Recollections of the Lords and Commons,' 'The Great Metropolis,' &c. &c.



AMONG THE PRINCIPAL CONTENTS WILL BE FOUND:—

General Remarks on the Place.
General Remarks on the People.
The King and his Minister.
State of Political Feeling.
The System of Government.
Literature—Literary Men—Publishing, &c.
The Newspaper Press.
The Higher Classes—Middle Classes—Lower Classes.
Military Matters.
The Theatres—Places of Amusement.
Manners—Customs—Habits.
State of Morals—Crime—Religion.
Hospitals—Medical Men.
Education—Boarding Schools.
Courts of Law—Justice.
Nunneries and Nuns.
Hotels—Dining Rooms—Coffee Houses.
Public Buildings—Miscellaneous.



SAUNDERS & OTLEY, Publishers, Conduit-street.

By J. H. ALLAN,
Member of the Athenian Archæological Society, and of the Egyptian Society of Cairo.
Imp. 4to. with upwards of 40 Lithographed Drawings, and 70 Wood-Engravings, 3*l.* 3*s.* cloth.
[*Just ready.*

THE LAW OF NISI PRIUS,

Evidence in Civil Actions, and Arbitration and Awards, with an Appendix of the New Rules, the Statutes of Set-off, Interpleader, and Limitation, and the Decisions thereon.

By ARCHIBALD JOHN STEPHENS,
Barrister-at-Law. 3 vols. royal 8vo. containing nearly 3,000 pages, and above 300 pages of Index, 5*s.* 5*s.* boards.

"The value of the work consists in its comprehending a full statement of the Law and Practice of Nisi Prius, deduced not only from the old authorities, but from the judgments pronounced by the most eminent judges of the present age; and it comprises as well the evidence applicable to each class of actions, as the law of evidence in general. These are accompanied by a full consideration of the pleadings in each kind of action, and the rules governing the mode of conducting trials at Nisi Prius. The work affords abundant proof of immense labour and research. It contains a vast mass of valuable matter not to be found in former works, and the whole has been well arranged and ably treated."—*Legal Observer.*

LONDON, SATURDAY, NOVEMBER 4, 1843.

REVIEWS

History of the Conquest of Mexico, with a Preliminary View of the ancient Mexican Civilization, and the Life of the Conqueror, Hernando Cortés. By W. H. Prescott. 3 vols. Bentley.

We rejoice to see Mr. Prescott again in the field. We judged that the author of 'Spain under Ferdinand and Isabella' had not exhausted in that work the fruits of his laborious researches; and that his well-exercised pen would probably be again employed in illustrating the most remarkable age of Spanish, or even indeed of European history. We have many histories, it is true, of the conquest of Mexico, and even from such writers as Solís and Robertson, two of the most accomplished historians of their respective nations. Yet the critical spirit of the present day requires a minuteness of investigation and a sifting of authorities which those writers never dreamt of. Besides, the materials were not within their reach. The first great collector of the materials of Spanish history, was Don Juan Baptista Muñoz, the celebrated historiographer of the Indies, who diligently exercised the power intrusted to him of searching all the archives of the kingdom and its colonies. He did not live, however, to execute his own designs, but died in this country, leaving a very large collection of valuable documents, which has been carefully preserved. This collection, as well as that of Don M. F. de Navarrete, and several others, have been examined by our author, whose perseverance and self-sacrifice in his favourite study must be well known to the readers of his former history. With such copious stores of information and a congenial theme—for we suspect that the Conquest of Mexico is a subject better adapted to Mr. Prescott's genius than the intrigues of a European court—he could not fail to produce a valuable work. We can answer at least for its elaborate execution; but as these volumes, fraught with learning and philosophy, have been but a short time in our hands, we shall defer our critical judgment of them till a future occasion, and content ourselves at present with a few extracts, exhibiting either the novelty of our author's information or the brilliancy of his manner.

In speaking of Cortés, Mr. Prescott seems sometimes to slip into the vulgar practice of considering that remarkable man as a born hero—an error which ought to be carefully avoided by the philosophical historian. In the following account of him, however, we see nothing but the ordinary gentleman:—

"Hernando Cortés was born at Medellin, a town in the southeast corner of Estremadura, in 1485. He came of an ancient and respectable family; and historians have gratified the national vanity by tracing it up to the Lombard kings, whose descendants crossed the Pyrenees, and established themselves in Aragon under the Gothic monarchy. This royal genealogy was not found out till Cortés had acquired a name which would confer distinction on any descent, however noble. His father, Martin Cortés de Monroy, was a captain of infantry, in moderate circumstances, but a man of unblemished honour; and both he and his wife, Doña Catalina Pizarro Altamirano, appear to have been much regarded for their excellent qualities. In his infancy Cortés is said to have had a feeble constitution, which strengthened as he grew older. At fourteen, he was sent to Salamanca, as his father, who conceived great hopes from his quick and showy parts, proposed to educate him for the law, a profession which held out better inducements to the young aspirant than any other. The son, however, did not conform to these views. He showed little fondness for books, and after loitering away two years at college, returned home, to the great chagrin of his parents. Yet his time had not been wholly misspent, since he had laid up a little store of Latin, and learned to write good prose, and even verses 'of some estimation, considering'—as an old writer quaintly remarks—'Cortés as the author.' He now passed his days in the idle, unprofitable manner of one, who, too wilful to be guided by others, proposes no object to himself. His buoyant spirits were continually breaking out in troublesome frolics and capricious humours, quite at variance with the orderly habits of his father's household. He showed a particular inclination for the military profession, or rather for the life of adventure to which in those days it was sure to lead. And when, at the age of seventeen, he proposed to enrol himself under the banners of the Great Captain, his parents, probably thinking a life of hardship and hazard abroad preferable to one of idleness at home, made no objection."

The future conqueror of Mexico appears to have studied in the same school as Don Juan:

> He learned the arts of riding, fencing, gunnery;
> And how to scale a fortress, or a nunnery.

In an escalade of the latter kind, he met with an accident which had the effect of delaying his visit to the New World:—

"As he was scaling a high wall, one night, which gave him access to the apartment of a lady with whom he was engaged in an intrigue, the stones gave way, and he was thrown down with much violence and buried under the ruins. A severe contusion, though attended with no other serious consequences, confined him to his bed till after the departure of the fleet."

Our author delights in the elaborate details with which he finishes his pictures. He often introduces little particulars, which, in our opinion, do not belong to history, and respecting which the testimony of authors can be no satisfactory evidence. Some of these superfluous touches may be discerned in the following portrait of Cortés:—

"Cortés at this time was thirty-three, or perhaps thirty-four years of age. In stature he was rather above the middle size. His complexion was pale; and his large dark eye gave an expression of gravity to his countenance, not to have been expected in one of his cheerful temperament. His figure was slender, at least until later life; but his chest was deep, his shoulders broad, his frame muscular and well proportioned. It presented the union of agility and vigour which qualified him to excel in fencing, horsemanship, and the other generous exercises of chivalry. In his diet he was temperate, careless of what he ate, and drinking little; while to toil and privation he seemed perfectly indifferent. His dress, for he did not disdain the impression produced by such adventitious aids, was such as to set off his handsome person to advantage: neither gaudy nor striking, but rich. He wore few ornaments, and usually the same; but those were of great price. His manners, frank and soldier-like, concealed a most cool and calculating spirit. With his gayest humour there mingled a settled air of resolution, which made those who approached him feel they must obey; and which infused something like awe into the attachment of his most devoted followers. Such a combination, in which love was tempered by authority, was the one probably best calculated to inspire devotion in the rough and turbulent spirits among whom his lot was to be cast. The character of Cortés seems to have undergone some change with change of circumstances; or to speak more correctly, the new scenes in which he was placed called forth qualities which before lay dormant in his bosom. There are some hardy natures that require the heats of excited action to unfold their energies; like the plants, which, closed to the mild influence of a temperate latitude, come to their full growth, and give forth their fruits, only in the burning atmosphere of the tropics.—Such is the portrait left to us by his contemporaries of this remarkable man; the instrument selected by Providence to scatter terror among the barbarian monarchs of the Western world, and lay their empires in the dust."

The impulse given by Humboldt to the study of Mexican antiquities, has produced, of late years, some magnificent works, which enable the student to form a tolerably correct idea of the progress made by the Aztecs in the arts, and to fill his imagination with the magnificence of bygone greatness. Our author has availed himself, to the fullest extent, of these aids; and hence he has been enabled to *restore*, in the most perfect manner (as will be seen by the following extract), Cholula, the most remarkable of the Mexican cities:—

"It was of great antiquity, and was founded by the primitive races who overspread the land before the Aztecs. We have a few particulars of its form of government, which seems to have been cast on a republican model similar to that of Tlascala. This answered so well, that the state maintained its independence down to a very late period, when, if not reduced to vassalage by the Aztecs, it was so far under their control, as to enjoy few of the benefits of a separate political existence. Their connexion with Mexico brought the Cholulans into frequent collision with their neighbours and kindred, the Tlascalans. But although far superior to them in refinement and the various arts of civilization, they were no match in war for the bold mountaineers, the Swiss of Anahuac. The Cholulan capital was the great commercial emporium of the plateau. The inhabitants excelled in various mechanical arts, especially that of working in metals, the manufacture of cotton and agave cloths, and of a delicate kind of pottery, rivalling, it was said, that of Florence in beauty. But such attention to the arts of a polished and peaceful community naturally indisposed them to war, and disqualified them for coping with those who made war the great business of life. The Cholulans were accused of effeminacy, and were less distinguished—it is the charge of their rivals—by their courage than their cunning."

In the account of Montezuma's household, we have the same brilliant colouring, and a like abundance of details, including many of too transient and unstable a character to be, strictly speaking, historical:—

"But the most luxurious residence of the Aztec monarch, at that season, was the royal hill of Chapoltepec, a spot consecrated, moreover, by the ashes of his ancestors. It stood in a westerly direction from the capital, and its base was, in his day, washed by the waters of the Tezcuco. On its lofty crest of porphyritic rock there now stands the magnificent, though desolate, castle erected by the young viceroy Galvez, at the close of the seventeenth century. The view from its windows is one of the finest in the environs of Mexico. The landscape is not disfigured here, as in many other quarters, by the white and barren patches, so offensive to the sight; but the eye wanders over an unbroken expanse of meadows and cultivated fields, waving with rich harvests of European grain. Montezuma's garden stretched for miles around the base of the hill. Two statues of that monarch and his father cut in *bas relief* in the porphyry, were spared till the middle of the last century; and the grounds are still shaded by gigantic cypresses, more than fifty feet in circumference, which were centuries old at the time of the Conquest. The place is now a tangled wilderness of wild shrubs, where the myrtle mingles its dark, glossy leaves with the red berries and delicate foliage of the pepper-tree. Surely, there is no spot better suited to awaken meditation on the past; none where the traveller, as he sits under those stately cypresses grey with the moss of ages, can so fitly ponder on the sad destinies of the Indian races and the monarch who once held his courtly revels under the shadow of their branches. The domestic establishment of Montezuma was on the same scale of barbaric splendor as every thing else about him. He could boast as many wives as are found in the harem of an Eastern sultan. They were lodged in their own apartments, and provided with every accommodation, according to their ideas, for personal comfort and cleanliness. They passed their hours in the usual feminine employments of weaving and embroidery, especially in the graceful featherwork, for which such rich materials were furnished by the royal aviaries. They conducted themselves with strict decorum, under the supervision of certain aged females, who acted in the respectable capacity of duennas, in the same manner as in the religious houses attached to the teocallis. The palace was supplied with

Digitized by Google

numerous baths, and Montezuma set the example in his own person, of frequent ablutions. He bathed at least once, and changed his dress four times, it is said, every day. He never put on the same apparel a second time, but gave it away to his attendants. Queen Elizabeth, with a similar taste for costume, showed a less princely spirit in hoarding her discarded suits. Her wardrobe was, probably, somewhat more costly than that of the Indian emperor. * * His meals the emperor took alone. The well-matted floor of a large saloon was covered with hundreds of dishes. Sometimes Montezuma himself, but more frequently his steward, indicated those which he preferred, and were kept hot by means of chafing-dishes. The royal bill of fare comprehended, besides domestic animals, game from the distant forests, and fish which the day before was swimming in the Gulf of Mexico! They were dressed in manifold ways, for the Aztec artistes, as we have already had occasion to notice, had penetrated deep into the mysteries of culinary science."

Among the dainties served at the Emperor's table, we find enumerated a "fricassee of young children," but the historian, Bernal Diaz, allows that this article is somewhat apocryphal. It is worthy of remark, that from the ancient Mexicans we derive the names of two articles of luxury—one of them, it must be confessed, a semi-barbarous luxury; namely, chocolatl (chocolate) and tabaco (tobacco).

The following passage is very characteristic of our author, who delights in what artists call strong effects, glowing colours, bold contrasts, and who is evidently not much inclined to strip reality of the hues of romance:—

"The events recorded in this chapter are certainly some of the most extraordinary on the page of history. That a small body of men, like the Spaniards, should have entered the palace of a mighty prince, have seized his person in the midst of his vassals, have borne him off a captive to their quarters,—that they should have put to an ignominious death before his face his high officers, for executing, probably, his own commands, and have crowned the whole by putting the monarch in irons like a common malefactor,—that this should have been done, not to a drivelling dotard in the decay of his fortunes, but to a proud monarch in the plenitude of his power, in the very heart of his capital, surrounded by thousands and tens of thousands who trembled at his nod, and would have poured out their blood like water in his defence,—that all this should have been done by a mere handful of adventurers, is a thing too extravagant, altogether too improbable, for the pages of romance! It is, nevertheless, literally true. Yet we shall not be prepared to acquiesce in the judgment of contemporaries who regarded these acts with admiration. We may well distrust any grounds on which it is attempted to justify the kidnapping of a friendly sovereign,—by those very persons, too, who were reaping the full benefit of his favours."

We shall close, at present, with a paragraph in which the spirit of the sixteenth century is contrasted, in the most judicious and philosophic manner, with that of the present day:—

"A good criterion of the moral sense of the actors in these events is afforded by the reflections of Bernal Diaz, made some fifty years, it will be remembered, after the events themselves, when the fire of youth had become extinct, and the eye, glancing back through the vista of half a century, might be supposed to be unclouded by the passions and prejudices which throw their mist over the present. 'Now that I am an old man,' says the veteran, 'I often entertain myself with calling to my mind the heroical deeds of early days, till they are as fresh as the events of yesterday. I think of the seizure of the Indian monarch, his confinement in irons, and the execution of his officers, till all these things seem actually passing before me. And, as I ponder on our exploits, I feel that it was not of ourselves that we performed them, but that it was the providence of God which guided us. Much food is there here for meditation!' There is so, indeed, and for a meditation not unpleasing, as we reflect on the advance, in speculative morality, at least, which the nineteenth century has made over the sixteenth. But should not the consciousness of this teach us charity? Should it not make us the more distrustful of applying the standard of the present to measure the actions of the past?"

The Croton Aqueduct. By J. B. Towers, of the Engineer Department of the U. S. New York and London, Wiley & Putnam.

THE value, to every large community, of an abundant supply of pure water, and the physical, moral, and medicinal importance of frequent and profuse applications of it to the human frame externally and internally, were a great deal better understood in former times than now; and were certainly applied with much greater effect, despite the exertions of Father Mathew, Vincent Priessnitz, Temperance Societies, and Committees of Parliament for improvement of towns, cities, and the dwellings of the people. The English are certainly neither a bath-taking nor a water-drinking people. Perhaps they are of opinion that for nine months of the year, they have fogs and showers enough, and rain enough around them, in the murky climate of our sea-girt country, to render any further application of the pervading fluid a matter of supererogation. Yet, certainly, it is not so. Even in the moist English climate, frequent and ample ablution is an element of health and vigour, and contributes to the soundness of the mind, by assisting the body in the discharge of the functions of perspiration and digestion. The necessity for artificial stimulus, so ruinous to both body and mind, is frequently the result of inattention to the purification of the skin—and thus the want of frequent external ablution, renders the wholesome beverage of pure water insufficient for the demands of a digestion and respiration which are overburdened by neglect.

To supply and secure to the inhabitants of large cities and populous towns, pure air and pure water, is one of the first duties of every legislature, national and local. Yet it is only recently, and in this country to a very limited extent, that much attention has been directed to a subject so important to the well-being of the people. Notwithstanding all the aids of practical science and the expedients of modern mechanical skill, the air of our manufacturing towns is still loaded with smoke, their lanes and alleys with filth, and their crowded dwellings with putrefying and diseased air—ills which the rich rarely consider until they are at last conveyed to them through the channels of the disease and contamination engendered by this neglect, and ascending in fevers and cholera, plagues and epidemics, which in their progress execute fearful havoc alike on negligent rulers and the objects of their neglect. Then, perhaps, a fever hospital is the result; the symptom is treated, but the source of the disease overlooked and neglected.

Draining, Sewerage, Ventilation and Smoke-burning are among the first of the duties of a home legislation, of a beneficent government, in such a country as this. We have had some talk in Parliament and elsewhere on such subjects—talk, but little else. To these we may add one other not less important—a Profuse Supply of Pure Water—not, as hitherto, in pail-fulls and jug-fulls, doled out in a wretched pittance to the hard taxed water-rate payer; but streams of running water, ample for all purposes and for all persons, especially the poor and hard-wrought among the people—for these especially. This has not been accomplished in this country—yet we know not where it is more wanted, or where that want might be more easily supplied.

It has frequently struck us with wonder, that the enormous powers of the modern steam-engine have not been more directly brought to bear on this improvement of the social condition, and physical welfare and comfort of mankind. When it is known that one pound of coal will raise, by a Cornish steam-engine, ten thousand gallons of water ten feet high, how should we be ashamed when we render the stinted allowance which we dole out to the inhabitants of our lanes and alleys, while the very air they breathe is contaminated by volumes of filthy smoke from the very engines which make those men rich, whose carelessness and disregard for the health of others is the true source of all that impurity, and all that filth of atmosphere! Surely it would not be too much to demand, that one tithe of the steam-engine power, which is devoted to the enrichment of the few, should be directly applied to the promotion of the well-being and the preservation of the health of the many, by whose labours those few are themselves enriched.

It was such a benevolent view as this that, two hundred years ago, actuated the enlightened, far-seeing inventor of the steam-engine, when he revolved the high purposes to which the conceptions of his fertile mind might one day be applied. Soliloquizing of this "semi-omnipotent engine," "by many years' experience and labour so advantageously by me contrived," he continues—"and I may boldly call it the most stupendous work in the whole world; not only with little charge to drain all sorts of mines, and *furnish cities with water*, though never so high seated, as well as to *keep them sweet, running through their several streets*, and so performing the work of scavengers, as well as furnishing the inhabitants with sufficient water for their private occasions, but likewise," &c.—So meditated, planned, and advocated one of the aristocracy of intellect as well as rank in those days, alas! too far in advance of his own times—and of ours.

True it is, that our towns are in general supplied with water; true it is, that it is not now, as once, sold in "haporths" from the barrels on the horse's back, from door to door; but then, it is the rich who chiefly benefit, and benefit in proportion to their wealth. The works, instead of being public works for the common good, are the private enterprise of companies for private gain; their profitable customers are the ratepayers; and it is always with difficulty and parsimony that a supply for public purposes is at any time to be obtained.

It is plain, then, that the introduction of the supply of pure water into any town should be the work of the community on behalf of that community, and with no view to individual advantage. The supply should come, as in the time of the Romans, in an artificial river of large dimensions, instead of the paltry pipes which now smuggle it unseen to the houses of the rich. At certain hours of the day,—say morning and evening,—the open sewers on each side of the street should run with a copious supply, to carry off every impurity; and the regulations of the police should bring every housekeeper to the door with her broom, to wash and purify the whole of the pavement in front of her dwelling. In every lane and alley should bubble and ripple along this purifying stream, carrying away all filth, and giving to the houses and the streets a more than Dutch cleanliness. Then the supply for domestic use, how copious should it be! Every square, every street, every court, every alley should have its fountain playing high in the sight of its inhabitants, testifying to all men the care and forethought, and wise benevolence of the legislature; the large basins which receive these jets should be free to the poor, and the rich should pay for all. Such is a course which wisdom and forethought should enable every community to follow at much less expense than the stunted pipe costs at present, but with how much greater benefit, and comfort, and health. Twenty endowed hospitals, and a regiment of scavengers, and a battalion of police,

Digitized by Google

were not so effective for the well-being, health, happiness, and peacefulness of the inhabitants as this—a truly patriarchal kind of social governing. And much of all this, it appears from the work before us, New York has done—been in a manner compelled to do, and done only at last; not at once, or at first, but at last; not spontaneously, and from the love of all men, but much, it seems, for self-preservation and love of life without fever. The necessity was felt in 1774, when there were only 22,000 people congregated together. In 1798 and 1799 it was matter of talking, and of letter-writing, and even of asking an engineer whether water could be brought in; which was, accordingly, replied to in the affirmative; *naively* telling us—as engineers now-a-days are even compelled sometimes to admit in cross-examinations—that they "neither used levels, nor made any survey of the country, nor measured the flow of the stream, but their opinion was founded on personal view, gained by walking over the ground." In 1822 we next hear of the matter; and it is not now engineers walking over the ground, but the more modern invention, "committees sitting upon it;" and, finally, an accurate survey and estimates, then a report made and approved. The committee have again sat, talked, approved, reported, and again the matter ends—still no wholesome pure water for the city. But now comes a more serious element into the question: *yellow fever* enters the city, commences its ravages alike on rich and poor, beginning, of course, with the latter, who could not get water, and avenging them on the former, who could but would not give it them. Then, indeed, do the bustling mayor and active town council begin to think something might as well be acted as talked. In 1824, 25, 26, we have reports, prospectuses, acts of Congress, ostensible shares, but as yet no water—only on paper. In 1831, there is again talk of taking "more decided steps;" various communications, resolutions, and reports, adducing facts and arguments, are made, in one of which it is actually stated, that the parties now are in earnest, and "require our municipal authorities no longer to satisfy themselves with speeches, reports, and surveys, but *actually to raise the means and strike the spade into the ground.*" These are, indeed, stout words, meaning actual hard labour of digging, and do, indeed, look like a beginning. But the end of the talking is not yet.

Preparations to act, not conducive to action, were all that flowed from the requisitions of 1831; and even the *yellow fever* had now been forgotten. But 1832 brought *the plague of cholera* into the city. Then did the paternal corporation of the municipality arouse itself once more with something of earnestness. Aldermen and members of the common council dying of pestilence, bred in the poorer districts of the town, and in part engendered by want of an ample supply of pure water—alderman and councillor dying of pestilence, bred by ineffective legislature and executive in their own city—were circumstances to bring the subject home to the men and their families. There is now a mighty commotion at the council board. "The Committee of Fire and Water pursued the subject with energy;" and "Myndert van Schaick, being a member of the Board of Aldermen at that time, and holding the situation of Treasurer of the Board of Health, became deeply interested in the measure." With a truly Dutch love of cleanliness and energy of character did the worthy Van Schaick bestir himself; so that after four years of further talk and deliberation, the work was—actually set a-going, and the threat of 1831 was actually put in execution, the New Yorkers having proceeded to "raise the means, and strike the spade into the ground." In May, 1837, the work was commenced, and on the 4th of July, 1842, the waters of the Croton traversed the aqueduct, and entered the joyous city of New York.

The means by which this result has been wrought out are described in the work before us. And in truth this same Croton aqueduct is one of the most remarkable works of modern times, far outstripping our own wretched Water-Works—East London, or West London, or North or South London Water-Works, and all other like private joint-stock enterprises as pump along driblets underground to the ratepayers at so much per gallon per day. Here we have the waters of a river dammed up at their sources, pure and undefiled, a virgin stream, springing up among the woods in a remote forest, and consecrated to the health and happiness of a great city no less than *forty miles* off. The waters of the river, being pent up at their fountain head in the silent woods, are to be transported, or have the means of transporting themselves, through a rough and uneven country those forty miles. An artificial channel, built with square stones, supported on solid masonry, is carried over valleys, through rivers, under hills, on arches and banks, or through tunnels and bridges, over these forty miles. Not a pipe, but a sort of condensed river, arched over to keep it pure and safe, is made to flow at the rate of a mile and a half an hour towards New York. *A mile and a half of pure water measured off to the drinking inhabitants of New York every hour!* And yet this is no tale of a sea serpent, or of a tub, for the reservoir into which this river empties itself on reaching New York, is the worthy basin of such a stream: it covers the area of seven squares of the city of New York, which had been laid off as building ground. It is thirty feet high, covers more than thirty acres, and contains one month's supply for the city, supposing the feeder to fail—a longer period of siege than in the present state of the fortifications of New York it is likely to withstand. It is characteristically stated to extend in length from Seventy-ninth to Eighty-sixth street, and contains one hundred and fifty millions of gallons. Two miles further on is another reservoir for distributing these waters, built entirely of stone, four hundred and thirty-six feet square, and forty-five feet deep, containing twenty millions of gallons. The cost of the whole has been about two millions of pounds sterling.

And then how this river of blessing is distributed!—Passing a picturesque point of the Haarlem river, where there is a pressure of one hundred and twenty feet high, an aperture, seven inches in diameter, is made, and a gigantic *jet d'eau*, equal to a score of Versailles fountains, rears itself in the air to the height of one hundred and fifteen feet, a wonderfully near approach to the height from which it descends. We perfectly sympathize with the writer when he exclaims, after describing this phenomenon, "to those who had watched over the work during its construction and looked for its successful operation, this was peculiarly gratifying! to see the water (for the first time) leap from this opening and rise upwards with such force and beauty occasioned pleasing emotions, and gave proof that the design and construction of the work were alike faultless, and that the proudest hopes of the projectors would be realised. There it stood, a whitened column, rising erect, or shifting its form, or waving like a forest tree, as the winds swayed, with the rainbow tints resting on its spray, while on the other side the wooded hills arose to rival its height; all around was of Nature—no marble basin—no allegorical figures—only Nature adorning the scene with the grandeur and beauty of her green hills and rugged mountains." On reaching the town, with equal liberality, the stream animates the squares and the parks, leaping joyously in the air, murmuring soft music, sending forth cooling and refreshing vapours through the hot summer air, and in the words of the Marquis of Worcester, "keeping the town sweet and running through its several streets." No wonder then, that on the 4th of July, 1842, the entrance of the Croton river into New York was an event hailed by the citizens of New York with a joyous and universal holiday. "The Croton water, with the beauty and grandeur of its fountains, was received with unrestrained enthusiasm."

With works so gigantic as an undertaking of this extent must necessarily require, it was to be desired that some account of them should be given to the public, not only for the information of engineers, but also for the guidance of other communities—and which community is not of the number?—who may equally want and equally desire an ample supply of clear water. This work is, we presume, by a young engineer, and designed for popular, quite as much as for professional, use. It is illustrated by many engravings of the picturesque points of the works, generally well drawn, and sometimes villanously engraved; those executed in mezzotint are often good and clever, the others are wretched. The view of the fountain head, above the Croton dam, is every way good, and that below the Croton dam is every way bad. Plate 20 is perhaps the best in the volume, containing the view of the aforesaid *jet d'eau* on Haarlem river—a pleasing subject very pleasingly treated and delicately executed. On the whole, the subject, which is not altogether a *dry* one, is made as interesting as its nature would admit. There is prefixed a short account of some remarkable aqueducts of modern and ancient times, to support a standard of comparison for the Croton viaduct. The work is handsomely got up, for an American work. We suggest to Mr. Weale the mechanical details of these works as a very suitable continuation to his 'Public Works of America,' of which we have heard nothing lately. On the whole, this book is creditable to New York, and the work it describes pre-eminently so.

The following details may be interesting to the professional reader:—

"The sources of the Croton River are principally in the county of Putnam, at a distance of fifty miles from the city of New York; they are mostly springs, which in that elevated and uneven country, have formed many ponds and lakes, never failing in their supply. There are about twenty of these lakes which constitute the sources of the Croton River, and the aggregate of their surface areas is about 3,000,800 acres. From these sources to the mouth of the Croton at the head of Tappan Bay in the Hudson, the distance is about twenty-five miles. The country bordering upon the Croton is generally elevated and uneven, not sustaining a dense population and cleared sufficiently to prevent injury to the water from decayed vegetable matter. The river has a rapid descent, and flows over a bed of gravel and masses of broken rock. From these advantages there is good reason to suppose that the water will receive very little impurity from the wash of the country through which it flows, and there is no doubt that the sources furnish that which is peculiarly adapted to all the purposes of a large city. The water is of such uncommon purity, that in earlier days the native Indian gave a name to the river which signifies *clear water.*"

Flow of water in the Croton River, Capacity of the Fountain Reservoir, &c.

"The medium flow of water in the Croton where the fountain reservoir is formed, exceeds fifty millions of gallons in twenty-four hours, and the minimum flow, after a long continued drought, is about twenty-seven millions of gallons in twenty-four hours. The dam on the Croton River is about thirty-eight feet above the level, which was the surface of the natural flow of water at that place, and sets the water back

Digitized by Google

about six miles, forming the Fountain Reservoir which covers an area of about 400 acres. The country forming the valley of the river was such as to give bold shores to this reservoir generally, and in cases where there was a gentle slope, or a level of the ground near the surface of water, excavations were made, so that the water should not be of less depth than four and a half feet. The great length of this reservoir is favourable for the purity of the water which enters the aqueduct: spread over this large surface, it will have an opportunity to settle and part with some of the impurities which it receives during rainy seasons from the wash of the country through which it flows. The available capacity of this reservoir down to the level where the water would cease to flow off in the aqueduct, has been estimated at six-hundred millions of gallons. Could we suppose that the Croton River will ever in any season of drought fail to furnish a supply greater than would be carried off from this reservoir, and the reservoirs in the city by evaporation, we have still a supply of water which would be sufficient for one million of inhabitants during the space of thirty days, estimating the amount necessary for each inhabitant to be twenty gallons for every twenty-four hours. But we may assume the number of inhabitants at present to be one-third of a million, and therefore we have a sufficient store of water in this fountain reservoir to supply them for the space of ninety days in the emergency before supposed. In addition to the quantity in the fountain reservoir we have sufficient in the reservoirs at the city to supply one-third of a million of inhabitants for about twenty-five days at the rate of supply before mentioned. Thus we find, should such a limit as we have supposed ever happen to the supply from the river, the season of drought cannot certainly be supposed to continue during the length of time (about four months) that would be required for the present population of the city to exhaust the quantity in store when all the reservoirs are full. The minimum flow of water in the river where the dam is constructed, has been stated to be twenty-seven millions of gallons for every twenty-four hours. This would be a sufficient supply for one million of inhabitants; and should the population of the city increase to one million and a half, this supply, together with the quantity in store, will probably be sufficient during any season of drought. There is therefore no fear in regard to the supply for the present, and should the time arrive when the city will require more than the present facilities afford during low stages of the river, other streams may be found which can be turned into the upper branches of the Croton to draw from in seasons of drought. These suggestions would only be useful to provide a supply during the low stages of the river, for at other seasons the flow of water in the Croton would be equal to the full capacity of the aqueduct.

"A description of the general design and purpose of the channel-way in connexion with the reservoirs, will serve to give a clear understanding of the operation of the work. Having ascertained the elevation in the city at which it would be desirable to use the water, it was only necessary then to find a point on the Croton River, where a dam could be constructed that would turn the water into a channel having a gradual descent to the required elevation at the city. So that it may easily be conceived it is only diverting the water into another channel where it will flow on unobstructed. The manner in which water is conducted from its natural channel for the purpose of propelling the machinery of manufacturing establishments, by a race-way or other channel, is a simple illustration of the operation of this great work. At the place where it was determined to build the dam across the Croton River, the surface of the natural flow of water was about thirty-eight feet below the elevation required as a head for the water to flow into the aqueduct leading into the city. By going further up the river the dam would have been of less height, and a point might have been found where it would be only necessary to build a dam to turn the water, and not form a pond of much extent above it; but for such purpose it would have been necessary to go above, where some important tributaries enter the river, and would have required a considerable extension of the aqueduct. It was perhaps desirable to form this fountain reservoir, so that it would afford a supply of water to draw from, should there at any future time, in a season of drought, be more required for the use of the city than would be flowing in the river. No essential change occurs in the form of the channel-way from the fountain reservoir on the Croton to the receiving reservoir on the Island of New York, a distance of thirty-eight miles, except in crossing Haarlem River to reach the island, and in passing a deep valley on the island, where iron pipes are used instead of the channel-way of masonry to provide for the pressure consequent upon a depression from the regular plane. At these points the iron pipes descend and rise again, so that when the latter is flowing in the channel-way they will be constantly full. Thus it will be perceived that the channel-way of masonry will never be filled entirely so as to occasion a pressure on all its interior surface. The surface of the fountain reservoir is 166½ feet above the level of mean tide at the city of New York, and the difference of level between that and the surface of the receiving reservoir on the island of New York (a distance of thirty-eight miles) is forty-seven and a half feet, leaving the surface of this reservoir 119 feet above the level of mean tide. From the receiving reservoir the water is conducted (a distance of two miles) in iron pipes to the distributing reservoir, where the surface of the water is 115 feet above the level of mean tide. This last is the height to which the water may generally be made available in the city."

Such is the general design of the aqueduct, and for the conditions under which it was executed, and the nature of the hydraulic construction, we must refer the reader to the work itself. Sufficient particulars are there given to convey a general idea of the nature of the works and the manner of their execution, but we suggest the propriety of a publication of the details and specifications of the whole work, with accurate observations on the actual velocity and delivery of the stream, the slope of its surface, the distribution through the city, and the expenditure of the *jets d'eau*, &c. as likely to prove a valuable addition to the library of the engineer, and of all the public bodies and private individuals interested in the water-works of great cities.

Diary of Travels and Adventures in Upper India. By C. J. C. Davidson, Esq., late Lieutenant-Colonel of Engineers, Bengal. Colburn.

Mr. Davidson informs us that he is a gentleman of more than portly size, a lover of field-sports, a scientific epicure, and a bit of a humourist. His work is quite consistent with this description of himself; it is written in a style of sarcastic banter, in which old campaigners are accustomed to indulge at the mess-table, especially when they have a lurking suspicion that their merits are not sufficiently appreciated by the higher authorities; and there are occasional touches of bitterness, which bear all the marks of having been suggested by personal disappointment. It is so common for tourists to declare that they did not look forward to publication when they made their original notes, that the phrase has come to be regarded as a conventional matter of course; but, in this instance, there is abundant internal evidence to show that Mr. Davidson's avowal is perfectly true; for no one would have kept so disorganized and disjointed a record, who intended that it should be seen beyond the limited circle of his own friends. Mr. Davidson's excursions, however, brought him into parts of India which are but little known. His sketches of the condition of the country are sometimes graphic, and, we have no doubt, honest; take, for instance, his account of Dhampore, in Rohelcund, which is far from being complimentary to the lords of Leadenhall Street:—

"Dhampore contains a good many substantial *old* houses; such a thing as a new brick huvailee (the origin of our English word hovel?) is not built, at an average, in large towns once a year. The surplus wealth of India, that used to be employed in building extensive towns, crowded ghauts, magnificent stone or brick Seraces, some of them capable of containing from six to eight thousand people; enormous massive bridges, splendid mosques and temples; is all gone; it has disappeared entirely. All the towns in India, with a very few exceptions, are in ruins. Delhi is surrounded by ruins. Agra, Booranpore, Aurungabad, have immense suburbs in ruins. The Deckan is a heap of ruins. Many towns in central India that had their hundreds of thousands of inhabitants, are now literally without one, and are swarming with leopards, tigers, elks, and buffaloes. In deep forests you stumble upon Hindoo temples, Mohummedan gateways, stone tanks eight hundred yards square, brick wells of large dimensions; scores of acres of burying-grounds, and all the other concomitants, and proofs of wealth, and power, and population. Malthus would never have written his too celebrated work, nor Godwin ever written his too little valued answers, had they been in India. India is a large forest, with a great many cultivated spots. India—I say it after due consideration—could contain and support five times its present population with ease; and yet it is unquestionably the poorest country in the known world."

Sultan Mahmúd, of Ghizni, was not the only ruler of the East who could enable owls to endow their daughters with ruined villages; the Company have, it seems, given some opportunities of adding ruined cities to the bargain.

Our author had the good fortune of reaching Hurdwar at the time of its great annual fair. He gives some amusing details of the tricks in horse-dealing, practised by Oriental jockies; but as these are not very different from the artifices practised nearer home, we take a sketch of other objects, which possess rather more novelty:—

"Huge heaps of assafœtida in bags, from the mountains beyond Cabool; tons of raisins of various sorts; almonds, pistachio nuts, sheep with four or five horns; bulkh cats, with long silken hair of singular beauty; faquers begging, and abusing the uncharitable with the grossest and most filthy language; long strings of elderly ladies proceeding in a chant to the priests of the Lingum, to bargain for bodily issue; ghat priests presenting their books for the presents and signatures of the European visitors; groups of Hindoos surrounding a Brahmin, who gives each of them a certificate of his having performed the pilgrimage,—fill up various spots, and infuse liveliness and spirit into the scene."

Passing from one subject to another, *regis ad exemplar*, that is, "without more ceremony than the author himself," we regret to learn that the system of convict-discipline in British India is of little efficacy in repressing crime. *Quis custodiet ipsos custodes?* was asked long ago, and "Who will watch the watchmen?" still continues to be the unsolved difficulty of police regulation all over the world:—

"A jail-bird can easily be distinguished after the first six months, by his superior bodily condition. On his head may be seen either a kinkhâb or embroidered cap, or one of English flowered muslin, enriched with a border of gold or silver lace. Gros de Naples is coming into fashion, but slowly. On his back is a blanket (if he chooses to carry it out of prison), which is renewed annually; and he has in his hands a handsome set of brass plates and dishes, or a curiously carved hooka bottom, if on good terms with the ruling powers. See him at work: the burkundauze is smoking *his* chillum, while he and his friends are sound asleep, sub tegmine fagi! All of a sudden there is an alarm—the judge is coming!—up they all start, and work like devils for ten or fifteen seconds, and then again to their repose. This is working in chains on the roads! In fact, after a man is once used to the comforts of an Indian prison, there is no keeping him out!"

In several places our author adverts to the imperfect administration of justice by the civil servants of the Company. The officers are generally compelled to depend on native agents, who render them difficult of access, for the purpose of securing fees and bribes for themselves:

Digitized by Google

"Our civil servants are not accessible; let the fault rest on whom it may, they are not accessible; this the natives feel and lament. A strong instance of this sort once occurred to me. I was requested by a landholder of considerable wealth and respectability, who had once held the situation of kotwal in a large city, to obtain the honour of an interview with the wife of a civil servant of high moral and personal respectability, whom he had dandled on his knee as an infant. 'Introduce you! said I; 'why not go yourself?' 'I go! Why, sir, I dare not approach the very compound of the house he lives in!' 'How!—why!' 'Why, I'll tell you. If his head man should hear that I ventured to present myself before the gentleman without his permission, he would immediately harass me by some false complaint, or even by instituting an inquiry into the very title-deeds of my estate, which might, however falsely, terminate in my ruin! It is not long since I paid eleven hundred rupees to —— to suppress false claims, which, had they actually gone into court, would have cost me ten times the sum."

A more extraordinary instance of the imperfection of the administration of British law in India, was brought under Mr. Davidson's notice at Calpee. He there made acquaintance with the celebrated murderer, robber, and smuggler, Gopal: the brief history he gives of this eminent worthy requires no comment:—

"Gopal is at present about forty-two years of age, a tall, athletic man, with a most hideous muddy eye, having the glare of hell itself. It is said that he has always fifteen servants upon stated pay, and can in a few hours command the services of three hundred armed and desperate men. He is a smuggler of salt, and although mean in his apparel (how is it that the greatest geniuses are generally so slovenly? is it a law of nature?) he asserts that his daily expenses exceed six rupees, and he *must* get them, either by robbery or smuggling. The strength and vigour of the Calpee police may be fairly estimated by the fact, that Gopal has been known to walk into the dwelling-house of a rich merchant, in the centre of the most populous parts of the town, and when he was surrounded by his alarmed servants and family; he has very coolly selected the gold bangles of his children, and silenced the trembling remonstrances of the Mahajun by threats of his vengeance. Nor is this a solitary instance; but he pursues this line of conduct with so much tact and judgment, that he has now established his character, and is greatly respected in the city. When he murders, Gopal is equally above all concealment; as in the recent case of a sepahee returning with his savings for the subsistence of his family, who was waylaid and murdered by our hero in open day. After securing the plunder, he very coolly gave himself up to justice, acknowledging with the most praiseworthy candour, that he had killed the sepahee, who had first assaulted him. It was proved on the trial that the sepahee was wholly unarmed. He was sentenced to be hung by the court of Hameerpore, on his own confession; but so tender are Feringees, that Gopal was released, from want of evidence, by the Sudder Court at Calcutta. Their objection was excellent, though curious: it was, that if Gopal's confession were taken, it must be taken altogether, and not that part only which could lead to his conviction. Gopal was released, and now walks about in his Sunday clothes, or may be seen smoking a delicate chillum in the verandah of his brother's house. Gopal is a living evidence of British tenderness."

A brief conversation with a Thug whom Mr. Davidson suspected of having joined in robbing him, deserves to be quoted:—

"I took the liberty of recounting the interesting particulars of a neat robbery, which had been committed upon my private property while in tents at Hameerpore; and the lively, nay, ultra-professional joy which illuminated his countenance, tempted me to exclaim, rather unguardedly, 'Perhaps you were employed in that little affair yourself, or it may have been executed by some of your agents?' His manner immediately changed 'from lively to severe,' and with a look that might have frozen a less innocent querist, he exclaimed with a sneer, 'No, sir! murder, and not robbery, is my profession!' 'What!' said I, in a timid respectful way, 'do you thugs never divert yourselves with the minor performances of the profession? 'Humâra rozgâr nuheen—it is not my profession! We do rob, there's no denying it, but it's not our profession; we look upon it as low and dirty, and I assure you that none but the merest novices would descend so low as to rob a tent or a dwelling-house."

The Thug's notion of respectability may be compared with a Sepoy's exposition of the doctrine of exclusive salvation, practically afforded to some of the Fakérs at that favourite and holy spot of Hindú pilgrimage, the meeting of the Jumna and the Ganges:—

"Observing that one of these impostors was surrounded by a group of sepoys clad in full uniform, and that they kicked and abused him without mercy, I rode up to interfere. 'What is the matter, my brothers?' said I. 'Why do you maltreat this poor beggar? What has he done to deserve beating and abuse?' One of them briskly approached me, and, with a countenance marked with the strongest indignation, exclaimed—'Sir, this rascal is a chumâr (a low caste, dealing in hides of animals, cutting up carrion and the like), and I am a chuttree! (a Rajpoot). What right has he to defile this holy ground? If he should die of any disease contracted here, the villain would most assuredly claim the merit of having died at the Tribênee, and thus get to heaven! a low scoundrel like that! Is this to be endured? Do you suppose that we have no proper sense of religion to allow such desecration?'"

As a contrast to Hindú intolerance, we shall quote a summary of the edicts issued by the Rajá Peyâdâssí, a Buddhist monarch of India who reigned more than two thousand years ago. The deciphering of the inscriptions on the stone pillars containing these edicts, is one of the many achievements for which Eastern scholars are indebted to the learning, assiduity, and ingenuity of Mr. James Prinsep:—

"On one of the pillars of the Rajah Piyádâsee, is found—I. Edict, prohibiting sacrifice of animals for food and religious purposes.—II. Provides a system of medical aid for men *and animals* throughout his dominions!—III. Enjoins a quinquennial *humiliation*, or the republication of the great moral maxims Buddhistical,—viz., 1. Honour thy father and mother. 2. Charity to kindred, *neighbour*, and priesthood. 3. Humanity to animals. 4. To preserve the body in temperance. 5. To keep the tongue from evil speaking! 6. Appoints *custodes morum*, or a moral police, to take cognizance of the conduct of people at meals, domestic life, families, and conversation; and missionaries are appointed 'to drown them with the overflowing truths of our religion, to release them from the fetters of sin, and bring them into the salvation which *passeth understanding!!*' This is an exact quotation! I skip one or two edicts; not because they are somewhat commonplace. Now for the tenth. 10. Comments on the 'glory or renown' which attend merely the vain and transitory deeds of this world. The rajah being actuated by higher motives, *looks beyond* for the reward for which he strives for heroism (fighting the good fight) the most zealous, yet respectful. 'It winds up (says the learned Prinsep) with a curious passage about victory; which, as far as I can make it out, (mark how he speaks of himself!) describes the victory of victories to be, that which overcometh the passions, and happiness itself, which conquereth the things of this world, and the things of the world beyond, and is the true object of desire!' Four or five of these pillars, more or less mutilated, have been found in different parts of the Bengal presidency; but it fortunately happens, that the erasures do not occur on the same parts of the pillars, and hence a whole can be obtained."

Leaving our readers to form their own reflections on this interesting monument of antiquity, we turn to a natural phenomenon which we do not remember to have seen described before:—

"I observed a singular curiosity,—a small dome-covered building, about eight feet square, with walls two feet thick, had accidentally received a peepul seed, which had taken root, and become a tree. In the course of a few years, it had thrown out roots, which completely surrounded the building; and eventually the roof was sustained entirely by the tree, now above fifty feet high; and the natives had removed the walls. The effect was strikingly picturesque, and only required a venerable, long white-bearded faqueer, to make it perfect. Something nearly similar I have since observed on the Garden-reach road."

Another natural phenomenon of a very different kind, an Indian hail-storm, is described with great spirit:—

"It was about the middle of the month of January, and I had left Sauguor, *en route* to Cawnepore, three marches. About five in the afternoon, the horizon to the west became darkened by a dense black stripe of cloud, which rose gradually to the height of about forty-five degrees before I was much alarmed. Then came gusts of cold wind, each lasting a minute or two—then a gale, which lasted for a quarter of an hour, the sky gradually darkening. At last there was a perfect lull, and then a few drops of rain—a slight shower, and then another lull. Suddenly a sound, the most terrific that human ears ever heard, as that of a million of cavalry galloping over a plain of marble, advancing, until I could not believe that I was listening to mere sound, but to something of which I had hitherto had no experience. This continued for a quarter of an hour. The top or roof of my tent having been tightened by the rain, the hailstones caused it to rattle as if it had been a drum. I expected every moment to see the tent blown to atoms, but the ropes having been carefully tied, it was thereby saved. The corners, however, were weighed down with maunds of hailstones. When the storm finished, I rushed out, and found what had lately been a beautiful, uninterrupted sheet of green corn, for miles, was now glistening six inches deep with hailstones—the whole appearance of the country being that of an English winter. The leaves of the burgot, which are nearly as thick and tough as cows' skin, were cut to pieces; enormous boughs had been broken, and thrown on the ground, without being heard through the frightful blasts. I marched five marches across the traces of this storm, and the leaves of all the trees bore the marks of the storm in the same manner as did the burgot. I found that the storm had begun to the west of Bhopal, at which place it blew away several of the tents of a marching regiment: at Jubbulpore, it unroofed the mess-room of a regiment while the officers were collected for dinner—rolled it up, as if a sheet of paper, and left it on the ground some hundred yards off."

The extracts we have given are sufficient to illustrate the very miscellaneous contents of these volumes; but before closing them we must repeat our complaint of the ever-varying orthography of Indian names, for which each writer seems to have framed a system of his own. Who would recognize his old acquaintance Alí in the barbarous Ulee? The Asiatic Society and the Oriental Translation Committee having recognized Sir William Jones's system as a standard, any departure from it ought to be condemned as mere affectation.

Historical Sketches of Statesmen in the Reign of George III. By Lord Brougham, F.R.S., &c. Knight & Co.

THIS third and concluding volume of Lord Brougham's 'Historical Sketches' is dedicated to M. Guizot, and given to the public as a mark of the author's gratitude for "the favour" with which he affirms that the two former volumes were received. The public has unquestionably done a great deal for Lord Brougham, more than the extension of its patronage to the works of his pen; and it may fairly be doubted, whether he is discharged of his debt by the oblation of another octavo. Indeed, we have reason to opine,—reason furnished by the pages before us,—that this "small return for so much kindness" is intended more for the public that reads books, than for the public that judges of men's lives and actions, inasmuch as there is discoverable, nay manifest, throughout the work, a splenetic hostility to the latter, exhibited in angry denunciations of the great organs of

Digitized by Google

opinion, which have sinned, it is but too probable, in refusing to accompany his lordship's trumpet. However, his gratitude, such as it is, is not confined to the bare contribution of a new book to the book-shelf; we are informed (and the information pleased us) that the noble writer has also felt it his duty to "redouble his care to prevent any bias of a party or personal kind from influencing the opinions pronounced, whether upon men or measures." There is certainly no writer of the day more in need of a Mentor at his side to warn him against aberrations of the kind. We observed, in noticing the first series of the 'Sketches,' that "his parliamentary and forensic habits are favourable to the indulgence of one-sided views, and to the adoption of notions, because they suit the occasion;" we remarked also his "habitual devotion to special purposes;" and, giving his lordship credit for a sincere desire to get the better of these faults, we cannot but perceive, in the volume before us, fresh evidence of the mastery they possess over his mind, and how necessary it is for him to lay on the lash with augmented vigour, if he ever hopes to whip the offending Adam out of his character. He would appear, during the four years that have elapsed since he commenced this work, to have flagellated himself with all the delicacy of Sancho, and to have been full as "tender-conscienced of his back," as Hudibras. He is still the same special author, still the same "occasional writer," as far as ever from being even a contributor to History, for which he wants the chief and elementary qualifications—intellectual composure, a cool judgment, and a passion for truth—the only passion, indeed, from which his works are tolerably free.

At the same time, it must be admitted that never did any sketches by mortal or immortal pencil more abound in wrath against the vices of public personages. The iron virtue of the noble lord has no mercy for the offences of courtiers, or of demagogues, no toleration for the reckless pen, or the licentious tongue, no patience at the spectacle of self-seeking ambition, and he turns from the sight of a renegade, as if he had trodden on a toad. Standing immaculate in the crowd of lawyers, senators, and popular leaders, he casts, as he has right to do, his missiles in all directions round about him, and woe to the man who has ever lusted after notoriety, or committed fornication with the mob. See how he "bolts his cloudless thunder" at the head of Wilkes, not without some waste, we think, of the divine artillery, seeing that nobody in the present age shows any disposition to make Wilkes an idol, or a hero:—

"But the fall, the rapid and total declension of Wilkes' fame—the utter oblivion into which his very name has passed for all purposes save the remembrance of his vices,—the very ruins of his reputation no longer existing in our political history—this affords also a salutary lesson to the followers of the multitude—those who may court the applause of the hour, and regulate their conduct towards the people, not by their own sound and conscientious opinions of what is right, but by the desire to gain fame in doing what is pleasing, and to avoid giving the displeasure that arises from telling wholesome, though unpalatable, turths. Never man more pandered to the appetites of the mob than Wilkes; never political pimp gave more uniform contentment to his followers. Having the moral and sturdy English, and not the voluble and versatile Irish, to deal with, he durst not do or say as he chose himself; but was compelled to follow that he might seem to lead, or at least to go two steps with his followers, that he might get them to go three with him. He dared not deceive them grossly, clumsily, openly, impudently—dared not tell them opposite stories in the same breath—give them one advice to-day and the contrary to-morrow—pledge himself to a dozen things at one and the same time, then come before them with every one pledge unredeemed, and ask their voices, and ask their money too, on the credit of as many more pledges for the succeeding half-year—all this, with the jealous and obstinate people of England, was out of the question; it could not have passed for six weeks. But he committed as great, if not as gross frauds upon them; abused their confidence as entirely, if not so shamefully; catered for their depraved appetites in all the base dainties of sedition, and slander, and thoughtless violence, and unreasonable demands; instead of using his influence to guide their judgment, improve their taste, reclaim them from bad courses, and better their condition by providing for their instruction. The means by which he retained their attachment were disgraceful and vile—like the hypocrite, his whole public life was a lie."

We have no disposition to defend Wilkes, nor is it for such a purpose that we have chosen this vapouring passage for citation. But let the reader recal to mind the troth plighted by the noble author in his introduction, his engagement to allow no "party or personal" motives or considerations to ruffle the calm flow of the historian, and then let him observe in the allusion to the "versatile Irish," and the obvious innuendo of the succeeding sentences, how difficult it is for habitual intemperance to keep the pledge. It will also be seen into what inconsistencies of statement the writer is betrayed by the febrile condition of his brain. In one sentence, he says that Wilkes "dared not deceive them (the sturdy English) *grossly*," and in another, written with the same drop of ink, he tells us, that "he committed as great, if not as *gross*, frauds upon them," as the living demagogue to whom he so unbecomingly refers. Again he says of the English ringleader—"like the hypocrite, his whole public life was a lie." Now, if we turn back only a page or two, we find the sketch of the same character beginning with these words—"It is only justice towards him to remark that there was *so little hypocrisy* about him," &c. But this is trivial compared with what follows. After describing, in the above declamatory periods, the various profligate arts by which Wilkes obtained his ascendancy over the rabble, his lordship goes on to observe—"It is the *abuse*, no doubt, of *such* courses, that we should reprobate." The abuse of means which had just been stigmatized as "vile and disgraceful!"—the abuse of slander and hypocrisy!—the abuse of the "base dainties of sedition!" We do not accuse the author of holding that there is a fit *use* of slander and hypocrisy, or any way, consistent with moral taste, of serving up to the public the dishes of Wilkes's *cuisine;* we merely tax him with a heinous carelessness of composition, for which he has long wanted the excuse which forensic labours and official engagements erst supplied him with. The whole account of Wilkes is rambling and unconnected beyond measure; every thing is said twice over: indeed his lordship may go into the category of "Heywood and Shirly" as a master of "tautology." After saying that a man "makes no pretence to the purity of private life, or even to its decencies," it is a little superfluous to state, that of "the *more sterling* qualities of strict moral conduct, regular religious habits, temperate and prudent behaviour, &c., he had absolutely nothing." And why "*more sterling*"?—more sterling than what? It strikes us, that all sterling qualities are included in the phrase "strict moral conduct," to say nothing of the ensuing string of excellencies in endless apposition. Lord Brougham, who is well acquainted with the various systems of education, knows as well as any man what would befal an ingenious youth guilty of such loose composition as this, at Eton, or Westminster, or any of those ancient seminaries where the good system still prevails, which is described by Butler as

> ——Virtue's governess,
> Tutress of arts and sciences.

The extraordinary part acted by Lord Camden at the opening of the session of Parliament in 1770, is related in the sketch of that nobleman, and commented on with just severity by the author, who views with the resentment that becomes him, the spectacle of a chancellor turning like a viper upon his colleagues, and assailing them for counsels in which he had himself, sitting at the same board, concurred or acquiesced. The story is this:—

"When upon the assembling of parliament in 1770 Lord Chatham moved an amendment pledging the Lords with all convenient speed to take into consideration the causes of the prevailing discontents, and particularly the proceedings of the Commons touching Wilkes's election, and closed his remarkable reply by affirming that 'when the law ends tyranny begins,' Lord Camden rose and declared, with a warmth unusual to him, that he had accepted the great seal without condition, and meant not to be trammelled by the king (then correcting his expression)—by his ministers; but he added, 'I have suffered myself to be so too long. I have beheld with silent indignation the arbitrary measures of the minister. I have long drooped and held down my head in Council, and disapproved with my looks those steps which I knew my avowed opposition could not prevent. I will do so no longer; but openly and boldly speak my sentiments.' He then supported Lord Chatham's amendment; declared that, if as a judge he should pay any respect to the vote of the Commons, he should look upon himself as a traitor to his trust and an enemy to his country; accused the ministers of causing the existing discontents, and all but in terms, certainly by implications, charged them with having formed a conspiracy against the liberties of the people. The ministers whom he thus accused had, through all the time of their measures causing their discontents, and their conspiracy against public liberty, been his colleagues and still were his colleagues; for, strange to tell, he made his speech, without having taken any step to resign the Great Seal."

We shall now quote a part of Lord Brougham's animadversion upon this event:—

"The cabinet had no great right to complain of the line taken by Lord Camden; for he plainly had given his colleagues to understand that he differed with them, and that, on this account, he withheld his opinion from them. They had a right to object; they were entitled to require his aid, and on his refusing it, to demand his resignation. They chose to retain him among them, and therefore they took him on his own terms. But the party which had a right to complain of Lord Camden, had an equal right to complain of all his colleagues, and that party was the country. A cabinet so constructed and so acting was wholly incapable of well administering the affairs of the nation, and it was the duty of his colleagues to require either his full co-operation or his retirement; and above all it was the duty of Lord Camden to relinquish his high station whenever he did not choose to perform its highest duties. To remain in office while he disapproved of the government's proceedings; to be responsible for measures on which he pronounced no opinion, but held an adverse one; to continue a nominal minister of the Crown, while the most important acts were doing in his name, which he believed must involve the country in a war with her colonies, and endanger also the peace of the empire at home—acts which he regarded as hostile to the principles of the constitution, and subversive of the people's most sacred rights—*was surely an offence of as high a nature as ever statesman committed.*"

Of the morality of this criticism we fully approve: there can be no doubt that Lord Camden's conduct upon the occasion in question was "an offence of as high a nature as ever statesman committed." But what we complain of in Lord Brougham is the levity with which, after pronouncing the justest censure in the strongest language, he incontinently forgets his own recorded sentence, and, in summing up his judgment of the self-same character, delivers himself, without a scruple or a pang, of a contradictory and undiscriminating panegyric. Here is a flagrant proof of this indefensible laxity:—

Digitized by Google

"Two years after he descended to the grave full of years and honours, the most precious honours which a patriot can enjoy, the unabated gratitude of his countrymen, and the *unbroken consciousness* of having, through good report and evil, firmly maintained his principles and faithfully discharged his duty. * * * In the whole of Lord Camden's life there is no passage more remarkable or more edifying than his manly adherence to his own clear and well-considered opinion, in spite of the high professional authority by which it was impugned."

"Unbroken consciousness"! What! — not broken by the stinging memory of his parliamentary conduct in 1770! — not broken by the reminiscence of "an offence of as high a nature as ever statesman committed"? And then we are told that nothing in Lord Camden's life was "more remarkable, or more edifying, than his manly adherence to his own clear and well-considered opinion,"—this, without a syllable of modification, without a solitary set-off, without one retrospective glance at that particular and signal passage of Lord Camden's history, by the writer himself so severely reprobated, and in which assuredly the "adherence to a clear and well-considered opinion" was anything but "edifying," and anything but "manly."

It must, however, be acknowledged that it is only in this way that Lord Brougham is ever liable to the charge of forgetting himself.

We cannot pass from the sketch of Lord Camden without noticing one trait of his public character, for which we are not at all surprised to find that the noble author entertains a feeling of admiration. It appears that he had "no childish fear of lowering the dignity of an ex-Chancellor"! Lord Brougham imitates him in this; but there is another feature which he has not succeeded so well in copying,—he cannot be said to "push his opinions to *the verge of moderation*," his propensity being to press them to the edge of the precipice, as this volume, amongst his other works, abundantly demonstrates.

The sketch entitled "John, fourth Duke of Bedford" has the amiable design of vindicating a character which has been ill-used, and has also been written, the author informs us, with the austere purpose of taking vengeance upon "a certain body of unknown defamers," (appropriately headed by the shade of Junius,) by whose little less than demoniac pranks, it is painfully manifest that his lordship is vexed in his chair by day, and racked upon his couch by night. In the following passage we think we see him presented to our view in something like the agonizing condition of St. Anthony in his cell, with all sorts of imps and devils, but especially the devils of the press, hovering and fluttering before him and about him, pulling, pinching, and clapper-clawing his devoted lordship, and one goblin more forward than the rest presuming to tweak him by the nose:—

"Beside the satisfaction of contributing to frustrate injustice, and deprive malice of its prey, there is this benefit to be derived from the inquiry upon which I am about to enter—we shall be enabled to test the claims of a noted slanderer to public confidence, and to ascertain how little he is worthy of credit in his assault upon other reputations. But we shall also be enabled to estimate the value of the class to which he belongs; the body of unknown defamers, who, lurking in concealment, bound by no tie of honour, *influenced by no regard for public opinion*, feeling no sense of shame, their motives wholly inscrutable, gratifying, it may be, some paltry spite, or actuated by some motive too sordid to be avowed by the most callous of human beings, vent their calumnies against men whose whole lives are before the world, who in vain would grapple with the nameless mob of their slanderers, but who, did they only know the hand from whence the blows are levelled, would very possibly require no other defence than at once to name their accuser. That the efforts of this despicable race have sometimes prevailed over truth and justice; that the public, in order to indulge their appetite for abuse of eminent men, have suffered the oft-repeated lie to pass current without sifting its value, and have believed what was boldly asserted, with the hardly credible folly of confounding with the courage of truth the cheap daring of concealed calumniators, cannot be doubted."

We proceed a few pages, and we hear another equally piteous wail, extorted by the tricks and enormities of the same pack of unseen tormentors:—

"There is no characteristic more universal of such writers than their indiscriminate railing. They are, in very deed, no respecters of persons. Their hand is against every one. Obscure themselves, they habitually envy all fame. Low far beneath any honest man's level, as they feel conscious they must sink were the veil removed which conceals them, they delight in pulling all others down to nearly the same degradation with themselves. Nor is it envy alone that stimulates their malignant appetite. Instinctively aware of the scorn in which they are held, and sure that, were the darkness dispelled in which they lurk, all hands would be raised against them, they obey the animal impulse of fear when they indulge in a propensity to work destruction."

Most righteous is it to defend even departed worth from the shafts of the calumniator; and most righteous is it, also, to feel and to express sentiments of disgust and abhorrence at slander —whether occasional or systematic—whether anonymous or vouched by the name and addition of the libeller. Whether it be for money, or for malice, that false witness is borne against any man, the offence is odious, and its punishment ought to be severe; but why the rage against the vice of calumny just now? Why this furious pamphleteering (for such truly it is) against the abuses of the press just at present? Who has recently stood up and advocated either the excesses of Junius, or the sins of more modern writers of the same reckless school? As it was said of the idle declamation in praise of Hercules, "*Quis vituperavit?*" so we may say of Lord Brougham's diatribe against anonymous slanderers, *Quis approbavit?* Is Junius a model in these days? Do we hold up his style to imitation, much less his morality? Why is it that Lord Brougham cannot expose and rebuke an extravagant misrepresentation, made nearly eighty years ago, without flying into a passion on the general question of anonymous writing, and preparing for its discussion by working himself into the temper of Xantippe? If we saw in the anonymous writings of these times any general tendency to immorality — any symptom of growth in licentiousness, whether in coarseness of language or violation of private character, or public, we could not only understand the drift of Lord Brougham's strictures, but should commend their spirit, guarded, however, against admiring the declamatory strain in which he conveys them. But we do not behold the press of the day with his lordship's eyes; on the contrary, we think we see a continual improvement in its morality and its taste. Ribaldry is not at all in vogue; invasions of private life are rare; and even the lives and actions of public men are seldom visited with any truculence of diction, and still more unfrequently defamed with the audacity but too common in former times. What public journal now would sully its columns with such a letter as that of Junius in reply to Junia? Nay, what newspaper would defile itself with the foul language of the letters signed Poplicola, which Lord Brougham (with all his zeal for literary probity) assumes to be the productions of Junius, without producing a scintilla of evidence to fix them upon him? We might ask the same question respecting many passages in the most celebrated of these epistolatory invectives, whose grossness of expression belongs to an age over which we possess a decided advantage in refinement of language, and, we believe, in delicacy of sentiment and purity of morals. Hence are we forced to conclude, that there is here, in the passages we have just quoted, but another case in which, under cover of reprobating the licentiousness of public writers, the attack is really upon those who have done no more than exercise, in a displeasing way, but within the bounds of propriety, the legitimate functions of the journalist. The press cannot always scatter roses or heap incense: it must sometimes plant the thorn; must sometimes utter truths very painful to public men; sometimes—nay, often, disturb the complacency of self-conceit, and leave the print of merited correction upon the delicate and smarting skin of vanity—that tenderest limb of the moral constitution, and therefore judiciously appointed to receive the rod.* No doubt the operation is afflicting; but Opinion, mistress of the world, must discharge her duty, and her organs must promulgate and execute her sentences, through tears and tribulations, unmoved by the murmurs of the culprit. It would certainly be an ease and a comfort to public characters to be rid of an ever-sitting tribunal to investigate their conduct, and punish their misdemeanours. In the schoolboy's eyes, there is no such nuisance as the birch; and he considers its unseen but poignant strokes much in the same light in which the assailants of the press regard its most legitimate and wholesome rigours. Amongst these rigours there is one, which is perhaps of all the most righteous, but which, we believe, has, more than any other, evoked a spirit of hostility to this incomparable disciplinarian; we mean, the holding up continually to an individual (important enough to invite its attention) the picture of his former self, in order to exact some semblance of conformity between his professions and his conduct: to make his age harmonize with his youth, and save him (if his salvation be possible) the disgrace and the remorse of outliving the generous warmth of his prime; and, after running through all the permutations and combinations of party, becoming a faction against himself, trampling on his own fame, ostracizing his ancient principles, sending his old alliances and early friendships into exile. The press is not to be condemned for this; yet if it be not for this, or some like exertion of its power, we know no cause why any public man of the age should be offended with its liberty, and make it the butt of his invectives. And of all men, the author of these Sketches is not the best entitled to put any public writer upon his trial. In his very attack on Junius, we have proof enough that he is not himself particularly illustrious for the virtues he insists on in other wielders of the pen. In the sketch of the Duke of Bedford, we find the passage following:—

"The hatred which this writer evinced towards the Duke, rests, as far as it has any public ground to support it, upon the junction of the Bedford party with Lord Bute, against Lord Chatham; but, in all probability, there was some sordid or spiteful feeling, of a personal kind, at the root of it. Lord Chatham had been, like all the great men of the day, the object of

* The choice of the *locus in quo*, in such cases, is one in which tastes differ; but Lord Brougham has the oddest of all notions upon this subject: he considers that the tenderest part of a man's character is the virtue, not the vice, for which he is most distinguished. A man of notorious bravery is, according to him, most piqued by being branded with cowardice! Junius, in a private note to Woodfall, proposes to make a charge of cowardice upon George the Third. Lord Brougham observes—"I need hardly add, that the utter falsehood of such a charge was admitted by all parties, even in the utmost heat of factious conflict; but this writer, with *the malignity of a fiend*, frames his slander in order to assail with certainty *the tender point* of his victim." According to this, the tender point of Aristides was his honesty; of Joseph, his continence; of Howard, his humanity; of Hampden, his public spirit. We should be at a loss, upon this principle, where to have Lord Brougham—which is his "*tender point*"?

Digitized by Google

the slanderer's fiercest vituperation. He had repeatedly treated him as a lunatic, and frequently as a tyrant: lurking under the name of Publicola, he had lavished upon him every term of gross abuse which his vocabulary supplied—'a man purely and perfectly bad;' 'a traitor;' an 'intriguer;' a 'hypocrite;' 'so black a villain, that a gibbet is too honourable a situation for his carcase' (Woodfall, ii. 458). But in the course of a few months from his last attack, which was in 1770, he became appeased; and whether, from beginning to favour Lord Chatham the year before, or from mere hatred toward Lord Bute, his fury broke forth against the Bedford party in the letter to its chief, which has been the subject of so much observation, and is certainly the most scurrilous of any that were printed under the name of Junius."

Now a fair assailant of Junius, instead of affirming thus hardily, that "lurking under the name of Publicola," he bespattered, after such a fashion, the character of Lord Chatham, would have given Junius the benefit of the reasonable doubt which exists as to his identity with Publicola. We are not aware of any better evidence of this identity than the statement in the "preliminary essay," to Woodfall's edition (1814), that "he is to be recognized under the mask of Publicola, Domitian, Vindex, and several others." But one thing that prevents us from recognizing Junius under the name of Publicola, is the extreme rancour and violence with which Lord Chatham is attacked in the letters bearing the latter signature. We find the author of the "preliminary essay" himself observing (p. 82), that Junius "had more than once *some doubts* of the motives both of Lord Camden and Lord Chatham," but Publicola had evidently no doubts at all, for there are no bounds to the abuse he pours upon the latter. Where is there anything bordering upon the tone of Publicola in any of the unquestionable letters of Junius, where mention of Lord Chatham is made? In the letter to the Duke of Grafton, dated 8th of July, 1769, (the year in which the letters commence) we find Lord Chatham thus spoken of,—"Lord Chatham, Mr. Grenville, and Lord Rockingham, have successively had the honour to be dismissed for preferring their duty as servants of the public, to those compliances which were expected from their station." And again,—"Lord Bute found no resource of dependence, or security, in the proud, imposing superiority of Lord Chatham's abilities," &c. This is as far from the strain of Publicola as Cancer from Capricorn; and in no preceding letter is there to be found a sentence of "fierce vituperation," much less the "fiercest," in reference to the great statesman in question; nor is it true, confidently as Lord Brougham states it, that Junius had "repeatedly treated him as a lunatic." But Junius must be blackened, because he is the most celebrated of anonymous writers, and Lord Brougham has a horror of such writers, amounting to a monomania, and unmitigated by the remembrance that he himself, aforetime, wore the helm of Pluto, and shot his arrows in darkness. It is certainly anything but marvellous, that an anonymous writer should take daring liberties with truth, when we see authors, whose names blaze in the title-page of their books, violating her sacred person without a twinge of conscience. To the following passage, pursuing the same topic, we proceed to invite the reader's attention:—

"It is untrue to assert, as some have done, that he had his idols. Lord Chatham has been named, and we have seen how, more than any other statesman of his age, that venerable patriot was assailed by his foulest abuse; assaulted, not indeed under the same, but another disguise. For as unmingled vituperation would pall upon the appetite, as bitters, like sweets, may require to be dashed and varied, even Junius found it necessary to give some relief to his pictures, and to paint some figures in a brighter hue; not to mention that contrast becomes necessary in order to blame the more effectually, or as Sir Philip Francis in his own person used to say, 'Praise is bearable when used *in odium tertii*.' Eulogy, however, thus bestowed by compulsion, was soon repented and begrudged; nor could so ungenial a soil long support so exotic a plant. If Junius could not with safety for his consistency extirpate it, he ceased to foster it, or pruned it, and let it die away; and he had always the resource of changing the mask, *and then Publicola could make up by increased virulence and scurrility for the temporary laudation into which Junius had been driven or beguiled.*"

Now observe how monstrous is the perversion of fact in this passage. The only letters of Publicola are two; their dates are April and May, 1767. The first undoubted letter of Junius is dated 21st of January, 1769. Yet it is affirmed that Publicola could make up by *increased virulence and scurrility* for the temporary laudation into which Junius had been driven or beguiled!" So that the virulence of Publicola in 1767 is advanced in aggravation of punishment for the crimes of Junius in 1769: and the latter is stated to have resorted to the former signature, when he was wearied of the language of encomium in the character of Junius, and wanted a vent for the scurrility from which he had so long and painfully abstained! If this is not the wolf and the lamb over again, we never saw a fable of Æsop acted in real life.

Sire, répond l'agneau, que votre majesté (Lord B.)
Ne se mette pas en colère;
Mais plutot qu'elle considère
Que je me vas désaltérant
Dans le courant,
Plus de vingt pas au-dessous d'elle;
Et que, par conséquent, en aucune façon
Je ne puis troubler sa boisson.

There can be no better course taken to revive the reputation of Junius than Lord Brougham adopts in these rash strictures. His Lordship burnishes him up while he seeks to tarnish him, and defeats his object by the rancour with which he prosecutes it. Here is more of the same desperate administration of injustice, regardless of evidence, taking guilt for granted, through a predetermination to convict:—

"It is almost equally incorrect to say that Lord Camden was not attacked by Junius. He is in one place represented as an object neither of respect nor esteem; and as having at different times held every kind of opinion and conduct (Woodfall, iii. 174); in another, as 'the invader of the constitution, after trampling the laws under his feet" (ii. 474); and in a third, as 'an apostate lawyer, weak enough to sacrifice his own character, and base enough to betray the laws of his country' (ii. 457)."

Not one of the letters here cited bears the signature of Junius, or was admitted by that writer into the authorized edition of his works. Proof, therefore, is required that Junius was the author, before a just criticism can charge their indecencies upon him. The first is signed Atticus. Its mere appearance in the edition of 1814 (edited by Woodfall, *the son*, a thoroughly honest editor, but whose guesses and opinions can only be received for what they are—guesses and opinions) is no demonstration that Atticus and Junius are one. Lord Brougham would fix upon Junius the crime of libelling Lord Camden, by showing that a writer named Atticus libelled him, without a syllable to establish the identity of the latter with the former. The second letter quoted is subscribed Correggio, and we should say that it bears internal evidence of its not having emanated from Junius. We should be disposed to ascribe it rather to Wilkes, the last paragraph but one being quite in his obscene vein, and the entire letter replete with a degree of coarseness to which Junius, although often coarse, never descends. Other and stronger reasons might easily be adduced, were this a fitting occasion.* The third letter is Publicola again, so completely is the author driven out of the pages of Junius himself to establish his extravagant positions against him. Lord Brougham should either have confined himself to the unquestionable letters of Junius, to show that he was the foul libeller of Lord Chatham and Lord Camden; or, when he desired to avail himself of the letters under unacknowledged signatures, he should have made some attempt to identify the authorships of the two parcels of correspondence. Junius is as well entitled as any other traverser to the benefit of a reasonable doubt; and surely, if we imagine the great shadow indicted at the bar of criticism, the very contradictions between the letters of Publicola and Correggio on the one side, and those of Junius on the other, would be most justly pleadable by the latter, and abundantly sufficient to secure his acquittal—Lord Brougham not holding the scales.

We shall have to pay the work before us the tribute of some further remarks at ~~another time~~. The pages on the French revolution, and some of the prominent characters that figured in it, remain to be reviewed.

The Fundamental Principles of Modern Judaism, investigated by Moses Margoliouth, of Trin. Coll. Dubl. With a Preface by the Rev. H. Raikes, Chancellor of the diocese of Chester. London, Wertheim; Dublin, Curry.

THIS work does not fulfil the promise of its title-page. Mr. Margoliouth has confined his attention to the use of phylacteries, fringes, and inscriptions for the door-posts, which form an important part of the practices of modern Judaism, but which have very little claim to be regarded as principles; to this he has added the six hundred and thirteen precepts collected from the Pentateuch, which contain all the positive injunctions of the Mosaic Law. In these of course the ten commandments are included, and it is therefore rather singular that Mr. Chancellor Raikes should denounce the whole collection as a mass of trifles. Writers of prefaces should try to know something of the works which they introduce, and not denounce all the precepts in the five books of Moses, both moral and ceremonial, as mere trifles.

The apparent object of Mr. Margoliouth is to show that the three distinguishing characteristics of modern Judaism,—the phylacteries, fringes, and inscriptions for door-posts,—are, at least in their present form, rabbinical innovations, and that the various superstitions connected with them have withdrawn the attention of the Jews from "the weightier matters of the law." He has very needlessly perplexed the discussion, by dragging into it several tirades against popery, in which vehement invective takes the place of reasoning, and assertion stands for argument. The converted Jew has transferred his spirit of Pharisaic exclusiveness from Judaism to Christianity; it would have been better had he left it behind with the rest of his old rabbinical errors.

The work concludes with an appeal to the Jews to listen to the evidences of Christianity, and another to learned Christians, exhorting them to study Hebrew literature. In the account given of Hebrew authors since the dispersion, Mr. Margoliouth exhibits a very extensive knowledge of the rabbinical writers,

* The note upon this letter in Woodfall is poor evidence indeed of Correggio's identity with Junius. "The following answer to correspondents in the P. A. of September 16, identifies Junius to have been the author of this letter:—'*Our correspondent C. will observe that we have obeyed his directions in every particular, and we shall always pay the utmost attention to whatever comes from so masterly a pen.*'—*Edit.*" Now, how do we know that C. stands for Correggio? However, let this be assumed; does it follow that because C. was, long after, the signature to the private notes from Junius to Woodfall, therefore the Correggio of 1767 and the C. of 1769 were the same? Then C.'s "directions are obeyed in every particular:" Correggio, so far as appears, gives no directions.

Digitized by Google

but his estimate of their literary value is rather deficient in taste and discrimination. He has mentioned only one of the Elegies in which the Jewish poets have at various times bewailed the proscription of their name and nation, and he has not noticed any of their curious histories of the persecutions to which they were subjected in the dark ages. We quite agree with Mr. Margoliouth that a Hebrew Chrestomathy, containing selections from the best writers in prose and verse, since the dispersion, would be useful to the biblical student, and interesting to the general reader, but we cannot recommend him to undertake such a work.

OUR LIBRARY TABLE.

Symbolism, by A. Moehler, D.D., translated by J. B. Robertson, Esq.—These volumes contain a very minute examination of the doctrinal differences between the Catholic and Protestant churches, for the purpose of showing the superior excellence of the former. The writer was a distinguished Professor of Theology in Germany, where his work, on its first publication, produced a great sensation in the religious world. We cannot anticipate similar success for the translation, which is dry and tedious beyond even critical endurance. To one merit of the work we are glad to bear testimony; we have verified several of Moehler's references, taken at random, and have found him to be scrupulously accurate.

The Intellectual and Catholic Poetry of Holy Scriptures, by an Ascetick.—Sheer absurdity.

Promptorium Parvulorum sive Clericorum; ad fidem Codicum recensuit A. Way.—This publication of the Camden Society contains the first part of a Latin and English Dictionary, written by Brother Galfrid the grammarian, about the year 1440, and printed by Pynson in 1449. The author wrote "in conformity with the language of Norfolk with which alone he was acquainted," and the editor in his Notes—a valuable contribution to the study of old English—has compared this language "with the existing dialect of East Anglia, as far as it was practicable." We may notice this work more fully when complete.

The Constitutional Charter of the Kingdom of Saxony, translated from the German by H. Schütze.—Translated at the request of "some British residents in Saxony and some friends in England," to whom, though not without interest for all, it will probably prove more acceptable than to the public in general.

Jack's Edition of Life at Sea; or the Jervian System in 183—, *being a Series of Letters by an Old Irish Captain of the Head to his Nephew: to which are added, a Set of Orders, which are calculated for bringing H.M.S. into "great good Order."*—The quotation of this title will spare the reader a paragraph of criticism. It is a fair but flattering sample of the style in which the work is written. The Old Captain of the Head is one of the ill-used—who would be ironical had he wit enough—and merely attains to ill temper. His book is a heavy and ill-written enumeration of all the small grievances to which sailors can be exposed, when they have Whigs for captains: and the few anecdotes and adventures it contains are not worth detaching.

The Recreation (the fourth of the Series).—The editor of this volume professes to have exercised "much care in the selection of the materials." We, of all critics, are bound to believe this—since the *Athenæum* has furnished its quota; and this not merely in the shape of extracts, but also of comments and connecting links: in proof, see the passages from Mr. Borrow's 'Bible in Spain.' However flattering this may be to *our* "care in selection," it is but shabby work as concerns the public, and as such we direct attention to it.

The Wrongs of Women, by Charlotte Elizabeth. Part I.—Devoted to the wrongs of milliners and dressmakers, whose claims on public sympathy were, not long since, advocated in this journal. The present exposure is cast in the form of a tale, with a strong taint of what the ill-natured might call cant and claptrap. There is, indeed, a large class of obscure writers who are accustomed to convert religious sympathy into current coin; and Charlotte Elizabeth's numberless publications raise a strong suspicion that she has a quick sense of the profitable uses of religion.

Guide to Female Happiness through the Paths of Virtue, by Elizabeth J. Castell.—Well meant, and not ill written.

Biographical Illustrations of St. Paul's Cathedral, by G. L. Smyth.—Short but well written sketches of the lives of the more illustrious of those whom their country has thought worthy of a resting-place within the walls of the cathedral. There is also an Appendix, containing a list of the past dignitaries of the cathedral.

Reform your Waltzing, by an Amateur.—A reform, the necessity for which has escaped the notice of our legislators. We agree with the author, that if it be right to waltz, it is right to waltz well, and this certainly is in England a rare accomplishment. We trust the author's success will recompense him for the reproach he fears—

> Turpe est difficiles habere nugas,
> Et stultus labor est ineptiarum.

The Grave of Genius: a Tale.—True yet Marvellous, by J. O. La Mont.—"Marvellous" indeed is it and "true," that trial, and endurance, and death, have not so far impressed themselves on Mr. La Mont, as to induce him to dispense with pompous fripperies of style, the like of which have hardly been seen since Anna Seward's days.

A Concise and Practical System of Stenography, by G. Bradley.—The author recommends the abridgment of words and the omission of superfluous letters as a preferable mode to the adoption of new and arbitrary signs. Of the respective merits of the two methods those who practise stenography are the best judges.

The Child's Guide through the Bible, by W. E. Fletcher.—The chief novelty of this little work is the enormously thick paper on which it is printed, and which most unnecessarily swells out its dimensions.

Almanacks, Pocket-Books, &c.—About this time of the year almanacks begin to come forward.—Here is Glenny's *Garden Almanac*, which has its merits, but is surely dear at a shilling: and Fulcher's *Ladies' Memorandum-Book and Poetical Miscellany*; as usual, full of charades, the very sight of which is enough to set the brains of "inquiring youth" to work—as usual, containing a liberal supply of original poetry, above the average standard, by Bernard Barton and others, and a selection of a still higher order, in which large drafts have been made on the fugitive verses of our own contributor, Miss Frances Brown. We presume, therefore, that Mr. Fulcher has sent an unusually handsome copy to Stranorlar, Ireland—with a very pretty autograph, which will be recognized at the Post Office.—And here is a merry pocket-companion, not to be disposed of in so summary a fashion as the above; *Punch's* vademecum, full of precise information and comical annotation—cuts on wood and capers in rhyme, with its journals, romances, and aphorisms, after the approved pattern, some of which are illustrated by etchings in that style of historical art in which Mr. Leech is so excellent:—'Intemperance' is a specimen of the higher order, but there is no deficiency of broader fun in the other subjects, as for instance, 'Home in the Holidays,' and the 'Pet of the Ballet by Daylight.' Of the literary wares in *Punch's* budget, we must give a sample; first, a new version of a popular song:—

The Days when we went Gipsying.

Oh! the days when we went gipsying,
A long time ago,
Though meant to be amusing trips,
Proved nothing else but woe.
The fire-place would never draw,
The wood was always green,
And nought but flies and creeping things
Were in the milk-pot seen.
And thus we passed the hours away,
In pastime very slow,
In the days when we went gipsying,
A long time ago.

The tea was always very bad,
The water never boiled;
We wore the smartest things we had,
And they were always spoiled.
And if along the meadows damp
We felt incline to roam,
It usually begnn to rain
Before we got safe home.
And thus we passed, &c.

We never mean to pay again
A visit to the scene,
And seat ourselves on emmets' nests,—
We are not now so green.
We do not love it overmuch,
But when we want our tea,
We'll take it on a table, where
It always ought to be.
And thus we'll drink it properly,
Provided 't is not sloe,
Much better than the gipsying
A long time ago!

To this, add a few receipts for the benefit of such readers as are troubled with housekeeping:—

"*To keep away Chaps.*—Very plain cooks, in common with other female attendants, are recommended for this purpose. You will not then be much troubled with them.

"*Grease Spots* are removed at any time from silks and velvet, by placing a red-hot iron upon the part, which entirely takes them away. The same will apply to ink and mould.

"*To prevent Beer from being turned by Thunder.*—Having ascertained that it is perfectly good, draw off entirely in pint-pots. Then having collected an equal number of railway navigators, distribute accordingly. This will answer in the hottest summer."

A literary journal must spare a paragraph to the—

Habits of Eminent Authors.

"Shelley usually ate a baked potato previously to sitting down to write. He has been heard to assert that some of his finest ideas came whilst putting in the butter. Whether he purchased his potatoes in the street, or had them dressed at home, does not appear.

"Fielding wrote the whole of *Tom Jones* in one night, after a debauch with Hogarth, and sold it the next morning to procure him a meal. Such is the fate of genius!

"Kirke White was much admired for his red hair, which he allowed to grow down his back in two plaits. He never would suffer any allusion to be made to it; but when writing used it as blotting-paper. On this account all his MS. works are transcribed in red ink, as may be seen in the library of the British Museum.

"Cuvier always wrote with a pail of water at his side, in which he alternately dipped his head and feet to freshen his ideas. He has been known to do this upwards of sixty times in one night when preparing his *Règne Animal*. It was his boast that he had never been up in a balloon.

"Dr. Johnson could never see a post without jumping over it. Boswell remarking upon its puerility, Johnson observed, 'Sir, what a boy does in sport, a man may do in earnest.' Upon which Boswell replied, 'Then you mean to say that I might play at chuck-farthing?' 'Sir,' returned Johnson, 'any man might, if he had a farthing to chuck.'

"How brilliant are these sallies, when compared to the inane answers of modern times—the empty retorts of exhausted receivers!"

The 'Notes of a Naturalist' are no less edifying. In short, half-a-crown's worth of better comicality has not often been offered to those who love a laugh.

List of New Books.—Titi Livii Patavini Historiarum ab Urbe Condita Libri Quinque Priores, by William M. Gunn, new edit. 12mo. 4*s.* 6*d.* bd.—Moore's Poetical Works, complete in 1 vol. royal 8vo. 21*s.* cl.—Diary of Travels and Adventures in Upper India, by Lieut.-Colonel Davidson, 2 vols. post 8vo. 21*s.* cl.—Murray's Colonial and Home Library, No. II., 'Borrow's Bible in Spain, Part II.,' 2*s.* 6*d.* swd.—Religion in the United States of America, by Rev. FAREWELL TO THE FLOWERS.

"FAREWELL! farewell! bright children of the sun,
Whose beauty rose around our path where'er
We wandered forth since vernal days begun;
The glory and the garland of the year.
Ye came, the children of the Spring's bright promise;
Ye crowned the Summer, in her path of light,
And now, when Autumn's wealth is passing from us,
We gaze upon your parting bloom, as bright
And dearer far than Summer's richest hue—
Sweet flowers, adieu!

You will return again; the early beams
Of Spring will wake ye from your wintry sleep,
By the still fountains and the shining streams,
That through the green and leafy woodlands sweep;
Ye will return again, to cheer the bosoms
Of the deep valleys, by old woods o'erhung,
With the fresh fragrance of your opening blossoms;
To be the joy and treasure of the young;
With birds, from the far lands and sunny hours,
Ye will return, sweet flowers!

But when will they return, our flowers that fell
From Life's blanched garland when its bloom was new,
And left but the dim memories that dwell
In silent hearts and homes? The summer's dew
And summer's sun, with all their balm and brightness,
May fall on deserts or on graves in vain;
But to the locks grown dim with early whiteness,
What spring can give the sable look again,
Or to the early withered heart restore
Its perished bloom once more?

In vain, in vain, years come and years depart;
Time hath its changes, and the world its tears;
And we grow old in frame, and grey in heart,
Seeking the grave through many hopes and fears;
But still the ancient earth renews around us
Her faded flowers, though Life renews no more
The bright but early broken ties that bound us,
The garlands that our blighted summers wore:
Buds to the trees, and blossoms to the bowers,
Return,—but not Life's flowers!"

Thus sung the bard, when Autumn's latest gold
Hung on the woods, and Summer's latest bloom
Was fading fast, as Winter stern and cold
Came from his northern home of clouds and gloom.
But from the dying flowers a voice seemed breathing
Of higher hopes; it whispered sweet and low,
"When Spring again her sunny smile is wreathing
We will return to thee; but thou must go
To seek Life's blighted blossoms on that shore
Where flowers can fade no more!"

FRANCES BROWN.

VERISIMILITUDES.

If you like my "Verisimilitudes," perhaps you will insert them.—Yours, &c. DAVID DRY.

Those who talk much should think a little.

A skull without a tongue often preaches better than a skull that has one.

There are many people, whose whole wisdom consists in hiding their want of it.

A witty man can make a jest, a wise man take one.

The most sensible people are generally the least sensitive.

Laurels grow best in grave-yards.

God is like the air, never seen yet always about us.

A wit and a fool in company, are like a crab and an oyster—the one watches till the other opens his mouth that he may catch him up.

If the Man-in-the-Moon could speak to men upon earth, how many would blush to hear him!

There are more men like women, than women like men.

Silence is the deep fountain of Eloquence.

A man's favourite prejudice is the *nose of his mind*, which he follows into whatsoever predicament it may lead him.

Our weakest years engender passions which our strongest are unable to eradicate.

Friends should have the same tastes but different talents.

Time is a tell-tale, who, like other tell-tales, embellishes the truth as often as he disfigures it.

Words hurt more than blows, and heal more than balsams.

Distinctions of words are determinations of ideas.

The greatest effects often flow from the slightest causes.—A History of Remarkable Events might have for its frontispiece father Peneus or Eridanus pouring a river out of a pitcher.

Better to be brought up at a good mother's knee than at the feet of a Gamaliel.

When Prometheus stole fire from heaven he burnt his fingers.

Ignorance makes some men bold and others timid.

Death is often less painful than the thought of it.

Presume a virtue though you see it not.

The chief pleasures of knowledge are derived from our own previous ignorance and the existing ignorance of others; that is, in the attainment and the display.

Prayer is not so much "the gate of heaven" as the knocker of the gate.

An injury committed with a good grace will often be more tolerable than a benefit conferred with an ill one.

Maxims should seldom be stated absolutely.

Johnson says of Pope (what had been said of Pindar) that "the bees swarmed about his mouth in the cradle:" if so, they left their stings as well as their sweetness.

Nobility and Mobility only differ by a pothook.

The greatest conquerors are but the lieutenants of Death.

What a deal of trouble the gunsmith saves the gallows-maker!

SIR JOHN HERSCHEL'S REPLY TO DR. ROBINSON.*

Collingwood, Nov. 2, 1843.

I regret being obliged once more to solicit a place in your pages in reference to Dr. Robinson's reply to my letter in the *Athenæum* of Sept. 30th.—the more so as I am sensible that it is a discussion by which science is not likely to be directly advanced. However, it shall be the last time I shall so trouble you, as, if the discussion should be prolonged, it must, of necessity, be through another medium.

Dr. Robinson could not, I think, be reasonably surprised at my feeling pained by the epithet he applied to a work I had always been accustomed to regard with no small degree of veneration. As applied to a *work* of art, that epithet is surely derogatory, though it is not necessarily so to the artist; and if he will again read that part of my letter, he will see that he has here misapprehended the plain meaning of my expressions, which applied to the work alone.

Dr. Robinson considers me to have unduly narrowed the question by restricting it to figure and polish, and waving the true matter at issue, viz. performance. The whole passage, however,† in which the expression I complained of occurs, is devoted to explaining the difficulties of communicating these two qualities to large specula. I cannot therefore see how I have gone out of my way to narrow the question. On the contrary, I consider him to have unnecessarily extended it (and that in a direction and to a latitude, as regards some particulars, where at all events I consider it quite unnecessary to follow him,) by arguing, from the reserve maintained (and in my opinion, under all the circumstances, wisely and laudably maintained) in exhibiting it, and from its admittedly sparing use, that, in plain terms, the reflector was naught, and the artist ashamed of his work.

I waive all comment on Dr. Robinson's *à priori* reasons (from focal length and mode of support) against the action of the telescope, for after all, the question, even as limited to figure and polish, is one of performance, which is their only effectual test. And on this point I have a great, though of course unintentional, mis-citation to correct, which most materially alters the position in which I stand as his opponent, and but for which I should not have considered it requisite to reply to his letter at all. On a careful perusal of my father's papers in vol. 80 of the Philosophical Transactions relative to Saturn and his satellites, I find that I have ascribed a much greater superiority of action to the four-feet over the eighteen-inch reflector, than was its due. The important observation of the 16th October, which I have cited as a triumphant proof of this superiority, was in fact made with the twenty-feet reflector—the ring was seen with that reflector during its "disappearance," and *the motions of both the satellites followed out* to the determination of the periods and the calculation of their tables, by the aid of observations *solely* made with that telescope.

I can only account for this oversight (for which I must apologize to you and your readers, and especially to Dr. Robinson) from having taken up what appears to have been an exaggerated idea of the difficulty of seeing the seventh satellite with an eighteen-inch aperture, arising from my own want of success. In fact, though I have often observed the sixth, both in England and at the Cape, I have no observation on which I can fully rely of the seventh. My letter to Prof. Bessel, cited by Lamont, to which Dr. Robinson refers, contains these words, in reference to my own observations:—"May 16, 1835.... I can have little doubt that the sixth has been several times seen, *and perhaps also* the seventh." A closer examination of these has restricted the *possible* observations of that satellite which may have occurred to me, to a very few cases of doubtful identification and knotted *ansæ*, which I am now engaged in re-examining. The disappearance of the ring also was *total* to my instrument in 1832.

I admit, therefore, that the discovery of these satellites does not afford that proof I had assumed of first-rate action, *in the sense of the word in which we now use it*, and in which the truly marvellous powers of the then twenty-feet reflector authorize it to be used. From that position I recede. But I do contend that they prove a highly respectable amount of definition, such as no artist needed for a moment to be ashamed of at a much more advanced period. And when such definition, *even had it never subsequently improved*, is taken in conjunction with the greatly superior light of a four-feet surface, even of metal somewhat less reflective, I must continue to hold, that the four-feet reflector was really an immense step in advance.

And here I must remark on what Dr. Robinson observes respecting the twenty-feet observations of the 28th of August, of the sixth satellite: that this instrument was employed to verify the "conjecture" which the forty-feet had given rise to. The case was beyond conjecture. It was fixed, at the instant of observation, in the observer's mind, as discovery. There *had* been conjecture, but here was conviction. The brightness and exact allineation of the five near satellites with the ring and with each other, (the remote one being also seen), and the distinct view obtained of them, took the matter out of the domain of conjecture, and stamped it with the seal of reality.

The case was much of the same kind as respects the seventh satellite. That also had been seen before, though under a mistaken identity. Even on the very night of its final recognition and admission into the list of satellites, imperfect and, as it evidently appears, unsatisfactory glimpses, of a nature to leave great doubt as to the reality of the object seen, were obtained with the smaller telescope. It seems to have died away under the attempt to fit it steadily, requiring the planet to be hidden—a thing which of itself might cause illusion, and on the strength of which no cautious astronomer would venture to assert a discovery of importance. The "*great light*" of the four-feet reflector was now called in aid, and a steady and continuous view obtained (not a word being said of hiding the planet), which at once proved the *reality* of the object, marked its characteristic feebleness in comparison with all the others, as a distinguishing physical feature, and justified the observer in dating its recognition *as an undoubted satellite* from that day. Taking, then, the word *action* to mean simply the effective combination of good qualities conducive to seeing, here is a clear case of superiority of action made out.

Definition and light (resulting from aperture, and not from polish or reflective power), though both conducive to good vision, are yet, to a certain degree, conflicting qualities. One or other, then, the four-feet reflector must have had, since in totality of effect, it is clearly shown to have surpassed the other. Dr. Robinson denies both. He cites a letter of Smeaton's, to show that the metal of which it was composed was not even real speculum metal, but some base and unidentifiable alloy. Smeaton's letter refers to the thin metal first cast, which was composed of two parts "hard" (bell?) metal, and one part "white" metal, which latter was no such "impure alloy" as Dr. Robinson (I think somewhat uncharitably) supposes, but such metal as the founder was in the habit of supplying to opticians for small specula—*therefore*, the highest speculum metal then known, whatever the atomic theory may have since done for us in that line. But the thick metal was composed of pure copper and pure tin, in the proportion of 430 lb. of copper to 2441 lb. of a higher speculum metal, whose proportions were 1946 C + 812 T, a quality which I admit to be too low to resist tarnish, but still *real* speculum metal.

I am obliged to take for authority in this statement a MS. 'Register of Experiments on the Construction of Specula,' occupying four thick folios, closely written, containing records in detail of upwards of 2,000 operations on specula of all sizes and foci, and forming the basis of a regular treatise on the subject, embodying the results of all Sir W. Herschel's experience. Had Dr. Robinson confined himself to reasoning on the "facts before the public," without putting purely hypothetical interpretations upon them, I had not done so; but having been thus led by his comments to trace the history of its figure and polish, as it stands there recorded, I must also state, from the same authority, some further facts, which bear on the point.

First, between Oct. 24, 1788, and August 27, 1789, he correctly says, that Sir W. Herschel, not being satisfied with the mirror, continued to work upon it, and the polish being then still imperfect (from certain indications stated), he goes on to say, "It follows that at least a year was expended in giving this imperfect polish," which he appears to consider slow progress. It becomes necessary for me, therefore, to explain in what the work done in this year actually consisted. It consisted in the invention of a till then totally new method of polishing—in the construction of a system of machinery to carry that method into effect—in the trial and improvement of that system, by working on the eighteen-inch speculum, till it was wrought up to the exquisite perfection which it appears to have attained—in constructing a similar mechanism, on a larger scale, for the four-feet—*in destroying*, *by re-grinding*, the whole of the surface, which had previously been produced on the great mirror (to shorten its focus fourteen or fifteen inches)—and in re-polishing it *ab initio*, on the new system. Not one word of all this enormous labour is even hinted at by Sir W. Herschel publicly in plainer terms than "I continued to work on it!"

Second, as to the actual state of the mirror at the date of the *nominal* completion of the "Telescope," the epoch of which (assuredly no bad one) is the day of discovery of the sixth satellite. Here I must let the MS. speak: "August 22, at 6h. we took off the speculum, and the polish *was greatly advanced towards the sides*. By the trial on the Castle it appears to be of very excellent shape. It acts well without any limiting diaphragm. The polish is still very far from being complete, but I shall try the speculum on celestial objects before I polish any more." Thus we see, that so far from being then in the artist's mind anything like a complete work, the mirror yet wanted something of being satisfactorily polished up to the edge!

The interval between this date and March, 1700, was occupied in endeavouring to give a perfect figure to the thin mirror, and in astronomical work of every description, but chiefly in hunting down the orbits of the satellites of Saturn and Uranus, with the eighteen-inch reflector—an instrument which proved fully adequate to the task. To have devoted *this* interval of all others to the casting, grinding, and polishing a new metal, as Dr. Robinson seems to think would have been no unadvisable or difficult matter, would have been the most complete sacrifice of end to means on record, unless the "zealous observer," and the now perhaps somewhat overworked artist, could have dissevered their identity.

It cannot be supposed that in an undertaking so novel, everything went off at once successfully, or that it proved an easy matter to unite the two requisites of figure and polish. In 1790 I find the figure spoken of in terms of high eulogy, but "stains" complained of in the polish. In 1791, the stars were "found thrown into a well-defined round point," and "some pretty close double stars were seen very well, but there was still a faint glory left about them, which denoted that the different parts of the speculum were not yet thrown together." A long and obstinate conflict now commenced, with various changes of fortune; but I do not find that, until 1796, a perfect union of foci was attained in conjunction with an unexceptionable polish. Here I

* For Dr. Robinson's letter, see *ante*, p. 945.

† "Up to the size of six, or perhaps nine inches.....must be regarded as a failure."

Digitized by Google

should be disposed to fix the date of its completion, but the contest had continually to be renewed (though an increasing advantage arising from practice), for tarnish was continually destroying the work. This was the real evil—the besetting and disheartening difficulty—and here, if the world please to call it so, is failure. But here, the world and I shall always differ. Dr. Robinson may complain that in 1815 the eye of an observer, in his 77th year, failed to detect two new stars in the nebula of Orion. How often had Struve—how often had I (for here I am forced to refer to my own observations), scrutinized that nebula with every desire to obtain a perfect knowledge of it! Yet how strangely did the novel sight surprise the former, and how yet more strangely did the facility of seeing it when once pointed out as a thing *in esse* strike the latter. De Vico, I believe, counts seven or eight stars where Struve counted only five. Surely there must be a brood of young stars coming out here! How many will the next great reflector be blamed for not showing?

The suspicion of the rings of Uranus died a natural death, from innumerable good views of it obtained with other telescopes, especially the twenty-feet, in the ordinary course of observation, in which views no such appendages were seen. They obviously arose from some accidental flexure of the mirror merely temporary, arising from false bearing on its support.

Sir W. Herschel was no draftsman. His pen and ink attempts to represent nebulæ fail to give any satisfactory idea of them, and description will do little or nothing in such cases. I rejoice to learn that my own representations of many of these objects have been found defective, as it proves that our knowledge of their construction is on the increase.

To conclude—there are two ways of looking through Time's Telescope at inventions and improvements. Dr. Robinson has stationed himself in advance, on the high ground of subsequent achievement—of improvement all but miraculous in every branch of theory and practice—in a scientific age, an age of general information and adaptation of means to the end, without a parallel in history. In all these respects a new world has arisen within the last fifty years. In the pride of such advantages, we may, indeed, look back through the large end of the perspective, and see the steps of our predecessors shrink under our eye. For my own part, I prefer the inventor's end, viewed through which, every step appears gigantic, as it seems to lead on to the unknown and the infinite. In this spirit, I look forward to the results of Lord Rosse's present efforts; and with an earnest hope that their success may exceed even his own wishes,

I remain, Yours, &c. J. F. W. Herschel.

Observations on some of the Decorative Arts in Germany and France, and on the Causes of the Superiority of these, as contrasted with the same Arts in Great Britain. With Suggestions for the Improvement of Decorative Art. By Charles H. Wilson, Esq.

[We lately published (*ante*, pp. 902, 923) the Report on Fresco Painting, made by Mr. Wilson to the Commissioners of the Fine Arts. We are glad now to have it in our power to publish a Paper on the Decorative Arts, with suggestions for their improvement, communicated by the same well-informed and intelligent gentleman to the Royal Scottish Society of Arts, and published in Jameson's Edinburgh Journal. Some few passages which had especial reference to the state of the Arts in Scotland have been omitted—the rest is of general interest.]

The general promotion of taste is an object of great interest and importance, and materially affects our commercial prosperity. We find it asserted on authority which cannot be questioned, that the principles of taste, as applied to manufactures, are better understood on the Continent than with us; and the subject has been deemed of so much importance that parliamentary inquiries have been made into the causes of our inferiority, which inquiries have been followed by active exertions on the part of Government to promote improvement of taste amongst the manufacturing classes, by the establishment of Schools of Design in London and elsewhere, also by the passing of a Copyright Bill, by which an effort has been made to protect the authors and proprietors of novel designs from the piracy which has been so injuriously practised.

There can be no doubt that these measures are important steps, and must tend to promote the objects which those who originated them had in view; but we must not rest here,—we must do much more than has yet been done, or perhaps ever contemplated, before we can hope to meet our neighbours without disadvantage in the display of taste. We must not only, as they do, teach principles of good taste in Schools of Design, and defend honest men from the piracy of knaves, but we must also, as they do, form and throw open to our people extensive museums of art, employ the painter and the sculptor to complete the edifices which are raised by the skill of our architects, call in the aid of the fine arts in commemorating the glories of our country, and unite the labours of the artist with those of the historian.

We must, I think, attribute the superior taste which our neighbours exhibit in their manufactures and decorative arts* in a great measure to the advancement which they have made in the fine arts. I have been unable, in speaking of the former, to omit allusion to the latter, and I do not wish to separate them. The divorce which in our day and amongst us has taken place between fine art and ornamental art, has been in many instances fatal to the latter, and certainly has been of no advantage to the former. It has indeed been asserted that taste in manufactures has nothing whatever to do with the state of the fine arts, but the whole history of art proves the reverse of this proposition; and while there can be no reasonable doubt that many of those decorative arts which are more immediately connected with fine art, rise and fall with it; so do I not doubt that every manufacture where taste can be shown, however apparently unconnected with fine art, is influenced by its actual state. It will hardly, I think, be denied that on taste in architecture depends that in house-painting, in furniture, and in iron-work. In every age the forms and ornaments which have been used in these arts have been in accordance with the architectural taste of the time, and, in fact, we can at a glance tell to what period an old piece of iron-work or carving belongs. I have said that a divorce has taken place between fine and ornamental art, and in the medley designs of our house-painters, cabinet-makers, and smiths, the unhappy effects are sufficiently discernible. Assuredly, some centuries hence, should the works of our artizans survive to such a period, they will puzzle the artist and antiquary of those days to decide to what age they belong.

The majority of modern architects leave their works to be completed by the house-painter, and, I may add, the upholsterer and smith, for a house cannot be said to be complete till these artizans have worked in it, and for it.

If the house be Greek or Italian in architectural style, most house-painters on being consulted will recommend its being painted "à la Louis XIV.;" if Elizabethan, they will still warmly advise the Louis XIV.; and if Gothic, they will advocate the same style. The upholsterer thinks of no style at all, neither does the smith. I am not, indeed, aware, that either is ever called upon to furnish a house in accordance with its architecture; such a thing is never, or, at any rate, rarely, and then only very partially, thought of. We shall see in the course of my observations on foreign buildings, whether such is the case in these.

That a house should be painted in any style but that of its architecture is preposterous; we acknowledge this at times in the completion of public or religious buildings. Why should it not be the universal rule? for certainly furniture might be made as comfortable as modern habits require, and still be in harmony in point of form and taste with the edifice: what a charming variety would thus be attained! * *

I repeat that I cannot omit all mention of fine art, although the present paper bears a title which might authorize the supposition that I intend to confine myself exclusively to descriptions of arts which, according to our present mode of thinking, have no connexion, or, at any rate, a very slight and distant one with the *fine arts*. As I mean to endeavour to show that the contrary is the case, I shall briefly touch upon the state of our School of Art, and offer a few observations upon the state of taste in this country. I shall then glance at the state of art in Germany and France, and contrast the system adopted in those countries for the encouragement and employment of art with that followed in ours.

(Mr. Wilson here gives a sketch of the history and state of the Fine Arts in Scotland.)

The artist in this country has thus two great evils to contend with; in youth, the want of the means of education—in manhood, the want of proper and well-directed patronage. Private patronage can create a very excellent school of art, but it cannot create what we term a great school. We must have that of the State, and also that of Municipalities; I would willingly add, also, that of the Church. I am certain, that if the State finally patronizes art (and I am thankful to think that there is now a certain prospect of its doing so), our municipalities will follow, and do so also. We should then see our artists called upon to design, not only great historical works, but also works which would bear more directly on mere ornamental art, than the production of pictures alone can possibly do, and which would, therefore, tend to its improvement; and, as I hope to show you by my subsequent observations on foreign art, whilst the artist would profit in every point of view by such employment (his field of study, for instance, would be greatly extended, which would unquestionably tend to the general improvement of fine art), the position of the ornamentalist would also be greatly improved, more ability and cultivation would be required in his department; and as juster ideas of art would soon prevail, young men would not so readily esteem themselves fit to be artists, as they do now on very slender grounds, but would continue in departments of art which would offer them secure subsistence, rather than embrace the miserable and hopeless career of the mediocre artist.

In my late continental tour, my express object was inquiry into certain processes of painting; but although much occupied with these, I still had time to give a passing glance to other interesting subjects so closely connected with the particular objects of my journey that I had merely somewhat to extend my observations partially to embrace these also.

The King of Bavaria is the greatest patron of art now living, and in his capital we may see numerous proofs of the results which a well-directed patronage of the arts can produce. The Bavarian artists now enjoy an European reputation, but it is much to be regretted that the zealous praise of some of their admirers amongst ourselves has raised a feeling in some of our artists, which displays itself in *discreditable* abuse in those journals, the pages of which are particularly devoted to art; thus, we have on one side an admiration which, although just, is too exclusive, and, on the other, criticism which is intemperate and ungenerous.

No comparison whatever can at present be instituted between the leading artists of Germany and those of this country: when our artists are, like the former, employed to paint national monuments, then we may institute a comparison, but, at present, none can with justice be entered upon. To paint a single historical work, however large it may be, is one thing, but to paint a series for a particular building, is quite another; it is possible that an artist may succeed in the single picture, yet fail in the series. Where a comparison can fairly be instituted, and that is between the cabinet pictures, landscapes, and portraits of our School and of theirs, I think that it cannot be doubted, that, in many respects, our artists have the advantage, and we may entertain a warm expectation of success when they are called upon to execute works of equal magnitude and importance with those of their continental brethren.

The King of Bavaria has resolved that his capital and dominions shall contain monuments to rival those erected by the magnificence or piety of former days, and he has to a wonderful extent succeeded in his object.

The manner in which His Majesty meets his artists is interesting, and offers, I think, a useful lesson to our amateurs. When he has resolved on the erection of a new church or other important edifice, he summons an architect, painter, and sculptor to his presence, and explains his wishes to them either separately or together; when the plans are ready, the artists again meet their sovereign, and a council is

* By decorative and ornamental art, says Mr. Wilson, I mean that art which is not usually classed by us with fine art. Neither the expressions nor the distinction are correct; but, as I must make a distinction, I use these phrases for want of more appropriate ones in our vocabulary.

Digitized by Google

held over them; he encourages them freely to express their opinions, even when contrary to those expressed by himself. When everything is thus at last decided upon, the work is commenced and goes on without interference; and should any part of it prove less successful than was expected, there are no reproaches, for the King at the previous council took his share of responsibility.

It will be easy to conceive that such a monarch is spoken of with devoted attachment by the men he thus employs, and that he is served with enthusiasm. Many express surprise that the King of Bavaria should have been able to carry on and complete such varied and extensive works, when it is known that the resources of his kingdom cannot be very great; but he is aided by the devotion of his artists, who accept of moderate sums for their labour; many of them will leave immortal names, but few of them indeed will leave fortunes.

I beg that it may not be thought by these expressions that I am of opinion that art should ever be poorly paid. I hold a very opposite opinion; it ought to be well paid, but not extravagantly, as some seem to think. I regret to think that, in our country, public undertakings are so frequently viewed by individuals employed in them as sources of immense emolument; hence an outcry, hence opposition to every undertaking that is not of the most utilitarian character, and the apprehension of extravagant cost frequently deters from many undertakings that would be beneficial to art.

I admire the Bavarian artist who is content with the emolument which his king can afford to give him, and who undertakes works at a moderate price for the love of art and the honour of his country; and this spirit prevails amongst all who are employed—amongst artizans as well as artists. The Chevalier Klenze, the King's principal architect, informed me that the operatives bestowed so much time and labour upon everything that they undertook for the King, that in the earnest desire to make their work as perfect as possible, they seriously impaired their profits. These are interesting facts, and assist, at any rate, in explaining how so many works are done, and so well done.

The tendency of the Germans in art has been much misrepresented in this country, and we have heard it repeated, "*usque ad nauseam*," that they are mere imitators of the very early masters. This is not true. I shall not enter at large upon this subject, but beg to refer you, for what I believe to be a true view of it, to Mr. Eastlake's admirable paper at the end of the last report of the last Parliamentary Committee on the Arts.

In Architecture, I am not disposed to consider our friends so favourably:—there is much genius evinced in their productions, their conceptions are great, and magnificent works are undertaken, and brought to a successful termination, but their talent is chiefly shown in very direct imitation, and that imitation is not always discriminating; there are many very tasteful revivals of the middle age Tuscan, of the restored Italian classic, of the Byzantine and Romanesque, but, at the same time, there is also a revival of the principal defects of the Italian architects; and I do not think that much judgment is always shown in the choice of a style. The famous Ludwigstrasse is wholly ineffective as a street; the style of most of the buildings is that of the fortress palaces of Tuscany, and the imitation is not at all times successful. The material, however, is excellent, and so is the workmanship; the details are generally in beautiful taste and admirably executed, and the decorative completion of the buildings is ever in a style of great magnificence.

The few attempts in Gothic are coarse, and almost entirely devoid of all true Gothic feeling; and it is remarkable that the details which, in edifices in other styles, are better than the general designs, are, in the Gothic attempts, very indifferent and inferior to the conception of the mass.

I do not think that the Bavarian School of Sculpture has any very high claims to excellence. The word clever seems to me the most applicable to the works which I saw at Munich. There is no want of employment however. In the new throne-room of the palace, there are twelve colossal portraits of ancestors of the king, in gilt bronze; the Tympana of the Walhalla, the Glyptothek, and portico opposite, are filled with statuary; and I might mention much besides; but the most extraordinary undertaking of all, is a statue of Bavaria now modelling, and which is to be cast in bronze. It seems to be about fifty feet high; and I saw several young sculptors perched on different parts of it, or slung with ropes, chipping away at the plaster of which it is formed, and shaping it with small pickaxes as substitutes for the usual modelling tools.

Whilst the fine arts in Munich are flourishing, the decorative arts which are connected more immediately with them are in a very advanced state. The house-painters of Munich are excellent artists, and paint cleverly in oil, fresco, encaustic, fresco secco, a peculiar art imported from Italy, and in common distemper. The reason of this ability and advancement is evident. The arabesques and ornamental painting in the palace are all designed and executed by eminent artists, and so it was in the best ages of art. Thus, an example of fine designs, correct and appropriate taste, and excellent execution, is set to the mere decorative painter, many of whom, indeed, are employed as assistants, and thus study their art under the most advantageous circumstances. The reason of our inferiority in this department is thus rendered evident, and all efforts to place ourselves on the same level with these artists will be vain, till we see the same system adopted.

The execution of ornamental architectural details at Munich is also excellent; there is no art in which we are more deficient than in this, as is sufficiently evinced in the hard, stiff, and lifeless character of our architectural ornamental details of every description.

I was also much struck with what may be termed the decorative carpentry, or rather joinery, at Munich—[Mr. Wilson exhibited some examples of the beautiful flooring of the palace;] the cost is, however, considerable, about 3*s.* 4*d.* for every 18 inches square, which would make a cost of 100*l.* for a room 30 feet square, although machinery is used in the formation of the pieces of which this mosaic work is formed. The doors also of the palace are beautiful specimens of taste and workmanship; they are about 10 feet high, and formed of various fine woods inlaid in beautiful patterns and highly polished; each door costs 18*l.* I have not seen anything to equal them in any other royal residence which I have visited.

Metals, also, are wrought with great taste and skill; and in ornamental work, attention is paid in the design to the *nature* of the material, which is too much neglected by our designers, amongst whom forms borrowed from those of stone-work are generally used in iron.

I purchased, for the use of our School of Design, a number of examples of ancient iron-work, made in the workshops of Nuremberg, and which unquestionably excel both in taste and in workmanship the boasted productions of our day. It is perhaps impossible to restore, for all purposes, the old modes of working iron; but although we must submit to the trammels of casting processes, yet in designing even for these, just principles of design may be introduced, by paying more attention to the nature and capabilities of the material.

I now beg to call your attention to another important art which has been restored and is practised with much success in Munich; I mean that of glass-painting. Before entering upon a description of it, I would beg such of you as have seen them, to recall to your memories the noble specimens we possess in some of the cathedrals and ancient churches in the south; I would mention the fine windows of Cologne Cathedral, but especially those of St. Lawrence in Nuremberg, in which church the Volkamer window may be mentioned as, in all probability, the finest in the world. The art has never been lost in Nuremberg, and I am happy to show you a copy, by the best artist of that place, of a portion of the Volkamer window. You observe that we have here a figure of St. Catherine, admirably drawn, and she is placed over a Gothic pattern or ornamental design, which runs through the greater portion of the window behind the figures. You have here a specimen of the true system on which such subjects on glass should be designed. These should be treated in a conventional manner; no attempt should be made to represent nature, as we do, for instance, in a picture, as thereby the idea of a window is immediately destroyed; many of you who have seen it must have been struck with the bad effect produced by this mode of painting a window, as seen in St. George's Chapel at Windsor. Notwithstanding the just criticism with which these have been assailed, glass painters, both in the south and amongst ourselves, persist in copying pictures for such purposes, so little do they understand the principles of design, as applicable to their art. I saw in London a copy from Rubens's Descent from the Cross, being executed for a church, and I might cite many other examples of this perversion of taste.

Now, the glass should be painted with architectural ornaments in character with the architecture of the church, and these should be correctly coloured, in imitation of ancient painted examples of church architecture. Some of you are aware that both the exteriors and interiors of ancient buildings were richly painted. It was thus in Egypt, thus in Greece, and such was the practice in ancient and Gothic times. It was a practice which, I believe, was abandoned when the principles of taste were better understood, although I say this with caution, and it would be foreign to my subject to enter upon this interesting question. The architectural and ornamental design, then, in church windows, in the particular examples which I bring before you, seems to be a representation, in brilliant colours, of the painted architecture of the period, and over these are painted the figures, whether of holy personages, saints, or heroes.

The architectural ornaments or design fill the whole window, and the figures are drawn and painted in a severe manner, without any affectation of pictorial effect as to light and shadow.

To give you a more distinct idea of my meaning, besides these specimens of painted glass, I exhibit a coloured engraving from one of the windows of the Au Kirche at Munich; in this specimen the true principles of design, as I view them, have been adhered to with considerable fidelity, although such is not exactly the case with all the windows in that church.

I have made these brief observations upon this important subject, because, as far as I can judge from the examples which I have seen, neither in London nor anywhere in this country, is the art of designing for glass-painting yet understood. The windows which you frequently see executed of pieces of stained glass arranged in patterns, cannot be criticized as specimens of the art at all; those in which ornaments are painted are very far from satisfactory, and as to the copies from ancient masters, from Mr. Martin's coloured prints, the portraits of noble lords, &c. &c., the sooner these are sent to the glass-house, to be melted for some useful purpose, the better.

There is a school of glass-painting at Munich, ostered by the King with the utmost care. Professor Hess, one of the most distinguished of the Bavarian artists, is inspector, and under him there is another accomplished artist, who makes the principal designs and directs the works.

We have here the secret of the superiority of our neighbours in this and, as I have shown you, in other ornamental arts. What are our glass-painters as compared with those of Munich? Instead of being accomplished artists, they have hardly a claim to the title at all. We complain of the imperfection of many of our decorative arts, but how can it be otherwise? They are chiefly practised by individuals who, however meritorious, have little claim to artistic knowledge. The establishment of a school of design in every town in the kingdom will not mend this; the use of schools of design is to educate persons who may execute the designs of artists. To make designers, as is expected by many, except for inferior purposes, is impossible. A classical education, a perfect knowledge of the history of art, in fine, an educated mind and a refined taste, are necessary to the designer for important ornamental works; and till it is made worth while for the professors of these to follow the art, and till such persons are employed, we must, of necessity, make what efforts we may, be behind our neighbours in these ornamental arts, since they avail themselves of the services of the finest talent within their reach.

To return to the Munich School of Glass-Painting. The Director first prepares full size cartoons; these he paints in water-colour (and I have nowhere seen more beautiful drawings): other cartoons are then

Digitized by Google

prepared which may be termed maps of the colours; these are coarsely executed, but correctly tinted; the simple colours only are indicated; thus a red robe is painted of a flat red, the shades being left out, and so on with the other colours. This map, so to speak, is put into the hands of the glass-cutter; he matches the tints from his stock of coloured glass, and cuts it to the shapes. This process requires much practice; many of the pieces are very small and of somewhat complicated shapes; he must also allow for the leading, or uniting by means of strips of lead, as you see in this example.

The coloured and white pieces being now united with lead in the usual way, pass into the hands of the artist, and are painted. A mystery is made of the preparation of the colours, and I was not allowed to make any inquiries; but this mechanical part of the art is, I believe, well understood amongst ourselves. After the painting is completed, the lead is taken out, and the pieces of painted glass are put into the stove. An old man from Nuremberg superintends this department, and is the only person in the establishment who has the requisite experience.

The encouragement given to the art which I have just described, has led to great improvements in the manufacture of glass, and the optical instruments of Munich have now a high reputation.

In France, I was also chiefly occupied inquiring into processes of painting, and I had little time to see to other matters. I cannot venture to offer you more than a few very general observations on the arts of this great and interesting country, but I shall bring under your notice a few facts which bear upon the subject which I have been attempting to illustrate.

Art is extensively patronized in France, and frequently with political views. The patronage, however, is not always judicious, and the very frequent changes of government which have taken place of late years in France have led to this. The patronage of the throne, which is very extensive, has been more steady, and has produced great results, whilst that of the ministry has never been on any well-organized plan, and to this most of the faults that have been committed are to be attributed.

Whatever may be the objections to some details of the system, Art is extensively patronized in France by the throne, the ministry, and the municipalities, and great has been the progress that has been made.

I might give you many examples of the munificent care with which the French government watches over and promotes the welfare of Art; I might describe to you that magnificent establishment, the École des Beaux Arts at Paris; but I must content myself with a brief notice of that most important of all establishments, the French Academy at Rome.

The French Academy occupies the Villa Medicis, with its fine and extensive garden on the Pincian Mount. One of the most distinguished of the French artists is sent to Rome as director, his office enduring for five years; he has fine apartments in one part of the villa, and entertains during winter.

I do not know how many pupils are sent or how long they remain; I believe five years; but this is of no consequence to the view that I am at present taking. The whole cost of the establishment is 100,000 francs, or 5000*l.* sterling per annum, of which 20,000 francs are expended in travelling expenses during the hot summer months, when the pupils leave Rome (then unhealthy) and visit other parts of Italy.

The students are required to be at home at meals, unless they have the permission of the Director to do otherwise. They are also required to keep regular hours, to be studious and diligent, and to secure this, tasks are allotted to them. The young architects, who study monuments of antiquity, are provided with scaffolding, ladders, and every convenience, and the painters and sculptors are equally cared for; and, lastly, the Director regularly sees company, generally composed from the best native and foreign society, where the pupils have every opportunity of improving themselves in this agreeable and refined intercourse.

Contrast this with the English system. Every three years a travelling student is sent abroad, and he is thrown into a position, for profiting in which he is often wholly unprepared by previous education; he is generally quite ignorant of the history of art, or of any art but that which he has worshipped in the Academy, and is probably prejudiced against all other; he is, in fact, sent to Rome, provided with funds, and perfectly free to follow any course he may choose, without any guide at the very time he most needs one. The result may be anticipated, and I believe that very few of the travelling students have attained to any eminence; whilst, on the other side, many of the most distinguished of the French artists were students in this Roman establishment.

I was assured by the Directors of the Museums in Paris, by M. Ingres, late Director of the French Academy, and by M. Couder, that they considered the French Academy in Rome as one of the most valuable and useful of their national institutions for the benefit of art.

I have contrasted the French system with ours, and this is one of those unpleasant contrasts that we are forced to make; but still, be it observed, we have in our plan another instance of artists doing what they can for the benefit of art, unaided either by the public or the government of the country.

I am unable, as I have said, to give you any detailed account of the arts and manufactures of France; to do so would also be beside my subject. We have, however, much need to be up and doing. We have admitted the superiority, in point of taste, of many of the French manufactures, but we have claimed for ours great superiority of fabric. This, in many respects, is fast becoming a fallacy; and as the French have greatly excelled us in taste, they are now, in many cases, equalling us in fabric.

I found in the Italian ports our fine woollen cloths and printed goods comparatively unsaleable, because the French goods were much superior. I was informed, that, in America, their glass manufacture, because of its superior beauty, has the advantage of ours in the market; and I have particularly to mention their astonishing progress in cutlery, in which only a short time ago they were, almost to a proverb, deficient. They now produce various articles which, in appearance, at any rate, are equal to our own. We ought to take these things into our serious consideration.

But to return to my more immediate subject.

Great additions have lately been made to the Hotel de Ville of Paris; and the public apartments of the Lord Mayor, if I may so call him, have been painted by some of the most distinguished of the French artists, amongst whom I may mention M. Vauchelet, to whom two of the rooms have been intrusted. In one he has painted, on pilasters of polished white Scagliola, a series of exquisitely designed arabesques; his subject is continued in the frieze and terminated on the ceiling; the other rooms are appropriately and magnificently decorated also. In this building we have an instance of well-directed municipal patronage of art; and a number of churches exhibit, at the same time, instances of the munificent patronage of the worthy magistracy of Paris.

In the Chambre des Pairs, and in that Des Députés, and in a number of churches and public buildings, we see the results of the efforts of the French Government. At Fontainbleau, Versailles, and in the Louvre (and I dare say elsewhere), may be seen a prodigious number of works of art executed by order of his Majesty the King of the French. To give you some idea of the extent of the works carried on at Versailles, I may mention that I was shown by my friend, Monsieur Neveu, the king's architect, sixty large portfolios of the drawings for the works now in progress.

I have endeavoured to show you, in these brief observations on German and on French art, what are the true causes of the superiority of these nations in the decorative arts.

It must be perfectly evident to you that palaces painted by accomplished artists, must be in better taste, better done, and far more complete and interesting, than those like ours, in which, after the architect has closed his labours, the house-painter and upholsterer alone are consulted. This is so evident, that I need not detain you further with many arguments on this portion of my subject.

But our neighbours go farther in this decorative employment of artists. I saw one of the most able of the Parisian artists designing ornamental tapestries for the palace, to be executed at the Gobelins. You will remember that Raphael did the same, and our finest possession are some of the cartoons which he prepared for such a purpose.

The works of artists are, in fine, the very sources from which all our decorative artists draw their examples, and their jumbles are chiefly made up, from the arabesques of the Vatican, those of the palace of the T at Mantua, and the well known designs of Watteau. We shall have nothing new, not even an appropriate application of what is old, till, as of old, and as now in Germany and in France, the most able artists we can command are employed in such departments of art.

The tradesman need not be jealous of this employment of the artist. There can be little doubt that were artists employed to paint, and to direct the painting of our royal and other palaces, that the taste for such decorations would rapidly spread over the land, and the employment of the tradesman would be increased a hundred-fold; whilst, by the diffusion of taste, and the increase of skill on the part of our workmen, that which is now far too expensive for many to adopt would then be brought within the compass of their means.

By the employment of artists, the taste of the nation generally would be greatly improved, and I have no doubt that we should soon be enabled to meet our neighbours in those wide fields where we confess that they have beaten us, and there can also be no doubt that our commercial prosperity would be thereby increased.

Before concluding this paper, I shall briefly bring before you one plan which would, I think, greatly aid in promoting taste in manufactures amongst all classes.

I have endeavoured to show you that, without a more general employment of artists, we cannot hope to rival our neighbours. I have also said that, like them, we must open museums to our people, and increase the numbers of our schools of design.

With regard to museums, our attention has been almost entirely directed to the accumulation in these of precious works of art and of antiquities, but no one seems to have thought of the accumulation of specimens of ancient industrial art, and also of foreign manufactures. To make artists, and to cultivate taste in the fine arts, we have purchased the Elgin and other marbles, and we are slowly forming a national gallery. We do not think it enough to provide our young artists with casts of portions of statues and with prints for pictures; we procure for them real Greek and Roman statues, and real pictures by the great masters—and we do well. Now, I would propose that we should carry out this principle in our efforts to promote taste in manufactures of every description; let us form museums in which the citizen may see, free of all cost, specimens of ancient iron-work, wood-carving, glass-painting, and of such arts as were successfully practised in ancient times, of which examples still exist, and to this museum let there be yearly added specimens of the novel and tasteful inventions of our clever neighbours and rivals, so that we may have an opportunity of knowing what they are about, and of comparing our efforts with theirs.

I was influenced by such thoughts as these, when I purchased, for the Honourable Board of Trustees for Manufactures, the objects which they have obligingly permitted me to exhibit to you. I have formed the nucleus of such a museum as that which I advocate. You may observe amongst these, specimens of iron-work, centuries old, which (as I have already remarked) excel in taste and workmanship all the productions of our days; also a lock of ancient date, which I am told is a miracle both of workmanship and inventive skill.

There are also a few specimens of carving, of ancient glass-painting, and some of tasteful modern German manufactures; there are not many of these, but they are all pleasing examples of taste and skill, and I shall, by their exhibition in our school of ornamental design, give the pupils a better idea of the various arts exemplified in these specimens, than if I were provided with all the prints that ever were published, and were to lecture from morning till night every day of the year.

I have briefly alluded to a plan, for which I trust to have the support of your opinion, as one which will be greatly conducive to our advancement in the arts.

OUR WEEKLY GOSSIP.

Messrs. Longman announce, as forthcoming during the present season, 'The Miscellaneous Works of Sir James Mackintosh, including his Contributions to the Edinburgh Review; collected and edited by his Son;' 'Southern Æthiopia;' 'Memoir and Correspondence of the late Mrs. Grant, of Laggan;' 'The Life and Times of Richard the Third; by Miss C. Halsted;' 'Some Passages from the Diary of the Lady Willoughby, 1635–47;' the third and concluding volume of the 'Correspondence of John, Fourth Duke of Bedford;' 'The Life and Adventures of Jack of the Mill, commonly called Lord Othmill; by William Howitt;' 'The Wanderings of a Journeyman Tailor through Europe and the East, translated from the third edition of the original German; by William Howitt;' 'German Experiences, addressed to the English, both Goers-abroad and Stayers-at-home; by William Howitt;' 'The Child's Picture and Verse Book, commonly called Otto Speckter's Fable-book; translated by Mary Howitt;' 'Selections from the Rolliad, the Poetry of the Anti-Jacobin, the Pursuits of Literature, and other Works, chiefly poetical, with a few explanatory Notes; by Sir William Heygate, Bart.;' 'A Municipal History of London and the Thames; by J. Fletcher, Esq.;' 'A Pictorial Tour in the Mediterranean; by J. H. Allan;' and 'Researches on Light, by Robert Hunt.'

Since last we noticed the subject of the consolidation of certain of the public records in the Branch Office of Carlton Ride, we are informed that all the records, deposited in the Augmentation Office, have been brought to that repository, and that the subterranean vaults in Somerset House, in which Sir Robert Inglis and Mr. Hallam found stalagmites and stalactites, have been entirely cleared of their contents, which have been also transferred to Carlton Ride. With some few exceptions, we understand that all the records of the Common Pleas, Queen's Bench, and Exchequer, are now placed there.

The opening of the New Gresham College, in Basinghall Street, took place on Thursday, in the presence of the Lord Mayor, the Trustees, and a numerous company. An opening address was delivered by the lecturer on Astronomy—and an inaugural ode, composed by Professor Taylor, performed, in which Miss Rainforth, Miss Dolby, Messrs. Hobbs, Phillips, Roe, and the composer himself, took part.

The boys at Eton are said to have raised a large subscription among themselves for the purpose of placing a stained glass window above the altar in the chapel; and the order has been given to Mr. Willement.

Sig. Fornasari has made his appearance at Paris, in his best part, *Belisario*. His handsome person, and his fine voice seem to have impressed our neighbours favourably; his manner of singing and action less so. That excellent *artiste*, Mdlle. Nissen, made "a hit" as *Irene*. One of the most celebrated Italian tenors, Sig. Bassadonna, is announced as about to pay us a visit.—Meanwhile Sig. Pacini, the composer, some of whose melodies are so original as to make us wistfully desire that he would acquire a little science,—has finished an opera, 'Luciella,' for the next Carnival at Naples.—Sig. Vera, a new composer, described in a private letter as of unusual promise, has brought out an opera, 'Amelda di Messina,' at La Scala, with success. The journals, in particular, mention a *barcarole*, sung by Sig. Feretti, the baritone.—Turning over some of the musical journals of Lombardy a while since, we were amused at the stir which the strictures of M. Fétis on the state of sacred music in Italy (see *Athenæum*, No. 775) seem to have made. In proof that the "land of song" has still its worthy men, a *Requiem*, recently completed by Maestro Perotti, is lauded to the skies—but, alas for our faith!—in the next paragraph comes a panegyric on Donizetti's *Miserere*, in which that facile composer is coupled with Palestrina, Allegri, and Pergolesi. There is small hope of regeneration for a school when discrimination is at so low a point, and vanity is so irritable.—The wise men of Germany, at their recent congress held in Munich, headed by Prof. Thiersch, unanimously resolved that a gold medal should be struck in honour of Dr. Mendelssohn-Bartholdy, for his having so admirably set to music the translated choruses of 'Antigone.'—M. Liszt's success in the Bavarian capital is signal; but rapidly thickening rumours make us look out with interest for the time, now said to be at hand, when, retiring from exhibition, he will seriously betake himself to composition.—A new opera, by Nicolai, entitled 'Heimken,' is about to be produced at Vienna. The King of Prussia has sent this young composer the large gold medal, in recognition of his talent. We remember too gratefully a song by him, sung here by Staudigl, not to desire further opportunities of making his acquaintance.—The 1st of November has given occasion, in Paris, to the execution of two new masses, one by M. Lefebure-Wely, and the other by M. Martin, the meritorious chapel-master of St. Germain l'Auxerrois. Why is it that we hear of no corresponding enterprise at home? and with all the current enthusiasm in the cause of Religious Art, detect among our scantily-employed composers, so little inclination to lend on, or even to keep pace with popular sympathy? We have long believed, that in Oratorio a new style was producible, suited to the genius of our poetry, our music, and our popular taste. Why will not our younger writers give a little of their leisure to this branch of their art, instead of attempting Sonatas, the fashion of which is gone by, and quartetts, when we are as poor in quartett players as in quartett audiences?—We cannot but add to this inquiring word of counsel, a line, recording the success of an English composition abroad. This is Mr. Macfarren's overture to 'Chevy Chase,' which has been performed at the Leipsic Concerts, and received with great enthusiasm.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. Renoux, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. Bouton. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

To the Managers of Schools in London and its Neighbourhood, and also to the Visitors of the Royal Polytechnic Institution.

THE PUBLIC LECTURES, by Dr. Ryan, Professor Bachhoffner, Mr. Goddard, and others, are delivered at Twelve, One, Two, Three, Half-past Four, and at Eight o'Clock in the Evening, and usually occupy about half an hour each. They are generally ELEMENTARY LECTURES, and are delivered in the most simple and inviting form with a view to combine entertainment with instruction. The subject of the Lectures for each day is suspended in the Hall.—To the valuable APPARATUS for ILLUSTRATION has been added ARMSTRONG'S HYDRO-ELECTRIC MACHINE and LONGBOTTOM'S OPAQUE MICROSCOPE.—The EXHIBITION ROOMS, with continued novelties, are Open Mornings and Evenings, except Saturday Evenings.

Admission, One Shilling. Schools, Half-price.

For Instruction in the Private Classes apply to Mr. R. I. Longbottom, the Secretary.

SCIENTIFIC AND LITERARY

Society of Arts.—*Nov.* 1.—T. Hoblyn, Esq. V.P. in the chair. The first meeting for the present session took place for the dispatch of business. J. Wray, Esq., T. Kingsbury, Esq., Dr. Salt, T. Grainger, Esq., Mr. Platow, and Mr. Exall, were elected Members.

MEETINGS FOR THE ENSUING WEEK.

Mon. Institute of British Architects, 8, P.M.
Tues. Horticultural Society, 2.
— Linnean Society, 8.
Wed. Society of Arts, 8.—'On means of preserving Life, &c. in cases of Shipwreck,' by the Secretary.
— Literary Fund, 3.
Thur. Royal Academy.—Anatomical Lecture.
— Royal Society of Literature, 4.
Fri. Astronomical Society, 8.

MUSIC AND THE DRAMA

Mr. Braham's Concert.—*Mr. Hamilton Braham.*—Early in the year (*ante*, p. 142), on the occasion of Mr. Charles Braham's appearance, we glanced at the career of his father, and with every kind and respectful feeling for one so deservedly a public favourite, pointed out how a repetition of it would be inapplicable to the requisitions of our time, and therefore dangerous to attempt. As far as the latter opinion goes, we are already justified, in the present condition of Mr. Charles Braham as a singer. Possessing fair natural endowments, this gentleman is already a confirmed copyist of his father. Should he ever venture beyond the range of the ballad-concert, he has his education as a vocalist to begin: should he ever appear unprotected by the indulgence extended to his father's associate, he will find himself with a scanty public, and that of the lowest order of intelligence. The introduction of another member of the family far more highly endowed, in the same unartistic and unsatisfactory fashion, calls for protest from those who would not see good gifts thrown away, or a famous name "sink in the ground." Mr. Hamilton Braham has a very fine and mellow baritone voice, already displaying indications of the twang and the *rush* (passed off for execution) and the bawl, which gradually overgrew and vulgarized his father's style; owing, as we before said, to the mistaken purpose of propitiating the galleries. These defects, if not removed in time, will prove fatal to progress, and even (if such matters are an object of consideration) to profit. A great dramatic singer might do much to cherish and advance the popular taste for Opera—an effective ballad singer will only retard it. It is grievous to think, that an aspirant should begin among the shifts and mannerisms at which a veteran ends: and, ungracious as is the task of plain-speaking, we would rather give ourselves the pain now, than hereafter have to deplore the failure of the youngest of Braham's sons.

Covent Garden.—The Manager's forlorn hope, the troop of '*Les Enfans Castelli*,' has not taken the town by storm, and he is wroth: the failure of his first season he attributed to his tragedians; this of his *third* he ascribes to a rival manager, though both the children and the public seem to have disappointed his expectations. It is not for Mr. Wallack to impugn his own management, but it would be in better taste to refrain from throwing blame on others: there might have been persons in the house eager to condemn: had the performances, however, gratified the audience generally, their opposition would have been silenced. But they did not please, nor were they calculated to do so: trained children are, unfortunately, no novelties on the stage; and if full-grown French actors failed to satisfy a select audience in this large theatre, it was not very likely that a few clever boys and girls would succeed with a mixed assembly. The entertainment, too, was not good of the kind, and seemed worse for being misplaced: it was a feast of scraps—a dinner of *entremets* and *hors d'œuvres*; and these neither fresh nor appetising. Half of it—and the worst half too—was furnished by English performers, who were hissed—not for their demerits, but the badness of the pieces. First came a farce, and then a ballet, played by adults; M. Laurençon, a grotesque pantomimist and dancer, being the *primo buffo* of the latter. The children did not appear altogether until the last, when the audience were wearied and out of humour. The juvenile corps is not very remarkable for talent, with the exception of M. Colbrun, a youthful genius, who sings characteristic *chansons*, and plays in vaudeville and ballet with the tact and cleverness of an old stager. He was very much applauded, as also was Mdlle. Leontine, a graceful little dancer; but the disapprobation was predominant. Mr. Wallack's injudicious attempt to put down the expression of public opinion, by calling names and imputing motives, was resented by many who had before been tolerant; and the opposition became more pertinacious in consequence.

Haymarket.—Another French vaudeville, called 'Victor and Hortense,' the names of the hero and heroine, who were played by Mr. Webster and Madame Celeste, has been brought out with success. The incidents are improbable, as usual, and the sentiment is peculiarly French. A countess marries her gamekeeper extempore, on hearing that he is a duke by descent, in order to raise her rank; and though he is enamoured of her, and had saved her life, she leaves him because he is uneducated. They meet by accident after a lapse of time, during which the Revolution has proscribed her and made him a colonel; he saves her from death a second time, and the husband and wife are reconciled. The acting satisfied the audience, and Buckstone's drollery came in opportunely to stifle any misgivings by a roar of laughter. Murphy's pleasant comedy, 'Know your own Mind,' has been revived here, with a certain degree of success. Some of the principal parts were very well performed by Madame Vestris, Mrs. Glover, Mrs. E. Yarnold, Mr. C. Mathews, and Mr. Stuart, and the costumes were in good taste.

MISCELLANEA

Paris Academy of Sciences.—Oct. 23.—A communication was read from M. Leverrier on the simplification of the construction of astronomical tables.—M. Fourneyron communicated a table for facilitating the calculations of the motion of water in conduit pipes. The object is to fix with greater precision the diameter of pipe necessary according to the flow of the liquid.—Papers on the steam-engine were received from M. Morin and M. de Pambour, and a report was read on the turbine of M. Passot. The report is favourable to the inventor. It recognizes the originality of the discovery, the simplicity of the apparatus, and the practical advantages to be derived from it.—M. Arago again alluded to the recent discoveries of Dr. Belfield Lefevre in photography. The processes now made use of are empirical, and the results obtained are not to be explained in the present state of chemical science. Sir John Herschel had, indeed, pointed out the fact that ioduret of silver was, by the action of light, reduced or transformed into a sub-ioduret; but whether such reduction took place in the camera obscura, by what chemical mechanism that reduction was effected, in what manner the *accelerating substances*, brome and chlorine, intervened to precipitate the action of light, are problems which Dr. Lefevre is supposed to have solved; and, in so doing, to have shown that the process, as at present instituted, is founded on a wrong principle, so that success must necessarily be the exception, and failure the rule. Our readers will form some idea of the minute nature of these investigations when we inform them that, according to Dr. Lefevre, no less than six distinct elementary substances, viz. silver, iodine, chlorine, carbon, oxygen, and hydrogen, compose the sensitive coating which is to be submitted to the action of the light; and that these substances, by their mutual re-actions, successively form seven distinct compounds; whilst the entire thickness of the coating does not equal one ten-thousandth part of that of a sheet of silver paper, and its weight, though extended over an area of 48 square inches, is not equal to the tenth part of a grain.—M. Payen made a report on the opium of Algeria. The qualities of opium vary according to locality, and the mode of culture and collecting it; they vary also, and frequently in a still higher degree, by mixture and adulteration. The general opinion is, that the opium the richest in morphine comes from Asia Minor by Smyrna, and that the opium derived from the neighbouring provinces, *viâ* Constantinople, is greatly inferior. M. Hardy, the Director of the Central Nursery of Algeria, sent to Paris the produce of his crop of opium. It amounted to rather more than an ounce and half, from 990 poppy heads, and had been carefully extracted by means of incisions on the capsules. This opium, says the reporter, presented all the character of the best samples from Smyrna. On being analyzed it was found to contain 5 per cent. of crystallized morphine, deprived of the narcotine by ether. Two samples from Smyrna being analyzed for the purpose of comparison, they were found to contain—one 3.925 per cent.: the other 4.1 per cent. of morphine. Some samples from India were, however, found to be much more rich than either of the samples operated upon as above stated. They yielded 10.7 of pure white crystallized morphine. It would appear, however, by a communication from M. Liautaud, that as much as 12 per cent. of morphine has been obtained from the opium of Algeria.—M. E. Becquerel made a communication relative to solar light. It is known that the same ray has three distinct actions. The question to be determined is, whether they correspond to three elements or to one sole agent, whose action is modified according to the substances exposed to it. M. Melloni has succeeded in passing a solar ray through a medium in such a way as to retain the caloric, and allow only the light to escape. It remains, therefore, only to be ascertained whether a similar separation may be established between the luminous radiation and the chemical radiation. M. Becquerel's experiments would seem to prove that the luminous and chemical properties are inseparable.

British Museum.—The precautions adopted to secure secresy, have been frustrated, by the appearance of a print giving a view of the 'New British Museum,' which confirms the worst suspicions and prognostications. In point of execution, the engraving is poor enough, yet I have my fears that it may be received as tolerably correct in regard to matter-of-fact particulars; and though it is not likely that it was drawn immediately from the model, it would be easy enough for any one, who had obtained access, to go home and put down the design upon paper; for he must have a very short memory indeed, who could not carry away the whole of it. Most assuredly, he would not be burthened by the ideas contained in it, or by its multiplicity of details. This façade turns out to be—what was all along suspected—a mere repetition of the poverty-stricken elevations of the inner quadrangle; the chief difference being, that here the columns are brought forward. Instead of the building deriving richness from the colonnades, these last are rendered common-place insipidities, by the chilling poverty of what they are attached to; besides being not a little monotonous in themselves. It looks as if the architect had merely *planted out* so many columns before the walls of his edifice, by way of substitute for all character and design. His building will look far more like a post-office than a Museum; and, in fact, the portico of his Post Office is better than the one at the Museum will be. As for sculpture, that, it seems, is to be dispensed with altogether: added, indeed, it might be, but hardly combined; for unless a corresponding degree of decoration were extended to other parts, the sticking up of sculpture would be very much like putting a plume of feathers on a Quaker's drab bonnet. The whole is too essentially dowdy to admit of such embellishment. After all, the view which has been put forth may be an unfair and libellous portrait of the 'New British Museum.' If so, the architect can adopt a most effectual mode of redress by doing that which he might have done with better grace before—namely, exhibit his model, and thereby remove whatever injurious impressions may have been made by a misrepresentation of it. Either the view is such misrepresentation, or it fully accounts for the model not being exposed to criticism. * *

The New Royal Exchange.—The last stone of the tower was set on Tuesday. All that now remains to be added to the tower will be the supports of the vane and the vane itself. The vane will be the same grasshopper (the crest of Sir Thomas Gresham) which adorned the old Exchange, and escaped the fire almost uninjured. It has been repaired, and will be regilt before it will be raised. It has been determined that the chimes shall be restored, and the peal of bells increased from eight to fifteen. The first brick of this structure was laid in January, 1841, and it is positively stated that it will be finished and open for the use of the merchants by the time originally mentioned, viz., the middle of next year. The portico is completed, with the exception of the fixing of the sculpture in the pediment, which will consist of sixteen figures, in high relief, by Mr. R. Westmacott. As soon as the mass of building in front, called Bank Buildings, shall have been removed, the space will be arranged and the statue of the Duke of Wellington by Chantrey will be erected.

Self-Priming Gun.—The Messrs. Needham have obtained a patent for an improvement in percussion locks, by which the caps are, by the motion of the lock, placed at once, in a small cavity beneath where the nipple generally is, and there held fast till exploded on pulling the trigger. The contrivance further provides, that directly one cap is exploded it is forced from its cavity, and another cap takes its place. The caps are contained in a groove along the side of the stock, which groove is covered with a small plate of brass. The groove holds sixty caps.—*Times.*

New Public Park at Birkenhead.—The populous town of Birkenhead, which has sprung into importance, and almost into being, within the last ten years, may be regarded as a kind of suburb to Liverpool, being on the opposite, or Cheshire, side of the Mersey, by a cheap ferry across which it is readily connected with that great emporium of commerce. It presents more of the aspect of an Australian colony than an English district; as an immense tract of ground has been laid out in streets and roads, while buildings of all descriptions are rising in every quarter. The Commissioners of the township have recently determined to devote a large portion of ground to the formation of a public park; and Mr. Paxton, of Chatsworth, having been applied to, has undertaken to design and superintend its execution. The plot of ground comprises about 180 statute acres, and is nearly a mile long and half a mile wide, in its longest and broadest parts. It is of an irregular oblong figure, with an undulated variety of slope towards Liverpool. The plan provides eight entrances; and immediately within the inclosure there will be a belt, of varied width, for terraces and villas. The central and principal portion will be laid out as a park, with a serpentine drive all round it and across the middle; and there will be two spacious lakes in this, surrounded by a sort of ornamental park-garden. We learn that it is intended to admit the public to all this part during the day, closing it only at night. The operations have already commenced; and when the lines of the road, &c. are marked out, the whole of the works are to be conducted with the greatest possible celerity. Too much commendation can hardly be bestowed on the public body which have so nobly originated the scheme, since the day is now past when it is necessary to prove by argumentation that such things have a highly beneficial effect on the physical and moral health of a country.—*Gardeners' Chronicle.*

Strange Calculation.—Some genius has perpetrated the following calculations:—I have been married 32 years, during which time I have received from the hands of my wife three cups of coffee each day, two in the morning and one at night, making about 35,040 cups of half a pint each, or nearly 70 barrels of 30 gallons each, weighing 17,520 lb., or nearly nine tons weight. Yet from that period I have scarcely varied in weight myself from 160 lb. It will, therefore, be seen that I have drunk in coffee alone 218 times my own weight. I am not much of a meat eater, yet I presume I have consumed about eight ounces a-day, which makes 5,806 lb., or about ten oxen. Of flour I have consumed in the 32 years, about 50 barrels. For 20 years of this time, up to 1831, I have drunk two wine-glasses of brandy each day, making 900 quarts. The port wine, madeira, whiskey, punch, &c., I am not able to count, but they are not large. In champagne I have been moderate, as I find from my bills that I have paid for 53 baskets in the last 13 years, which is about one bottle a week, and this not all consumed by me. When we take into the account all the vegetables in addition, such as potatoes, peas, asparagus, strawberries, cherries, apples, pears, peaches, raisins, &c., the amount consumed by an individual is most enormous. Now, my body has been renewed more than four times in 32 years; and taking it for granted that the water, of which I have drunk much, acts merely as a diluent, yet, all taken together, I conclude that I have consumed in 32 years about the weight of 1,100 men of 160 lb. each. —*Paris paper*, quoted in *The Times.*

Kings, b. ii. c. 9.—In March last, as I was crossing the Soubunreekà river (India), my attention was attracted to a number of human skeletons, which lay scattered upon the white sands adjacent to the course of the stream. Upon inquiry, I learned that these were the remains of pilgrims who were on their road to the great pagoda at Juggernaut, and had been drowned two evenings before by a ferry-boat sinking with them. On approaching several of these sad vestiges of mortality, I perceived that the flesh had been devoured from the bones by Pariah dogs, vultures, and other animals. The only portion of the several corpses I noticed that remained entire and untouched, were the bottoms of the feet and the insides of the hands; and this extraordinary circumstance immediately brought to my mind that remarkable passage recorded in the 2d Book of Kings, chap. 9, relating to the death and ultimate fate of Jezebel, who was, as to her body, eaten of dogs, and nothing remained of her but the palms of her hands and the soles of her feet. The former narrative may afford a corroborative proof of the antipathy that the dog has to prey upon the human hands and feet. Why such should be the case, remains a mystery.—*Malta Times.*

Antiquities of Ceylon.—A discovery of great historical importance was lately made by a gentleman at Manaar. In digging under the foundation of a very old house, some Roman bricks of a flat form were found, and, in sifting the rubbish, a gold ring, marked ANN. PLOC. (our types cannot imitate the exact characters), turned up of ancient manufacture, quite plain, and of a shape similar to those in the British Museum, which are said to have been worn by Roman knights. Now, we know from Pliny that the farmer of the duties in the Red Sea, Annius Plocanius, was carried by a storm to the coast of Ceylon in the year 50 B.C.; he was of the equestrian order, and there seems little reason to doubt of the ring having belonged to him. It is much time-worn, or rather injured by the effects of damp and corrosion.—*Ceylon Herald, July 4.*

To Correspondents.—W. R. C.—M. E. M. J.—L. T. M.—received.

An obliging Correspondent has enabled us to correct an error in our notice last week respecting copies sent to Nice. "In sending the *Athenæum*," he observes, "to Nice, it is necessary to pay twopence, and the postage at Nice will be three sous. Having received the *Athenæum* during three years that I resided at Nice, I speak from personal knowledge. At Pisa and Florence the postage of the *Athenæum* is half a paul, about 2½d."

WORKS

PRINTED FOR

TAYLOR & WALTON,

28, UPPER GOWER STREET.

PARNELL'S APPLIED CHEMISTRY in MANUFACTURES, ARTS, and DOMESTIC ECONOMY. With Illustrations. In Monthly Parts, 8vo., each 2*s.* 6*d.*

Part 1. GAS ILLUMINATION.

2. GAS ILLUMINATION and PRESERVATION of WOOD.

3. (*Dec.* 1) will contain PRESERVATION of WOOD and CALICO PRINTING.

FRESENIUS and WILL'S (of Giessen) NEW METHODS of ALKALIMETRY, and of Determining the Commercial Value of Acids and Manganese. 12mo. 4*s.* 6*d.* cloth.

LIEBIG'S (Professor) **LETTERS** on CHEMISTRY, and its Relations to Commerce, Physiology, and Agriculture. Fcap. 8vo. 4*s.* 6*d.* cloth.

LIEBIG'S (Professor) **CHEMISTRY** of AGRICULTURE and PHYSIOLOGY. 3rd edition, revised and partly re-written, 8vo. 10*s.* 6*d.* cloth.

LIEBIG'S (Professor) **ANIMAL CHEMISTRY.** 2nd edition, 8vo. 9*s.* 6*d.* (*To be ready next week*).

TURNER'S CHEMISTRY. 7th edition. By LIEBIG and GREGORY. 8vo. 1*l.* 8*s.* cloth.

PARNELL'S ELEMENTS of CHEMICAL ANALYSIS. 8vo. 10*s.* 6*d.*

QUAIN'S ANATOMY. 5th edition. By Dr. SHARPEY and Mr. QUAIN. 1 vol. 8vo. with very numerous Illustrations on Wood.

Part I. (500 pages and 150 Woodcuts) is now ready.

ELLIS'S DEMONSTRATIONS of ANATOMY: a GUIDE to the DISSECTION of the HUMAN BODY. Crown 8vo. 12*s.*

QUAIN'S (Professor) **ANATOMY and OPERATIVE SURGERY of the ARTERIES.** Parts 1 to 16, each 12*s.* Plates in imperial folio (Five in each Part), Letter-press in 8vo.

*** Part 17 will complete the Work, and will soon be published.

MÜLLER'S PHYSIOLOGY. Translated by Dr. BALY. 2 vols. 8vo., each 20*s.*

WALSHE'S (Professor) **PHYSICAL DIAGNOSIS of DISEASES of the LUNGS.** Fcap. 8vo. 6*s.* 6*d.* cloth.

MORTON'S SURGICAL ANATOMY.

PERINÆUM. Royal 8vo. 6*s.*; coloured, 7*s.* 6*d.*

GROIN, FEMORAL and POPLITEAL REGIONS, 9*s.*; coloured, 13*s.*

INGUINAL HERNIÆ, 9*s.*; coloured, 12*s.*

DAVIS'S (Dr. D. D.) **ELEMENTS of OBSTETRIC MEDICINE.** 8vo. with 4to. vol. of Plates, 1*l.* 7*s.* 6*d.* cloth.

Just published, in fcap. 8vo. price 5*s.*

THE LAST DAYS of FRANCIS the FIRST, and other POEMS.
By JOHN THOMAS MOTT.
William Pickering, Publisher, Piccadilly.

In 8vo. cloth, with numerous Illustrations. 7*s.*

CHAPMAN'S PRACTICAL MINERALOGY. The only work by which the name, &c. of any mineral substance may be speedily ascertained.
H. Baillière, 219, Regent-street.

Just published, in 8vo. cloth, price 7*s.* 6*d.*

IRELAND AS A KINGDOM AND A COLONY; or, a Historical, Political, and Military Sketch of its State, previous to, and since the Invasion under Henry the Second.
London: C. Dolman, New Bond-street.
Dublin: S. J. Machen, 38, Westmoreland-street.

Just published, in a closely printed 12mo. vol. of 400 pages, cloth lettered, price 10*s.* 6*d.*

THE OCULIST'S VADE-MECUM: a complete Practical System of Ophthalmic Surgery. With numerous Woodcuts and Coloured Engravings of the Diseases and Operations on the Eye. By JOHN WALKER, Surgeon to the Manchester Eye Hospital, &c.
London: Longman, Brown, Green & Longmans. Manchester: Simms & Dinham.

Nearly ready, in 1 vol. royal 8vo.

THE HISTORY of GRAVESEND, in the COUNTY of KENT, and of the PORT of LONDON.
By R. P. CRUDEN.
London: W. Pickering, 177, Piccadilly.

ROSE'S BIOGRAPHICAL DICTIONARY.
Just published, Part XXI. commencing Vol. VI. of a

NEW GENERAL BIOGRAPHICAL DICTIONARY, projected and partly arranged by the late Rev. HUGH JAMES ROSE, B.D.
Published for the Proprietors, by B. Fellowes, Ludgate-street.

NEW WORK BY W. H. MAXWELL, ESQ.
In 2 vols. 8vo. bound, with Portrait. (*nearly ready.*)

WANDERINGS in the HIGHLANDS and ISLANDS, with Sketches taken on the Scottish Borders; being a Sequel to 'Wild Sports in the West.'
London: A. H. Baily & Co. Cornhill.
*** This Work may be had at all Circulating Libraries.

Under the Patronage and Dedicated by special permission to His Royal Highness Prince Albert,

GUTCH'S LITERARY and SCIENTIFIC REGISTER and ALMANACK for 1844. Price 3*s.* 6*d.* gilt edges, and numerous Woodcuts.
From the mass of Scientific matter contained in its pages, it is especially recommended to the notice of Engineers, Mechanics, and Men of Science in general.
Published by E. Lumley, 56, Chancery-lane; Messrs. Simpkin & Marshall, Stationers'-court.

Just published,

THE DOCTRINE of INDIVIDUALITY: a Discourse. By WILLIAM MACCALL. Price 6*d.*
By the same Author.
The Agents of Civilization: a Series of Lectures. Price 3*s.* 6*d.*
The Unchristian Nature of Commercial Restrictions. Price 3*d.*
John Green, 121, Newgate-street, London.

NELSON'S FESTIVALS AND FASTS.
In a large volume, 8vo. price 8*s.* cloth,

A COMPANION for the FESTIVALS and FASTS of the CHURCH of ENGLAND, with Collects and Prayers for each Solemnity. By ROBERT NELSON, Esq. A new edition, revised and corrected.
Oxford: printed for Thomas Tegg, 73, Cheapside, London.

On the 1st Nov. *to be continued Monthly,* post 8vo.
No. II. of MURRAY'S

COLONIAL and HOME LIBRARY, designed to furnish Cheap Literature to all classes of Readers in the British Dominions.
BORROW'S BIBLE IN SPAIN, Part II., price 2*s.* 6*d.*, completes that Work.
John Murray, Albemarle-street.

COMPLETION OF THE HISTORY OF ENGLAND.
In 21 vols. small 8vo. with 80 Plates, price 5*s.* each, bound in cloth,

VALPY'S only Complete **HISTORY of ENGLAND.**
By HUME and SMOLLETT, and HUGHES.
The Continuation from the Reign of George II. (1760 to 1835.) By the Rev. T. S. HUGHES, B.D., Prebendary of Peterborough, late Christian Advocate at Cambridge, Author of 'Travels in Greece,' &c. Embellished with 80 highly-finished Engravings on Steel.
Printed by A. J. Valpy, M.A.; sold by H. Wix, Bridge-street; and all Booksellers.

ROBERTS'S ORIENTAL ILLUSTRATIONS.
Second Edition.
In a large volume, 8vo. printed in the best manner on superfine paper, price 12*s.* bound in cloth.

ORIENTAL ILLUSTRATIONS of the SACRED SCRIPTURES, collected from the Customs, Manners, Rites, Superstitions, Traditions, Parabolical, Idiomatical, and Proverbial Forms of Speech, Climate, Works of Art, and Literature of the Hindoos, during a Residence in the East of nearly fourteen years. By JOSEPH ROBERTS, Corresponding Member of the Royal Asiatic Society of Great Britain and Ireland. The 2nd edition, corrected and enlarged.
London: printed for Thomas Tegg, 73, Cheapside; and sold by all other Booksellers.

In 1 thick volume, 8vo. price 25*s.* cloth,

A LEXICON, HEBREW, CHALDEE, and ENGLISH; compiled from the most approved sources, Oriental and European, Jewish and Christian, with an English Index alphabetically arranged, forming a reversed Dictionary, English, Hebrew, and Chaldee. By Professor LEE, D.D. Regius Professor of Hebrew in the University of Cambridge.
By the same Author, a 3rd edition, enriched with much original matter, price 12*s.* cloth.
A Grammar of the Hebrew Language; comprised in a Series of Lectures, compiled from the best authorities, and principally from Oriental sources; designed for the use of students in the Universities.
Duncan & Malcolm, Paternoster-row.

This day is published, Part XVI. price 4*s.* of

THE BOOK OF THE FARM.
By HENRY STEPHENS, F.R.S.E.
Contents: Sowing and Diseases of Turnips, and Turnip Drills—Repairing of the Fences of Grass-fields, and the Principles on which Field-gates should be Constructed—Weaning of Calves, Management of Bulls, and Grazing and Diseases of Cattle—Mares Foaling, Management of Stallions, and Grazing and Diseases of Horses—Sheep-washing, Sheep-shearing, and Weaning and Marking of Lambs. With 33 Engravings on Wood.
William Blackwood & Sons, 45, George-street, Edinburgh; and 22, Pall Mall, London.

In a handsome vol. imp. 8vo. illustrated by a large Map of the *Mer de Glace* of Chamouni, Lithographed Views and Plans, and Engravings on Wood, price 28*s.*; or with the large Map coloured, in a case, 31*s.* 6*d.*

TRAVELS THROUGH the ALPS of SAVOY and other Parts of the PENNINE CHAIN, with Observations on the Phenomena of GLACIERS.
By JAMES D. FORBES, F.R.S., Sec. R.S.E.
Corresponding Member of the Royal Institute of France, and Prof. of Natural Philosophy in the University of Edinburgh.
"A volume full of interesting and novel scientific information, pleasant and readable."—*Athenæum.*
A. & C. Black, Edinburgh; Longman & Co. London.

Adapted for Schools, Private Teachers, and Students.

COOLEY'S ELEMENTS of EUCLID, with explanatory Appendix and Exercises. 4*s.* 6*d.* bd.
"The best edition of the Elements which has yet appeared." *Athenæum.*—"This neat edition of Euclid's Elements is a great improvement on Simson's and Playfair's." *Scholastic Journal.*
COOLEY'S GEOMETRICAL PROPOSITIONS: a Key to the Exercises appended to the Elements. 3*s.* 6*d.* bd.
COOLEY'S FIGURES of EUCLID, with Enunciations, 1*s.* 6*d.*
London: Whittaker & Co.: sold by all Booksellers.

Just published, 12mo. price 4*s.* cloth lettered,

THE ART of QUESTIONING and ANSWERING in FRENCH. By A. C. G. JOBERT. This book has received the unequivocal approbation and patronage of the most eminent masters in London, Edinburgh, and other places; its peculiar and special object is to make the learner speak as soon as possible, by causing him to practise the language in its interrogative and responsive forms. The work is adapted to every system of tuition.
London: Simpkin, Marshall & Co.

Just published, bound in cloth, price 4*s.*

THE CHILD'S GUIDE THROUGH THE BIBLE; or, a Help to understand the Bible, as the Record of God's Plans for teaching Men Religion.
By W. EVANS FLETCHER, B.A.
"To teach children to *think* as they go through the Bible—to explain to them what the Bible really *is*—what its plan is—what it was written for—is the object of this little work."—*Preface.*
London: Hatchard & Son, Piccadilly. Norwich: J. Fletcher.

ANTHON'S CÆSAR'S COMMENTARIES.
In a large volume, duodecimo, embellished with a Map, and numerous Cuts, price 6*s.* bound,

CÆSAR'S COMMENTARIES on the GALLIC WAR; and the first book of the Greek Paraphrase: with English Notes, Critical and Explanatory, Plans of Battle Sieges, &c., and Historical, Geographical, and Archæological Indexes.
By CHARLES ANTHON, L.L.D.
The 3rd edition, revised and corrected.
London: printed for Thomas Tegg, Cheapside; and may be procured by order of all Booksellers.

LANGUE FRANÇAISE.

SIMPLES NOTES GRAMMATICALES, par le moyen desquelles on peut, *en quelques heures seulement,* repasser tous les Principes et les plus grandes Difficultés de la Langue Française; suivies d'Instructions simples pour faciliter aux Elèves l'Analyse Grammaticale et l'Analyse Logique; de Règles pour la Lecture à haute-voix, &c. &c. Par J. S. LUCET, aîné, Professeur de Langue Française, de Belles-Lettres, et d'Elocution.
Chez Dulau & Cie. 37, Soho-square, London.

Now in Course of Publication,
CHAMBERS'S

CYCLOPÆDIA of ENGLISH LITERATURE, consisting of a Series of Specimens of British Writers in Prose and Verse, connected by a Historical and Critical Narrative.
Edited by ROBERT CHAMBERS.
The Work appears in Weekly Numbers, royal 8vo. price 1½*d.* each, and in Monthly Parts at 7*d.* The First Volume is now issued, price 7*s.* boards. A Second Volume will complete the Work.
Edinburgh: W. & R. Chambers; W. S. Orr & Co., Amen-corner, London; and sold by all Booksellers.

ILLUSTRATED CLASSICS.
Now ready, in two handsome volumes, with One Hundred and Twenty Illustrations by William Harvey,

MILTON'S POETICAL WORKS, complete: with an Essay on his Life and Writings, by JAMES MONTGOMERY. Handsomely bound in cl. 24*s.*; morocco, 34*s.*

COWPER'S POETICAL WORKS: with Life and Critical Remarks, by the Rev. THOMAS DALE; and 75 Illustrations, by JOHN GILBERT, 2 vols. cloth, 24*s.*; morocco, 34*s.*

THOMSON'S SEASONS and CASTLE of INDOLENCE: with Life and Essay, by the late ALLAN CUNNINGHAM; and 48 Illustrations, by SAMUEL WILLIAMS. Complete in 1 volume, cloth, 12*s.*; morocco, 17*s.*
D. Bogue (late Tilt & Bogue), Fleet-street.

Now ready, in small 8vo. price 5*s.*

A SUMMER at PORT PHILLIP; including the latest Information regarding that Colony. By the HON. R. DUNDAS MURRAY.

Now ready, in small 8vo. price 2*s.* 6*d.*

A PLEA for WOMAN; being a Vindication of the importance and extent of her natural Sphere and Action; with Remarks on Recent Works on the subject. By MRS. HUGO REID.

13th edition, in 1 vol. 8vo. 18*s.*

BROWN'S LECTURES on the PHILOSOPHY of the MIND. With a Memoir, by DR. WELSH.
"An inestimable book."—DR. PARR.
In a large volume, 8vo. price 15*s.*

THE PRINCIPLES of POLITICAL ECONOMY. By J. R. M'CULLOCH, Esq. A new edition, enlarged and corrected throughout.
William Tait, Edinburgh; Simpkin, Marshall & Co. London; and John Cumming, Dublin.

Digitized by Google

PUNCH.

THE QUEEN'S VISIT TO CAMBRIDGE, specially reported by PUNCH, (Her Majesty's Joke-Maker in Ordinary)—The Irish Frankenstein—The Comic Blackstone—The Great Unaccountable: Ferm of Churchwardens' Accounts—Famine and Fashion—A Speech for Sir Robert—Hobler's Resignation—University Intelligence—Punch's Continental Tour—The Nelson Column, &c. &c. &c., in to-day's Number. Price 3d.

NEW VOLUME OF ARNOLD'S ROME.

Just published, price 14s.

HISTORY of ROME. By THOMAS ARNOLD, D.D., late Regius Professor of Modern History in the University of Oxford, &c. &c.

Volume III. from the end of the First to the end of the Second Punic War.

London: B. Fellowes; J. G. F. & J. Rivington; E. Hodgson; G. Lawford; J. M. Richardson; J. Bain; and S. Hodgson. Oxford: J. H. Parker. Cambridge: J. & J. J. Deighton.

Also, by the same Author, lately published,

Introductory Lectures on Modern History, delivered in the University of Oxford, 1842. 2nd edition, price 8s. 6d.

Published this day, uniform with Murray's Byron,

A NEW EDITION of SPENSER'S WORKS, with a beautiful Portrait and Vignette, medium 8vo. cloth lettered, price only 9s. Also,

Library Edition of the above, with Life by Aiken. 5 vols. 8vo. cloth lettered, price only 1l. 5s.

Spenser's Fairie Queen, with Portrait of the Author. 8vo. cloth lettered, only 5s.

The lowness of the price of the above will, it is confidently expected, command an extensive sale,—an early application is therefore requested.

London: George Routledge, 30, Soho-square.

MAPS *of the Society for the Diffusion of Useful Knowledge.*

No. 102, containing a general Map of the TURKISH EMPIRE, and a Map of EGYPT, ABYSSINIA, ARABIA, and the PERSIAN GULF, is just published.—On the 15th inst. will be published, Two SUPPLEMENTARY NUMBERS.—No. 103 will contain a new Map of HOLLAND and BELGIUM, and a new Map of CHINA; and No. 104, a new Map of LONDON. In December will appear the Concluding Number of the Series, containing a GEOLOGICAL MAP of ENGLAND and WALES, and at the same time will be published Indexes and Title-pages.

Chapman & Hall, 186, Strand.

Now ready, price 4s. 6d.

RURAL CHEMISTRY.

By EDWARD SOLLY, Esq. Jun., F.R.S. Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Royal Agricultural Society, and Lecturer on Chemistry, at the Royal Institution, &c. &c.

Extracts from the Introduction:—

"A knowledge of the chemical composition of soils and the various substances employed as manures enables us to comprehend the mode in which the latter act; and a knowledge of the nature of those substances which plants require, points out the best and most economical methods of restoring to the soil, by manures, those substances which plants remove from it."

"If the farmer knows what it is that gives the fertilizing powers to manure, and is aware of the nature of those substances, he will soon learn the best method of preserving and using them: he will then understand how to make the most of the various sources of manure at his disposal, and he will be enabled readily to save much, that, for the want of such knowledge, would otherwise be lost."

London: 3, Charles-street, Covent-garden; and may be ordered of all Booksellers.

NEW AMERICAN BOOKS.

Messrs. WILEY & PUTNAM have just imported the following Works:

ESCHENBURG'S MANUAL of CLASSICAL LITERATURE, with Additions, embracing Treatises on Classical Geography, Topography, and Chronology, Greek and Roman Mythology, and Antiquities, Archæology, and History of Greek and Roman Literature. By N. W. FISKE, Professor in Amherst College. The 4th edition, sixth thousand, with 54 Engravings, royal 8vo. 1l. 4s. cloth.

De Wette's Critical and Historical Introduction to the Canonical Scriptures of the Old Testament, translated and enlarged by Theodore Parker. 2 vols. 8vo. 1l. 10s. cloth.

Woman, an Enigma; or, Life and its Revealings. 18mo. 3s. 6d. cloth gilt.

The May-Flower; or, Sketches of Scenes and Characters among the Descendants of the Pilgrims. By Mrs. H. B. Stowe. 4s. cloth gilt.

Wiley & Putnam, Stationers'-hall-court, London.

FOR SCHOOLS AND FAMILIES.

ELEMENTARY COPY BOOKS: an improved Plan of teaching WRITING; whereby the Process of Instruction is greatly simplified, the Progress of the Learner secured, and the labour of the Teacher facilitated. In 12 consecutive Numbers.

By B. F. FOSTER,

Author of 'Double Entry Elucidated,' and other scholastic works.

*** In point of *cheapness* and *efficacy* these books will be found superior to anything of the sort extant. Copies are set upon each page; the height, width, and slope of the letters are indicated by a peculiar process, and the child is not left to practise without guidance or direction. The Lessons are progressively arranged, leading from the simple elementary characters through all the gradations of Large-text, Text, Round, and Small, to Current Hand.

Just ready, by the same Author, in 4to.

2. DOUBLE ENTRY ELUCIDATED: an improved Method of teaching BOOK-KEEPING. In Four Parts. Part I. Theory, 2s. 6d.—Part II. Initiatory Exercises, 1s. 6d.—Part III. Memorandums of Transactions, 1s. 6d.—Part IV. Key, 2s. 6d. The Parts are sold separately.

In 12mo. cloth, 2s. 6d.

3. PENMANSHIP; Theoretical and Practical: illustrated and explained.

Souter & Law, London School Library, 131, Fleet-street.

MADAME GUIZOT.

Just published, fc. 8vo. with Illustrations, 8s. cloth,

THE YOUNG STUDENT; or, Ralph and Victor. By Madame GUIZOT. From the French, by SAMUEL JACKSON.

"A more deeply interesting work for youth has not appeared since the publication of 'Robinson Crusoe.'"

D. Bogue (late Tilt & Bogue), Fleet-street.

THE QUEEN'S VISIT TO CAMBRIDGE.

Just completed in 2 vols. with 152 Engravings, by J. Le Keux,

HISTORICAL and DESCRIPTIVE ACCOUNTS of all the COLLEGES, PUBLIC BUILDINGS, and TOWN of CAMBRIDGE. By THOMAS WRIGHT, M.A., F.S.A., of Trinity College, Cambridge.

Price 2l. 2s. 8vo. and 4l. 4s. 4to.

"On the first appearance of this handsome work we expressed our opinion of its embellishments. The plates, which seem to increase in beauty, fully sustain the reputation of Mr. Le Keux, and Mr. Wright has evidently made considerable researches in sources which have not hitherto been explained."—*Literary Gazette.*

"A work in every respect meriting public approbation."—*Cambridge Independent Press.*

David Bogue (late Tilt & Bogue) 86, Fleet-street.

J. R. Smith, 4, Old Compton-street, Soho, London.

Just published, in 12mo. cloth, price 2s. 6d.

THE INFLUENCE of RESPECT for OUTWARD THINGS: in Two Dialogues. Dialogue I. On Respect for Outward Things in relation to Virtue and Happiness. Dialogue II. On Respect for Outward Things in relation to Religious Profession.

"This is a brief practical inquiry into the moral principles which actuate modern society, and a calm exposure of many of the current fallacies by which men regulate their conduct."—*Tait's Magazine.*

"The author of this little work is evidently a strong and original thinker, and he deserves credit in general for just views of the present condition of human society, and the remedies which should be adopted for its improvement."—*Christian Reformer.*

"The author of this little volume, Mr. John Taylor, is a man who feels deeply the evils of our present social condition, and is anxious to contribute something towards their remedy. No candid reader, we think, will deny him sincerity, benevolence, and earnest thought on a most important subject."—*Inquirer.*

London: Charles Fox, 67, Paternoster-row.

This day, in 1 vol. price 7s. cloth,

THE INVISIBLE UNIVERSE DISCLOSED. In which all the fundamental properties appertaining to substances are thoroughly investigated, including their forms and relative situations, which consist in the combinations of lines called mathematics; with a new, perfect, and universally intelligible system thereof, showing the exact proportion between the circumference and the diameter or width of a circle, without which fundamental requisite, and in its present state, the said science is not and cannot be known. The numerous errors in the present system of astronomy are proved and corrected; and finally, the system or manner in which the entire known bodies of the universe co-operate together, with the cause of their existence, is completely demonstrated.

By H. C. JOHNSON.

Effingham Wilson, 18, Bishopsgate Within.

COMPLETION OF MR. SHAW'S BEAUTIFUL WORK.

Just ready, in 2 vols. imperial 8vo. price 7l. 7s.; or on larger paper, imperial 4to., the Plates more highly finished, and heightened with gold, 18l.

ECONOMIC LIFE ASSURANCE SOCIETY,
No. 34, Bridge-street, Blackfriars, London: established 1823.
Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

LONDON, EDINBURGH, and DUBLIN LIFE COMPANY, 3, Charlotte-row, Mansion House, and Chancery-lane, London.

The indisputability of the policies granted by this Company; The obligation to pay the sum assured, although the debt for which the policy was taken may have been paid before the claim arises;

Whole-world policies not confined to the limits of Europe;

Option of half-premium payment for the first seven years;

These form a combination of advantages which can be obtained only from the London, Edinburgh, and Dublin Life Company. ALEX. ROBERTSON, Manager.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security. F. G. P. NEISON, Actuary.

FAMILY ENDOWMENT SOCIETY, LIFE ASSURANCE and ANNUITY OFFICE,
12, Chatham-place, Blackfriars, London.

Directors.

William Butterworth Bayley, Esq. *Chairman.*
John Fuller, Esq. *Deputy Chairman.*

Henry Bowden, Esq.	Elliot Macnaghten, Esq.
Robert Bruce Chichester, Esq.	William Prinsep, Esq.
Alexander Colvin, Esq.	Joshua Walker, Esq.
Edward Lee, Esq.	

Major Willock, K.L.S.

CAPITAL 500,000*l.*

The objects of Life Assurance may be accomplished at this Office on terms as low as is consistent with security.

Examples of Life Assurance for 100*l.*

Age.	30	40	50	60
Annual Premium..	£. s. d. 2 4 7	£. s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.

The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.

JOHN CAZENOVE, Secretary.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE. Founded A.D. 1815, upon the principle of Mutual Contribution. Constituted by Act of Parliament. Capital accumulated and invested upwards of ONE MILLION THREE HUNDRED THOUSAND POUNDS. Annual Revenue upwards of TWO HUNDRED THOUSAND POUNDS. At 31st December, 1838, the Society's third periodical Investigation, the BONUS ADDITIONS then declared amounted to TWO per CENT. per ANNUM, not only on the original sum assured, but likewise on the Bonus Additions previously declared.

The Fourth Periodical Investigation takes place at 31*st December*, 1845.

Copies of the lately published Prospectus may be had on application, from which intending Assurers may satisfy themselves, that independently of this Society's large Accumulated Fund and Annual Revenue, and other advantages necessarily arising from its long, steady, and extensive business, the Principles on which it is Founded and Conducted are of the most *Equitable* character, and such as hold out the greatest inducements to parties now wishing to become connected with it.

Forms of Proposals, and every necessary information, may be obtained at the Head Office, Edinburgh, or at any of the Society's Agencies. JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall,
HUGH M'KEAN, Agent.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, No. 24, Lombard-street.
Loans granted to Policy Holders.

Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.

Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.

Loans may be obtained on personal or other security by individuals Assuring their lives with this Association.

Risks taken on the Lives of Master Mariners and Passengers by sea, either for the whole term of life, or for the voyage.

EDWARD GILBERTSON, Secretary.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 46, Moorgate-street, City.

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Park-square, Regent's-park.
With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. Or one-half only of the usual rate, with interest on the remainder, will be received for five or seven years, the other half to be paid at the convenience of the assured.

The insured for life participate septennially in the profits realized.

A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have been yet appointed.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman*	Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq.	Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

UNIVERSAL LIFE ASSURANCE SOCIETY,
1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq.	Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

Solicitor—William H. Cotterill, Esq.
Physician—George Burrows, M.D.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.

The following table will show the result of the last division of profits, as declared on the 10th of *May*, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduced Annual Premium (for the current year).
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	24 8 4	12 4 2
40		1,000	31 10 0	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

DAVID JONES, Actuary.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

THE RESPIRATOR.—WILLIAM JACKSON, City Agent (Successor to the late George Butler), solicits inspection of his complete assortment of these philosophical and eminently useful Instruments for protecting the Lungs, and affording an easy respiration to those invalids to whom the breathing of cold air is distressing and injurious. A Circular, descriptive of the various kinds and their uses, together with observations on the choice of the Respirator, may be had *gratis* at the City Dispensary Establishment, 93, Cheapside, corner of King-street. Established A.D. 1616.

SMOKE PREVENTED, and VENTILATION EFFECTED, by SPONTANEOUS ACTION.—Mr. JEAKES, 51, Great Russell-street, Russell-square, *Sole Agent in London* for the sale of DAY'S PATENT WINDGUARD, by the use of which he guarantees to cure all Chimneys smoking from wind, and also to prevent downward currents. It is admirably adapted for the ventilation of apartments of every description; also of ships, stables, dairies, and larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise, and not liable to derangement. It also offers no impediment to sweeping. Price, for general use, 30*s.*; larger size, 45*s.*; larger sizes, especially adapted for ventilation, 60*s.* and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the Trade in general, is especially invited.

THE OMBROSOME, or PATENT PORTABLE SHOWER BATH, especially adapted for travelling and exportation. By this Bath an inexhaustible shower is produced from a few quarts of water: the height of the shower may be increased or lessened to suit adults or children, and occupying so little room, is peculiarly suited for bed-rooms and dressing-rooms; it is also an excellent Douche Bath. Being little larger than a writing-desk when packed, it will be a great desideratum for exportation to India and other hot climates. To Military Men and others of a migratory life, also to Students of the Universities, Inns of Court, &c., (where rooms are low and water scarce), the present invention cannot fail to be most acceptable. It is made entirely of brass, and is at once simple and elegant.—May be seen at the Royal Polytechnic Institution; and be had, with Prospectuses, wholesale and for exportation, at the Manufactory, 115, Old-street; and retail at the Bazaar, Panklibanon Iron Works, 58, Baker-street; Mr. J. L. Benham, 19, Wigmore-street; Mr. C. Bray, 16, Cranbourne-street; Mr. J. Deacon, 4, Moorgate-street; Mr. J. Evans, London Bridge; Messrs. Fallows & Adcock, 4, Halkin-street West; Messrs. Glenton & Chapman, 147, New Bond-street; and of all the leading Ironmongers throughout England.—Price 4*l.* 10*s.* and 5*l.* 5*s.*

F. ARNOLD'S

INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

BUTTER MADE IN TEN MINUTES, by the NEWLY-INVENTED CHURN, registered according to Act of Parliament.

This Act imposes a penalty of from 5*l.* to 20*l.* for each imitation, piracy, or selling, recoverable by the proprietors before a magistrate, or by civil action. Half the penalty will be given to any person informing the proprietors of any infringement. The words of the Act are, "No person or persons shall copy or alter any design, either by adding to, or subtracting from," &c.

ATTWOOD, WIMBLE & WARNER, Manufacturers, LEWES, Sussex.

This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which insures the butter coming in ten or twelve minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the heat of summer, placing the churn in cold water will be the means of hardening the butter.

Sizes,	No. 1.	2.	and 3.
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London,	25*s.*	35*s.*	42*s.*

Metal Pans for Churns to stand in, 4*s.* 6*d.*, 6*s.*, and 7*s.* Larger sizes made to order.

To be seen in London, at Wright's Range Warehouse, No. 3, Arthur-street, near the Monument; Rigby's Brush Warehouse, No. 80, Gracechurch-street; Livermore & Son, Ironmongers, No. 30, Oxford-street; Benham, 19, Wigmore-street, Cavendish-square. Export Agents, Barnes & Co., 109, Fenchurch-street.

SUPERB LADIES' CABINET and JEWEL CASES, at MECHI'S, 4, Leadenhall-street, London.—Elegant papier-mâché tables, chess tables, workboxes, card boxes for playing cards, visiting card cases, work boxes, desks, and dressing cases, pole screens, hand screens, card racks, envelope cases, vases, netting boxes, portfolios, note and cake baskets, superb teatrays, and table inkstands, presenting a tout ensemble of splendour and elegance not to be equalled in London. The papier mâché manufactures are superb and various in their design, the prices varying from 50 guineas to a few shillings. A few high-priced elegancies will be sold at cost prices to clear the stock. Bagatelle tables, backgammon and chess boards, table cutlery, and Sheffield plate as usual.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 214, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

ALLNUTTS' FRUIT LOZENGES, for Coughs, Colds, Sore Throats, Hoarseness, &c., prepared solely from the BLACK CURRANT.—In the above preparation the acidity of the Black Currant alone is introduced, and that in the highest degree of concentration. The Lozenges may therefore be strongly recommended (even to persons of the most delicate constitutions), in the above complaints, as they tend to allay inflammation, and particularly to promote a free expectoration. Public speakers and singers will find them of peculiar service. They have been also remarkably useful in cases of the influenza. The annually increasing sale for the last 30 years of this article, notwithstanding the numerous attempts to equal it, will sufficiently prove its decided superiority to all other preparations of a similar description.—Be careful to ask for "ALLNUTTS' FRUIT LOZENGES," prepared only by the Proprietors, Allnutt & Son, Queen-street, Portsea.—Sold in boxes, at 1*s.* 1½*d.* each, by all Patent Medicine Vendors in the Kingdom.

November 4, 1843.

TO READING AND BOOK SOCIETIES, CLERGYMEN, and FAMILIES THROUGHOUT ENGLAND, SCOTLAND, AND IRELAND.

New Plan for obtaining all the New Publications and Standard Works for perusal without purchase.

Now ready, gratis, and post free,

HINTS FOR THE FORMATION OF READING SOCIETIES.

The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable works in the various languages, and that of extending the choice of new books to the entire productions of the press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the new works as they appear may be obtained. To be had Gratis and Post Free on application to SAUNDERS & OTLEY, Publishers, Conduit-street.

Just published,

A SELECT LIST OF ENGLISH, FRENCH, AND ITALIAN WORKS,

ALPHABETICALLY ARRANGED FOR THE USE OF SUBSCRIBERS TO

SAUNDERS & OTLEY'S BRITISH AND FOREIGN LIBRARY, CONDUIT-STREET, HANOVER-SQUARE.

This selection has been made chiefly with a view to assist Subscribers in the choice of such Works as are likely to afford instruction or amusement, and to obviate, as far as possible, the disappointment experienced on sending for a Work with a promising or attractive title, and finding it to be quite unworthy of perusal. ALL Works included in the List, therefore, may be considered as of a character likely to interest the general reader, but those of a higher degree of merit will be distinguished by an asterisk attached to them.

TERMS FOR THE PERUSAL OF NEW PUBLICATIONS.

Now ready, gratis, and post free,

THE TERMS OF SUBSCRIPTION TO THE BRITISH AND FOREIGN LIBRARY,

Conduit-street, Hanover-square.

Families in Town or Country are supplied with all the New and Standard Works for perusal in any quantity. The NEW CATALOGUE is just published, comprising (besides a large collection of French and Italian Works) the most esteemed productions in the following branches of English Literature:—

HISTORY, BIOGRAPHY, DIVINITY, BELLES LETTRES, MORAL PHILOSOPHY, POLITICAL PHILOSOPHY, VOYAGES AND TRAVELS, FICTION, POETRY, THE DRAMA.

Apply to Saunders & Otley, Publishers, Conduit-street; of whom may be had,

A LIST of the REDUNDANT COPIES of NEW PUBLICATIONS
In History, Biography, Memoirs, Travels, Novels, &c., withdrawn from Saunders & Otley's extensive Library.

FOR AUTHORS PUBLISHING.

Now ready, Fourth Edition, price 2*s.* 6*d.* cloth gilt, or 3*s.* post free,

THE AUTHOR'S PRINTING AND PUBLISHING ASSISTANT.

A Guide to the Printing, Correcting, and Publishing New Works, comprising Explanations of the Process of Printing; Preparation and Calculation of Manuscripts; Choice of Paper, Type, Binding, Illustrations, Publishing, Advertising, Estimates of Cost for Large or Small Editions, &c., with an Exemplification and Description of the Typographical Marks used in the Correction of the Press.

"Every one who has written or who may write for the press, should possess this work."—*Metropolitan.*

*** Authors and Publishers, desirous of having their Works reviewed in THE METROPOLITAN MAGAZINE, are requested to direct copies to be forwarded to the Editor, at the Publishers', Messrs. Saunders & Otley, Conduit-street, before the 15th of each month. The ability and impartiality displayed in this department of 'The Metropolitan' are well known, and its Reviews constantly quoted as of the first critical authority.

THE NEW WORK ON INDIA.

Now ready, in 2 vols. post 8vo. 21*s.* bound,

COLONEL DAVIDSON'S TRAVELS and ADVENTURES IN UPPER INDIA.

"This is, to our thinking, the most amusing and informing book that has been produced during the last ten years on any subjects or localities connected with our Indian empire. We can imagine the enthusiasm with which this work will be received by all old Indians, yet is there not a single circulating library reader who will not find it as exciting and full of romantic adventure as the wildest romance."—*Naval and Military Gazette.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

Now ready, illustrated with 100 Engravings, price 5*s.* 6*d.* cloth,

LECTURES on ELECTRICITY, being an Elementary Course of Instruction, written in a familiar style, and divested of technicality, upon this interesting and delightful branch of science. From its practical character, this is the only work on the subject adapted for tuition, and calculated to become a Class-book. By WILLIAM STURGEON, Lecturer to the Institute of Natural and Experimental Science, Manchester.

Also,

Sturgeon's Elementary Lectures on Galvanism. 5*s.*

Sturgeon's Theory and Practice of Electro-Gilding and Silvering. 1*s.*

London: Sherwood, Gilbert & Piper, Paternoster-row.

THE ROYAL DISPENSARY for DISEASES of the EAR, 10, Dean-street, Soho-square, instituted 1816.

Under the Patronage of
Her Most Gracious Majesty the QUEEN.
Her Majesty the QUEEN DOWAGER.
His Royal Highness Prince ALBERT, K.G.
His Majesty the KING of HANOVER, K.G.
His Majesty the KING of the BELGIANS, K.G.
His Royal Highness the Duke of CAMBRIDGE, K.G.
Her Royal Highness the Duchess of KENT.
Her Royal Highness the Duchess of CAMBRIDGE.
President—His Grace the Duke of BUCCLEUCH, K.G.
Consulting Physicians—Sir Henry Halford, Bart. G.C.H.; Sir Matthew Tierney, Bart. K.C.H.
Director and Surgeon—John Harrison Curtis, Esq.

Brief Report of this Institution, read at the Twenty-seventh Annual General Meeting of the Governors, held as above, the 20th of July, 1843.
His Grace the Duke of CLEVELAND, K.G., Vice-President, in the Chair.

Since the establishment of the Charity in 1816 upwards of 13,250 Patients, including more than 650 cases of nervous deafness, and several of deaf and dumb, have been cured or relieved. The number of applicants for relief in a single day has, during the past year, been repeatedly upwards of 180; most of the patients have been persons in the labouring classes, being chiefly domestic servants, artisans, and distressed foreigners, dependent for support on their own exertions, and to whom, therefore, any derangement of the function of hearing is a most serious calamity, as interfering with their means of subsistence. Several new remedies and modes of treatment have rece ved extensive trials at the Dispensary, and, being employed only with the utmost caution, have been attended with very satisfactory results. Into the technical details of these matters this is not the proper place to enter, but it may be stated that the proceedings at the Dispensary for the past year have contributed to the improvement of Aural Surgery, and to increasing the power of medicine over some of the most distressing diseases to which the ear is liable. At the same time it must be observed that the Dispensary furnishes only the remedies and palliatives for diseases, the greater part of which might be prevented by due attention to the laws of health, both by individuals and by the community. A very large proportion of the cases presented at the Dispensary may be distinctly traced to the operation of living in confined and damp localities, to intemperance, want of cleanliness and of out-door exercise, unwholesome or adulterated food, &c., evils which are manifestly the result of artificial arrangements, and consequently remediable. Of those cases in which the means employed fail of producing a cure nearly all are of old standing, which, if attended to in their earlier stages, would probably have admitted of easy cure.

This brief summary of the proceedings cannot be more satisfactorily closed than by stating that, in not a single instance during the existence of the Charity, have any unfavourable results been produced by the means employed, the strongest possible proof of the cautious nature of the methods pursued at this Institution.

JOHN HARRISON CURTIS, Director and Surgeon.
Royal Dispensary, Nov. 6, 1843.

FELIX SUMMERLY'S RECREATION HANDBOOKS FOR NATIONAL GALLERY. EXCURSIONS OUT OF LONDON. WESTMINSTER ABBEY. TEMPLE CHURCH. FREE PICTURE GALLERIES. HAMPTON COURT. CANTERBURY.

THE PUSEYITE CONTROVERSY.
Now ready, royal 12mo. price 5s. cloth,
THE LIFE and TIMES of JOHN REUCHLIN, the Father of the German Reformation. By FRANCIS BARHAM, Esq., Editor of 'Collier's Ecclesiastical History,' &c., uniform with the under-mentioned.

Just published, royal 12mo. price 6s. 6d. bound in cloth,
The Life and Times of Girolamo Savonarola; illustrating the Progress of the Reformation in Italy during the Fifteenth Century. From original sources, German and Italian.

"The authors have happily succeeded in presenting us with an original, vivid, and graphic account of their characters and writings. There is a certain freshness and power of genius in their modes of thought, and styles of writing, impressive by earnestness of purpose, and fascinating by poetry of sentiment. They emit a quickening, vivifying influence to the reader's mind; and by the boldness yet truthfulness of their conceptions, do him the greatest of all services, by teaching him to think for himself."—*Church of England Quarterly Review.*
Whittaker & Co. Ave Maria-lane.

By Mr. TURLE, Organist of Westminster Abbey, and PROF. TAYLOR, Gresham College.
1. PSALM TUNES.
2. SACRED MUSIC.

THE PEOPLE'S MUSIC BOOK.—A Work intended to meet the growing demand for Music among all classes of the community. Principally arranged for Four Voices, and, where admissible, with an Accompaniment for the Organ or Pianoforte. Each number contains three separate portions, forming, respectively, a complete body of the best Music for the Cathedral, the Church or Chapel, the Family, the Glee Club, and the Madrigal Society.

Published Monthly in Parts, comprising 32 pages super-royal 8vo. price One Shilling.

The 30th Edition, of 1,000 each.
FLETCHER'S FAMILY DEVOTION; containing the Morning and Evening Service of a Family for every Day throughout the Year. Embellished with 17 elegant Engravings. Bound in cloth, gilt edges, price 11. 6s. Recommended by 25 distinguished Ministers in England, and upwards of 100 Clergymen in the United States of America.

"Our attention has lately been called to an advertisement of a book of 'Family Devotion, containing the Morning and Evening Service of a Family for every Day throughout the Year.' According to the advertisement, this new Order for morning and evening prayer daily throughout the year, is already in its 30th edition of 1,000 each. 30,000 copies of a book of common prayer for Dissenters, recommended by twenty-five distinguished ministers, whose names are given, and who include some of the most prominent of the day, cannot be dispersed throughout England without working some considerable change in the minds of probably 200,000 persons."—*Times*, Sept. 17, 1843.

Just published.
A PORTRAIT of the REV. JOHN CUMMING, M.A., Minister of the Scottish National Church, Crown-court, Little Russell-street, Covent-garden; engraved by Thomson, from a Painting by W. Booth, Esq., in the possession of Mr. Cumming. Large paper, India proofs, 10s.; small paper, plain proofs, 7s. 6d.

Chez Dulau & Cie. 37, Soho-square, London.

In demy 8vo. price 8s. 6d. cloth, with a Map,

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.

By WILLIAM DESBOROUGH COOLEY.

"A truly classical work.... This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gräberg da Hemsö, in the *Rivista Europea*, May, 1843.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated.... The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa*.

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

*** A COMPLETE INDEX to the COMPANION to the ALMANAC is also published, from its Commencement in 1828 to 1843, both inclusive, forming one thick volume, bound uniform with the Work. Price Seven-and-Sixpence.

Also,

THE UNIONS' AND PARISH OFFICERS' SHEET ALMANAC, containing a complete List of the Unions, the Names of the Chairmen and Vice-Chairmen of the Boards of Guardians, and Clerks; with an Abstract of the more important points of the various Acts of Parliament, and a variety of other Information. One Shilling and Sixpence.

Preparing for Publication,

THE UNIONS' AND PARISH OFFICERS' POCKET ALMANAC, containing in addition to the usual matter of an Almanac, a Mass of Information for the Guidance of all Persons in any way connected with the Administration and Dispensation of the Poor Laws. Price Three Shillings.

London: Charles Knight & Co. 22, Ludgate-street.

MRS. GORE'S NEW NOVEL.

Now ready, at all the Libraries, in 3 vols.

THE BIRTHRIGHT.

By MRS. GORE,

Authoress of 'The Banker's Wife,' 'The Money Lender,' &c.

ALSO, JUST PUBLISHED,

THE PERILS OF BEAUTY.

By CAPTAIN FREDERICK CHAMIER, R.N.

Author of 'The Life of a Sailor,' &c.

3 vols.

JESSIE PHILLIPS:

A TALE of the PRESENT DAY. By MRS. TROLLOPE.

3 vols. with Portrait of the Authoress, and numerous Illustrations by Leech.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

PRINTED FOR

TAYLOR AND WALTON,

Booksellers and Publishers to University College,

UPPER GOWER-STREET.

DARLEY'S SCIENTIFIC LIBRARY,

FOR THE USE OF

SCHOOLS, PRIVATE STUDENTS, ARTISTS, AND MECHANICS.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics these little works will be particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

I.

FOURTH EDITION,

A SYSTEM

OF

POPULAR GEOMETRY;

Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading truths and great principles.

By GEORGE DARLEY, A.B.

Price 4s. 6d. cloth.

II.

NEW EDITION, (just published,)

COMPANION

TO THE

POPULAR GEOMETRY;

In which the Elements of Abstract Science are familiarized, illustrated, and rendered practically useful to the various purposes of life, with numerous Cuts.

By GEORGE DARLEY, A.B.

Price 4s. 6d. cloth.

III.

THIRD EDITION,

A SYSTEM

OF

POPULAR ALGEBRA;

WITH

A Section on PROPORTIONS and PROGRESSIONS.

By GEORGE DARLEY, A.B.

Price 4s. 6d.

IV.

SECOND EDITION,

A SYSTEM

OF

POPULAR TRIGONOMETRY,

Both Plane and Spherical;

With POPULAR TREATISES on LOGARITHMS, and the Application of Algebra to Geometry.

By GEORGE DARLEY, A.B.

Price 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, article 'Mechanics.'*

REVIEWS

Travels in Ireland, Vol. II.—[*Reisen in Irland*]. By J. G. Kohl. Dresden and Leipzig, Arnold; London, Williams & Norgate.

Mr. Kohl's second volume has just reached us, and we resume our translation with the same tale of want and misery—with another incident in which the wretchedness of Ireland comes prominently forward—because we believe, with the author, that the amount of suffering heroically endured in that unhappy country is either not known or not appreciated in England. Mr. Kohl's party is here about to start from Kilkenny for Waterford :—

It was still rather dark, but there was light enough for us to discern groups of figures, which surrounded our vehicle. They were, as usual, women, whom hunger had already driven out of their beds. The chorus of their cries was indeed heartrending: each of them zealously recited her troubles, the number of her children, the distress of her husband, just as the "Bajazzos" on the Kilkenny racecourse enumerated their curiosities. They implored our party, if they would not each give something, at least to club together and give them sixpence, which they would afterwards change into halfpence and divide amongst them. When they saw that our hearts remained unmoved, they brought forward from the midst of the throng a poor old blind woman, whom they led up to the coach, so that we could perceive her darkened eyes even in the twilight, and exclaimed, "Look, your honours, at this misery—look at this poor, wretched woman! Give her something, if it be only a penny, your honours, and your journey will be lucky. God will protect your eyes, and lead you home safely to your families!" When the poor old blind woman, whose hand the rest of the party extended towards the coach, had received something, they all seemed quieted, and were not so urgent for themselves. I have often remarked, among the Irish beggars, that the wretched have retired, as it were for shame, in the presence of those more wretched. A traveller in Ireland cannot say too much of the extraordinary misery of the poorer classes, in order, if possible, to overcome the prejudices of those Englishmen who will not believe in the misery of Ireland, who always deny it, laugh at it, and think him a fool who talks of and believes it. Ruin, decay, rags, beggars, and misery, are to be found everywhere in Ireland; not only in the wild vicinities of Clare, Donegal, Mayo, and Kerry, where they are at their height, and are exhibited in the most extreme and wildest degree, but they extend everywhere through the most beautiful and fruitful counties, because they are not caused by the poverty of nature, but by men—partly by Englishmen, through their hard laws—partly by Irishmen, through their want of industry. Thus, too, this beautiful road to Waterford exhibits the usual Irish exuberance of poverty and superfluity of want. It is said that a great deal of the land in this fruitful vicinity is under the administration of middlemen; and there are, therefore, many poor villagers, and farmers whose rents are raised to the highest point, or who, in Irish phrase, are "rack-rented." A landowner who thus screws his tenants, is entitled a "rack-renter," and the castle where he dwells a "Castle Rack-rent."

At Waterford Mr. Kohl visited the Repeal Rooms :—

These repeal rooms are to be found in many Irish towns. One finds in them always the friends of repeal gathered round the opposition papers of England and Ireland, which are constantly to be found there. Most of the provincial papers of Ireland are naturally opposition papers; and in Waterford alone three of these are published. The *Dublin Mail* is the chief Tory newspaper in the country: this, however, I did not find in any of the repeal rooms which I visited. I fancy we Germans, were we ever such zealous repealers, would now and then read the *Dublin Mail*, were it only to see what our opponents said of us. The English parties are always so buried in their own interests, that they only read the newspapers of their own party, and never appear to trouble themselves about the arguments of their opponents. In this respect they put an entire trust in the articles of their own party journalists, who now and then inform them of the faithless and disgraceful doings of the opposite faction. At Waterford the east of Ireland begins; and as the people of the south—the Phœnicians, the Spaniards, and the French—always landed in the south-west of the country, near Bantry, in Kerry, Clare, &c., so the eastern nations—the Danes, Welch, and English—have always made their descent at Waterford. The Danes possessed to the last the towns of Waterford and Wexford. The Welch Strongbow landed just between Wexford and Waterford. The English King, Henry the Second, landed at Waterford, and thence began his conquest of Ireland. At Waterford, too, Cromwell landed, and marched thence into the interior, to commence anew the same conquest. The town is still full of Cromwell, that extraordinary man, that rude warrior, and mighty oppressor of Ireland. The inhabitants still point out to the traveller the rock from which Cromwell fired upon the town. The ruin of the old tower still stands at the end of the quay, bearing marks of Cromwell's cannon-balls, which made a breach in it. How many breaches made by Cromwell's cannons in Irish walls remain still unrepaired and unhealed, as his soldiers left them! and so, too, in the political condition of Ireland there are many unhealed breaches and wounds which he inflicted on the land. Cromwell's times correspond pretty nearly with our thirty years' war, with which they may, in many points, be compared. But how long have the wounds of Germany which this war inflicted been scarred over and forgotten! how much has grown up since! how completely has everything been restored! It may be remarked as a peculiar feature in the constitution and nature of Ireland, that no wounds in her ever heal, but that the land rather bleeds from a thousand large or small wounds and conspiracies, without coming to a decided outbreak. Ireland has never had energy enough to free herself fully, and raise herself up again safe and sound, but yet clings too strongly to life to perish altogether.

At Wexford, after admiring the fine harbour, and "Parkin's patent slip," Mr. Kohl was taken to see an infant school, the first he had yet visited :—

We often see in small places what is denied us in larger; and thus in Wexford I saw one of the many hundred infant schools which are now scattered over England and Ireland. These schools have in Ireland a peculiar interest, inasmuch as Catholic and Protestant children are educated together in them. These schools, are, therefore, a sign of the greater degree of toleration now existing between these two sects, and will probably lead to still greater advances in the same direction. In the school which I visited in Wexford, there were ninety-one Roman Catholic, and thirty Protestant, children. Like most schools of this kind in Ireland, it had been about five years in existence. The children usually remained in them till the age of twelve, but the Roman Catholics often send their girls after their twelfth year back to the infant school, because, as the teachers informed me, they are not satisfied with the schools which their own community provide for them, and therefore prefer the infant school. The Protestant girls, on the other hand, as also the boys, do not return to the school, because they find themselves better provided for. The instruction at these infant schools takes a peculiar and very poetical turn. The whole process is conducted in verses, which are sung by the little pupils, and accompanied, if the poems admit of it, by action. Above all, every ordinary movement of the children is accompanied by singing. Thus, for example, they sing the following verses when they enter the school,—

> We'll go to our places and make no wry faces,
> And say all our lessons distinctly and slow,
> For if we don't do it, our mistress will know it,
> And into the corner we surely shall go.

When I entered the school the little children were all in the garden; but summoned by the bell of the mistress, they immediately formed in a line, and marched two and two into the school, singing this song, which consisted of several verses. I immediately recognised the melody, which was an old English national tune, which I had frequently heard before in Ireland. They called it the infants' march. They all looked cheerful and happy, and gave tongue merrily; and even the little three year old ones, who could not sing the words with the rest, opened their mouths as wide as if they had cherries to swallow. As they all go in procession, each hurries to take his place in the long line: no one remains behind, and the scolding entrance scenes at school-doors are not to be found here. Indeed, there is no one to scold, for the mistress walks side by side with the children, and joins in their song. * * The movement and exercise ensuing from the pantomimic accompaniments of the singing, tend also considerably to relieve the monotony of the long continued sedentary posture so common in schools. It is also practice in singing, and cultivates in the children an ear for music. I was frequently astonished how the little children begin to learn these verses; for, as the mistress has no time to devote to individuals, they must acquire them in a certain measure by themselves. The very little ones at first imitate the motion of the hands, then they open their mouths, and learn by degrees some leading words, and remark the rhymes and intonations. Thus, at length the whole verse is acquired, and out of it, after a little culture, grows the clear comprehension and the fruitful idea. This adornment of learning by means of poetry, and this mode of learning by committing verses to memory, is a very favourite method in England, and extends from the infant schools to Eton College, and other learned academies. I believe the English consider this the most practical plan. As there are a number of very little children collected in these schools, a bed always forms part of the ordinary school furniture, in which the weaker infants are laid to rest. The infant schools have only existed five years in Ireland, and their effects on the better education of the people, are as yet, scarcely visible. They must, however, be very beneficial, for thousands of children, who would otherwise run wild in the streets, or grow up in miserable huts, here have the advantage of a reasonable supervision, and a far better management and home than their parents could provide for them. As the Irish are an especially intelligent people, and very earnest in the pursuit of knowledge, I cannot but look with the greatest expectation and the fairest hopes on the immense number of new schools with which this country is being covered. I think I scarcely passed through one village in Ireland in which I did not discover a bran new school-house, as I did not pass through a single village where a distillery falling to decay was not shown to me. What ruin would one more gladly see than the latter, what restoration more gladly than the former? In Wexford there were to be found, not long since, seven breweries, and now there is only one kept in active work. In New Ross and Enniscorthy, the chief distilleries had reduced their establishments. The contemplation of such objects as these, gives a higher pleasure to the philanthropist than the sight of scenery and monuments.

Of the poor-houses and poor-law, Mr. Kohl thus speaks :—

The poor-houses, in general, appear like fortresses. They are usually situated on the top of an elevation outside the town, probably in order to secure fresh air. They are built of a hard grey stone, surrounded with high walls, and provided with little turrets, and fortress-like outworks. They look out over a great extent of country, and are the terror of the Irish beggars all round, who prefer their independent beggary to the confinement, though free from care, of the workhouses. In some places no poor-houses have as yet been erected, and where this is the case, the beggars are to be found in hordes, flying from the detested poor-houses. Up to the present time almost all the poor of the land were supported exclusively by private charity. This was in no part of the United Kingdom so prevalent as in Ireland; and consequently Ireland is, more than all other parts of the empire, enraged at the newly appointed order of things, and opposed to the attempted introduction of the poor-law. As the Irish, in accordance with their benevolent goodness of heart, do not like to set bounds to their liberality, their expense is consequently doubled by the imposition of poors' rates; and the beggars, as well as those who were in the habit of relieving them, join in the opposition. They appear

Digitized by Google

firmly convinced, that the poor-houses cannot be maintained in the land, and hope to see them soon disappear; in this hope, however, they will probably be disappointed; for, however many inconveniences may for the present follow the transition, from the relief of the poor by private benevolence to the establishment of a provision made by the State, yet there is no doubt that the latter plan is by far the more advantageous of the two. The feeling among the Irish beggars and their patrons is somewhat similar to that which pervades the Irish tenants and their landlords. These, too, complain, that in consequence of the spirit of improvement, enlightenment, and independence, which has sprung up among the country people of late, and more especially of the agitations of O'Connell, the good understanding of past times has been, in a great measure, disturbed. The landlords complain that it sometimes occurs to their tenants to have opinions of their own, and therefore, now and then, to vote against them, their natural lords; and the tenants bewail the old times, now gone by, when they were supported and aided by their protecting masters; and say they can no longer rejoice in the old confidence and mutual trust, the old kindness and support, but rather that they are more frequently than ever driven out of house and home. This is sad, and recals to our recollection the case of Courland, Livonia, and other countries where the removal of bondage has produced circumstances and complaints similar to those one meets with in Ireland. And yet, in the name of the cause of freedom, we must rejoice even at these temporary calamities, hoping, as we may venture to do, that at last everything will draw to a fair and glorious end. Wexford was the scene of a horrible incident during the last Irish rebellion at the end of the last century. The rebels put to death a crowd of English and Protestant prisoners, on the bridge built over a narrow part of the arm of the sea, by plunging them one after another into the sea beneath. Mulgrave says, in his Memoirs of the Rebellion, which, though famous in Ireland, are now, from some cause or other, scarce, that most of the prisoners were first run through, behind and before at the same time, and then hurled into the water. If we reflect that this affair occurred within the memory of many now living, and that similar atrocities are to be found on many of the pages of a history so rich in civil war as that of the Irish, we shall not venture to place any full reliance on the present peaceful state of that country, nor feel an assured hope that such an event will not recur.

The "sweet vale of Avoca" introduces a chapter on Tom Moore, from whose songs Mr. Kohl quotes largely, in order to prove to his German countrymen that Moore is an Irish, and not an English, bard, drawing all his inspiration from Irish deeds, Irish scenery, and Irish sympathies:—

Tom Moore's beautiful and musical verses are written from an Irish heart, and stamped on every Irish brain. They have more power to move than O'Connell's longest speeches, which will be forgotten when the verses of the Irish bard are still sounding on from generation to generation. Thomas Moore is, in fact, a more dangerous agitator than O'Connell, although he remains quietly in his comfortable home reposing in his easy chair. His influence extends to the inmost heart of the Irish, and he marches to battle against the Saxon with tears and sighs, with enthusiastic blessings and curses, with the voice and verse of the poet. O'Connell fights in the van, and Moore is the bard who stands by his side. O'Connell, Moore, and Father Mathew—this is the great triumvirate who now stand at the head of all moral movements in Erin, each occupying his own peculiar post. They form the mighty trefoil of the wondrous shamrock, which is verdant and blooming on the mountain top of Irish fame, and to which Erin's people look up with loving and admiring gaze. It is worthy of remark, that all three were born in the south of Ireland, and in the neighbourhood of the sea,—O'Connell in Cahirsirveen in Kerry, Father Mathew in Cork, and Tom Moore in Wexford. The circumstance of the birthplace of these three great men being in the south, confirms what I have before remarked, that the chief of Irish patriotism is to be found in that quarter. . . . . .

We must not, however, forget Avoca, while mentioning its panegyrist:—

The whole country is rich in interesting and romantic scenes and valleys. The most famous of all, however, is the valley of the Avoca, in the spot where the chief sources of its waters join, and shortly before it empties itself into the sea. In Ireland the vale of Avoca is as famous as the valley of Vaucluse in Southern France. It is striking how frequently beautiful names are connected with beautiful things. Avoca sounds quite an Italian name, though not half so much so in the mouth of an Englishman. Hosts of such Italian-like names are to be found in Ireland, such as the town of Portumna on the Shannon, the bay of Lescanor on the coast of County Clare, the headland Brandon, and the town of Bandon, Fort del Ore in Kerry, Garomna and Castello in Connemara, Marino, Matilla, and Portobello near Dublin. Are these names in the Celtic language of Ireland the same as in the original language of Italy, or are they really Italian names, which have been transplanted to Ireland as to other countries, on account of the sweetness of their sound? The beautiful foliage of the vale of Avoca constitutes its principal charm. Here are beautiful oaks and beeches, forming the most picturesque groups, and clothed over with ivy. All the valleys of the mountain districts of County Wicklow, through which rivers run, are decked in the same way with beautiful foliage, whilst the broad ridges, the pyramidical mountain tops and the unwatered neighbouring valleys are quite bare. By the side of the beautiful watered valleys are to be found large tracts perfectly treeless. The Irish oak has a peculiar conformation, which makes it easily recognizable and distinguishes it from the English variety. But although I could tell an Irish oak at a single glance by its peculiar physiognomy or growth of its branches, yet I should find considerable difficulty in describing it. The most characteristic mark appears to me to be, that the branches do not grow so interlaced, so gnarled, or so broad as those of the same tree in other countries. It appears to me that straight lines prevail more than curve, length more than breadth, in the Irish oak. The main branches form usually more or less the figure of an expanded fan. The Irish oaks, also, are generally not so large as the English; but as a counterbalance, the wood of the Irish oak is, as the Irish boast, harder and more durable than that of the English, and many works in carved wood, as for example those in Westminster Hall in London, are in Irish oak. But that which constitutes the beauty of the vale of Avoca, and generally of all the glens of County Wicklow, is the luxuriant ivy. There is scarcely a single tree in this whole neighbourhood, which is not adorned with ivy; and it is an employment of no common interest to examine all the various and multiform figures assumed by the circling parasite on the hundreds and hundreds of beautiful columns in this vast leafy temple. At one time it is a single freshly verdant shoot, climbing like a slender streak on the gnarled bark of some burly tree, at another a hundred shoots twine round the pillar like so many gay-coloured snakes. In another part they clothe some dead old tree as with a shaggy skin, and climbing over its topmost branches, invest it as it were with artificial foliage, such as it can never produce for itself again. It was autumn when I visited Avoca, and the foliage of the oak was already becoming yellow, while the ever-green ivy was as fresh and verdant as ever; and thus, in its double pomp of colours, each tree represented at once the beginning and end of the year. The extraordinary luxuriance with which the ivy here grows round every tree, and the manner in which it rises out of the ground wherever there is any support, and climbs round that support, is really wonderful. Beautiful, however, as it makes every thing,—each hut and wall and hollow tree to the sight of the painter, it must yet be a great and annoying nuisance to every landowner. Out of how many old and mighty trees does it suck the life-sap, and suffocate them! It is probably one of the chief, but least noticed, causes of the devastation of the forests of Ireland. The little town of Arklow lies at the mouth of the Avoca, near the sea, and from it goes the road to the woody valley, first passing through the forest of Glenart, in which lie Glenart Castle, and another equally beautiful and picturesque building, Shelton Abbey. The whole road between Arklow and Rathdrum, a village some twelve miles distant, is rich in most lovely scenery. The most beautiful parts, however, are between the embouchures of the rivers Avonbey and Aughrim, or between the first and second "meetings of the waters." Thomas Moore does not say in the note to his little poem, 'The Meeting of the Waters,' to which of these two points he alludes; but the Irish pointed out to me the first as the scene, and even showed me the oak under which he sat and was inspired.

> There is not in the wide world a valley so sweet,
> As that vale in whose bosom the bright waters meet—

sings Moore, and among the Irish these words meet with an almost too literal echo. They do not reflect that a poet, entranced for a moment by the wonderful charms of a scene, may, without intention to deceive, pronounce it the sweetest spot in the world; but that, if a prosaic *æsthetic* is seated on the judgment seat, and employs such expressions, he is guilty of exaggeration. There are so many charming valleys, and nature is so gracious and beautiful in a hundred thousand spots on earth, that one may only venture to forget this fact, when hidden in one's own delicious valley, and intoxicated with its beauty; not when one lifts up one's head and looks forth into the wide world for comparison's sake. The Americans who come here, say the Irish, assure us that they never saw its equal. A Frenchman, too, was lately here, and declared that its equal was not to be found in his vast country. Only the German visitor was unwilling to come forth so readily with his "the most splendid scenery he ever saw in his life." It is often with the inhabitants of some secluded and narrow district as with lovers who have made acquaintance with the divinity of human nature, and in particular with the general beauty of the female sex, only by means of a single individual. As they study this individual more deeply, learn it more thoroughly, and appreciate more nearly all the beauties with which the human soul as well as the body are adorned, they begin to consider this as individual merit in the particular person, and when they ought reasonably to love the whole race of mankind, as a creation of God, with the same affection as the individual, they leave the path of reason, and fall in love, as the English express it, that is, fall into a deep hole, whence they can see but one star of the millions which crowd the vault of heaven. Thus the Irish have found all the fragrance of heaven in their vale of Avoca. They and their journalists and poets have discovered and praised all its beauties, and thus has arisen the exclusive affection for this valley, as though it were unique in the whole globe.

A long moral, truly, for so short a tale. But Mr. Kohl is a traveller, and must be permitted to sit in stern judgment even on the "sweet vale" of Avoca, albeit thereby he hurl down some favourite idol from its throne in the hearts of a whole nation. From the vale of Avoca, and its bard, we pass naturally to another of Mr. Kohl's great triumvirate of Ireland, and proceed to introduce to our readers Mr. O'Connell and Repeal of the Union:—

On my return to Dublin, I was first introduced to that man whom every stranger in Ireland is as anxious to see as they would be to get a sight of the Pope at Rome. I mean that man, whom they in Kerry call king, by courtesy or in jest; who, at the time of my visit to Dublin, happened to be Lord Mayor, and who, throughout all Ireland is entitled the immortal, the great, the great agitator, and for whom in London they have so many different names. It is undoubtedly a pleasure to be able to converse with so sensible, experienced, talented, distinguished, and intellectual a man, who, at the same time, within his own house, is so agreeable and hospitable to his guests. But it is not of the private character of O'Connell I wish to speak, as it is not my practice to speak of the private character of individuals with whom I become acquainted. Many people remain entirely in the narrow circle of private life, and these remain in their own power; others make themselves remarkable as actors, statesmen, or authors on the stage of public life; and these own only part of themselves, since they exhibit another part to be looked at and criticised. Such people, so long as they wear the garb of the character they act, one may freely and

Digitized by Google

publicly criticize and talk about without any indelicacy; we may attack them boldly, and be their enemy in public, although in private one may be their friend, or, at least, have little objection to them. O'Connell has kept less of himself than any man in Great Britain, for he has made himself more public than any one else: he exhibits himself everywhere to the gaze and opinion of the public—in parliament, at public meetings, in the streets, at elections, even on his travels. He scarcely ever ceases to lead a public life, and almost everything he does is done before the eyes of hundreds or thousands of witnesses. Peel, Wellington, and other great statesmen, wrap themselves up in the secresy of their bureaux and cabinets, from which they only emerge in their public measures, and in person only in parliament, at public dinners, &c. O'Connell, the tribune of the people, is all public: even his domestic and family affairs are talked of at his meetings, since it is only through the direct support of the public that he is enabled to keep up his house and family. A person travelling in Germany for ethnographical or geographical objects, and who wishes to become acquainted only with the character of the country or nation, need not take any trouble to ascertain particulars of our distinguished men; but travelling in Ireland for the same purposes and overlooking O'Connell, the man who, as Atlas bears the earth, has taken the Emerald Isle on his shoulders, is almost impossible, for he is himself an ethnographical phenomenon; partly because for thirty years he has exercised the most extraordinary influence on the formation of the character and the change of the condition of his nation, partly because he himself and his power are also phenomena which can only be explained by reference to the national character. The Irish are, indeed, a people of an ancient stamp, such as can hardly be met with elsewhere. With us, people have everywhere become too rational, too enlightened, and too independent for a single individual, risen from the midst of them, to grow up into such preponderating influence. We laugh at the prophets: but among the Irish is still to be found the ancient faith in saints and miracles; and the strong, the immortal, and the great, still find here a fruitful soil, from which laurels for their temples and halos for their heads may spring up, such as can no longer be acquired elsewhere. They are enthusiastic, credulous, blind, still infants, and patriotic enough to give themselves up to admiration of a man of genius, and to raise him upon their shoulders and shields, as the Roman soldiers did their generals. At the same time, they are in a state of wretchedness, and anxious to be relieved from their sufferings, and are willing to cover him with praises who shows in this respect an interest in them and devotedness to their cause, and to applaud him from the bottom of their aching hearts. In a well-regulated state, among an enlightened, well-governed people, where every one knows how to act for himself, and possesses the means of subsistence, the appearance and growth of such a tribune is absolutely impossible. It was only when Rome's *infima plebs* had dissolved into a large and shapeless mass, that its tribunes made their appearance. Ireland is a country which possesses more unfortunate, wretched, poverty-stricken proletarians, without rights or possessions, than any other in the world, and therefore is also a soil in which such talented, active, eloquent tribunes as O'Connell may thrive; a man who, for these thirty years, has been representing the powerful and unwearied arm of Ireland, with which it is ever threatening England, and with which it gradually recovers, one after another, the natural rights of which it has been deprived. It is, of course, not my intention to attempt a perfect character of so remarkable a person as O'Connell, as my powers will not be adequate to accomplish such a task; yet I will endeavour to give my German readers, who have not had an opportunity of witnessing a meeting of the Emerald legion—as O'Connell sometimes, in the poetical flights of his speeches, entitles his repealers—or of a division of this Emerald legion, a faithful picture of such a meeting; adding a few observations, which I had opportunity to make, of men whose names often figure in the newspapers. It was one of the common repeal meetings which O'Connell frequently calls together, in order to keep up the fire of agitation among the people, and took place in a room of the Corn Exchange, at Dublin. Although I arrived at the appointed hour, I found the room full to suffocation. The assembly consisted, to judge by their exterior, almost entirely of such Kerry men and Clare and Kildare men as I had observed in the interior of the country, dressed in their peculiar garb of rags. To my surprise, I saw but few whole coats, and but few such people as we should call respectable and substantial citizens. They all stood and sat on benches, ranged like an amphitheatre, round the room. At the table, in the middle, sat some writers and reporters. A gallery, which was raised above the heads of the rest, was filled with women, boys, and girls. I perceived that there was some room at the centre table, and endeavoured to make my way to it. Instantly a number of arms were ready with their kind assistance, and at last I was lifted up and handed over the heads of the people, and over the railing which surrounded the table, from which I safely descended. Rags and tatters hung over the railings on every side, for torn clothes were almost the universal uniform of the Emerald legion. I do not wish to say anything insulting or offensive, nor would I speak with any hardheartedness or want of compassion of the poor fellows who could provide no better uniform than rags for the solemn assembly of the repealers, but I wish only to impress upon my readers the fact, that most of O'Connell's repealing friends who appeared here in public, wore tattered garments. The next morning, however, I read in the Dublin papers that "the repeal meeting of yesterday was very *respectably* attended," which certainly was not the case in the every day acceptation of the phrase. The whole assembly presented such an appearance as would not be seen on the Continent, either in France or Germany, except when some public hurricane had stirred up the lowest depth of the waters: nay, even in times of revolution, we should scarcely find anything similar among ourselves.

Mr. Kohl then gives the inscriptions on some of the banners, and proceeds again to comment on this strange scene of rags and repeal:—

It is one of the most remarkable traits of the English national character and government, which foreigners do not sufficiently admire, that they can both endure and tolerate such uproarious agitation without seeming to suffer by it. O'Connell himself, his uninterrupted life of tribune of the Irish people, during thirty or forty years, and his position as the grand agitator of Ireland, form the most brilliant praise on the one hand of the craft of this clever man, who has been always venturing to the utmost bounds of legality, yet never has ventured beyond them; and, on the other hand, of English political freedom, indeed of the character of the whole English nation, and among them, for all their authorities and statesmen, to whom O'Connell has been always a grievous eyesore and stumbling-block, and who yet have never stepped beyond the strict bounds of law, nor ventured to touch a hair of the agitator's head. I will not stop to inquire here, whether it would have been possible for a man like O'Connell to pursue his occupation as free as air in France or Germany, without coming within reach of prison or guillotine; but I will merely, for an instant, turn to the republics of Greece and Rome, and think of the end and fate of their popular leaders and tribunes. I do not believe that any of these republics can produce an instance of a man raising and supporting so long, and with such impunity, as O'Connell, a war against so vast an aristocratical power as that of England and Ireland. It appears to me that O'Connell's history is in this point unique, as also in this, that he has never once changed his position and principles. He was the man of the people and the agitator thirty years ago, and the man of the people and the agitator he still is. He has never forgotten his part, as did those Roman tribunes, who almost all ended with attempting to grasp the regal power. I do not forget that O'Connell is still living, and that we "can pronounce none happy before his death;" but that this phenomenon should have lasted through thirty years is surely a miracle such as has never been heard of before.

O'Connell's personal appearance in his Lord Mayor's robes is then described, but this is too well known to need repetition; our readers, however, may not be so well acquainted with one of O'Connell's most celebrated supporters:

No one among the notabilities on the platform excited my attention to such a degree as the Tom Steele of newspaper notoriety, who is almost of equal fame with O'Connell through all Ireland, as O'Connell's satellite, and who, without O'Connell, would probably have been as little known as Jupiter's satellites without Jupiter. This man has, as I was informed, spent no inconsiderable fortune, entirely in agitating. He is now poor, and appears more than ever devoted to the cause for which he has sacrificed his property. Tom Steele possesses as striking an appearance as one of Bardolph's, Pistol's, and Nym's boon companions, or rather looks like what one could imagine Corporal Bardolph himself to have been. He has the long and meagre figure of a corporal, and withal the fiery nose of Bardolph. The only difference is, that his face appears, at any rate now, more careworn and melancholy than that of Bardolph. I need hardly say, that he has the manner of a man without education, and when one hears him speak, it is hard to understand how, except by expenditure of money, he has obtained any influence and power with the people. It may be that the man has other inward and nobler qualities, which I know nothing of: this is possible, but so much is certain, that I have not exaggerated in the least in my description. Falstaff blames Prince Harry for the bad company in which he finds him; and I must say, that Tom's physiognomy,—judging only from his physiognomy,—was such as led me to wish that I had not seen O'Connell in his company. He was, however, received with loud cheers, which he acknowledged, and then took a seat by O'Connell.

Mr. Kohl proceeds to give several extracts from O'Connell's speeches, with which the English reader is well acquainted. The collection of rent, however, does not pass unnoticed. Of this he says:—

I must confess that these money boxes were the greatest eyesore to me in the whole matter. I cannot forgive O'Connell for it, and I think nobody else can. And will posterity be able to forgive him for making a gain and a money matter of his patriotic toils, and carrying on this business openly and publicly without shame or fear? I believe it never occurs to him himself, that there is anything bad in the affair, for he has entrenched himself, and made himself secure behind some such reasoning as this:—"I was an advocate with excellent practice, which promised to be better than it already was. I became a patriot, and dedicated all my powers to my country and to your cause, ye men of Ireland! This business is an expensive one to me, for I must not only provide for myself and my family, but also maintain several of my friends who help me and mine, and stand by me in Parliament, and put me in a condition to do effectually, whatever I do for your cause. There can be nothing more just than that all Ireland should pay for the cost of this business, and also reimburse me for the profits of my profession, which I have surrendered for love of her. I can, therefore, with the greatest right, demand of you the O'Connell tribute, and receive it with a good conscience." This species of reasoning it is which O'Connell, for some time, has been constantly repeating, and allows to be repeated by all his friends, and in all the journals of his party. As almost all his speeches contain requests for money or rent, and his usual arguments in behalf of his just claims on his country for support and indemnification, his enemies are constantly employed in vilifying him as a false prophet, a regular robber, a knave in politics, a hypocrite in religion, and whatever other epithets of abuse the Tories have at their command, and they reproach him with picking the pockets of the people that he himself may live in luxury. His friends, on the other hand, many of them contributors of money, assert that O'Connell could not possibly order matters otherwise; that if he is to direct all his energies towards the good of his country to any profit, he must both ask and accept this money, and that if they gave no money, they could have no repeal. The question is now in what light we should regard the affair; and this will be difficult to decide, without a closer knowledge of the heart and financial condition of O'Connell than any one, but God, possesses. The following facts, however, are certain; that in consequence of his patriotic and stirring endeavours and agitations, O'Connell enjoys a yearly rent of no inconsiderable

Digitized by Google

magnitude (to the amount, it is said of more than 10,000*l.*), and that he and his friends live well on this, with far better clothes and far better food than thousands of those from whom they draw the rent. Farther, it is certain that O'Connell and his friends do not say, "we will walk in rags, we will eat potatoes and salt, like millions of our compatriots for whom we toil; we will set aside all worldly advantages, and all the money which is contributed shall be devoted solely and singly to the cause, and not employed for any personal purposes." The tendency of their argument is rather this: "if we had continued as advocates, we could now be living gloriously, and in the enjoyment of all kinds of pleasure; if therefore we are to forget this, you must fully protect us from want." We cannot, therefore, place the O'Connells in the same rank with the great and glorious spirits whom the world has exalted so high, because they kept their soul and their thoughts free from the atmosphere of money, and kept their hands undefiled by the touch of Satan's worst invention, gold,—such men as the unselfish Fabricius, Cincinnatus the worker at the plough, the barefooted Caliphs, the world-denying apostles and prophets, and other highly exalted prophets and patriots. This is not, however, to say that all that O'Connell does, is done solely from interested motives, and that all his zeal, all his eloquence, and all his patriotism, arise only from greediness for gain, and that we must, therefore, consider him a public deceiver and hypocrite. For an intermediate position is perfectly conceivable of a man equally zealous for his country and her cause, and for his own interest. Perhaps he may have commenced out of pure zeal for his native land, out of pure antipathy and thorough hatred to the Tories, and has unexpectedly, on this his path, stumbled on a spring of gold, which he allows to pour forth its riches for him, inasmuch as it helps him on. There are, I believe, prophetic souls standing midway between the pure angelic spirit and the evil one, which we may call, if we will, false prophets, but which are in truth prophets still. Such as these are, we may think, the more extraordinary, for while they serve Mammon, they know how to preserve their soul ever fresh and ever young, and have the art to keep alive the fire of enthusiasm, not allowing one half of their soul to be corrupted by the other. I am inclined to think, that to such a class O'Connell belongs. Are there not men to be found who, with devotion and enthusiasm, serve a God in whom they themselves do not believe? Had not Mohammed inspirations, and was he not zealous for his God, while he yet, with cunning craft, used that God as means to his own end? We must also look on O'Connell as a child of our times, and as such, lay much good to his share. It is quite possible, it is indeed probable, that had he followed the example of Jean Jacques Rousseau, had he refused the support of his friends, had he, like Cincinnatus, determined to live by the plough, or had he, like millions of his poor compatriots, been content to dress in rags and live on potatoes, he never would have attained to his power. Perhaps the people would have despised him and passed him by. Perhaps this age must and will see its heroes well clothed and well fed. As the English national debt is a yoke and burden which holds all England together, so, perhaps, is the O'Connell tribute a burden which holds all the Repealers together. They have once pledged themselves to pay a certain amount of tribute, and this binds them to advance with O'Connell. They perhaps wonder at the extraordinary character of this tribute, which a man without external power, only by his eloquence and earnestness, has imposed upon them, and on this very account value him the more highly. The sum of the whole is; O'Connell is a wonderful man of the 19th century, (the century of money,) who has arrived at influence, power, and prosperity, by means such as the world has rarely heard of previously; who, without physical power and without giving up anything, has for forty years bid defiance to the most powerful aristocracy of Europe, having on his side nothing but a few millions of beggars."

Opinions will, of course, be various as to Mr. O'Connell's character; at any rate, there is much that is valuable in the portrait which Mr. Kohl has drawn, for the author has no prejudices to incline him to one side rather than the other. Mr. Kohl is not, however, always right, and of this there is an amusing instance in the chapter following that from which we have just quoted. On his way to Drogheda he fell in with a person, whose name he inquired, in the following remarkable manner (which he asserts to be the only feasible method of getting at an English name): "How do you spell your name, sir?" This strange question produced the equally strange answer, "John Kjulpen is my name, sir!" on which answer Mr. Kohl thus amusingly comments:—

As I was not very well versed in the English alphabet, I did not quite make out the name, notwithstanding the spelling. For I neither knew how to write nor how to pronounce it; a difficulty which very frequently occurs in English. I however knew at once, by the final syllable *pen*, as also by the Christian name John, that my friend must be from Cornwall. For the following verse is recited concerning the Cornishmen, as the inhabitants of Cornwall are called in English:—

> P'ill, pull, and pen
> Spell the name of Cornish men.

These Cornishmen are generally named John, as the most common name in Wales is Johnson. Whence the Cornishmen assert that the Welchmen are their sons!

A tolerable concatenation of amusing blunders for one sentence.

In another place he informs us that the Irish tinkers are called *rowers*, and adds, in English, the explanation—"That means, they are always rambling about." He then enters on a speculation, that though rowers means really people who row, yet perhaps the Irish attach a peculiar meaning to the word. A more probable explanation, one would think, might be found in its being either the Irish or Kohlian pronunciation of the word *rovers*, at all events an easier method of settling the difficulty. Mr. Kohl's blunders are, however, not frequent, and easily excusable; and as they are always good-humoured, even when they are intended to tell against us, we will not violate the rites of hospitality by citing any more. An anecdote recorded by our author, of Lizst's having been mistaken in the neighbourhood of Belfast for O'Connell, and nearly ducked in a horse-pond in consequence, may or may not be true, but it serves, at any rate, to introduce some apposite remarks on the state of party in Ireland.

That which constitutes the peculiarity and the unhappiness of Irish parties is, that they harmonize in scarcely a single point, and that their interests and their sympathies are so divided that they can scarcely unite in any single thing for the good of the whole. It is true, indeed, in a certain sense, that all who live on Erin's soil, and are inclosed in the circumference of the island, are peculiarly and exclusively Irishmen, and necessarily sympathize, to some extent, with their native land, which they either entered as colonists, or have inhabited from ancient times. The old original Celts, the newly-arrived English and Scotch, the Roman Catholics, Presbyterians, and High Churchmen, the poor tenants, the merchants, the high and mighty landlords, all have become Irishmen, or have always been so. The name of Erin finds a response in the breast of all of them; they all desire the prosperity of the country, and there is scarce one of them to be found, who does not bewail her misfortunes. They have united also, to a certain extent, against the claims and assumptions of England, the original Celtic inhabitants and the Roman Catholics being naturally and inveterately opposed to her, and the Presbyterians of Ireland, like those of Scotland, strongly adverse to the High Church party. Nay, even the Presbyterians of Ireland stand in a kind of opposition to the Kirk of Scotland, which, as Mother Church, has now and then attempted to exercise a kind of authority over the Irish synod. In the same way, the Irish Protestant church is by no means in harmony with the English; and the interests of the Irish Presbyterian, Lutheran, or Catholic merchants, and manufacturers of Saxon or Celtic origin, are diametrically opposed to those of the English. Neither are the Irish nobility the same in their views and opinions as the English; the Irish nobleman being frequently laughed at in England, and the English far from loved in Ireland. One would imagine that out of all this there must spring up in Ireland a noble, united, and powerful opposition to England, and that all parties would cordially shake hands when called upon to join against England, as parties in other countries, France for instance, have always heartily united when their country has been attacked from without. Passionate as is the conflict of parties and principles in France, yet, as soon as the foe appears, the contending factions become brothers. In Ireland, however, the very opposite is the case; as often as England, the foe and the oppressor, appears in Ireland, she finds there parties ready, from feelings of party hate, to repress a portion of their patriotic sympathies, and even to sacrifice a portion of their interests, in order to gratify their enmity and save the remaining portion of their interests. Thus, though the Irish landlords were far from liking the restrictions to which the trade of Ireland was subjected before the Union, because they themselves naturally suffered by them, yet they did not complain, feeling that they needed the support of the English monarchs to maintain them in the possessions which they had received at their hands. Thus though the Irish Parliament was far from receiving willingly hints and commands from the English, yet it showed itself obedient, in order to have its privileges maintained. Thus too, though the Presbyterian and Roman Catholic parties are both averse to the claims of the High Church and the Protestant aristocracy, they hate each other so bitterly that they often desert and betray one another in the very heat of the battle. It is said to have occurred during the last revolution, that Presbyterian soldiers looked on inactively, and even rejoiced, when bodies of Roman Catholics were cut to pieces by the English, although both parties were nominally contending against these same English. Thus the interests of two Irish parties never run parallel, and even if both are opposed to England, yet they are so much more bitterly opposed to each other, that they often make friends with England, even though it be against their inclination. People in Ireland think and feel so differently on the most important relations in which men are held one to another, on religion, state, and nationality, and are interested in such opposite ways in the same things, that it is almost impossible to propose or carry any general measure for the country, that will not be looked upon as a poison by one party, while it is blest by another as a healing balm and wholesome medicine. If it be proposed to help the poor by means of poor-houses, the Presbyterians are contented with the plan as one that is calculated to promote order and relieve them of beggars; while the Roman Catholics, who are led by their religion to give much in alms, are opposed to the measure as one which would impose on them a double tax. If it is attempted to improve the instruction in the schools, the Protestants insist on the whole Bible, the Romanists object to the whole Bible, and the schools are the sufferers between them. If it is desired to drain the bogs, and bring the bare hills into cultivation, the farmers applaud, but the great lords will not part with their pastures? or the great lords approve, and then the petty farmers are unwilling to lose their peat. If an endeavour is made to lower the tithes, the high Church party shake their heads, while the Roman Catholics nod assent. Men rejoice in the west over what is done for the Celtic language and antiquities, and over the newly erected chairs of Celtic literature, while in the east this is ridiculed; and the Union, for the maintenance of which one party would die, is like to whelm the other in destruction. And what is worse, there is no prospect of these differences ending, and these clashing interests becoming reconciled, for the attempts at such reconciliation which are being made, advance so slowly, that one dare not calculate on reaching a goal so distant. The Celts vanish but tardily before the aggressions of the Saxon, and a difference of language must continue for no inconsiderable length of time. The Romanists have so much to demand back again from the Protestants, and these latter, at this moment, exercise such grossly unjust privileges, and enjoy a spoil so violently taken from the former, that it will be long before they can accustom themselves to the sacrifice. The great landowners have not advanced

Digitized by Google

a step towards giving up any of their unjust claims on the tenants, and a righteous division of the large estates has never even been dreamed of.

With this view of the state of Irish parties, which, gloomy as it is, we fear is but too just, we take our leave of Mr. Kohl and Ireland. We cannot speak too highly of the urbanity which distinguishes Mr. Kohl's volumes,—an urbanity not interrupted even by the firm and decided expression of his opinion respecting all anomalies and abuses: and we are led, by this description of our sister isle, to look forward with pleasure to our author's promised volumes on England; and thankful should we be if we could persuade ourselves that we had nothing to fear from such an impartial delineation, as we have good reason to expect.

Religion in the United States of America. By the Rev. Robert Baird. Glasgow, Blackie; London, Duncan & Malcolm.

It is rare to find a volume going beyond the professions of its title-page both in the extent and variety of its subjects; the work before us is not confined to religion, but is a clear, philosophical examination of the circumstances which have contributed to mould the form of society in the United States, to establish democracy in government as well as the voluntary principle in religion, and to open for both a career to which it is impossible to assign limits. In nations, as in individuals, the circumstances of infancy and childhood produce effects which are influential over the whole course of future life. In our notices of Bancroft's History of the United States, we pointed out the rugged and stern traits of inflexible perseverance, in whatever was believed to be the path of duty, which distinguished the Pilgrim Fathers. Their resolution to worship God according to their own consciences, led them to abandon their English homes for the wild forests of Northern America; they were daunted by no perils, they despaired under no sufferings, and their energies achieved triumphs greater in their amount, extent, and duration, than the chivalrous daring of Cortés and Pizarro. These men were the progenitors of the New Englanders, to whom they bequeathed the broadest characteristics of their Anglo-Saxon ancestry — inflexible resolution, and a spirit of independence, which, as Tacitus said of their German forefathers, was sometimes carried beyond the bounds of social and conventional restraint. Qualities such as these cannot be thoroughly appreciated by men living within a circle of high civilization, but they are of inestimable value on the frontiers; they are the true elements of triumph over the savagery of Nature and the barbarism of man.

While we look back with pride to our Anglo-Saxon ancestry, we cannot be insensible to the exhibition of their great qualities, displayed by those who are, like us, descended from the same stock in the back-woods of America. Here is a picture of an Anglo-Saxon conquest, more glorious than the capture of Montezuma in his own capital:—

"Take the following case as an illustration of the process that is continually going on on the frontier. A man removes to the west, he purchases a piece of ground, builds a house, and devotes himself to the clearing and tillage of his forest acres. Ere long he has rescued a farm from the wilderness, and has reared a family upon it. He then divides his land among his sons, if there be enough for a farm to each of them; if not, each receives money enough to buy one, as he comes of age. Some may settle on lands bestowed on them by their father; others, preferring a change, may dispose of their portion and proceed, most commonly unmarried, to 'the frontier country' as it is called, that is, to those parts of the west where the public lands are not yet sold. There he chooses out as much as he can conveniently pay for, receiving a title to it from the district land office, and proceeds to make for himself a home. This is likely to be in the spring. Having selected a spot for his dwelling, generally near some spring or where water may be had by digging a well, he goes round and makes the acquaintance of his neighbours, residing within the distance, it may be, of several miles. A day is fixed for building him a house, upon which those neighbours come and render him such efficient help, that in a single day he will find a log-house constructed, and perhaps covered with clap boards, and having apertures cut out for the doors, windows, and chimney. He makes his floor at once of rough boards riven from the abundant timber of the surrounding forest, constructs his doors and erects a chimney. Occupying himself, while interrupted in out-door work by rainy weather, in completing his house, he finds it in a few weeks tolerably comfortable, and during fair weather he clears the underwood from some ten or fifteen acres, kills the large trees by notching them round so as to arrest the rise of the sap, and sows the ground with Indian corn, or maize as it is called in Europe. He can easily make, buy, or hire a plough, a harrow, and a hoe or two. If he find time, he surrounds his field with a fence of stakes. At length, after prolonging his stay until his crop is beyond the risk of serious injury from squirrels and birds, or from the growth of weeds, he shuts up his house, commits it to the care of some neighbour, living perhaps one or two miles off, and returns to his paternal home, which may be from fifty to three hundred miles distant from his new settlement. There he stays until the month of September, then marries, and with his young wife, a waggon and pair of horses to carry their effects, a few cattle or sheep, or none, according to circumstances, sets out to settle for life in the wilderness. On arriving at his farm, he sows wheat or rye among his standing Indian corn, then gathers in this last, and prepares for the winter. His wife shares all the cares incident to this humble beginning. Accustomed to every kind of household work, she strives by the diligence of her fingers to avoid the necessity of going to the merchant who has opened his store at some village among the trees, perhaps some miles off, and there laying out the little money they may have left. With economy and health they gradually become prosperous. The primitive log-house gives place to a far better mansion, constructed of hewn logs, or of boards, or of brick or stone. Extensive and well fenced fields spread around, ample barns stored with grain, stalls filled with horses and cattle, flocks of sheep and herds of hogs all attest the increasing wealth of the owners. Their children grow up, perhaps to pursue the same course, or as their inclinations may lead, to choose some other occupation, or to enter one of the learned professions."

We have described an isolated settler; let a few years pass, when his example shall have induced others to "locate" in his neighbourhood, and here is the process by which the new settlement obtains a place of worship:—

"Let us suppose a settlement commenced in the forest, in the northern part of Indiana, and that in the course of three or four years a considerable number of emigrants have established themselves within a mile or two of each other in the woods. Each clears away by degrees a part of the surrounding forest, and fences in his new fields where the deadened trees still stand very thick. By little and little the country shows signs of occupation by civilised man. In the centre of the settlement a little village begins to form around a tavern and a blacksmith's shop. A carpenter places himself there as a convenient centre. So do the tailor, the shoemaker, the waggon-maker, and the hatter. Nor is the son of Æsculapius wanting; perhaps he is most of all needed; and it will be well if two or three of his brethren do not soon join him. The merchant of course opens his magazine there. And if there be any prospect of the rising city, though the deadened trees stand quite in the vicinity of the streets, becoming the seat of justice for a new county, there will soon be half a dozen young expounders of the law, to increase the population, and offer their services to those who have suffered or committed some injustice. Things will hardly have reached this point before some one amid this heterogeneous population come from different points of the older States, intermixed with wanderers from Europe,—Irish, Scotch, or German,—proposes that they should think of having a church, or at least, some place of worship. It is ten chances to one if there be not one or more pious women, or some pious man with his family, who sigh for the privileges of the sanctuary as once enjoyed by them in the distant east. What is to be done? Some one proposes that they should build a good large school-house, which may serve also for holding religious meetings, and this is scarcely sooner proposed than accomplished. Though possibly made of mere logs and very plain, it will answer the purpose for a few years. Being intended for the meetings of all denominations of Christians, and open to all persons who may be passing, word is sent to the nearest in the neighbourhood. Ere long some Baptist preacher in passing preaches in the evening, and is followed by a Presbyterian and a Methodist. By and bye the last of these arranges his circuit labours so as to preach there once in the fortnight, and then the minister of some Presbyterian congregation, ten or fifteen miles off, agrees to come and preach once a month. Meanwhile, from the increase of the inhabitants, the congregations, on the Sabbath particularly, become too large for the school-house. A church is then built of framed beams and boards, forming no mean ornament to the village, and capable of accommodating some 200 or 300 people. Erected for the public good, it is used by all the sects in the place, and by others besides. For were a Swedenborgian minister to come and have notice given that he would preach, he might be sure of finding a congregation, though as the sect is small in America, and by many hardly so much as heard of, he might not have a single hearer that assented to his views. But it will not be long before the Presbyterians, Methodists, or Baptists feel that they must have a minister on whose services they can count with more certainty, and hence a church also for themselves. And, at last, the house, which was a joint-stock affair at first, falls into the hands of some one of the denominations, and is abandoned by the others who have mostly provided each one for itself. Or it may remain for the occasional service of some passing Roman Catholic priest, or Universalist preacher."

So rapid is the increase of population in the New States, that the objection which may be taken against the use of the same place of worship by different religious denominations is very soon obviated. Mr. Baird's testimony on this point is as decisive as it is wondrous:—

"When in the State of Alabama, in February, 1831, I visited the town of Montgomery, in company with a worthy Baptist minister, in the course of an extensive tour through the western States, in behalf of one of our benevolent societies. It was then hardly more than a large village, and on the night of the second of the two days we spent in it, we preached in a large school-house, which, if I remember rightly, was the only place for holding religious meetings existing there at the time. We had a good congregation, though a circus was held hard by. Just three years after, when repeating the same tour, I spent a Sabbath and one or two days more at the same spot, but under amazingly different circumstances. In the morning I preached in a Presbyterian church built of frames and covered with boards, and every way comfortable, to at least 600 persons. The church, which reckoned 100 members, had got a young man as pastor, to whom they gave a yearly stipend of one thousand dollars. At night I preached in a Baptist church, built of brick, but not quite finished, which could hold 300 persons at least. Besides these there were one Methodist Episcopal and one Protestant Methodist church, each, in so far as I can recollect, as large as the Baptist church. Then there was an Episcopal church, not less in size, though probably with a smaller congregation, than the Baptist church. And withal there was a Roman Catholic church, though not a large one, I believe. All this after an interval of only three years! Eventful years they had been."

But the voluntary principle has done still more in America; a Home Missionary Society has been formed, for the purpose of conveying religious instruction to families on the outskirts of civilization, and last year it employed 791 missionaries, at an expense of more than one

Digitized by Google

hundred thousand dollars. The collections made by the missionaries in these scattered congregations for religious and benevolent purposes amounted to nearly fifteen thousand dollars.

"The plan pursued by this society, and by all the other societies and boards established for the promotion of home missions, is never to support a missionary at its sole charges, if it can be avoided; but to give 100, or 150, or 200 dollars, rarely more than 100 or 120, to a young and yet feeble church, or two congregations near to each other, on condition of their making up the deficiency in the missionary's salary. Thus they are stimulated and encouraged to help themselves, and as soon as they can walk alone, if I may use the expression, the society leaves them for others which have been just organised, and which need assistance. In this way hundreds of congregations have been built up, and hundreds are at this moment emerging from the weakness of childhood into the vigour of youth and manhood. In no case, however, does the society do anything towards the erection of church edifices. The people must find these for themselves, and this they willingly do. The cheapness of materials in the new settlements, and in the villages of the interior, renders it easy to erect such houses as will suffice until the flock gathers strength, and can do something more."

Let us next take a glance at the state of education in the United States,—a matter closely connected with religion; for, as Archbishop Sharpe well observed, "Though God has little need of man's knowledge, he has still less of man's ignorance."

"The white population of the United States amounted in 1840 to 14,189,218, of which number it was ascertained that 549,693 persons, above twenty years of age, could neither read nor write. A large proportion of these must have been foreigners,—Irish, Germans, Swiss, and French,—as is evident from 13,041 of them being found in the six New England States, where education is nearly as universal as can well be imagined. That a native of either sex, in short, above the age of twenty, may be found in Connecticut or Massachusetts is not denied; but that there should be 526 such persons in the former of these States, and 4448 in the latter, cannot be believed by any one who knows the condition of the people there. The greater number were not native Americans, and even of those that remained the majority were idiots. By the census of 1840, it appears that the number of primary and common schools amounted to 47,209, attended by 1,845,245 scholars; of whom 468,264 were taught at the public charge, the remainder at that of their parents and friends. From this it will be seen that education in America depends very much on the voluntary principle; but though primary schools were in all parts of the country originated and sustained at first, as in most of the States it continues to be, by the people themselves, or rather by the friends of education, State after State is beginning to be induced by the efforts of these friends of education to make a legal provision, to a certain extent at least, for the instruction of all who may choose to avail themselves of it, for in this they do not see that they violate any rights of conscience."

Every traveller, who has examined them, has borne testimony to the excellence of the charitable institutions established for the relief of the insane, the blind, the deaf and dumb, and the orphan. Mr. Baird's statistics are not sufficiently definite to enable us to enter into any comparative estimate of their extent and efficiency. But we know from other sources that a system of charitable economy has been established in Boston, which is well worthy of imitation elsewhere. A central board has been formed of delegates from all the charitable institutions in the city, which are thus enabled to work together in harmonious association. The unity thus given to the exertions of benevolence, while it facilitates the detection of imposture, ensures the application of the specific relief required. We know that the advocate for economy in charity is unpopular in this country; we know that—

> The pleasure is as great
> Of *being cheated*, as to cheat;

but as we have no great respect for the amateurs of either pleasure, we have no hesitation in recommending the American plan of systematic and associated charity.

Statesmen of the Reign of George III. Third Series. By Lord Brougham.

[Second Notice.]

THE portion of the volume before us, which relates to the more remarkable characters that figured during the Reign of Terror in the French Revolution, is prefaced by a brief inquiry into the origin of that event; and we cannot discover that Lord Brougham has succeeded in throwing any new light upon the subject. We are disposed to think that his principal motive for going over this ground, has been to create an occasion for the moralizings with which he winds up his view of the period in question; and the fault of these moralizings is, that they have manifestly a special political object. It requires no great sagacity to perceive throughout them an under-current of allusion to another country, and to demagogues of a later time, bearing no very striking resemblance to Robespierre and Couthon. To the moral inferences themselves we have no objection to make; they are as little questionable as original; but believing them to be pointed at occurrences and personages of the day, we are justified in describing this oblique species of writing as only pamphleteering in masquerade, leaving it to other judges to determine how much truth and how much decency there may be in the insinuated parallels.

Lord Brougham has just now a horror of agitators, and therefore the important fact which he reads in the French Revolution is, beware of agitators—do not neglect to take precautions against agitators—the numbers of the ill-intentioned may be inconsiderable, but the tendency of their opinions is to spread, whereas the tendency of the respectable classes is to inaction, apathy, and ultimately submission.

"The power of the clubs and the Paris mob did not at all rest upon the refusal of the Government to give whatever improvements were required by the state of France. No pretext could be urged on any such ground either to justify or to palliate the enormities of those who acted in the sanguinary scenes, or the pusillanimity of those who permitted them to usurp and to abuse supreme power. The utmost latitude had been given to reformation in every branch of the state long before any attempts were made to subvert the constitutional government; and the success of those attempts had nothing whatever to do with the views or the grievances of Reformers, or with any complaints of the people."

According to this mode of reasoning, in seeking the causes of the ascendancy of violence in the latter period of the French Revolution, we are to go no further than the cowardly apathy and non-resistance of the middle classes of Paris! It was not the existence of enormous abuses, argues Lord Brougham, in the state, that called forth the spirit of Jacobinism and the fury of the Mountain, because "the utmost latitude had been given to reformation long before;" and therefore (taking his lordship's remarks connectively,) we should be satisfied with the statement that it was the pusillanimity of the respectable *bourgeoisie* of the French capital, which led to the Reign of Terror and all its sanguinary horrors! With profound respect to a writer of such ability, we take this to be one of the shoals of his political philosophy, for it appears to us not less clear that the first stage of the revolution was owing to the thorough awakening of the French nation to its manifold grievances, and a determination no longer to endure them, than that the latter is to be accounted for by the delay of the required reformations, and the unmitigable opposition of the privileged classes. The true lessons derivable from those portentous times, are the dangers of permitting public wrongs to accumulate unredressed, until they can only be thrown off by a force which rends the frame of the state asunder, as the exorcized demoniac is torn by the departing fiend. Reformation may come too late to avert revolution; just as a physician may be called in when the case is beyond pharmacy, and nothing but miracle, or some hidden energy of nature, can save the patient. It seems but too plain that the author has been seduced into this erroneous reasoning by his eagerness to push the parallel which he had in his mind's eye. Whether or not the parallel holds, as to "the utmost latitude" having been "given to reformation," is a question with which we have nothing to do. Lord Brougham embraces an extreme opinion, being now in the aphelion of his very eccentric orbit, where, however, he no more "perplexes monarchs," nor any longer makes "guilty nations tremble."

If we did not perfectly understand Lord Brougham's system of writing, we should never suspect a personal allusion in the following passage, which closes his account of Robespierre. Our suspicion certainly does not arise from the slightest agreement with the noble lord as to the justice of the application intended. On the contrary, it appears to us to be gross in an extreme degree, and breathing the very worst spirit of those moral assassins whom he unsparingly reviles in his strictures on Junius:—

"Such was Robespierre—a name at which all men still shudder. Reader, think not that this spectacle has been exhibited by Providence for no purpose, and without any use! It may serve as a warning against giving way to our scorn of creatures that seem harmless because of the disproportion between their mischievous propensities and their powers to injure, and against suffering them to breathe and to crawl till they begin to ascend into regions where they may be more noxious than in their congenial dunghill or native dust! No one who has cast away all regard to principle, and is callous to all human feelings, can be safely regarded as innocuous, merely because, in addition to other defects, he has also the despicable weakness of being pusillanimous and vile."

This would be violent pamphleteering, and even outrageous writing, in the columns of the most unscrupulous newspaper. But it is not enough to compare the manifest but un-named mark of Lord Brougham's rather blunt stiletto with Robespierre, for after resting from his rancour for a page or two, he rushes at his victim again, and proclaims him a Marat! And here, indeed, the attack is open, if not honest. The reader will be pleased to recollect that the citation following is from a work on the Statesmen of the Reign of George III., by a writer who invokes "the historic muse," parading himself as at least a Curtius:—

"That no such scenes could now be renewed in France we may very safely venture to affirm, though much mischief might still be wrought by undue popular excitement. That in this country such things are wholly impossible needs no proof. * * It is impossible to say the same thing of all parts of our people; it would be most false to assert, for example, that the Irish people are safe from such influence. On the contrary, they manifestly do not think and judge for themselves; they certainly are in the hands of persons who need not take the trouble to give sound reasons, or any reasons at all for their advice. The Irish people are excited and moved to action in the mass by appeals to matters of which they do not take the pains to comprehend even the outline, much less to reflect on the import and tendency. They are made, and easily made, to exert themselves for things of which they have formed no distinct idea, and in which they have no real interest

Digitized by Google

whatever. They leave to others, their spiritual and their political guides, the task of forming their opinions for them, if mere cry and clamour, mere running about and shouting, can be called opinions. They never are suspicious of a person's motives merely because they see he has an interest in deceiving them. They never weigh the probabilities of the tale, nor the credit of him that tells it. They may be deceived by the same person nine times in succession, and they believe him just as implicitly the tenth; nay, were he to confess that he had wilfully deceived them to suit a purpose of his own, they would only consider this a proof of his honesty, and lend an ear if possible more readily to his next imposture. A people thus uninstructed, thus excited, thus guided, are most deeply to be pitied; and the duty is most imperative on their rulers, by all means, and without delay, to rescue them from such ignorance, and save them from such guides by every kindly mode of treatment which a paternal Government can devise. But such a people, especially if the natural goodness of their dispositions were not outraged by scenes of a cruel kind, would easily be moved to witness, and to suffer the grossest violations of justice, would let themselves be hallooed on to the attack of their best friends by any wily impostor that might have gained their confidence, and would suffer men as base and as execrable as Marat to usurp the honours of their Pantheon."

The offensiveness of this species of composition would be but little aggravated by being anonymous. However, our objection to it is purely critical; we consider it monstrously unhistorical, and cannot believe it to have been "whispered by the historic muse" with whom Lord Brougham affects to be in communication —we acquit Clio of it altogether.

It is with pleasure we turn to passages where, unperverted by pique or party, the author shows himself capable of better things. Lord Brougham's estimate of Robespierre as an orator is worth having, and we shall, therefore, give a few of his remarks upon this subject. After quoting specimens from his most effective speeches, he observes:—

"No one at all acquainted with the rhetorical art can deny to these passages merit of the highest order. Above all, no one acquainted with the conduct of debate can doubt that they are precisely the kind of passages most surely calculated to awaken, to gratify, to controul an assembly deliberating on the actual affairs of men. The speaker who thus delivered himself was plainly gifted with extraordinary eloquence; and however he may have dwindled down to a frigid, sententious, unimpressive rhetorician upon occasions of an *epideictic* kind, occasions of mere display, like the fête in honour of the Supreme Being, or even when in the Convention, his personal vanity and desire of oratorical renown made him overdo his part, it is certain that he was capable of excelling in the art; that he did excel on those great occasions which are fitted to call forth its highest displays; and, sure test of excellence, that he rose with the difficulties opposed to him, meeting with superior power the more pressing exigencies of the occasion. That Robespierre may be tried by this test, we naturally turn to his great speech on the 8th Thermidor, the eve of his downfall; that speech of which we shall presently see that Cambacérès pronounced a very high panegyric to Napoleon, himself rather disposed to admire the revolutionary Dictator. It is a production of the highest merit, and manifestly elaborated with extraordinary care as well as skill in oratory. The passage respecting the fête in honour of the Supreme Being is, for a popular Assembly, perhaps too splendid, and might be deemed exaggerated; but the taste of the speech generally is correct and severe. That he had in various passages the masterpieces of the ancient orators in his mind, can admit of no doubt: but there is nothing to be seen like servile imitation; and even in the instance which most reminds us of the original ('Non! nous n'avons pas été trop sévères! J'en atteste la république qui respire! J'en atteste la représentation nationale environnée du respect dû à la représentation d'un grand peuple!' and ending with 'On parle de notre rigueur, et la patrie nous reproche notre faiblesse'), we find nothing nauseous in the imitation, but so fruitful a series of illustrations from the actual state of things, that all notion of pedantic recourse to Demosthenes is put to flight. There is also throughout the speech a tone of deep feeling, which was not natural to the speaker, and probably was awakened by the peculiarity of his unprecedented position, and the extreme singularity of the crisis in which he spoke."

This is high praise from a good judge. The following remarks on Robespierre's title to the epithet of "Incorruptible" appear to us to be sound:—

"He soon acquired, and even retained, the name so popular at all times, in revolutions so omnipotent, of '*Incorruptible*.' How came it to pass that while all, or nearly all, were equally careless of money; while the terrible Committee, with the disposal of uncounted millions, limited their whole salary and whole expenditure to eight shillings a-day, and all ended their lives in the greatest distress, he alone should be called the '*Incorruptible*?' The reason is to be sought for elsewhere than in the freedom from pecuniary corruption; for his possessing the feature common to them all never would have formed a mark of distinction. But as he had early perceived the power of the people—that is, the power of the multitude acting on or overawing the people; so had he observed almost as early the favour in their eyes of extreme courses; of unhesitating pursuit of one principle, without the least deviation to suit the temporary purposes of expediency, or the least temporizing to consult prudential views, whether of individual advantage or of public safety; and he saw that as whoever most rigidly conformed his course to this canon, so whoever went further than all others, outbidding them in violence and in blindness to all the advantages of compromise—was sure to carry away the chief favour of the unreflecting multitude. By this view was his conduct always guided; and as the people were ever sure to find him foremost among the more violent, ever at the head of those who would sacrifice all considerations to the favourite maxims, falsely called the *principles* of the day—laying all prudence on the shelf—giving moderation to the winds—flinging peace to the dogs, the dogs of war—now crying '*perish the colonies*,'—now '*perish commerce*'—and ever ready to wade through blood, the best blood of France, towards the attainment of the darling equality and unbridled licence of the multitude—he was for this hailed as the '*Incorruptible*,' that no one could ever doubt on a question which side he would take, and no one could expect others to outstrip his zeal and determination."

Danton's speeches were less studied and elaborated than Robespierre's:—

"The speeches of Danton were marked by a fire, an animation, very different from anything that we find in those of Robespierre, and the other leaders of the Revolution, except perhaps Isnard, the most ardent of them all. In Danton's eloquence there appears no preparation, no study, nothing got up for mere effect. We have the whole heart of the man poured forth; and accordingly he rises upon any incidental interruption, and is never confounded by any tumult or any attack. In one particular, as might be expected from his nature, he stands single among the great speakers of either France or England—the shortness of his speeches. They are, indeed, harangues prompted by the occasion; and we never lose the man of action in the orator."

Lord Brougham has the candour to acknowledge that in a former volume he expressed himself with undue harshness. Of this eminent chieftain he speaks thus highly:—

"His natural endowments were great for any part in public life, whether at the bar or in the senate, or even in war: for the part of a revolutionary leader they were of the highest order. A courage which nothing could quell; a quickness of perception at once and clearly to perceive his own opportunity, and his adversary's error; singular fertility of resources, with the power of sudden change in his course, and adaptation to varied circumstances; a natural eloquence springing from the true source of all eloquence—warm feelings, fruitful imagination, powerful reason, the qualities that distinguish it from the mere rhetorician's art,—but an eloquence hardy, caustic, masculine; a mighty frame of body; a voice overpowering all resistance: these were the grand qualities which Danton brought to the prodigious struggle in which he was engaged; and ambition and enthusiasm could, for the moment, deaden within him those kindlier feelings which would have impeded or encumbered his progress to eminence and to power. That he was extremely zealous for the great change which he so essentially promoted, can admit of no doubt; and there is no reason whatever for asserting that his ambition, or any personal motive, overtopped his honest though exaggerated enthusiasm. The zeal of St. Just and Camille Desmoulins was, in all probability, as sincere as Danton's; but they, especially St. Just, suffered personal feelings to interfere with it, and control their conduct to a very much greater extent; and their memory, especially St. Just's, is exposed to far more reproach for their conduct in the bloody scenes to which the Revolution gave birth."

Danton used to say of himself—"La nature m'a donné en partage les forces athletiques et la physiognomie âpre de la Liberté,"—the "athletic strength and harsh expression of freedom," as Lord Brougham renders it. As Danton was marked with the small pox, a revolutionary painter, inspired by this idea, would possibly pourtray Liberty with the fascinations of a pitted face; and certainly the Liberty of the Reign of Terror had every forbidding charm. Robespierre possessed the graces of the same disease, in addition to the ghastly complexion of habitual dyspepsia,—one of the keys to the understanding of his inhuman moral constitution. Couthon was paralytic; and Camille Desmoulins stuttered incurably. Of these physical defects the last is that which one is most surprised to find in a popular leader of celebrity. Lord Brougham observes upon this:

"It is a remarkable circumstance in the history of Camille, that he was wholly precluded by an incurable hesitation from speaking in public, and consequently could take no part in debate. Nothing can show more conclusively than the station to which he rose in the annals of the Revolution, that oratory, mere speaking, bore a far more inconsiderable part in the conduct of affairs than it usually does in the administration of popular governments. The debates of the Convention were for the most part short, full of quick and sudden allusions, loaded with personalities and abounding in appeals to the popular feelings, but with few long or elaborate speeches. The principal pains appear to have been bestowed upon the reports of the Committees, which were eagerly listened to, and produced a great effect, by the importance of their subjects and the authority of the bodies from whom they proceeded. In general, the debates resembled more the practical discussions of men engaged in action than the declamations or the arguments of debaters. Thus oratory was of less avail than might have been expected in the action of so popular a government. It should seem that such a government must be settled before eloquence can have its full scope. 'Pacis comes, otiique socia, et jam bene constitutæ reipublicæ alumna eloquentia.'"

Of the Abbé Siéyes, the author relates the following personal reminiscence, characteristic of that most intrepid theorist:—

"In the beginning of the year 1817, I made acquaintance with the Abbé, at that time, with Cambacérès and other regicides, residing at Brussels. I was then on my way to attend my parliamentary duties at the opening of the Session; and finding himself in company with a party leader, he was,—unfortunately for me, who desired to hear him descant on matters which he understood,—led to give me at great length and with little fruit, his ideas upon a point the most incomprehensible to a foreigner, and indeed the most difficult for any uninitiated Englishman, any Englishman out of the vortex of practical politics, to understand, namely, the course most fitting, in the circumstances of the moment, for the English Parliamentary opposition to take. I admired the unhesitating confidence with which he delivered authoritatively his opinions, oracularly dictating to me his crude, absurd, most ignorant notions. I marvelled at the boldness of the man who could thus lecture one necessarily well acquainted with the

Digitized by Google

subject, of which the lecturer could not by possibility understand the A, B, C. I exceedingly lamented the loss of what might have been an interview filled with curious information. I returned to England without the least disposition to put a single one of his absurdities to the test of experience; for indeed to have mentioned even the most tolerable of them to the least experienced of my party would have been to raise a doubt of my seriousness, if not of my sanity. Both my valued friend Lord Kinnaird and myself were mightily struck with the contrast which Cambacérès presented to the Abbé in these interviews."

Upon the whole review of the lives and deeds of the terrible chiefs of the French Revolution, the judgment of Lord Brougham, pronounced with unwonted calmness and balancing of considerations, appears to be discriminating and philosophic, and tends to a considerable mitigation (with one or two exceptions) of the sentence long since pronounced, but upon no distinct and solid grounds, against the revolutionary leaders promiscuously.

"We learn, when candidly examining the merits and the history of its great leaders, to distrust the general opinion of them which has prevailed, formed under the influence of the feelings naturally excited by the dreadful events of their day, events the horror of which almost inevitably tended to involve all that had any share of their guilt in an indiscriminate charge of sanguinary and profligate ambition. The public voice might be excused for thus pronouncing one undistinguishing sentence of condemnation upon them at the time, and while the sentiments that had been raised by so bloody a tragedy retained their force. But subsequent authors and reasoners have too frequently fallen into the same error, and treated the subject as superficially as the ephemeral writers and the speakers of the day. The common, almost the invariable, course has been to make no distinction whatever between the different actors in the drama. Danton has been treated with the same severity as Robespierre; Camille and St. Just have received the same award of condemnation, nay, the wretched Marat, whom it would be a profanation of the name to call a statesman, has not been held up to greater execration and scorn, than those who really, more or less, were entitled to be so called. A more calm examination of their history, for which survey the time may be admitted now to have arrived, begets far more than doubts upon the soundness of the commonly received opinion, and teaches us to distribute in very different and very unequal shares our praise and our censure. Even respecting Robespierre himself, it is probable that the pitch of the public voice has been somewhat too high, and that his bad and despicable character, dark as undeniably it was, had still some few redeeming traits to distinguish it from the Collots and the Billauds, by far the worst of the whole."

We cannot take leave of these Sketches without a few additional words of comment upon their style, the defects of which are not to be passed over as we should pass over those of a writer of less distinction. Lord Brougham is diffuse as a speaker, but, as a writer, there are no bounds to his diffuseness. His pages would infallibly be "referred for prolixity," if literature had a Court of Chancery. There is an accumulation of epithets and phrases *ad infinitum* and *ad nauseam*, as if the writer's object was to clothe each observation in every dress in his wardrobe, which certainly is as rich in words, as that of Lucullus was in mantles. Then he writes as it were in a circle, generally returning in a page or two to the place whence he started, and then repeating himself through every point of the compass, as if he felt discontented with the first way of expressing his meaning, and was always trying to mend the matter. This method (or the want of all method, rather) produces a slipshod composition, which would be wholly insufferable, were it not that the slippers in which Lord Brougham rambles glitter so gaily. He is as loose as possible, but he never wanders into the regions of dulness; and where he is not lucid, it is not for the want of brilliancy, but for want of the art of disposing his lights with skill, or because he is not so sparing as he should be of his resources of illustration. Singularly enough, he has all the air of elaborateness, while he is careless beyond any writer of the day. He reminds us of a sloven passing hours at his toilette, and coming from his labours a greater sloven than before; his gay clothes and jewellery proving nothing but his possession of those fine things. Then if he is never dull, he makes amends for it by being very often extravagant. He recognizes none of the standard measures of language, and uses the superlative degree much too freely, particularly when bestowing censure, or inflicting praise. This, however, is more a fault of the mind than of the pen: but the exaggerations of diction, into which it seduces an author, offend the ear as it does the judgment. We like sober sentences as well as sound judgments, and a perpetual rhapsody is more than we can bear. This is aggravated not a little by the evident search after the bitterest forms of expression, which, when they are found, betray more passion than the subject exacts or warrants. A passionate historian is an unseemly thing; so is a choleric biographer; but what is more unseemly than either, is a moral lecturer blowing a hurricane, blustering about vice and virtue like Boreas in a chair of Ethics. This arises, we are well aware, from the circumstance that the same gust is frequently intended to blast the memory of the dead, and to wither the character of the living; but it is a fault in style as well as in purpose, for there is a mood of composition germane to every subject; and the boundary question has been settled long ago between historic writing and pamphleteering. In short, the turbulent unquiet spirit of an author will assuredly infect his works, unless he is closely on his guard, and unless he uses every cool and lucid interval to allay the original heat of his effusions. There is much more of the poetic furor in Lord Brougham's temperament, than consorts with any undertaking of an historic or philosophic nature; but even the fury of poetry is far remote from truculence and rancour. The satiric rage of Juvenal is very different from the indignation of our author, although he may, perhaps, aspire to be an Archilochus, should he ever count a rhyming frenzy amongst his other possessions, and cease to publish his lampoons in prose. The vein of Archilochus, however, will not do for a philosopher who engages to teach by examples, and to instruct by the lessons of experience, not by the volubility of his tongue. We remarked, some years since, that his lordship had much of the "*varium et mutabile*" in his moral structure. Time has not corrected his termagancy; he writes more shrewishly than ever, and seems, indeed, to have taken a higher degree in Billingsgate University. We regret this for the sake of literature, of which he might be a more lustrous ornament, if he had but a better temper and a less unruly pen. It is this violence of mind that produces the disorderly style which characterizes him as an author. The disorder is not without beauty, and is often even a superb chaos; but it is inhabited too palpably by—

> Orcus and Hades and the dreaded name
> Of Demogorgon.

The angry passions haunt and infect his page. The work is too often a hubbub of dazzling sentences—a tumult of eloquent periods—a general rising of discontented and irritated feelings. When self-government is restored, we shall take up, with pleasure, a work by the noble Lord.

The Spas Revisited; a Supplement to the Spas of Germany. By A. B. Granville, M.D. Colburn.

"Dere is no honest man dat shall come in my closet," might appropriately be prefixed for motto to this small book of great words. Dr. Granville is as jealous of interference with his "simples" as was *Dr. Caius* before him. He cannot tolerate any other spa-peeping save his own;—accuses Dr. James Johnson of having trusted to hearsay, while he himself acknowledges a like source of information in his appendical notices of Gastein and Teplitz; and, considering himself as "The Great Pan" of the groves and springs in Germany, hymns his own praises, alternately with those of the Kings and Grand Dukes who have "listened to his sweet pipings," and of the landlords, who have pulled down and built up in dutiful obedience to the precepts of "the former work." In short, egotism, conceit, and fine language, are here amusingly combined; and in picking out a notice or two from pages so sumptuously embroidered with flowers of speech, we must confess our inability to make the frame-work correspond with the picture. Enough, however, shall be taken to prove that there is one healthful fountain which the Doctor holds in as small account as Sir Hugh Evans's antagonist: we mean "the well of English undefiled."

Baden-Baden, to begin with "the Queen of Spas," ("raised to this dignity in my former work,") has reached "the *ne plus ultra* of completeness." The Oosbach has been cleaned out, the *Speise-saal* of the Badische Hof "newly painted *à la Vatteau*" (!)—the *salle* and the *atrium* are especially deserving notice,—"the *habitués*" speak well of "the *cuisine*," and the landlord is "short of stature, but straight, with head erect, and *cheveux artistement arrangés*"—(by the bye, the landlord at the Hotel d'Angleterre has an "*empressée* manner"): "*Petit lait de chêvre*"—goats' milk whey—"from a neighbouring *châlet*," is attainable at the *Neue Trinkesalle*;—Dr. Guggart "has succeeded in the post of *Bade-arzt*," and brought the waters of the *Ursprung*, by a *trajet* of scarcely half a mile, to the *Neue Trinkesalle*, or Leopoldsaal;—the Grand Duchess Stephanie, and her youngest daughter, "who used to take an active part in the dance, impart a superior tone to the balls," which, under Monsieur Benazet, the gambling-house keeper, have greatly improved;—"the *mélange*" is no longer what it was;—the company "more *soignée* in their toilette,"—that of the ladies "being to the utmost *recherchée*."

Wildbad, too, as the Americans say, has "gone ahead"; but the greatest improvement is "an extensive *badhaus*," with "a *grand salon de réunion* on the first floor, a *caffé* on the *rez de chaussée*," and "the *thermæ* have extensive accommodations." It is true that no curled landlord, no Benazet, is there, to minister to the pleasures of the visitors, but "man and nature" are "ready to sympathize in their sufferings." A friend and patient of Dr. Granville's gives "terse and significant" testimony to the efficiency of this sympathy:—"'Unquestionably,' continues the writer of the letter, 'no one can dip into Wildbad, and advert to its peculiarities, without conceding to it the praise of being one of the very best warm waters.'" After a character so satisfactory and conclusive, we need no further "advert to the peculiarities" of Wildbad.

Next comes Ems—that dullest haunt of aristocratic dulness, blocking up one of the loveliest and most cheerful Rhine valleys, with its barrack-like hotels, and its concourse of Russian travelling carriages; for at Ems the Russian magnates love to congregate. This spa, accord-

Digitized by Google

ing to Dr. Granville, is thriving magnificently. The postmasters and hotel-keepers, however, told a different story in September. The new Kursaal is a huge, tasteless room, ("the ceiling divided into casoons with gilded rosaces,") and Chabert, lost from Baden, presides over its "*cuisine*." Ems, too, shows signs of a disposition to cross the Lahn,—much activity of brick and mortar manifesting itself on the left bank of the stream. A "splendid thermal establishment" is there in progress; but a suspension bridge is bespoken by Dr. Granville, to make "Ems the Ems it should be."

We must skip the pages given to Wiesbaden, Gastein, Teplitz, Carlsbad, "the King of the Spas," raised to that dignity in the Doctor's former work, (at which resort of the rheumatic our author appropriately refers to Mr. Martin's plan of utilizing the manure of London, whom, however, he does not mention, merely referring to "*my* two reports,")—Schlangenbad, to which he was unjust; and Aix, at which he breaks out into justifiable pæans in praise of Herr Dremel, landlord of Le Grand Monarque, and of Herr Dremel's cellar. Better Rhine wine, indeed, is nowhere to be drunk, save, perhaps, from the casks of jolly Herr Soherr, at the Weisse Rosse, Bingen. So, too, we must pass Soden and Veilbach, to halt for a while at Kissingen, which seems to be the Doctor's "closet of closets." Here he and the King of Bavaria have matters all their own way—have built a "highly tasteful, light, *dégagé* pavilion of cast-iron bronzed," "over the Ragotzi and Pandur"; and revised the *tables-d'hôte*, which once upon a time (see *Athen.* No. 727) were arranged upon the absurd plan of making the diet of the visitor subservient to the medical treatment which led him to the spa. Now that guests have become more numerous,—allured by the hopes of playing at puss-in-the-corner with Royalty itself, and hunt-the-slipper among Grand Duchesses seated Turkish fashion,—this sanitory control of the kitchen has been relaxed. They will here, too, find Dr. Granville resident for two months every summer, by the special permission of the King aforesaid, prepared to uphold his privilege "against all illegitimate intruders." Bold must be the English Esculapius who will henceforth dare to set foot in Kissingen!

After having mentioned Cannstadt on the Necker, as a spa strongly recommended by our author for its cheapness, retirement, and the virtues of its waters, we have done with this tawdry, trumpery book. It were idle to offer a comment, for what cares Dr. Granville for our opinion, so long as, with *Dr. Caius*, he can say to landlords, curled or uncurled, and spa proprietors, gentle or simple: "By gar, me tank you for dat;—by gar, I love you, and I shall procure-a you de good guest—de earl, de knight, de lords, de gentleman, my patients."

History of the Conquest of Mexico, with a Preliminary View of the ancient Mexican Civilization, and the Life of the Conqueror, Hernando Cortés. By W. H. Prescott.

[Second Notice.]

THE more closely we examine Mr. Prescott's work, the more do we find cause to commend his diligent research, as well as his care and candour in comparing together his numerous and oftentimes conflicting authorities. His vivacity of manner, and discursive observations scattered through notes as well as text, furnish countless proofs of his matchless industry. In point of style, too, he ranks with the ablest English historians; and paragraphs may be found in his volumes, in which the grace and elegance of Addison are combined with Robertson's majestic cadence and Gibbon's brilliancy. What, for example, can be more simple, clear, and vivid, more naturally conceived or more elegantly expressed, than the following paragraph, with which our author commences his inquiry into the origin of the Mexican civilization?—

"When the Europeans first touched the shores of America, it was as if they had alighted on another planet,—every thing there was so different from what they had before seen. They were introduced to new varieties of plants, and to unknown races of animals; while man, the lord of all, was equally strange, in complexion, language, and institutions. It was what they emphatically called it, a New World. Taught by their faith to derive all created beings from one source, they felt a natural perplexity as to the manner in which these distant and insulated regions could have obtained their inhabitants. The same curiosity was felt by their countrymen at home, and European scholars bewildered their brains with speculations on the best way of solving this interesting problem."

There is no part of our author's work in which he appears to greater advantage than in that which is devoted to the early history and civilization of the Mexicans. On this topic many and copious sources of information have, of late years, come to light, of which he has zealously availed himself. The *Historia Antigua* of Don Mariano Veytia, who was born at Puebla, in Mexico, in 1718, was published in the city of Mexico in 1836, and is a most important contribution to the early history of that country. Another work, of perhaps still greater value, is the *Historia universal de Nueva España*, written by Bernardino de Sahagun, a Franciscan friar, contemporary with the conquest. Having gone as a missionary to Mexico in 1529, Sahagun conceived there the design of illustrating the antiquities of the Aztecs. For this purpose, he resided some years in a Tezcucan town, where he conferred daily with a number of the natives unacquainted with Castilian. He propounded to them queries, which they, after deliberation, answered in their usual method of writing, by hieroglyphical paintings. These he submitted to other natives, who had been educated under his own eye, in the college of Santa Cruz; and the latter, after a consultation among themselves, gave a written explanation in the Mexican tongue, of the hieroglyphics. This process he repeated in another place, in some part of Mexico, and subjected the whole to a still further revision by a third body in another quarter. He finally arranged the combined results into a regular history, in the form it now bears; composing it in the Mexican language, which he could both write and speak with great accuracy and elegance. The finished work contained an immense mass of curious information. But Sahagun's literary ardour and liberality excited the jealousy of his order, so that at last his Provincial took possession of his manuscripts, and scattered them among the various religious houses in the country.

In this forlorn state of his affairs, Sahagun drew up a brief statement of the nature and contents of his work and forwarded it to Madrid. It fell into the hands of Don Juan de Ovando, President of the Council for the Indies, who was so much interested in it, that he ordered the manuscripts to be restored to their author, whom he requested to set at once about translating them into Castilian. Sahagun thus recovered his papers, though not without menace of ecclesiastical censures, and at eighty years of age began the work of translating them from the Mexican, in which he had written them thirty years before. The Spanish version, when finished, formed, with its numerous paintings, two volumes in folio. It was sent to Madrid: where, instead of being published, it disappeared, buried perhaps in some of the numerous cemeteries of learning with which Spain abounds. At length, at the close of the last century, the indefatigable Muñoz disinterred it from the library of a convent at Tolosa. This work was published at Mexico in 1829; and the year after, it appeared also in the magnificent work of Lord Kingsborough, who imagined that he was the first to give it to the world. It is a curious fact, and highly characteristic of Spain, that a work of such singular merit as Sahagun's history should lie buried there for nearly three centuries, and at last be published to the world in foreign countries.

The writings of Antonio Gama, another learned Mexican antiquarian, who lived in the last century, have also been published of late years; and if we add to these recent acquisitions the general results of Humboldt's researches, and the facilities afforded by Lord Kingsborough's work on Mexican antiquities, it will be obvious that a writer on the history of Mexico has, at the present day, great advantages over those who have previously treated of this obscure subject. Mr. Prescott has known how to turn these advantages to the best account; and hence, in the preliminary portion of his work, where no dramatic interest misleads, he furnishes a faultless specimen of historic writing.

Our author gives an accurate and lively account of the picture writing of the Mexicans. How far a fixed adherence to conventional forms could render it unambiguous, is evident from the fact, that it was used in the records of the tribunals. The statement of the case, the testimony, and the proceeding of the trial, were all set forth by a clerk in hieroglyphical paintings, and handed over to the court. The paintings were executed with so much accuracy, that in all suits respecting real property they were allowed to be produced as good authority in the Spanish tribunals, very long after the conquest; and a chair for their study and interpretation was established at Mexico in 1553, which has long since shared the fate of most other provisions for learning in that unfortunate country. The following anecdote is characteristic of the age and nation it refers to:—

"At the time of the arrival of the Spaniards, great quantities of these manuscripts were treasured up in the country. Numerous persons were employed in painting, and the dexterity of their operations excited the astonishment of the conquerors. Unfortunately, this was mingled with other, and unworthy feelings. The strange, unknown characters inscribed on them excited suspicion. They were looked on as magic scrolls; and were regarded in the same light with the idols and temples, as the symbols of a pestilent superstition, that must be extirpated. The first archbishop of Mexico, Don Juan de Zumarraga,—a name that should be as immortal as that of Omar,—collected these paintings from every quarter, especially from Tezcuco, the most cultivated capital in Anahuac, and the great depository of the national archives. He then caused them to be piled up in a 'mountain-heap,'—as it is called by the Spanish writers themselves,—in the market-place of Tlatelolco, and reduced them all to ashes! His greater countryman, Archbishop Ximenes, had celebrated a similar *auto-da-fe* of Arabic manuscripts, in Granada, some twenty years before. Never did fanaticism achieve two more signal triumphs, than by the annihilation of so many curious monuments of human ingenuity and learning! The unlettered soldiers were not slow in imitating the example of their prelate. Every chart and volume which fell into their hands was wantonly destroyed; so that, when the scholars of a later and more enlightened age anxiously sought to recover some of these memorials of civilization, nearly all had perished, and the few surviving were jealously hidden by the natives. Through the indefatigable labours of a private individual, however, a considerable collection was eventually deposited in the archives of Mexico; but was so little heeded there, that some were plundered, others decayed piecemeal from the damps and mildews, and others again were used up as waste paper! We contemplate with indignation the cruelties inflicted by the early conquerors. But indignation is

Digitized by Google

qualified with contempt, when we see them thus ruthlessly trampling out the spark of knowledge, the common boon and property of all mankind. We may well doubt which has the strongest claims to civilization, the victor or the vanquished."

In a century, however, after the conquest, the knowledge of the hieroglyphical writing had almost disappeared; and it may be doubted whether the art of reading these pictures is likely to be recovered. According to Bustamente, nevertheless, a Mexican writer of the present day, the key to the whole system of Mexican hieroglyphics was discovered by a person named Borunda, and carried to Spain in 1795, where it probably lies mouldering in some of the archives.

Superstition never contributed to the downfall of a nation more directly than in the case of the Mexicans. Let the reader give attention to the last sentence of the following extract:—

"A far more interesting personage in their mythology was Quetzalcoatl, god of the air, a divinity who, during his residence on earth, instructed the natives in the use of metals, in agriculture, and in the arts of government. He was one of those benefactors of their species, doubtless, who have been deified by the gratitude of posterity. Under him the earth teemed with fruits and flowers, without the pains of culture. An ear of Indian corn was as much as a single man could carry. The cotton, as it grew, took, of its own accord, the rich dies of human art. The air was filled with intoxicating perfumes and the sweet melody of birds. In short, these were the halcyon days, which find a place in the mythic systems of so many nations in the Old World. It was the *golden age* of Anahuac. From some cause not explained, Quetzalcoatl incurred the wrath of one of the principal gods, and was compelled to abandon the country. On his way he stopped at the city of Cholula, where a temple was dedicated to his worship, the massy ruins of which still form one of the most interesting relics of antiquity in Mexico. When he reached the shores of the Mexican Gulf, he took leave of his followers, promising that he and his descendants would revisit them hereafter, and then entering his wizard skiff, made of serpents' skins, embarked on the great ocean for the fabled land of Tlapallan. He was said to have been tall in stature, with a white skin, long, dark hair, and a flowing beard. The Mexicans looked confidently to the return of the benevolent deity; and this remarkable tradition, deeply cherished in their hearts, prepared the way, as we shall see hereafter, for the future success of the Spaniards."

Some of the Catholic missionaries have laboured to prove the identity of this god with the apostle St. Thomas. We wonder that he has not been of late years claimed as a Scandinavian.

If the superstition of the Mexicans hurried their empire to ruin, it also deprived them of any claim on the sympathy of mankind. Whatever may have been the amount of their civilization, however innocent and unoffending they may have been towards the Spaniards, we cannot but feel pleasure in their complete subjugation when we cast an eye on the sanguinary rites of their religion:—

"Human sacrifices were adopted by the Aztecs early in the fourteenth century, about two hundred years before the Conquest. Rare at first, they became more frequent with the wider extent of their empire; till, at length, almost every festival was closed with this cruel abomination. These religious ceremonials were generally arranged in such a manner as to afford a type of the most prominent circumstances in the character or history of the deity who was the object of them. A single example will suffice. One of their most important festivals was that in honour of the god Tezcatlepoca, whose rank was inferior only to that of the Supreme Being. He was called 'the soul of the world,' and supposed to have been its creator. He was depicted as a handsome man, endowed with perpetual youth. A year before the intended sacrifice, a captive, distinguished for his personal beauty, and without a blemish on his body, was selected to represent this deity. Certain tutors took charge of him, and instructed him how to perform his new part with becoming grace and dignity. He was arrayed in a splendid dress, regaled with incense, and with a profusion of sweet-scented flowers, of which the ancient Mexicans were as fond as their descendants at the present day. When he went abroad he was attended by a train of the royal pages, and, as he halted in the streets to play some favorite melody, the crowd prostrated themselves before him, and did him homage as the representative of their good deity. In this way he led an easy, luxurious life, till within a month of his sacrifice. Four beautiful girls, bearing the names of the principal goddesses, were then selected to share the honours of his bed; and with them he continued to live in idle dalliance, feasted at the banquets of the principal nobles, who paid him all the honours of a divinity. At length the fatal day of sacrifice arrived. The term of his short-lived glories was at an end. He was stripped of his gaudy apparel, and bade adieu to the fair partners of his revelries. One of the royal barges transported him across the lake to a temple which rose on its margin, about a league from the city. Hither the inhabitants of the capital flocked to witness the consummation of the ceremony. As the sad procession wound up the sides of the pyramid, the unhappy victim threw away his gay chaplets of flowers, and broke in pieces the musical instruments with which he had solaced the hours of captivity. On the summit he was received by six priests, whose long and matted locks flowed disorderly over their sable robes, covered with hieroglyphic scrolls of mystic import. They led him to the sacrificial stone, a huge block of jasper, with its upper surface somewhat convex. On this the prisoner was stretched. Five priests secured his head and his limbs; while the sixth, clad in a scarlet mantle, emblematic of his bloody office, dexterously opened the breast of the wretched victim with a sharp razor of *itztli*,—a volcanic substance hard as flint,—and, inserting his hand in the wound, tore out the palpitating heart. The minister of death, first holding this up towards the sun, an object of worship throughout Anahuac, cast it at the feet of the deity to whom the temple was devoted, while the multitudes below prostrated themselves in humble adoration. The tragic story of this prisoner was expounded by the priests as the type of human destiny, which, brilliant in its commencement, too often closes in sorrow and disaster."

These victims sometimes rejoiced in their lot; they were themselves intoxicated with fanaticism, and these exalted feelings may seem to many perhaps to mitigate the cruelty of such sacrifices. But where multitudes were sacrificed we can conceive no feeling to have predominated over the thirst for slaughter. Our author exhibits Mexican superstition in all its hideousness:

"The most loathsome part of the story, the manner in which the body of the sacrificed captive was disposed of, remains yet to be told. It was delivered to the warrior who had taken him in battle, and by him, after being dressed, was served up in an entertainment to his friends. This was not the coarse repast of famished cannibals, but a banquet teeming with delicious beverages and delicate viands, prepared with art, and attended by both sexes, who as we shall see hereafter, conducted themselves with all the decorum of civilized life. Surely, never were refinement and the extreme of barbarism brought so closely in contact with each other! Human sacrifices have been practised by many nations, not excepting the most polished nations of antiquity; but never by any on a scale to be compared with those in Anahuac. The amount of victims immolated on its accursed altars would stagger the faith of the least scrupulous believer. Scarcely any author pretends to estimate the yearly sacrifices throughout the empire at less than twenty thousand, and some carry the number as high as fifty! On great occasions, as the coronation of a king, or the consecration of a temple, the number becomes still more appalling. At the dedication of the great temple of Huitzilopotchli, in 1486, the prisoners, who for some years had been reserved for the purpose, were drawn from all quarters to the capital. They were ranged in files, forming a procession nearly two miles long. The ceremony consumed several days, and seventy thousand captives are said to have perished at the shrine of this terrible deity! But who can believe that so numerous a body would have suffered themselves to be led unresistingly like sheep to the slaughter? Or how could their remains, too great for consumption in the ordinary way, be disposed of, without breeding a pestilence in the capital? Yet the event was of recent date, and is unequivocally attested by the best informed historians. One fact may be considered certain. It was customary to preserve the skulls of the sacrificed in buildings appropriated to the purpose. The companions of Cortés counted one hundred and thirty-six thousand in one of these edifices! Without attempting a precise calculation, therefore, it is safe to conclude that thousands were yearly offered up, in the different cities of Anahuac, on the bloody altars of the Mexican divinities."

These terrible rites impressed on the people an air of profound melancholy, which still clings to their descendants at the present day. With many refinements in manners, with great stability and much wisdom in the system of government, and with a kind of writing which only required a little time to ripen it to perfection, with all these elements of civilization, the Mexicans combined a pompous barbarity of religious usages, which almost surpasses belief. Our author justly observes,—

"The Aztec character was perfectly original and unique. It was made up of incongruities apparently irreconcileable. It blended into one the marked peculiarities of different nations, not only of the same phase of civilization, but as far removed from each other as the extremes of barbarism and refinement. It may find a fitting parallel in their own wonderful climate, capable of producing, on a few square leagues of surface, the boundless variety of vegetable forms which belong to the frozen regions of the North, the temperate zone of Europe, and the burning skies of Arabia and Hindostan!"

Enough has been already said to show the high estimate we form of Mr. Prescott's merits as a historian. In the completeness of his research, the clearness, copiousness, and elaborate finish of his style, he rises to excellence. He is generally also judicious, and intent on the truth. Yet he appears to be misled at times by his sensitiveness, or by his ambition, as a writer, uniformly preferring those representations and expressions which are calculated to lend to his pictures the highest degree of dramatic action and the warmest colouring. The process of expunging from the mass of his authorities whatever is in its nature of doubtful authenticity, or likely to involve prejudices, is one in which he does not exhibit the perseverance of Niebuhr. He shrinks from the extreme rigour of sceptical criticism, as if he feared that the mere truth might be too dry for history. The consequence is, that many passages may be found in his volumes which seem to belong, not so much to a history, as a historical novel. We cannot allow our justification of this remark to run to any extent, but shall be content to illustrate our meaning by reference to the first few pages of our author's history of the conquest of Mexico:—

"In the beginning of the sixteenth century, Spain occupied perhaps the most prominent position on the theatre of Europe. The numerous states, into which she had been so long divided, were consolidated into one monarchy. The Moslem crescent, after reigning there for eight centuries, was no longer seen on her borders. The authority of the crown did not, as in later times, overshadow the inferior orders of the state. The people enjoyed the inestimable privilege of political representation, and exercised it with manly independence. The nation at large could boast as great a degree of constitutional freedom, as any other, at that time, in Christendom. Under a system of salutary laws and an equitable administration, domestic tranquillity was secured, public credit established, trade, manufactures, and even the more elegant arts, began to flourish; while a higher education called forth the first blossoms of that literature, which was to ripen into so rich a harvest, before the close of the century. Arms abroad kept pace with arts at home. Spain

Digitized by Google

found her empire suddenly enlarged by important acquisitions both in Europe and Africa, while a New World beyond the waters poured into her lap treasures of countless wealth, and opened an unbounded field for honourable enterprise."

Now here we object, in the first place, to the expression, "Moslem crescent." The crescent, matched in contrast and alliteration with the cross, belongs to a hackneyed and tinselled style. Besides, our author's use of it is especially incorrect; for the crescent was not the ensign of the Mohammedans in general, nor of the Arabs; it adorns the standard of the Ottoman Turks alone: and consequently it is erroneous to say, that the Moslem crescent ever reigned in Spain. Again, our author says that the Spanish nation, in the beginning of the sixteenth century, enjoyed the benefits of political representation, and could boast as large a share of political freedom as any other people. Surely they could not boast any securities like the *habeas corpus* and trial by jury. They had the forms of liberty but not the substance. We shall not quarrel with our author about the "salutary laws," but as to the equitable administration of them, we are unable to credit it. In the Spanish history of those days, we meet at every step with judicial persecutions—with accounts of suits iniquitously prolonged or wrongfully decided under the influence of open corruption. Next, our author, speaking of the long reign of Ferdinand and Isabella (1516), tells us that at that epoch, "the New World poured into the lap of Spain treasures of countless wealth," and opened a field of "honourable enterprise." As to the enterprise of the first adventurers to the New World, it appears to us to be a gratuitous piece of generosity to call it honourable. A great majority of the Conquistadors were worthy of admittance into the club described by Sir R. Steele, "the members of which, being all men of honour, had shot one another, or were hanged within a twelvemonth." Then, as to the treasures, certainly none had flowed in from the New World at the period alluded to. And did they ever flow in? Gold and silver certainly did, but not wealth, in the proper sense of the word. The precious metals flowed into Spain by deep but narrow channels, causing an enhancement of prices; injuring thereby Spanish industry, and infusing deeply into the vitals of the nation the causes of decay. Of Ximenes our author says, that, with all his faults, he was a Spaniard. This appears to us to be the language of boastful nationality, and not worthy of Mr. Prescott's classic pages. It might be said, with equal, if not greater truth, that Ximenes was in nothing so truly Spanish as in his vices, pride, and bigotry. The Flemings who accompanied Charles the Fifth are described by our author as all knaves and sycophants; and truly they may have been such; but it is much more certain, that had they been the most honest men living, they would have been described, under the circumstances of the time, as arrant knaves; and, consequently, we ought to be cautious how we repeat the language of national and popular dislike.

The Conquest of Mexico forms the brightest achievement in Spanish-American history. Hernando Cortés was the first, and by far the greatest of the Conquistadors. Yet, in the empire which he won, the Indian interest now predominates. We shall extract from our author's pages the following allusion to the unhonoured remains of the great conqueror:—

"In 1823, the patriot mob of the capital, in their zeal to commemorate the era of the national independence, and their detestation of the 'old Spaniards,' prepared to break open the tomb which held the ashes of Cortés, and to scatter them to the winds! The authorities declined to interfere on the occasion; but the friends of the family, as is commonly reported, entered the vault by night, and secretly removing the relics, prevented the commission of a sacrilege, which must have left a stain, not easy to be effaced, on the escutcheon of the fair city of Mexico.—Humboldt, forty years ago, remarked, that 'we may traverse Spanish America from Buenos Ayres to Monterey, and in no quarter shall we meet with a national monument which the public gratitude has raised to Christopher Columbus, or Hernando Cortés.' It was reserved for our own age to conceive the design of violating the repose of the dead, and insulting their remains! Yet the men who meditated this outrage were not the descendants of Montezuma, avenging the wrongs of their fathers, and vindicating their own rightful inheritance. They were the descendants of the old Conquerors and their countrymen, depending on the right of conquest for their ultimate title to the soil."

THE ANNUALS FOR 1844.

The Forget-me-Not.

THE letter-press of this volume is the best which has been given for many years; especially in the article of verse. The Editor has drawn forth from some nook of his escritoire a ballad by poor Miss Landon, now of course doubly valuable; he has availed himself of a scrap of unpublished verse by James Thomson, given to Mr. W. Shoberl by Lady Charlotte Bury, which, though of small intrinsic worth, may pass for a literary curiosity. He has tempted Miss Mitford to break into a MS. tragedy, 'Otto of Wittelsbach,' for a Rhine song,—graced his pages with delicacies by Lady Blessington and Lady Emmeline Stuart Wortley, while his more established contributors, Delta, Mr. Swain, Mrs. James Gray, Miss Gould, Mrs. Howitt, &c. are not less interesting than usual. In proof of this, we shall first give a copy of verses, which deserves to take a permanent place among poems of the affections:—

My Father.

BY MISS H. F. GOULD.

"In the evening time there shall be light."

Sacred the hour when thou, my sainted father,
Wast of thy worn-out, sinking clay undressed,
Softly, by his pale hand who comes to gather
Time's weary pilgrims home to joy and rest.

Noiseless and clear, and holiest of the seven,
That day when thy last earthly sun went down,
Thy Sabbath, closing here, began in Heaven,
Whilst thy meek brow changed ashes for a crown.

Hush was the evening: not a zephyr swelling
Heaved the tree-blossom or the woodbine leaves,
Silent, the bird that sung about our dwelling
Slept where she nestled, close beneath its eaves.

Cloudless the moon and stars above were shining
When Time's last ray to thy mild eye was shed;
While Death's cold touch, life's silver cord entwining,
Brought his chill night-dew on thy reverend head.

Ninety full years of pilgrimage completing,
How didst thou linger till one sabbath more:
'Twas holy time: thy pure heart stilled its beating:
Pain, work, and warfare, were for ever o'er!

* * *

Now, while the robin past thy window flying,
Leads off her young, forsaking here her nest,
Constant the wild bird, where thy dust is lying,
Sings her sweet hymn, a requiem to its rest.

There has it joined the ashes of my mother,
Faithful, re-wedded to its only bride:
And there thy latest-born, my younger brother,
Thy fond heart's care, sleeps closely by her side.

Yet, angel-father, over Jordan's water,
Is it so far, that now thou canst not see
Back to the shore, where lonely stands thy daughter,
Sprinkling its rocks and thorns with tears for thee?

Art thou so distant, visions of thy glory
May not be granted to her mortal sight;
When she so long watched o'er thy head so hoary,
Smoothing its pillow till that mournful night?

Since here so oft, in pain, the path of duty
Thy patient feet with steady steps have trod,
Safe now they walk the golden streets in beauty;
And O! thy blessed eyes see peace in God!

At the risk of being thought somewhat overmournful in our selection, we must further give—

Enduring Woe.

[From the German of Immermann.]

BY MARY HOWITT.

The leaves come whirling from the trees,
The autumn wind blows chill;
Know you the old decaying house
In the wood so deep and still?

The yellow leaves lie thick around,
The winds wail all about,
A pale and lovely countenance
Looks from the window out.

That pale and lovely face, how calm
It looks in evening gray!
The lady who has spoke to none
To none a word will say.

No serving-man hath she, no maid;
To no man's voice gives heed;
A sound is heard when day declines,
As of a coming steed.

Like a horse's tread it comes a-near;
She listens—forth she bends;
And lo! an old grey-headed knight
Before the door descends.

He climbs the stairs: and now, a kiss
Upon her brow imprest,
"How art thou now, dear child?" said he,
And held her to his breast.

They sate them to a table of stone,
And looked with looks of woe:
"Sing me," said he, "that little song,
As thou didst long ago."

She answered, "Ah! how gay I was
When Love's young morning shone,
But now, old man, 'tis so no more,
My young friend he is gone!

"I deck my hair with rosemary,
My funeral crown to be!
Thou knows't, old man, thou knowest well,
Thy only son was he!"

In a ghostly voice the old man spake,
In a ghostly voice replied:
"He fell in the joyous strength of youth—
In the ocean-fight he died!"

"For the honour of my Lord he fell,
Mangled with sword and shot—
I gladly gave my lord my all—
My son withheld I not!

"My Lord is dead! thy Love is dead!
Like sorrow for us two!
The world plays now another game,
With which we've nought to do!

"The world turns topsy-turvy now
And lauds the new as prime:
But we—we have our bitter grief
And memory of old time!

"And with us two the play is played:—
Thou art weak and I am old!"
The yellow leaves whirled round the house,
The autumn wind blew cold.

Who had been there had wept to hear
The two so sadly speak:
But there was not a single tear
On either woful cheek!

We shall now extract one of the prose contributions. Mrs. Hall, Mrs. Lee, Mrs. Gore, Miss Pardoe, and Mr. R. Bell, each of whom has helped the editor to good purpose, must excuse us, if, to their tales, we prefer an original letter of Lord Byron's to the Ettrick Shepherd, communicated by Delta. This, with two others, was overlooked, as a note informs us, at the time when Mr. Moore was collecting his materials:

"13, Terrace, Piccadilly, March 1st, 1816.

"Dear Sir,—I never was offended with you, and never had cause. At the time I received your last letter I was 'marrying and being given in marriage,' and since that period have been occupied and indolent; and am, at best, but a very ungracious or ungrateful correspondent—hardly ever writing letters but by fits and starts. At this moment my conscience smites me with an unanswered letter of Mr. W. Scott's, on a subject which may seem to him to require an answer; as it was on something relative to a friend* of his, for whose talents I have a sincere admiration. My family, about three months ago, was increased by a little girl, who is reckoned a fine child, I believe, though I feel loth to trust my own partialities. She is now in the country. I will mention your wishes on the score of collection and publication to Murray, but I have not much weight with him: what I have I will use. As far as my approval of your intention, may please you, you have it: and I should think Mr Scott's liking to your plan very ominous of its success. The objections you mention to the two things of mine lately published, are very just and true; not only with regard to them, but to all their predecessors, some more and some less. With regard to the quarter from which you anticipate a probable and public censure, on such points I can only say, that I am very sure there will be no severity but what is deserved; and, were there ever so much, it could

* Probably the Rev. Mr. Maturin.

not obliterate a particle of the obligation which I am already too much under to that journal and its conductors (as the grocer says to his customers) 'for past favours.' And so you want to come to London? It is a d——d place, to be sure, but the only one in the world (at least, the English world) for fun. Though I have seen parts of the world that I like better, still, upon the whole, it is the completest, either to help one in feeling one's self alive, or forgetting that one is so. I am interrupted, but will write again soon. Yours very truly, BYRON.

"P. S.—I forgot to thank you for telling, &c. &c., but am much obliged to you, as well as for a former compliment in the inscription of your 'Pilgrims of the Sun.'"

So much for the verse and prose of the oldest of the Annuals. Its illustrations, this year, are below par; the only two for which we can say a good word being Mr. Latilla's 'Young Bandit,' by Ryall, and Mr. Cattermole's 'True Traitor,' by Mote: that clever water-colourist's 'Manor-House of the Wyndhams,' has obviously been engraved from an unfinished sketch.

OUR LIBRARY TABLE.

The Englishman's Hebrew and English Concordance of the Old Testament, 2 vols.—This Concordance, contained in two large volumes, is, without doubt, the most accurate which has hitherto been published. The amount of labour bestowed on it, as recorded by Mr. Wigram, its ostensible editor, is almost beyond belief, especially in these days of off-hand publication. The first step was to form a new Standard of comparison, which was entitled the 'Hebraist's Vade Mecum,' and was arranged as follows:—"The Hebrew Bible from beginning to end was distributed, as printers would say, each word being placed as it recurred with those like it which had occurred in the preceding parts of the Bible. The MS. of the Concordance was then formed by means of this Standard, and compared before printing with a Hebrew and English, and afterwards with an English Bible. After printing the whole was read through in six different ways for different objects, all tending to secure the greatest accuracy." This work ought to be chronicled as a monument of patient industry, and we cordially wish success to all parties interested in so laborious a publication.

Observations on Days of unusual Magnetic Disturbance, printed by the British Government, under the Superintendence of Lieut.-Col. E. Sabine.—In this work is recorded the contemporary observations made at the British Colonial Magnetic Observatories. It is intended to publish the observations taken from 1840 to 1845, and this, the first Part, comes down to the close of 1841. It is the first attempt of the kind in the department of magnetic science, and calculated to lead to important results.

Lord Dacre of Gilsland, by Elizabeth M. Stewart. 3 vols.—In the days when the Miss Porters wove their showy historical romances, 'Lord Dacre' might have commanded a public; but times are changed for the novelist: and, clever as are portions of this tale, its fate, we regret to prophesy, is, to be speedily forgotten. The authoress appeals to the inexhaustible interest which belongs to Mary Queen of Scots in captivity, and exhibits, too, not unskilfully, the Virgin Queen; at first, with her lion port, commanding the Cecils and Walsinghams of her council; afterwards prostrate on her dying bed—in this estate, recalling to us Delaroche's awful and forcible picture of the last days of Elizabeth, in the Luxembourg Gallery. Then, to throw a romantic interest round Gertrude Harding and Lucy Fenton, the heroines of her romance, Mrs. (?) Stewart has had large recourse to the old artifice of abduction: opening her story with a spirited scene which may have been remotely suggested by the night-affray in Curfew Street, in Scott's 'Fair Maid of Perth.' Further, those who love the Midland districts and the North, will find themselves pleasantly led to Tutbury, to Barnard Castle, and to "merrie Carlisle," and shown the chiefs of those noble houses, to which so many a stout old ballad refers. Great care has been taken in the execution of this novel, but it has been badly planned, and is chargeable with the common fault of works by inexperienced hands—confusion of plot and superfluity of incident.

The Young Student, or Ralph and Victor, by Madame Guizot; *from the French*, by Samuel Jackson.—We are indebted to Mr. Jackson for many interesting translations; and have the highest respect for the memory of Madame Guizot, but neither pleasant associations nor esteem can convert 'Ralph and Victor' into one of the books for the young, which we can either admire or commend. If our children are to have fictions, the tone in which these are wrought is not an unimportant matter. Meretricious luxuriance of colouring is dangerous; but flatness and aridity are also objectionable. Madame Guizot's stubborn hero (her tale has a pair) runs away from his academy, and gets involved in all manner of strange adventures; her paragon has retrieved himself from the evil consequences of a theft committed when very young: hence there is stuff in the vicissitudes of Ralph and Victor's fortunes to make a couple of full-grown romances. But the discreet authoress recounts these in a manner so passionless and prosy, that the discrepancy will be felt by others as well as ourselves, and none are more sensitive in their literary likings or dislikings than the young. Further to illustrate, Madame Guizot stands at the antipodes of Miss Edgeworth. Nothing can be more unpicturesque and utilitarian than the events which that admirable writer assembles in most of her tales for youth, but the characters are genial. We love Rosamond with her scrapes; take a lively interest in warm-hearted Lucy's experiments, and enjoy Frank's acquisitions of knowledge as if they were so many novelties to our sadder selves—owing to the truth of character, and charm of style. In his preface Mr. Jackson associates Madame Guizot as a moralist with "Marmontel, St. Pierre, and Madame de Genlis." But the periods of the first had the grace of a perfect and polished harmony—and the scenes of the second got hold of the heart so strongly, that there was no stopping to ask how far such pathos was healthy; while the sprightly, vain, indefatigable, Madame Sillery, abounded in a busy inventiveness, and sometimes, as in 'The Palace of Truth,' in an arch wit—which amused when she failed to convince. Madame Guizot's 'Young Student' is not superior in probability to the above-mentioned efforts, while it is far behind them in artistic fascination.

The Earl of Leicester; a Tragedy.—This play, dramatized professedly from 'Kenilworth,' affords a curious instance of the extent to which good materials may be spoiled by bad workmanship. We have always thought Scott's novel full of brilliant scenes ready made: what can exceed the hearing of Tresilian's complaint by Elizabeth, in presence of the Leicester and Sussex factions?—or that thrilling moment on the terrace at Kenilworth, when the Virgin Queen confronted the "Gipsy" Earl with his wife? Again, what can be more forcibly scenic, than the interview at Cumnor Hall, in which Varney endeavours to win the Countess into connivance with Leicester's deceits, and to gain a hearing for his own passion? These are all here: but so tamed and stripped of their poetic garniture, that we can scarcely recognize one of the most powerful of modern romances, in this very lachrymose melodrama.

Hours of Meditation and devotional Reflection, by H. Zschokke, translated by J. D. Haas.—The author has long been known in Germany as a tale writer of no ordinary power, and the work before us will satisfy an English public that he is a sound and sensible moralist. Mr. Haas appears to have executed his humble office with judgment.

An Epitome of the First Book of Dr. John Bridge's Defence of the Government of the Church of England, by Martin Marprelate.—This tract is more argumentative and less abusive, and therefore less graphic and amusing—throwing less light on the manners of the age—than those which we lately noticed (*ante*, p. 751). That the author, however, was equally in earnest let the following rhymes, appended to his preface, testify:

Either from countrie or court,
M. Martin Marprelate will do you hurt.

Rime doggrell
Is good inough for bishops I can tell,
And I doe much maruell
If I have not given them such a spell
As answere it how they cannot tell.

Doctor Bridges up and downe
Writeth after this fashowne.

The Hope that is in us; a Poem.—This poem is smoothly written, in some parts not without power, and, considering the difficulty and argumentative nature of the subject, creditable to its author.

Champs de Roses, par Adolphe Duhart-Fauré.—A collection of French poems, from the pens of some of the more distinguished writers. The selection appears to have been made with judgment.

A Plea for the Liberties of the Scotch Universities, by J. I. Blackie.—The cause now pending between Sir D. Brewster and the Presbytery and Senatus Academicus of St. Andrews has given rise to this pamphlet, wherein the author, with great show of reason, maintains that it is harsh and unjust to enforce old tests for the purpose of depressing political or theological adversaries.

A Defence of the Church of England against the Attacks of a Roman Catholic Priest, by Dr. Tattam.—A discussion arising out of a meeting at Aylesbury, for the purpose of considering the duty of Protestants towards the Oriental churches, has ended in the publication of this volume of letters, which do not however add anything new to the already too large library of controversial theology.

The Morning and Evening Service of the Church of England briefly explained, by a Lady.—An unassuming little work, apparently well fitted for the use of children, for whom it is designed.

An Examination of Dr. Pusey's Sermon on the Eucharist, by Rev. B. Goodwin.—A contribution by a Dissenting minister at Oxford, to the numberless strictures on Dr. Pusey's well known sermon.

Thoughts on Moral and Spiritual Culture, by R. C. Waterston.—A reprint, in an enlarged form, of a lecture delivered before the American Institute, and contains much that is good with much that is fanciful.

Outlines of Sacred Geography, by Rev. R. Thomas.—*Outlines of British Geography*, by Rev. R. Thomas.—Such works are necessarily very brief, but these appear to contain almost all that is needful on their respective subjects, and will no doubt prove useful to the younger student of geography.

The Art of Questioning and Answering in French, by A. C. Jobert.—The object is sufficiently explained in its title-page. Use will best decide on its utility.

List of New Books.—Introduction to the Study and Practice of Midwifery, by W. and A. Campbell, Esqs., 2nd edit. 1vol. 8vo. 16*s.* cl.—The Life of Gerald Griffin, by his Brother, forming the first volume of his Life and Works, to be completed in 8 vols. 12mo. 6*s.* cl.—The Practical Angler, by Piscator, with plates, 8vo. 8*s.* 6*d.* cl.—The Gospel according to St. Matthew, translated from the Greek, by Sir John Cheke, with Introduction, by J. Goodwin, 8vo. 7*s.* 6*d.* bds.—Virgil, in Usum Delphini, new edit. 8vo. 11*s.* sheep.—Homeri Ilias, vol. duo in uno, 12mo. 6*s.* bd.—English and German Dialogues, by J. H. Hedley, square, 3*s.* 6*d.* cl.—The German Reader in Prose and Verse, by F. Demmler, 12mo. 4*s.* bd.—Williams's Symbolical Euclid, 7th edit. 18mo. 6*s.* 6*d.* cl., 7*s.* roan.—Conversations on Arithmetic, by Mrs. H. Ayers, 12mo. 6*s.* cl.—The Churches of York, with Historical and Architectural Notices, by Rev. J. Fawcett, imperial 4to. 2*l.* 2*s.* hf-bd.—Sermons by the late Rev. Francis Goode, 8vo. 10*s.* 6*d.* cl.—Claughton's (Rev. P. C.) Brief Comparison of the Thirty-nine Articles with Holy Scripture, 8vo. 5*s.* cl.—Marriott's (Rev. C.) Sermons before the University, &c. 12mo. 6*s.* cl.—Sermons Preached at St. Mary's Church, by Rev. Dr. Dibdin, 8vo. 12*s.* cl.—Philosophy of Christian Morals, by S. Spalding, 8vo. 10*s.* 6*d.* cl.—The Oculist's Vade Mecum, a complete Practical System of Ophthalmic Surgery, by John Walker, fc. 8vo. 10*s.* 6*d.* cl.—A Manual of Fresco and Encaustic Painting, by W. B. Sarsfield Taylor, post 8vo. 7*s.* 6*d.* cl.—Romantic Fiction, from the German, with woodcuts, &c. 12mo. 7*s.* cl.—The Book of Scottish Song, with Historical and Critical Notices, by Alexander Whitelaw, square, 9*s.* cl., 11*s.* morocco.—Ned Myers, or a Life before the Mast, by J. Fenimore Cooper, Esq., 2 vols. post 8vo. 18*s.* bds.—The Waverley Novels, People's Edition, Vol. I., royal 8vo. 9*s.* swd.—Elements of Anatomy, by Jones Quain, M.D., 5th edit. edited by Mr. Quain and Dr. Sharpey, Part I., 8vo. 13*s.* cl.—English Landscape Scenery, by George Childs, oblong, 7*s.* 6*d.* cl.—Life and Literary Remains of Charles Reece Pemberton, by W. J. Fox, edited by J. Fowler, 8vo. 12*s.* cl.—Narrative of a Journey from Heraut to Khiva, by Capt. James Abbott, 2 vols. 8vo. 24*s.* cl.—Remains of Margaret Davidson, new edit. fc. 8vo. 5*s.* cl.—Remains of Lucretia Davidson, new edit. fc. 8vo. 5*s.* cl.—Catlin's North American Indians, new edit. 2 vols. royal 8vo. 30*s.* cl.—Speed's Land Measurer's Ready Reckoner, square, 2*s.* bd.—The Heavens Illustrated, with 25 coloured engravings, 4to. 7*s.* 6*d.* cl.—The Birthright, and other Tales, by Mrs. Gore, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Nimrod Abroad, by C. J. THE OWL'S SOLILOQUY.

'Twas the twilight hour. "Tuwhit-tuwhoo!"
Said the Owl, as he peered the branches through
Of the grim old churchyard tree.
"Tuwhit-tuwhoo!"—and he plumed his wing;—
"They are silent now—they shall hear *me* sing—
That will gladden their hearts," quoth he.

"I'm the king of birds, and t'would ill agree
With my royal state and my dignity,
To mix with the vulgar throng;
So I wait till the shades begin to fall,
And the Earth is hushed,—then I charm them all
With my soft melodious song.

If I *were* to sing in the broad daylight,
I've not the least doubt they would all be quite
As pleased and as mute as now;
But I've often been told—and I think they're right,
That my voice has a grander sound by night,
And my notes a richer flow.

—Aha! there's that silly young bird again—
That nightingale, with his tedious strain—
Now really it's very wrong:—
He listened to me, one summer's eve,
And ever since then, without my leave,
He has tried to learn my song.

Tuwhit-tuwhoo, tuwhoo, tuwhoo—
He'll be sensible soon, what a vain to-do
He has made, with his rivalry;
Indeed, I've a mind myself to teach
The bird, how completely beyond his reach
Is the tone of my minstrelsy.

So now for a stave!—tuwhit-tuwhoo!"
Said the Owl, as he fluttered the branches through,
Of the grim, dark churchyard tree;
And a proud old fellow was he, that hour,
As, perched on the top ofthe belfry tower,
He hooted right dismally.

T. Westwood.

MUSIC IN THE NORTH OF EUROPE.

The following interesting communication requires no introduction. We cannot, however, give currency to the biographical notice of M. Weyse, without reminding the musical reader, and acquainting our Correspondent, that the name of this composer is not wholly unknown in England. Some of his works will be found in the *Allegri di Bravura*, published some twenty years ago by Boosey & Co., and now out of print. Our Correspondent obligingly promises to forward us the Ambrosian Chant referred to in this notice, with a view to its introduction in London, and to which our best attention shall be given on its arrival.

In your valuable journal of July 22nd, whilst making honourable mention of the Symphony of M. Gade of the Copenhagen Orchestra, you have, as already on a former occasion, pointed to the possibility of a new vein of musical invention (as you are pleased to call it) developing itself in Northern Europe, and having heard of Dr. Mendelssohn-Bartholdy's favourable critique of M. Gade's production, you indulged in the pleasing hope that your speculation was not wholly chimerical. Giving full credit to your powers of divination, I would merely add, with regard to M. Gade, that he is a young man of most promising talent, whose first great compositions have already acquired a certain celebrity. In the autumn of 1841, his grand Overture, 'Resonance of Ossian,' gained the prize from the Musical Society of Copenhagen, according to the award of Dr. Schneider of Dessau, and Dr. Spohr of Cassel, and is universally admired by those who have yet heard it executed, for its delicacy, sweetness and fanciful colour. It is a complete vision of sounds. M. Gade's Symphony, strange to say, was coldly received by the committee of the Copenhagen Musical Society, on which—too proud to take a refusal—M. Gade demanded the return of his score, and sent it to Dr. Mendelssohn, from whom it met, as you have stated, with the most flattering reception.

The object of my letter, however, is not to make you further acquainted with M. Gade. Living at a time when the works of Genius are diffused throughout the civilized world with railroad speed, he will find and make his own way. I am desirous of offering you some notice of the great Master Composer of the North, whose genius and compositions have formed M. Gade and many others. This is M. Weyse, who died at Copenhagen a year ago, aged sixty-eight years.

Christopher Ernst Frederik Weyse was born at Altona, in 1774, of indigent but respectable parents; his mother was well known in that town for her performances on the piano, and his grandfather, the Cantor at the parochial church, gave him his first musical lessons; his stepfather, however, destined him for the counting-house, and had the mortification of finding him most unqualified for the task. In the autumn of 1789, young Weyse landed at Copenhagen, provided merely with a few letters of introduction; one was for the leader of the Royal Orchestra, Schultz, a man of talent and merit; whose compositions were, at the time, much admired, and Weyse won his heart at their first interview, by improvising a pianoforte *fantasia*, on one of Schultz's airs. After a short time, Weyse received an appointment to his taste, that of organist to the church of St. Peter. He had now full time for the study of counterpoint and composition. The works of Sebastian Bach and Gluck were the foundation of his studies. He acquired the art of extemporizing on the piano to a very high degree, and played with exquisite taste. In 1799, the *Allgemeine musikalische Zeitung* made mention of Weyse in the following terms: "He is one of the first performers on the piano now existing; in his Fantasias he unites the science of Bach to the inexhaustible genius of Mozart; if he can succeed in reaching the taste of the latter, the art cannot be carried to greater perfection. Of his masterly compositions, we have yet only seen a collection of Sonatas; his great Symphonies not having found a publisher, notwithstanding they have been offered without regard to compensation or emolument."

With his studies of music Weyse united at that time those of philosophy, astronomy, medicine, and the languages. Even poetry was successfully cultivated by him; but whilst thus engaged an unfortunate attachment threw him into a state of melancholy which lasted for years. He was roused from his despondency by hearing Mozart's 'Don Juan' (in 1807), and seriously betook himself to composing for the stage; Oehlenschlager supplied him with a text, and Weyse gave full vent to his genius in the comic opera, 'The Sleeping Draught,' which has been given with continual success at the Copenhagen Opera, since 1809, and in the exquisite romantic operas, 'Faruk' and 'Ludlam's Cave,' the latter of which might easily be transferred to the English stage. Weyse became the father of the romantic opera in Denmark. Till then the influence of Gluck and Mozart had not been felt, although Copenhagen possessed composers of much merit and originality, as Schultz and Kuntzen.* For this Weyse paved the way, and his dramatic genius seemed to culminate in his music to Shakspeare's 'Macbeth' (1817), a subject worthy of his poetic mind. Amongst his later dramatic works, I may mention his 'Floribella' (1825), 'Kenilworth' (1832), and an operetta, full of spirit and beauty, entitled, 'An Adventure in the Garden of Rosenberg,' the subject being a comic love-intrigue in a favourite public garden of Copenhagen.

As a dramatic composer, Weyse became very popular in his own country, and his lyric songs are not less admirable and admired for their simplicity and sweetness. They are now universally sung in schools, and by the people throughout the country. Notwithstanding his great productiveness during almost half a century, every one of his compositions, even the smallest and most whimsical (of which not a few exist) bears witness to his correctness and excellence in handling his subject, and to the high estimation in which he held the science of Music.

But I have not yet mentioned that branch of composition in which he attained the greatest perfection, which more than any other is destined, I think, to carry his fame to posterity, and to place him, sooner or later, by the side of Handel and his predecessors, the old Italian masters. In his compositions of sacred music he has broken through all conventional barriers, and created what may be called a truly Protestant style. His 'Ambrosian Chant,' a Protestant transformation of the 'Te Deum Laudamus' of St. Ambrose, his 'Pentecost,' and Easter oratorios, his 'Sacrifice of Jesus,' his 'Oratorio in Celebration of the Reformation,' and a host of others, may be heard and studied repeatedly, even by scientific composers. Always original, and still plain, the most difficult problems are solved in a surprisingly easy manner; every idea is expressed in the most correct and beautiful way.

Why these oratorios at least, so easily accessible, so congenial to our Protestant feelings, have not yet attained their due celebrity throughout Protestant Europe, it is not difficult to explain. The reason is obvious to those who knew Weyse, and the character of his compositions. He was far in advance of his time, and his greatest works were, in consequence, understood only by a comparatively small band of true admirers, and not accessible to the superficial and uncultivated minds of the great mass of hearers and players of music. Then, too, Weyse had such an utter contempt for popularity-hunting, that he neglected availing himself of any means whatever to become known out of that narrow but enthusiastic circle where his affections centered. He composed, not to create a name for himself, nor with the least idea of lucre, but because he could not do otherwise.

As a composer of sacred music, I hope the name of Weyse will one day be established in religious England—not hesitating to express the opinion, that he was the father of an entirely new school of church music, indicating the truly and purely *Protestant* way of approaching the Deity in song, in a manner worthy of that religion. The reason why this high degree of purity was attained by Weyse, is, that he was entirely lyric in his sacred music, and but very seldom has given it an epic, and still less a dramatic character; whereas, all other composers have almost exclusively chosen the two latter in their great compositions of Protestant church-music; witness F. Schneider's 'Weltgericht,' Beethoven's 'Christ on the Mount of Olives,' Mendelssohn's 'Paul,' Handel's 'Messiah,' Spohr's 'Fall of Babylon;' the dramatic nature of which causes them to be generally considered as unfit for the Church,* and as too profane ever to be allowed to form part of our worship. I am by no means of opinion that music ought to be excluded from the Church; still I am not surprised at the reluctance with which many Protestants have received it. The old-fashioned "Oras" and "Kyrie-Eleisons" of the Catholic Church, were unfit to express the feelings of Protestants; and it was reserved for Weyse to give the true interpretation of the fundamental principles of Christianity. In short, we consider him as the Luther of the musical age, whose influence, now scarcely dawning, will shine in resplendent glory, when the works of the hour have long time been buried in oblivion. I remain, &c.

October 8, 1843. A Dane.

* The 'Hallelujah of the Creation,' by the above composer, is a work well known to our choral societies, especially in the provinces. But, with deference to our Correspondent, while admitting its merit, our recollection of it hardly permits us to allow his praise for originality to pass without some qualification.—*Ed.*

* From this somewhat hasty confusion of the music destined for devotional service, and for the spiritual concert, it would appear as if a bald and tabernacular psalmody had been, till M. Weyse's time, the only music recognized in the Danish Church. Our Correspondent, however, forgets that, besides Oratorios, Handel wrote Motets and Anthems. It would be too much to expect him to be acquainted with the rich stores of cathedral music possessed by the English Church.

OLD LONDON WALL.

While the deity, or demon, of Innovation drives tandem through the streets at such a hand-gallop, with Destruction as his fore-horse and Construction as his wheeler, let us remind him that to metamorphose is not always to beautify, but far oftener to *uglify* (if the parallel verb be allowed us). Every tramp of his said leader may crush an old monument into dust; every stamp of his hindermost Pegasus may produce some novel object, yet both tramp and stamp may agree in disfiguring the fair face of *Augusta Trinobantium*, our thrice honoured metropolis. Had we a hundred hands we would raise them against his approach towards certain localities where he threatens improvement by his two compendious processes—knocking down first, "knocking up" afterwards, mansions, magazines, and messuages, wholesale. For example we hope he will keep a reverential distance from Old London Wall, which trembles throughout its solid masses at the light rattle of his gig, worse than new lath-and-plaster erections

when a broad-wheeled waggon disturbs their nice equilibrium. Pronounce those venerable remains accumulations of compact rubbish, if you please, what would houses just turned out of the hod to replace them most probably be, but modern rubbish instead of antique? As regards practical usefulness, the few portions still visible above ground perform, or could perform, each the part of a dozen walls like those now built; indeed, we may entitle them Cyclopean for their comparative vast dimensions and durability. Their very mortar has the strength of modern brick, their concrete is an adamantine pudding-stone that would pose "little Jack Horner" to pull out the plums from it, even were not his fingers all "thumbs," we promise him. One immense portion, which might serve various mural purposes, has been long left almost unemployed by its proprietor, who stands as idle as itself,—we believe the Government. It supports a wine-vault, protects a stable-yard, and embellishes a vacant back-court upon Tower Hill, dividing elegance and Trinity Square from the Cimmerian purlieus of the Minories farther east: its aspect towards the former is gray and reverend, towards the latter sympathetically rugged, squalid, and grim. This east front looms over the back-court we mention, for about the length of a hundred and fifty feet, attaining perhaps the height of thirty-five, but is patched in different places in different manners, and has far less masonic attractiveness than the opposite or western front, which, however, appears scarce a third so long, or within ten feet so high, because of the elevated soil and other concealments. Both seem to have been here above six feet thick, faced with alternate broad and flat layers, very regular on the more perfect side, and with Roman tiles among them. Hyssop, or some weed more worthless in the materialist's eye, though precious in the moral philosopher's, waves along the ridge and lends its haggard brow a picturesque character, like thin and scattered locks crowning a beggar-patriarch's temples. Upon the waste ground here, we learn, a New Church is to be erected: were this fine old remain incorporated with the walls, they would derive from it additional venerableness, if not sacredness: for us we own it would have greater interest *cæteris paribus*, than the nicest, sprucest, specimen of *Vandal* architecture, called Gothic, raised in its stead. A second fragment stands opposite Sion College, at the corner of Philip Street, and flings its silver-pale reflexion over a burial-ground, into which the college library looks—one place of repose contemplating another! Both too, are deposits for dust and worms—but we digress: the said fragment runs along Messrs. Deacon's premises, and through them towards Cripplegate. Massive substructions exist beneath Mr. Hall's warehouse, and elsewhere hereabouts. All facilities will be afforded the antiquarian, or ruin-hunter, by the proprietors, who seem to feel a creditable pride in those memorials of olden times. What struck us as a third super-terranean portion bounds partly the small triangular green, fronting All-Hallows Church, Broad Street; its dim and sombre hue harmonizes well with that sequestered spot, and has also perhaps caused explorers to overlook it. But the largest, if not most perfect fragment, lines Cripplegate churchyard on the south: this immense cantlet of our "old dragon" wall displays a very piebald surface—antique, transition, and modern masses mingled together; still its original vertebræ peep out so often, that the comparative physiology of architecture enables an adept to determine their details. We buried ourselves deep here "in the abysm of time;" a circular bastion, protruding itself amongst the peaceful graves, has an air somewhat Roman, and may suggest the idea of a Saxon imitation, but is be-patched and bedarned with Middle Age and recent materials to such a degree as would perplex altogether *l'Art de verifier les Dates*, however subtle. Not many paces from this proud bulwark, (now itself needing protection!) Barbers'-Hall pushes into the cemetery another apsidal structure, which looks like another bastion raised and roofed over; if one indeed, (its coat of plaster prevents verification), it proves that a judicious architect might easily preserve an archaic remain, yet render it useful. But why, certain persons may ask, why preserve these non-conforming old samples of uncouth stone-work amongst smart new brick erections? does not the mere principle of homogeneity demand their removal? Yes, and why preserve that vegetable ruin, the wrinkled, decrepit, weather-beaten oak in the village-green? why not let a fine tall poplar spring up there instead, and flourish to heaven like the miraculous beanstalk? would not this exhibit much more "homogeneity" among the aspiring mud-cottages which have replaced the former humble ones? Let us also ask, how many fond associations and deep-rooted reminiscences would you tear from the heart when you dragged the sylvan monarch from his ancient domain? Is it of no use to cultivate the affections? Would the peasants who once assembled round this hoary trunk, and talked about bygone times and departed neighbours, whose existence it brought back, as it were, like a consecrated column inscribed with their names—a "monumental oak":—would these peasants, we ask, profit or lose were such an uncouth nonconformist doled out to them, seven logs a-piece, for firewood? These so-called incumbrances and inutilities are nevertheless silent friends, unto whom the simple-hearted often communicate their sorrows and their joys, which perhaps no other ear will receive: how many a forlorn night-wanderer has leaned his feeble arm against London Wall, and wept his bitter lot to the one old acquaintance that afforded him any resting-place? But no matter! demolish these rugged relics of British-Pelasgian art—these huge stumbling-blocks in the way of modern improvement. Certain politico-economical Savages, we are told, eat their very parents when superannuated and past service, thus carrying out the utilitarian principle to its utmost; and certain brute-creatures devour their disabled companions lest they might prove a drag on their progress: wherefore should men have less of the native Adam Smith in them than savages and brute-creatures? Yet if our Innovators would now and then bethink them, that there is a moral character to be built up among their fellow-citizens, as well as a new line of shops, perchance they would obtain a more catholic notion of Utility, and perceive, that however important physical welfare is to beings of flesh and blood, moral amelioration is likewise momentous to those who have *souls*.

OUR WEEKLY GOSSIP.

LETTERS from Egypt announce the death, in the 28th year of his age, of Mr. George Lloyd, only son of Major Sir W. Lloyd. He was accidentally killed near Thebes, by the bursting of a fowling-piece on the 10th of October. Mr. Lloyd was born in India and educated in Germany. A friend, in whose judgment we have much confidence, informs us that though Mr. Lloyd left India when a youth, he was singularly well acquainted with the character of the people of that country, and the modifications it had undergone from European associations; that he had devoted much time to the study of Middle Age history, and particularly to the influence of Saracenic science on European civilization; and latterly to Egyptian antiquities. Mr. Lloyd, unfortunately, came before the literary world too early for his reputation, and it was our duty two years since (No. 644), to comment somewhat severely on a volume to which his name was prefixed as Editor, and not much more favourably when he appeared as Editor of Capt. A. Gerard's papers (No. 733).

Mr. Duruset, for many years an unobtrusive and useful second tenor in English ballad opera, died within the week, aged fifty-two. He was the original *Sherasmin*, if our memory serves us, in Weber's 'Oberon.'

Silliman's Journal, just arrived, announces the death of Mr. Nicollet, at Washington, on the 11th of September, aged, it is supposed, about forty-eight. "Mr. Nicollet's labours," says Prof. Silliman, "in the departments of physical astronomy and geography are well known. He was the favourite pupil and friend of La Place; and the frequent occurrence of his name in the Mécanique Céleste, shows in what estimation he was held by his teacher. Mr. Nicollet came to this country about ten years since, and has been engaged principally in carrying out a survey—geographical, topographical, astronomical, and geological—of the vast region embraced by the sources of the Mississippi and Missouri Rivers. His map of this important labour was completed before his death, and was shown by him at the Association of American Geologists in April last, at Albany, and referred to in explanation of an interesting paper on the geology of the region in question. Mr. Nicollet also devoted much effort to the collection and preservation of the various Indian dialects, and in fact every thing which could illustrate the history of this interesting race. It is said that his collections of MS. notes on this subject are voluminous."

We must add to these obituary notices the name of the Rev. W. L. Rham, who died at Winkfield, in Berkshire, on the 31st ult. in the 64th year of his age. He was, we believe, of a German family, but born in Switzerland, and well known as a very able writer on agriculture, with which subject, theoretically and practically, few men were better acquainted. Mr. Rham contributed many valuable papers to the Journal of the Agricultural Society and the Penny Cyclopædia, and, in announcing his death in the Gardeners' Chronicle, Dr. Lindley mentions that he was the writer, in that Journal so well known to its readers, under the signature M.

On Monday last, Mr. C. W. Cope and Mr. J. Duncan were elected Associates of the Royal Academy. The principle on which these elections or selections are made, has not always been recognized without the walls of the Academy; but—no disparagement to Mr. Duncan—we think the public will agree with us, that the designer of 'The first Trial by Jury' was fully entitled to the honour.

It was lately announced in some of the German, and copied into the Paris papers, that M. Arago had refused the Order of Merit offered to him by the King of Prussia. Baron Humboldt has formally contradicted the statement, in a letter published in the *Prussian Gazette*. The King of Prussia, he says, simultaneously named, as Knights of the Order of Merit, MM. Arago, Letronne, De Chateaubriand, Daguerre, Horace Vernet, and Gay-Lussac, and M. Arago was the first to signify his acceptance, which he did in a letter to the Chancellor of the Order, expressive of his satisfaction at the distinction conferred on him.

The latest announcement of Mr. Murray is the 'Correspondence of William Taylor, of Norwich, (Author of "The English Synonyms,") with Robert Southey, Esq., from 1798 to 1830, with a Memoir of his Life and Works,' by J. W. Robberds, Esq.

We noticed lately the satisfactory clause in the treaty between France and Sardinia, extending the protection of copyright to musical and dramatic works. A deputation of French artists and men of letters connected with the theatres, having waited on M. Guizot to express their thanks, and to entreat that the means of carrying so just a measure into effect might be granted, were received by the Minister with the welcome assurance that the protection of French arts and letters in foreign countries should be forwarded by every possible means in the power of the government.

Monsigny's 'Déserteur' has been just revived at the Opéra Comique with success. A curious rumour—*ben trovato*, to say the least of it—promises an opera on the 'Consuelo' of George Sand, the music by Liszt; and even goes the length of indicating the probable cast of parts. *Consuelo*, Madame Stoltz; *Corilla*, Madame Dorus; *Maria Theresa*, Mdlle. Mequillet; *Count Albert von Rudolstadt*, Baroilhet; *Anzoleto*, Duprez; and *Maestro Porpora*, Levasseur.

The son of Hummel, who was for a season or two in London, has produced an opera at Weimar, but without success.—There is a talk of a German opera to be held in the Teatro Carcano, Milan, during the coming carnival,—a most royal return made by the Austrians, if true, for the present which Italy has made them of their *Kapellmeister* Donizetti. Good can hardly fail to accrue from both courtesies—to German singers and to Italian composers.

We observe, by one of the Bombay papers, that a native of Hyderabad confirms the hope of Col. Stoddart being alive, by stating explicitly that, when at Bokhara some months since, he had seen that officer, and been requested, by him, to make known his position.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

Digitized by Google

To the Managers of Schools in London and its Neighbourhood, and also to the Visitors of the Royal Polytechnic Institution.

THE PUBLIC LECTURES, by Dr. Ryan, Professor Bachhoffner, Mr. Goddard, and others, are delivered at Twelve, One, Two, Three, Half-past Four, and at Eight o'Clock in the Evening, and usually occupy about half an hour each. They are generally ELEMENTARY LECTURES, and are delivered in the most simple and inviting form with a view to combine entertainment with instruction. The subject of the Lectures for each day is suspended in the Hall.—To the valuable APPARATUS for ILLUSTRATION has been added ARMSTRONG'S HYDRO-ELECTRIC MACHINE and LONGBOTTOM'S OPAQUE MICROSCOPE.—The EXHIBITION ROOMS, with continued novelties, are Open Mornings and Evenings, except Saturday Evenings.

Admission, One Shilling. Schools, Half-price.

For Instruction in the Private Classes apply to Mr. R. I. Longbottom, the Secretary.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.—*Nov.* 1.—Mr. Murchison in the chair.

The magnificent collection of drawings of fossil fishes, being the originals of the great work of Prof. Agassiz, from whom, in order to aid their publication, they were purchased by Lord Francis Egerton, was presented by his Lordship, and exhibited.

The following communications were read:—

1. 'On the Fossil Remains of Star-fishes of the Order Ophiuridæ, found in Britain,' by Prof. Edward Forbes.—After enumerating the several Ophiuridæ recorded as British fossils, the author described four new species—viz. 1. *Ophioderma tenuibrachiata*, and 2. *Ophiura Murravi*, discovered by Dr. Murray in the lias near Scarborough; 3. *Amphiura Pratti*, discovered by Mr. Pratt in the Oxford clay; and 4. *Ophiura cretacea*, communicated by Mr. Tennant, from the chalk. The animals of this order appear to have commenced their existence in the earliest periods of organic life, and to have continued to the present day without any great modifications of form of family or generic value. They seem at present to be much more numerous than at any former period. None of the fossil species is identical with the existing.

2. 'On the Geology of Malta and Gozo,' by Lieut. Spratt, R.N., Assistant Surveyor H.M.S. Beacon.—The formations composing these islands are tertiary, and appear, from the author's researches, to belong to one geological epoch. They are all of marine origin, and very regularly deposited in parallel strata, but little inclined from the horizontal. They may be grouped under four divisions:—1. Coral limestone; 2. Yellow sandstone and blue clay; 3. Yellow and white calcareous sandy freestone; and 4. Yellowish white semi-crystalline limestone. Each of these groups is characterized by peculiar fossils, some of which are common to more than one. By a careful examination of the organic remains in each, the author was enabled to detect several extensive faults in both islands. These displacements amount generally to about half the present height of the islands above the sea—viz. about 300 feet, and the direction of the faults is transverse to the line of elevation, or the direction of the islands, that is, N.E. and S.W., the chain of islands running N.W. and S.E. Advantage of the irregularities of surface caused by these faults has been taken in constructing the military defences of the island. The author concludes with a detailed account of the several strata and their subdivisions, describing the distribution of the contained fossils, a collection of which accompanied the paper.

INSTITUTE OF BRITISH ARCHITECTS.—*Nov.* 6.—Mr. Tite, V.P. in the chair.—The minutes of the preceding session having been confirmed, the chairman, in a brief address, proceeded to congratulate the members on the increased attention paid to Gothic architecture, and considered it a source of gratification to the profession to witness the almost daily restoration of the most beautiful monuments of the middle ages, in all their pristine beauty; but at the same time he would caution the junior members against the exclusive study of that style, to the neglect of the classical styles of Greece and Italy, which were obviously more suitable on many occasions for modern purposes, and hoped they would not be forgetful of those great and grand types introduced by Inigo Jones and Sir Christopher Wren. He further offered some observations on the state of architecture in Germany, suggested by a recent tour in that country, particularizing among the buildings ancient and modern most worthy of attention the "Walhalla," the "Theatre at Munich," and the "Cathedral at Ulm." Of the first mentioned he spoke in the highest terms, with regard not only to the design and situation, but also to the perfect manner of its execution. Mr. Donaldson, V.P., then read an account of the models of churches preserved in Henry the Fifth's Chantry, Westminster Abbey, and which were proposed to be built in the reign of Queen Anne. Three, however, only, out of the thirteen—at Greenwich, St. James's Westminster, and the New Church in the Strand—had been constructed. The others were designs of a high class, and he considered it a serious loss to the architectural character of the metropolis that they were never carried into effect. The models are beautifully executed and in good preservation, and it is to be regretted that they are not more open to inspection. The names of the architects are unknown. Prof. Donaldson also explained the mode practised by the old Italian masters of preparing the fronts of their buildings for decorations in fresco, and exhibited an original drawing by Polidoro in illustration. He likewise read a communication from Mr. J. Crace, containing observations made during a recent tour through the north of Italy and Germany, on modern frescoes, and the methods adopted in their execution.

HORTICULTURAL SOCIETY.—*Nov.* 7.—R. W. Barchard, Esq., in the chair. Mr. J. Bagster and Mr. H. Waterer were elected Fellows. From Mrs. Lawrence, was a well-grown plant of *Cattleya labiata*, with two spikes of beautiful light pink blossoms; and a fine specimen of *Epiphyllum truncatum violacium*, with pretty purple flowers: this plant was exceedingly handsome, from its pyramidical form; this was effected by grafting it on *Cereus speciosissimus*, inserting the longest branches at the bottom, the shortest ones at the top, and filling up the intermediate space in the form of a regular pyramid; it was nearly three feet high, and the branches were all in bloom, from top to bottom, which rendered it an object of great interest: a Banksian medal was awarded. The Marquess of Bath sent two Queen Pine-apples, weighing 5lb. 4oz., and 5lb. 9oz., and measuring each 5½ in. in diameter, and 9½ in. in length; the number of pips was 10. These were exceedingly handsome fruit, and were not produced by mere accident, as those exhibited by his gardener from time to time prove; but were the result of steady successful cultivation and good management. There is little doubt that in a few years the manner of cultivating the Pine will be greatly altered, and that larger and better fruit will be produced than we have hitherto seen. A Banksian Medal was awarded. G. W. Ward, Esq., exhibited two bunches of Grapes, weighing 1lb. 4oz., and 1lb. 3oz.; these were said to have been brought from Paris in 1840, under the French name of Raisin Monstre: they much resembled the Gros Ribier du Maroc. They, although as ripe as ever they would be, were not so well flavoured as could have been wished; though they had had the benefit of all the heat that was given to Muscats, and it was said to have been put on the first week in March: this grape would require a warmer and better climate than that of Britain to bring it to perfection. Viscount Maynard exhibited a Cassaba, a Pearson's Green-fleshed, and a Netted Green-fleshed Melon; these were stated to have been from plants from which two crops had been cut. From the Gardens of the Society were ten varieties of Chrysanthemums; these were placed under glass about three weeks or a month ago, and from their having had abundance of light and air, which is so necessary for Chrysanthemums at this season, their flowers were finely coloured. There was also a collection of Pears, and amongst them Marie Louise, from a large tree which had been removed from a wall about three or four years ago, and had not suffered from the operation of lifting and transplanting.

LINNEAN SOCIETY.—*Nov.*—R. Brown, Esq., in the chair. A paper was read by Mr. Kippist on the discovery of the *Backhousia setosa* of De Candolle at Saffron Walden, in Essex, by Mr. J. Clarke. This plant had been previously described as *Picies nievacioides;* but there can be no doubt now of its identity with the *Backhousia setosa* of Europe. A paper was commenced from Mr. Griffiths, on the sub-class of plants called Rhizantheæ. The author proceeded to examine in detail the characters on which this class was founded. He considered that in each of the characters this class did not differ so much from the other classes as many of the plants undoubtedly referred to them. Their parasitic character differed. Many of the species had a higher vascular developement than was supposed. The absence of the embryo in the seed was an inference. There might be an embryo arrested in a stage of developement earlier than we are acquainted with in the higher forms of plants. Prof. Forbes exhibited some specimens of Orchidaceous flowers which had been electrotyped, and retained their form and character in a remarkable manner.

BOTANICAL SOCIETY.—*Sept.*—J. E. Gray, Esq., President, in the chair. Dr. Wood, of Cork, presented a specimen of *Neottia gemmipara*, found in Ireland. Dr. T. Taylor presented the following species of Jungermanniæ, new to the British Flora: *Jungermannia reclusa* (MSS. Taylor), *J. fragilifolia* (MSS. Taylor), *J. germana* (MSS. Taylor), and *J. riparia* (MSS. Taylor). Read:—'Observations on some varieties of Hypna, and on a new species of Lichen,' by Dr. Taylor. The specimens described were collected in North America by Dr. Gavin Watson, and by him presented to the Society. The new lichen described was named *Cenomyce foliacea*.

Oct.—J. Reynolds, Esq., Treasurer, in the chair. Mr. A. Gerard exhibited a collection of Fruits and Seeds from Sierra Leone, containing specimens of the fruits of the Butter and Tallow Tree (*Pentadesma butyraceæ*). Read:—'Notes of a Botanical Excursion to Tilgate Forest in August last,' by the Chairman.

Nov.—Hewett C. Watson, Esq., V.P., in the chair. The following papers were read:—'On the Botany of Lichfield,' by the Rev. R. Garnett; 'Notes on a species of Cuscuta found at Duxford, Cambridgeshire,' by Mr. Frederick Bond. The Chairman presented a series of specimens of the common Birch, in order to show that the forms described by different authors under the names of *Betula alba, pendula, glutinosa*, and *pubescens*, are only varieties of one single species, the original *Betula alba* of Linnæus. Mr. Watson stated that he had repeatedly found on different branches of the same tree the various forms of leaf and other characters which were given as the distinctions between these supposed species, and that the leaves of *Betula glutinosa* or *pubescens* were produced usually (if not always) on the seedling plants of *Betula alba* or *pendula*. Specimens of *Primula elatior*, from the Bardfield Station, were presented by Mr. E. Doubleday. They were remarkable for the wide variation in the relative length of the calyx and corolla, and also in the form of the leaves, some specimens resembling the primrose in their tapering leaves, while others had the abruptly contracted leaves similar to those of the cowslip.

SOCIETY OF ARTS.—*Nov.* 8.—G. Moore, Esq. V.P. in the chair.—The Secretary read a paper on the means at present known of preserving life in cases of shipwreck, which was illustrated by numerous models.

MEETINGS FOR THE ENSUING WEEK.

SAT.	Asiatic Society, 2, P.M.
	Botanic Society, 8.
MON.	Geographical Society, half-past 8.
TUES.	Meteorological Society, 8.
—	Medico-Chirurgical Society, half-past 8.
WED.	Society of Arts, 8.—'On Elkington's Process of Coating Iron with Zinc, Copper, &c.' by Mr. P. Pellatt.
—	Geological Society, half-past 8.
—	Microscopical Society, 8.
THUR.	Royal Society, half-past 8.
—	Royal Academy.—Anatomical Lecture.
—	Society of Antiquaries, 8.
FRI.	Botanical Society, 8.

FINE ARTS

DECORATION.

Pavements.

IN spite of great mistakes in taste committed in high quarters, such, for instance, as surrounding the finest remains of ancient sculpture in the world—the Elgin Marbles at the British Museum—with *sham* red granite walls, (bad even if real granite, but offensive as a pretence,) whilst red cloth hangings would have been effective and genuine;—erecting a statue to be invisible on the summit of a column, the column itself placed in a large open space, where its sole merits, its proportions, are lost;—deadening the many-tinted marble shafts at Westminster Abbey

Digitized by Google

with hideous leaden wash, to set off the abortions of Gibbs and Rysbrack;—in spite of these, and many other abominations, which might be recounted, all discouraging and perplexing, it appears to us, that a better taste in the decorative arts is gradually spreading and developing itself. We are beginning to be again sensible of the charms of colour in the decoration of our buildings, our garments, and our furniture. Form is assuming a more legitimate application in respect of ornament, and there is a wholesome preference for modest realities over meretricious shams. We need not conceal, that the direction of this improved taste is, at the present time, rather towards revival of what has once existed, than towards new creations. This, however, is no cause for regret. Emerging from the ignorance, conceit, and apathy of a transition state, in which we have been shuffling from the time of the Commonwealth in most points respecting art, we must necessarily collect our materials and pass through the phase of knowing, understanding, and appreciating the past, before we can proceed to reconstruct or create. Even the revival of ancient decorations, partakes, in some measure, of the character of inventions, in consequence of the new and improved means which progressive discoveries in science enable us to apply in the realization of them. Let us never forget, however, that the business of machinery can be but perfect *reproduction* after a given pattern. Its powers are infinite in this respect; but the work of the machine is not the work of a human mind. The skill of the fingers and the precision of the lathe have each their respective objects for which they are best suited, and in which neither can compete with the other. The boundaries are nice, and scarcely distinguishable. It might seem that the Birmingham smith, with all his modern appliances of steam-power, &c., ought to produce better iron-work—gates, for example—than his predecessor who relied on his rude and simple tools. Yet let any one who questions the superior mastery of the hand over machinery, compare the gates at Hampton Court with those on Constitution Hill, in the Green Park, or even the bronze gates before Buckingham Palace. The first are the work of an artist, the latter of a machine; the first full of light, beautiful, and graceful lines, waving in endless luxuriance, and cunning diversity; the latter, solid, heavy, clumsy, graceless; not bad in themselves, but very bad by comparison. The power that we now possess should make us the more cautious about the perfection and beauty of the original model. The creation of a single china or iron Frankenstein, resting on a solitary chimney-piece, matters little; but the multiplying them by millions, which stare you in the face in every house you enter, is a serious and appalling crusade against good taste. Good taste! "There is no disputing about taste," says Jones of the city: "Every one to his own taste," says Lord Jones of Belgrave Square. No more pernicious fallacies than these in their way, despite the principle has been upheld by Art-Unions. We might as well and as truly say, "No dispute about knowledge!" "Every one to his own morals!" But there are signs of the beginning of a practical warfare against these fallacies, and we will not here discuss them further.

Our attention has recently been called to the new tiles laid in the Temple Church, to the mosaic pavements in the Reform Club, in Messrs. Hilditch's shop on Ludgate Hill, in the Hall of the London Coffee House opposite, and elsewhere, as the early signs of improvements likely to be realized in pavements,—a subject which has been as much neglected as ceilings. Since the days of the Reformation, we have had little else on our floors than rude coarse flagstones, or, at best, chequers of black and white marble. The old English tile, in its immense variety, seems to have gone out of use, and even in the universal employment and adaptation of classical models, the use of the handsome mosaics of the Romans seems to have been altogether overlooked. It was natural enough to forget the tesselated pavements of the Middle Ages—of which a fine remnant may be seen before the altar of Westminster Abbey, if the visitor can persuade the vergers to remove the rush matting, or a more perfect specimen still in Trinity Chapel of Canterbury Cathedral—but it is not easy to account for the neglect of the Roman models, except so far as the difficulty and cost of manufacture may have influenced it. The revival, however, of both styles of pavement—old English tiling and Roman mosaics—and the invention of a third and cheaper process, ruder, and susceptible of less variety, by means of asphalte, are actively at work for the adornment of our floors. Two extensive factors of pottery ware, Messrs. Chamberlain, of Worcester, and Mr. Minton, of Stoke-upon-Trent, are busy in the preparation of Encaustic Tiles. These tiles are the true and genuine ecclesiastical ornaments for church pavements, and we hope no more sandstone flags will again be laid in a sacred edifice so long as tiles can be procured. If the foundation on which the tiles are to be laid is sound and level, the cost of appropriate tiling is not materially greater than of stone. The improved machinery of modern times subjects these tiles to great pressure, and they are consequently much harder and less porous, and therefore more durable than the ancient tiles. Indeed, unless there be some accidental defect in the clay, it is next to impossible, either by force or friction, to inflict any injury on them. They will sustain the roughest usage to which they are at all likely to be subjected, even by the hobnails of clodhoppers. These advantages are some set-off against the mechanical look which the modern tiles have, but which is not apparent in the ancient. The patterns in the first are more uniform, and seemingly the product of machinery, whilst the latter appear to be the work of the hand. Of the tiles of the two makers we have mentioned we prefer those of Mr. Minton. They have the more genuine ancient features about them. The tiles laid in the chancel of the Temple Church are of his manufacture. The patterns were almost wholly obtained from the Chapter House of Westminster Abbey, where the original pavement, having been carefully boarded over when that building was fitted up as a Record Office, remains in probably greater perfection than any elsewhere. Many of these patterns are of great beauty; some consist of heraldic cognizances, others of figures, some evidently relating to the life of Edward the Confessor, and others of very beautiful scrolls. They are probably as old as the reign of Edward III. who decorated this structure. The average price of each tile is sixpence. The ground is unglazed; the colours are a red, somewhat between Indian and light red, with the patterns of orange or bright yellow, highly vitrified and glazed. The red is decidedly susceptible of improvement. In the ancient tiles, the whole surface was glazed, and it must have been difficult to walk on them, unless barefooted. These tiles are about an inch thick. Besides these, Mr. Minton has produced a cheaper kind, which are wholly unglazed; they are red, buff, and black. The alternations of the black tiles are effective, and the whole appearance, rather Romanesque than Gothic, is chaste, but less ecclesiastical than the glazed. For this reason they are better suited to lay buildings, and are worth the attention of architects, for halls and passages even of very moderate sized houses. Very ornamental, too, they would prove for hearths and mantel-pieces, &c., and they might be applied for dairies, conservatories, and even some articles of domestic furniture. In the imitation of the ancient tiles, only red and buff colours hitherto appear to have been used. It may be well to point out that they were made of other colours. Green and white tiles were used by Henry VIII. for Hampton Court, these being his chosen—the Tudor—colours, and we should be glad to see them restored to the great Hall of that Palace.

One of the first specimens of the revival of the Tesselated Pavement, we believe, is to be seen in the hall of the Reform Club. It was manufactured by Mr. Singer, and laid on a principle for which he took out a patent. Excellent as the effect of this pavement is, it has a dingy appearance, and this, we believe, is unavoidable in the process adopted by Mr. Singer. The tesseræ, which are usually about an inch square, are laid not one by one on the floor itself, but on a ground of cement, thus forming slabs about eighteen inches square, which slabs are then placed together on the floor. In order to obtain a level surface, the tesseræ so fixed are, we believe, planed or ground smooth: for this purpose, they are made rather softer than would otherwise be necessary, and thus their ground surface absorbs the dirt. Mr. Blashfield has improved on this process, and though he adopts Mr. Singer's method of laying, he makes the tesseræ themselves so true and smooth that they require no further levelling. They can, therefore, be made much harder, are so made accordingly, and their original vitrified surface is not disturbed. Their colours remain unaffected by wear, and the white tesseræ are as clean and pure as biscuit china. These tesseræ, of the finest porcelain (being flint and fine clay,) are manufactured in the *powdered* state, in all varieties of colour, and consequently are coloured throughout their entire body; the powder, which is almost of impalpable fineness, is made to cohere by means of hydraulic pressure. Thus formed, they are highly vitrified. Pavements of this kind are necessarily much more costly than those of tiles, and their price will limit the use of them as pavements, except in the mansions of the wealthy. Still in passages subjected to much traffic, they are cheaper than oilcloth. We have seen a beautiful mosaic that cost fifty pounds, but will last a thousand years, substituted—from economical motives—for floorcloth of similar size, which it was necessary to replace annually. They might well be used before the altars of churches; and sufficient remains of Abbot Ware's Mosaic Pavement, laid in Henry the Third's reign, before the high altar in Westminster Abbey, exist to furnish models of ancient workmanship. The revived use of these tesseræ will lead, perhaps, to the erection of tombs like those of Edward the Confessor and Henry III.—(What a shame that the British Museum did not secure Cavallini's shrine at Strawberry Hill!) and it is not difficult to foresee the application of this mosaic work to many minor ornamental purposes, such as chess-boards, tables, &c.

Thus much of this paper was written when Mr. Owen Jones's Designs for Mosaic and Tesselated Pavements opportunely appeared,* to aid the revival of these beautiful floorings, by furnishing admirable patterns for them. The patterns are new combinations of ancient forms, chiefly Pompeian and Moorish—one of the handsomest (No. 7) to our taste, seems to result from a happy union of the general features of both. The whole of these patterns have been designed for square areas, and their application is consequently circumscribed, for the most part, to large mansions or to public buildings. We trust Mr. Jones will invent patterns suitable for smaller houses—for such passages as are generally found in the houses of the middle classes whom we may expect to see using the Tesselated Pavements. Mr. Jones's work contains ten designs, most of them intricate combinations of great variety. Though parts of them might be separated and applied to passages, we should still prefer having patterns invented expressly.

And here, whilst on the subject of patterns, we must find room for some judicious remarks on the subject, which appear in Mr. Eastlake's letter appended to Lady Mary Fox's 'Country House.'

"I can hardly approve the occasional practice of the ancients, in placing Mosaic 'histories' under their feet. The passion for this kind of decoration was carried so far, that the ornamental floor of the dining room sometimes represented the scattered fragments of a repast. The objections are sufficiently obvious. The forms and hues employed should be merely calculated to gratify the sight. Among other preliminary considerations, I would also include the nature of the mere surface, as well as the distinction of every apartment. Thus a pavement, however decorated, should still express the character of firmness and solidity. For this reason, I would banish even the lowest kind of life (that of plants), and every approach to perspective. Geometrical forms would thus be alone admissible: the variety is infinite: but even here I would again exclude abrupt and irregular contrasts of colour, which have sometimes the effect of making the evenness of the surface doubtful: the last consideration is even applicable to carpets."

Accompanying Mr. Jones's designs, is an essay 'On the Materials and Structure of Tesselated Pavements,' by Mr. J. O. Ward. It gives an account of the old Roman pavements, their materials and workmanship, and of the various experiments by Mr. Wyatt and others before the applications of the compressed tesseræ, the use of which it is the particular aim of this work to recommend. It enables us to add a few particulars to those we have already stated. The Romans laid the tesseræ, wanting uniformity in size and shape, one by one on the floor of cement—after-

* Designs for Mosaic Pavements. By Owen Jones, Archt. Weale.

Digitized by Google

wards rubbing and polishing the surface. "We need not dwell," says Mr. Ward, "at length on the time and trouble that it must have taken to set each tessera separately in the cement, and to try the surface with the level after every few pieces were laid. With respect to the subsequent operation of grinding down and polishing the surface of the work, it must have been, in most cases, (and particularly where stones of a hard and gritty nature were employed) the most tedious and laborious part of the process." Mr. Ward justly regards Mr. Singer's invention of cutting the tesseræ into uniform shapes out of thin layers of clay, and uniting them "with cement so as to form slabs of convenient size for paving"—"as one of the most important steps towards the revival of the art in this country." It appears that the material which Mr. Blashfield applied to the manufacture of his tesseræ, had been previously used in the production of buttons to supersede those of mother-of-pearl, bone, &c., according to a patent taken out by Mr. Prosser and worked by Messrs. Minton.

We have before admitted, that in so far as they are harder and truer in their levels, than those of Messrs. Singer, and consequently requiring no smoothing, these tesseræ are to be preferred,—but judging from our own observation, we think some qualification should be made in the following statement of the advantages. "First being formed in similar steel dies, they are of uniform size and shape, so that they can be fitted together accurately in the laying down of the most complicated designs." Now we beg to say that the varieties of material, or the process of baking, or something else, causes very manifest differences in size and shape to appear in the tesseræ of different colours. The blue invariably shrink most, the buff least, to a difference of one in twelve. Whether or not these differences are important in the actual laying, we cannot say. Next, it is said that "being all composed of the same material, variously coloured, they are all of precisely equal hardness." We doubt very much if the buff and white and blue are equally hard, or even of the same clay. We incline to think that the material of the first comes from Staffordshire, whilst that of the white is brought from the disintegrated granite of Cornwall. The process of laying is thus described: "the pavement is first put together, face downward, on a smooth surface, so that the tesseræ find their level without any trouble to the workmen; and as soon as a sufficient portion of the design is finished, it is backed with fine Roman cement, which is worked in to fill the crevices between the tesseræ; the pavement is thus formed into smooth flat slabs of convenient size (according to Mr. Singer's method), and these are laid on a foundation properly prepared in the usual way." "Pavements, thus constructed, are singularly beautiful. The outline of the design strikes clearly and sharply upon the eye, and the brilliant colours of tesseræ are reflected from the level surface, uninterrupted by those broad, uneven lines of cement which, in the Roman pavements, detract so much from the general effect. The truth of every line and angle in the figure, and the first proportion of all its parts, however complicated and various, impress the mind with an agreeable sense of order and precision."

Some imitations of tesselated pavements, and also of the encaustic tiles, have been attempted in Keene's cement, but we cannot say that we look on them, or, indeed, any imitations, with much favour, unless some very obvious advantages result. It has not the durability of either tesseræ or tiles. We have our doubts whether this composition be fit for pavements, though we have no doubt of its excellence for walls and ceilings. It is harder and more durable than scagliola, and is applicable for all sorts of inlaid marble work, realizing the effects at a tithe of the price.

The use of asphalte has not been so general as might have been wished or expected, and yet there would seem to be no good reasons against employing it in all cases where the cost of tiles or tesseræ is a consideration. For street pavements it is certainly susceptible of greater ornament than flag stones, and it might be agreeably diversified in colours and variety of patterns. Some attempts, but not carried out sufficiently as respects colour, have been made before the Ordnance Office in Pall Mall, at the foot of the steps of the Carlton Column, in Whitehall Yard, &c.

Floorcloths and carpets might be appropriately treated in connexion with pavements, except that what we have to submit, on carpets especially, to our fair readers would extend this paper inconveniently, and the discussion of the subject must, therefore, be postponed.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, EXETER HALL.

On WEDNESDAY EVENING, November 15, 1843, the Society will perform, for the first time, HANDEL'S Oratorio, DEBORAH. Principal Vocal Performers, Miss Rainforth, Miss Cubitt, Miss Dolby, Mr. Walker, Mr. Glubilei, and Mr. H. Phillips; the Band and Chorus will consist of above Five Hundred Performers. Tickets, 5s. each; Reserved Seats, 5s.; may be had of the principal Music-Sellers: of Mr. Mitchell, 39, Charing-cross, and of Mr. Ries, 102, Strand, opposite Exeter Hall. T. BREWER, Hon. Sec.

The doors of the Hall, for the future, will be opened at Half-past Six, and the performance commence at Seven o'Clock. The Subscription to the Society is One Guinea per annum. Persons desirous of becoming Subscribers are requested to apply at Exeter Hall on Tuesday Evening, between the hours of Eight and Ten.

NEW PUBLICATIONS.

Orpheus: a Collection of Glees, or Vocal German Quartetts, by the most admired German Composers, with English Poetry. Book 13.—The form of this publication argues an increase of musical acquirement in England worth noticing. A dozen years ago three-fourths of our amateur glee singers—*spelling*, instead of reading their parts, and depending on the indications given by the accompanist at the pianoforte, and the proceedings of their neighbours, for time,—would have been unable to make anything of a new composition, if denied the privilege of crowding together round one full score; a disposition of forces not only destructive of musical effect, but leading to conjunctions and disasters as whimsical as those of the never-to-be-forgotten quartett party in Paul de Kock's 'Mon Voisin Raymond.' Now, it would appear as if our singers are beginning to count their bars and rests,—to depend upon the eye and not the ear for the right interval; for a collection of music, issued in the good German form of separate vocal parts, has arrived at the thirteenth number. This advance is well worth a paragraph of notice and encouragement. As regards the intrinsic value of the German vocal quartett by way of addition to our vocal stores, the most catholic of critics must speak less confidently. That we are not blindly devoted to English glees, all must admit who will refer to a former number (*Athen.* No. 588), where principles were stated so unpalatable to native self-appreciation as to excite controversy. Good or bad, however, but few of the German part-songs can be accepted as a valuable addition to our store of native manufacture. Many are merely harmonized melodies, and, as such, not a whit more musically respectable than the 'O Nanny's, which the Knyvetts used to whisper for the applause of sexagenarian audiences. Polaccas, waltzes, marches, without number, occur to us, coming under this definition. To this class, however, belong some of the noblest popular strains of any country,—we mean Weber's settings of Körner's martial lyrics, which, by their invention and grandeur, must conciliate the severest musical purist, while, by the incomparable nature and spirit of their melodies, they stir the least educated listener as with "the voice of a trumpet." We are accustomed to pique ourselves on our 'Britons, strike home' and 'Rule Britannia,' but which of these, in its intense and over-mastering enthusiasm, approaches the 'Sword Song' and 'Lutzow's Wild Chase'? While speaking of the German melody-glees, we must not forget to praise those by Eisenhofer, in which a soft and flowing *cantilena* is set off by rich but not extravagant harmony. Coming from songs of the table and the troop, within the sphere of more strict musical contrivance, we shall find our cousins less rich than such admirable choral singers and such thoroughly-trained composers ought to be. Many of what may be called their serious glees are profoundly tedious, and stand in the catalogue of Music where 'The Burgomaster of Berlin' (see *ante*, p. 959,) stands among historical novels. There are fine compositions by Zelter and by Spohr,—the 'Rastlose Liebe' of the latter is a very gem;—we have heard, too, one or two by Marschner of great merit, but, on the whole, nothing to make our Danby, and Paxton, and Calcott, and Webbe, and Horsley ashamed of their selected works,—nothing so delicate as the last-mentioned writer's 'See the Chariot,' and 'By Celia's Arbour,' and 'Nymphs of the Forest.' This, by the way, may arise from the German part-songs being written for many voices, whereas our best have been only planned for a quartett of *soli*. To come directly to the matter in hand, the thirteenth number of Messrs. Ewer's 'Orpheus' shows that in this field of Music, also, that indefatigable and high-toned artist, Dr. Mendelssohn-Bartholdy has not been idle. He has on the present occasion, written for soprano, contralto, tenor, and bass, and not in the limited form of the harmonized melody. *That* he had already triumphantly attacked in his 'Sechs Lieder für vierstimmigen Männerchor,' (Op. 50), the second of which, 'Der Jäger Abschied,'—the same which was performed with so much pomp at the recent Brandenburg Festival—is one of the finest things ever composed for male voices. The songs under notice, as might be expected from the superior delicacy of the voices employed, are more exquisite in their harmonies, and less bold in their style than the collection referred to. 'The Nightingale' (No. 4) is in form of a round, with some liberties; 'The Hunting Song' (No. 6) unique, in our experiences, as starting off in a *minor* key; 'The Vale of Rest' (No. 5), and 'The Departure' (No. 3), in slower time and in a smoother style: in both will be found peculiar harmonies, ascribable probably to the composer's intimate knowledge of the ancient German Protestant church writers, but applied in positions entirely his own, and producing effects as interesting as they are unhackneyed.

Much of interest could be said concerning the German part-song, as belonging to those cheerful and enthusiastic popular festivals, which are, unhappily, so strange, perhaps so impossible, in England. But enough, on the present occasion, by way of sketching the outlines of its character, and of calling the attention of musicians of every quality—most of all those concerned in popular vocal instruction—to the publication before us.

MISCELLANEA

Paris Academy of Sciences.—Oct. 30.—M. de St. Venan, an engineer of the Ponts-et-Chaussées, read a paper on the calculations of the resistance and flexion of solids with simple or double curves, taking simultaneously into account the various trials to which they may be subjected in every sense. M. de St. Venan proposes to complete and rectify in several points, and also to simplify in many cases of practical application, the theory of the resistance of solid bodies, and the calculation of the slight modifications which they undergo within the limits of their elasticity. —M. Largeteau laid before the Academy a set of abridged tables for the calculations of equinoxes and solstices.—M. Walferdin made a communication on the improved manufacture of thermometers for measuring heights.—A report was received from M. Lewy on the analysis of a specimen of wax received from China. This wax, which is of vegetable origin, is of a beautiful white colour, crystallized, and resembles spermaceti in its external character. It melts at a heat of 82.5 of Centigrade; its boiling point is superior to that of mercury. The produce of the distillation is white, and differs in its nature from the substance when undistilled. It is very soluble in boiling alcohol and ether, and is completely dissolved by the oil of naphtha. When subjected to a boiling solution of potass the wax becomes a soluble soap, and it also mixes freely with barytes. When acted upon by nitric acid, it appears to yield the same products as those obtained with this acid from beeswax. Amongst other products is a volatile acid, possessing the principal characters of butyric acid. There is every reason to believe, from the analysis, that this wax is obtained from the *Rhus succedaneus*. —M. Bory de Saint-Vincent read a note on a publication by M. L. Villa, of Naples, respecting the flames issuing from volcanos. M. Villa has stated that a blueish flame, like that of spirits of wine, escapes with a certain degree of force, like that from a lamp. M. Bory de Saint-Vincent observed, "These occasional flames are the only ones that I have seen in craters, and there is reason to believe that volcanos give out no other, what are generally called flames in eruptions being only burning vapour. True flames are only seen in the openings which are in direct communication with the volcanic fire, and are never seen in the current of lava."—A paper was received from M. Lherminier on the earthquake of Guadaloupe, in 1839. He states:—1st, That there is nearly as much variety and irregularity in the distribution

Digitized by Google

of atmospheric electricity and earthquakes in the climate of the Antilles, as in the heat and humidity of clouds, winds, and luminous meteors, aerial and aqueous. 2ndly, That the months of July, August, September, and October are the periods of the greatest accumulation of caloric and vapour in the basin of the sea of the Antilles, and thus constitute the period when thunder is most frequent. 3rdly, That the average of the observations, made during a period of nine years at Martinique and Guadaloupe, gives thirty-eight days of thunder annually, whilst the observations made at Guadaloupe during a period of rather more than three years, gives thirty-nine days annually for thunder, and four for earthquakes.

Meteoric Phenomena.—I called your attention, about this time last year, (No. 786) to an observation recorded by Cowper the poet, of the meteoric phenomena of November, on November 10, 1787, at 3 A. M. It appears, from Madame D'Arblay's 'Diary,' that very brilliant phenomena were observed on the night previous in the same year. "On Nov. 9, at 1 A. M. the Prince of Wales came to inform the Queen that there were the most beautiful northern lights to be seen that could possibly be imagined, and begged her to come to the gallery windows."—'Diary of Madame d'Arblay,' Vol. III. p. 452.—I am, &c. L.

Galvanic Light.—A highly interesting experiment with the galvanic light, proposed by M. Archereau as a substitute for that of gas, has been made at Paris. The light exhibited appeared to be about an inch and a half in diameter, and was inclosed in a glass globe, of about twelve inches in diameter. In the first instance, the gas lights of the Place de la Concorde, which are 100 in number, were not extinguished. The appearance of those nearest the galvanic light was quite as faint and had the same dull hue as the ordinary oil-lamps when near a gas light of the full dimensions. When the gas lights of the place were put out, the effect of the galvanic light was exceedingly brilliant, eclipsing even, in the opinion of many persons present, that of the hydro-oxygen light. It was easy to read small print at the distance of 100 yards, and it was only necessary to look at the shadow of the objects in the way of the light to be convinced of its great illuminating power. The single light exhibited did not replace the whole of the gas lights which had been put out, but we may fairly estimate it as equal, at least, to twenty of the gas burners of the Place de la Concorde, where they are larger in volume than in most of the other parts of Paris. It would, therefore, require five of these galvanic lights to light the whole of the place; but the rays of these five lights meeting each other, would, in all probability, give a much more intense light—to say nothing of the superiority in softness and colour—than the present gas-lamps. That the substitution of the galvanic light for gas-light would be a great improvement there can be no doubt, and we imagine that the expense of renewing the supply of the galvanic battery by which the electric fluid is conveyed to the burner, and then thrown upon the charcoal which becomes thus brilliantly incandescent, would not be so great as that of the generation of gas. We should like, however, to see a light of greater diameter than that exhibited, and at a greater elevation, in order that we might judge of its effect when unobstructed by intervening objects. —*Galignani.*

Improvements.—According to a writer in *The Builder*, Her Majesty's government has determined upon placing the statue of his Majesty George the Fourth, by Chantrey, upon the eastern pedestal of Trafalgar-square, facing St. Martin's Church, whilst the statue of King George the Third, by Wyatt, in Cockspur-street, is to be removed from its present position and placed upon the western pedestal, opposite the College of Physicians, and the steps, the lions, and the relievos for the Nelson Column will be likewise proceeded with immediately. Another decision has also been come to, viz. the removal of St. Margaret's Church, Westminster, from its present locality to a more eligible site. The funds and the site have both been provided, and the work will be commenced during the present year.

Electro Lace.—A specimen was exhibited at the late exhibition of the Polytechnic Society, Cornwall, and is thus described in the Report:—"Electro lace is made by stretching common net on a frame of stout copper wire, and then brushing it over with plumbago, until its surface has acquired an uniformly black colour. It is then connected with the negative pole of a galvanic battery, and subjected to the voltaic action, between two plates of copper positively electrified, which causes it to be rapidly and effectually coated with metal, each thread being enclosed in a tube of copper. When it is desired that the sheets of lace be of large size (several feet square for instance), it will be necessary to divide the large frame by fine wires into squares of seven or eight inches, which forming nuclei for the deposit of metal, enables the sheets to be made of any extent, and at the same time tends to strengthen the work. The uses of electro lace are similar to those of common wire gauze, but when silvered or gilt it forms a beautiful material for fancy work."

Stained Glass.—There are some communications in the *Ecclesiologist* on the subject of Stained Glass, which yield one or two quoteable anecdotes. The spoliation of the rich windows in Tattershall Church, Lincolnshire, is thus related:—"Lord Exeter, not having learned the Commandments, or not understanding, or totally disregarding, the 8th and the 10th, employed a man of the name of Banks, of Revesbay, to get possession of the glass for his Lordship's use. Celerity and secrecy are essential to success in most schemes of spoliation; and as the townspeople had some sort of suspicion that their church was marked as a prey to the spoiler, and were quite disposed to obstruct the robber in his work, Banks used such speed, and took down the glass so hastily, that no plan for its re-arrangement could be observed: part of it, however, was put up in the chapel at Burleigh, part sent to Warwick for Lord Warwick's castle, and part, says Gough, still remains unpacked; and thus was this noble church—one of the noblest, one of the finest specimens of masonry in the kingdom—ruthlessly despoiled; and it was left for many, many years without any glass whatever in its magnificent windows, open to all the winds and snows and storms of very many successive winters."—The church at Stoke Golding, a village in Leicestershire, two miles south-west of Hinckley, formerly possessed some beautiful windows, "a great quantity of which, with figures of the Four Evangelists, was taken down and carried off by the very person above all others—at least so report says—who ought to have watched most jealously for its preservation, even the incumbent of the parish. But as there have been various incumbents within the last hundred years, it would be unjust to the innocent to confound them thus vaguely with the guilty; and, as the name was mentioned to me, so, in justice to others, I at once say that the incumbent alluded to was Dr. Staunton. He persuaded the parishioners, it would seem, that the glass needed fresh setting, and the lead had perished; and he undertook to have the whole windows perfectly re-set, and in the very best manner, if he was allowed to send them to a house in London, 'in which he had confidence.' Meanwhile, common glass windows were to be provided till these could be returned. But they never did return; and to this day, said my informant, we are in utter ignorance of every thing respecting our windows, excepting that they are totally lost to us. The very natural conclusion in his mind was, that Dr. Staunton had sold them; for he never would account for them, and made all sorts of evasive replies to all questions respecting them: and the natural conclusion seems to me the just one, and not in the least less charitable than the circumstances of the case fairly admit of. And if the fact was that Dr. Staunton sold these windows, then he sold what he stole; and a more flagrant case of fraud and deception could be instanced of few men. Hundreds have been hanged, and thousands transported, for offences not surpassing this in depravity and villany. The loss to the parish is of course irreparable."

To Correspondents.—S. P.—A. W.—A Reader.—H. V. Pickett—A. Z.—received.

We should be very happy to oblige a Subscriber at Sligo, but we never answer like questions. The objections are obvious.

If Mr. Payne does not see the difference between the cases which he assumes to be alike, it is needless our discussing the question with him. If he be really anxious to have the law settled by authority, let him ask his solicitor, who will inform him that it was long since so settled, or turn to the *Athenæum* (No. 746) where he will find the decision of the Vice Chancellor.

Erratum.—In the advertisement last week of the new work, 'Paris and its People,' by the author of 'Random Recollections,' 'The Great Metropolis,' &c., the book was announced for Tuesday the 7th, instead of Thursday next the 14th instant.

Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security. F. G. P. NEISON, Actuary.

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Park-square, Regent's-park.
With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. Or one-half only of the usual rate, with interest on the remainder, will be received for five or seven years, the other half to be paid at the convenience of the assured.

The insured for life participate septennially in the profits realized.

A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have been yet appointed.

ARGUS LIFE ASSURANCE COMPANY,
39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

Richard E. Arden, Esq.	Rupert Ingleby, Esq.
William Banbury, Esq.	Thomas Kelly, Esq. Ald.
Edward Bates, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
Thomas Camplin, Esq.	Lewis Pocock, Esq.
James Clift, Esq.	
J. Humphery, Esq. Ald. M.P.	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman* | Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq. | Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

WESTERN LIFE ASSURANCE SOCIETY,
49, Parliament-street, Westminster.—Capital 500,000*l.*

Directors.

Henry Edgeworth Bicknell, Esq.	James Hunt, Esq.
William Cabel, Esq.	John Arscott Lethbridge, Esq.
Thos. Somers Cocks, jun. Esq.	Edmund Lucas, Esq.
George Henry Drew, Esq.	George Kennet Pollock, Esq.
William Evans, Esq.	James Lys Seager, Esq.
William Freeman, Esq.	John Bazley White, Esq.
Francis Fuller, Esq.	Joseph Carter Wood, Esq.
Joseph Henry Goodhart, Esq.	

Physician—William Richard Basham, M.D.
Surgeons—Alfred Leggatt, Esq.; George D. Pollock, Esq.
Bankers—Messrs. Cocks, Biddulph & Co.
Solicitors—Messrs. J. L. Bicknell and J. C. Lethbridge.

The leading features of this Society are—

The very moderate Rate of Premium when viewed as combined with *perfect security* to the assured.

The advantage to the Assurers (by Table 2) of becoming entitled to *three-fourths* of the *profits*.

The assurance of a *certain bonus*.

The facility for *securing debts*.

The allowance of *half* the Annual Premium to remain unpaid for *seven years*, and

The accommodation of *temporary loans* to the Assured on available security. Immediate and deferred Annuities are granted by this Society on terms advantageous to the Public.

A liberal Commission allowed to Professional Gentlemen and Agents introducing business to the Office.

EDWARD T. RICHARDSON, Secretary.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past 2.

F. ARNOLD'S

INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes ... 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

BUTTER MADE IN TEN MINUTES, by the NEWLY-INVENTED CHURN, registered according to Act of Parliament.

This Act imposes a penalty of from 5*l.* to 20*l.* for each imitation, piracy, or selling, recoverable by the proprietors before a magistrate, or by civil action. Half the penalty will be given to any person informing the proprietors of any infringement. The words of the Act are, "No person or persons shall copy or alter any design, either by adding to, or subtracting from," &c.

ATTWOOD, WIMBLE & WARNER, Manufacturers, Lewes, Sussex.

This Churn being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which insures the butter coming in ten or twelve minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the heat of summer, placing the churn in cold water will be the means of hardening the butter.

Sizes,	No. 1,	2,	and 3.
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London,	25*s.*	35*s.*	42*s.*

Metal Pans for Churns to stand in, 4*s.* 6*d.*, 6*s.*, and 7*s.* Larger sizes made to order.

To be seen in London, at Wright's Range Warehouse, No. 2, Arthur-street, near the Monument; Rigby's Brush Warehouse, No. 80, Gracechurch-street; Livermore & Son, Ironmongers, No. 30, Oxford-street; Benham, 19, Wigmore-street, Cavendish-square. Export Agents, Barnes & Co., 109, Fenchurch-street.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis street, Gray's-inn-road.

SMOKE PREVENTED, and VENTILATION EFFECTED, by SPONTANEOUS ACTION.—Mr. JEAKES, 51, Great Russell-street, Russell-square, *Sole Agent in London* for the sale of DAY'S PATENT WINDGUARD, by the use of which he guarantees to cure all Chimneys smoking from wind, and also to prevent downward currents. It is admirably adapted for the ventilation of apartments of every description; also of ships, stables, dairies, and larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise, and not liable to derangement. It also offers no impediment to sweeping. Price, for general use, 30*s.*; larger size, 45*s.*; larger sizes, especially adapted for ventilation, 60*s.* and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the Trade in general, is especially invited.

THE OMBROSOME, or PATENT PORTABLE SHOWER BATH, especially adapted for travelling and exportation. By this Bath an inexhaustible shower is produced from a few quarts of water: the height of the shower may be increased or lessened to suit adults or children, and occupying so little room, is peculiarly suited for bed-rooms and dressing-rooms; it is also an excellent Douche Bath. Being little larger than a writing-desk when packed, it will be a great desideratum for exportation to India and other hot climates. To Military Men and others of a migratory life, also to Students of the Universities, Inns of Court, &c. (where rooms are low and water scarce), the present invention cannot fail to be most acceptable. It is made entirely of brass, and is at once simple and elegant.—May be seen at the Royal Polytechnic Institution; and be had, with Prospectuses, wholesale and for exportation, at the Manufactory, 115, Old-street; and retail at the Bazaar, Panklibanon Iron Works, 58, Baker-street; Mr. J. L. Benham, 19, Wigmore-street; Mr. C. Bray, 16, Cranbourne-street; Mr. J. Deacon, 4, Moorgate-street; Mr. J. Evans, London Bridge; Messrs. Fallows & Adcock, 4, Halkin-street West; Messrs. Glenton & Chapman, 147, New Bond-street; and of all the leading Ironmongers throughout England.—Price 4*l.* 10*s.* and 5*l.* 5*s.*

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 132 years. W. & Son have removed to 74, Cornhill, where the advantages of the premises will enable them personally to superintend their workmen. An extensive Stock, finished with the utmost care, and at the lowest possible prices consistent with maintaining their reputation supported during so many years for the finest work; consisting of COMPENSATED DUPLEX and LEVER WATCHES, on the principle of their Chronometers, to which Government awarded the prizes three years in succession. The Detached Lever and Horizontal Watches for ladies, of the smallest and most elegant patterns. Marine and Pocket Chronometers with long and accurate rates, also a large selection of second-hand Chronometers and Watches by the most eminent makers. Superior workmen are employed on the premises in the repairing department, for English and foreign work.—Webster & Son, 74, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Brondley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

MECHI'S CHESSMEN, in Ivory, Bone, and Wood, No. 4, Leadenhall-street, London—the best and cheapest; which may also be said of his backgammon, draft, and chess boards, cribbage boards and pegs, cushioned bagatelle tables, Pope Joan boards, work-boxes, desks, pocket-books, writing and envelope cases, dressing-cases, tea-caddies, table cutlery, Sheffield plated ware, penknives, scissors; hair, clothes, and tooth brushes; combs, razors, strops, &c. Quality of all the articles first-rate, and prices very moderate; Mechi's razors and magic strops and paste are renowned throughout the world, and all who find shaving a painful and unpleasant operation, should pay Mechi a visit at No. 4, Leadenhall-street.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged goût, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

187, PICCADILLY.

JOHN HATCHARD & SON have lately published—

1.

A DIARY OF A MARCH THROUGH SINDE AND AFFGHANISTAN,

With the Troops under the Command of Gen. Sir Wm. Nott, K.C.B. &c.

DURING THE LATE WAR,

BY THE REV. I. N. ALLEN, B.A.

Assistant Chaplain on the Hon. E. I. Company's Bombay Establishment. In 1 vol. post 8vo. price 12*s.* in richly-ornamented cloth.

Of the various works published on the subject of the late War, no authentic account has hitherto been furnished of that portion under the direction and command of General Sir William Nott, &c.; and thus the present Work, from the pen of an Author who accompanied the Expedition throughout, will be rendered additionally valuable and interesting.

This work is accompanied by Eight Illustrations from original drawings by the Author, and altogether will prove a most valuable sequel to the Journals of Lady Sale and Lieutenant Eyre, forming with those works the only complete and authentic history of our late operations in the East.

OPINIONS OF THE PRESS.

Times.—"Everything interesting, the author examined with attention; and the account he has given of the proceedings of the army, the manners, customs, and mode of warfare of the Affghans, will be read with pleasure and with profit; and we recommend Mr. Allen's book to all who feel an interest in that country."

Morning Herald.—"Nothing can be more unaffected than the style in which the author relates the occurrences which he actually witnessed; and the original illustrations add much to the interest of the work."

Naval and Military Gazette.—"We were most agreeably disappointed in the judgment we had nearly formed beforehand, in finding this journal nearly the reverse of our expectations: the author has succeeded in bringing forward many objects to view that have been hitherto overlooked: the work would do credit to any military writer."

Britannia.—"This diary fills up the gap in the history of the late war—clear, sensible, and tolerably copious."

2.

PROFESSOR GARBETT'S WORKS.

Each Pupil must be provided either with the MANUAL, price 5*s.*, or the LESSONS, price 1*s.* 6*d.*, published by Mr. PARKER, 445, West Strand.

Tickets and full particulars may be obtained at the Office, 101, St. Martin's Lane.

DESTITUTION IN THE METROPOLIS.—ROYAL FREE HOSPITAL for the DESTITUTE SICK and DISEASED, Gray's-inn-road (late Greville-street); founded A.D. 1828. *Patron*—The QUEEN.

This Hospital, which is entirely devoted to destitution in its most appalling and pitiable form, viz., accompanied by sickness and disease, is now established on a scale of sufficient magnitude, that with proper support it may be rendered capable of admitting into its wards all the "casual sick" of this great metropolis. It requires but the funds in order to have 500 beds immediately available for the reception of these, the most wretched of our fellow-creatures. Moreover, it gratuitously affords medical advice and medicine to more, on the average, than 1,800 out-patients a-week.

It is wholly supported by voluntary subscription, has no funded property of its own, nor any other income than that which is contributed by the philanthropic portion of the community. To these it is most earnestly recommended by the Committee at this period of extreme destitution and consequent sickness and peril of life. Its doors are daily thronged with the most miserable objects, and so great has been the demand upon its resources in consequence during the whole summer, that it has been compelled to borrow to a large amount from the fund subscribed towards the new building to defray the current expenses.

Contributions will be kindly received by Messrs. Coutts & Co.; Messrs. Drummonds & Co.; Messrs. Herries & Co.; Messrs. Smith, Payne & Smiths; Messrs. Glyn & Co.; Messrs. Jones, Loyd & Co.; Messrs. Barclay, Bevan & Co.; Messrs. Denison & Co.; Messrs. Williams, Deacon & Co.; Messrs. Prescott & Co.; Messrs. Ransom & Co.; Messrs. Overend, Gurney & Co.; Messrs. Nisbet & Co. Berners-street; and at the Secretary's Office, by the Rev. R. C. PACKMAN, Sec.

Cast-off apparel, male or female, will be gratefully acknowledged.

HOWE, LEONARD & CO., AUCTIONEERS AND COMMISSION MERCHANTS, BOSTON, UNITED STATES.—Particular attention given to Sales of New and Old Books, Paintings, Engravings, and Fancy Goods; also any other description of Merchandize. Refer to John Miller, Bookseller, London; Goddard & Hill, Birmingham.

PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh. In royal 4to. with 17 Plates and 38 Woodcuts, price 25*s.*

Lately published, by the same Author,

I.

The Natural Principles and Analogy of the Harmony of Form. In royal 4to. with 18 Engravings and Woodcuts. Price 15*s.*

II.

The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 8 coloured Diagrams, 8vo. Price 7*s.*

"In so far as we know, Mr. Hay is the first and only modern Artist who has entered upon the study of these subjects without the trammels of prejudice and authority. Setting aside the ordinances of fashion, as well as the dicta of speculation, he has sought the foundation of his profession in the properties of light, and in the laws of visual sensation, by which these properties are recognized and modified. The truths to which he has appealed are fundamental and irrefragable; and the conclusions which he has deduced from them will admit of no modification either from taste or fashion. Notwithstanding some trivial points of difference between Mr. Hay's views and our own, we have derived the greatest pleasure from the perusal of these works. They are all composed with accuracy and even elegance. His opinions and views are distinctly brought before the reader, and stated with that modesty which characterizes genius, and that firmness which indicates truth."—*Edinburgh Review*, October, 1843.

William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

REVIEWS

Life of Gerald Griffin, Esq. By his Brother. London, Simpkin & Marshall; Dublin, Cumming.

We have here a book which requires tender handling on the part of all who sympathize with the heart of a poet. By those whose *desideratum* in a biography is gossip, and even by many less exclusive persons, the 'Life of Gerald Griffin, by his Brother,' will be found too meagre, and too dreamy in its details. But the career of a literary man must always possess a fascination for literary men: and he with whom we have to deal, besides exciting a special interest as a contemporary, did not altogether follow the author's hackneyed path from the cradle to the grave. It is true that there were the usual indications of genius in childhood, the consuming desire for fame in youth, the struggle to achieve it in manhood, and the success: but the end is strange and unwonted; and will be read by some as a melancholy extinction of a bright light, by others as a vivifying example of conscience listened to, and worldly honours forsaken for "palm and amaranth." We shall refrain from offering an opinion on a question which there will be enough, and too many, willing to canvas, for controversy's sake—but shall, in preference, attempt a picture, "in little," of the man; relying on his affectionate biographer for traits and lineaments.

Gerald Griffin was the ninth son of his parents; his mother is described as a woman of talent, his father as one of those sanguine men so common in the sister country, given to speculation, yet wanting in experience. The child was born in Limerick, on the 12th of December, 1803. He was small, delicate, and gave early proofs of possessing a susceptible imagination and a nervous temperament. The legends of ghost and goblin, with which Irish servants are so richly provided, took root in a congenial soil—and we fear there was no one at hand to repress the growth of credulity, or to disentangle for the visionary boy the poetry of these things from its less worthy accompaniment. But the germ of much literary excellence lay in his wild familiarity with the pleasures of fear. No contemporary exercised a more entire mastery over Terror. A description occurs to us, as we write, of a girl carried off in the dusk of a summer evening, from a house filled with company, the effect of which has always seemed to us stronger than the most pompously paraded apparition in the romances of Mrs. Radcliffe or Maturin.

The first schoolmaster of our hero, a Mr. MacEligot, was one of the eccentrics of Limerick. He announced himself to Gerald's mother as one of three persons in Ireland who knew how to read—the Bishop of Killaloe and the Earl of Clare being the other two—and began a Christmas advertisement of his opening day thus: "When ponderous polysyllables promulgate professional powers," &c. His odd ways and pompous speeches must have supplied the novelist in embryo with a mine of humorous sayings and doings. But he seems to have done little for Gerald beyond keeping him from those venturesome experiments in which poet-children delight; and the boy probably acquired little knowledge, save in the humours of men, till his removal into the country, at the age of seven years. Fairy Lawn, the place where the Griffins established themselves, is beautifully situated. MacEligot was now well replaced by a daily tutor; and the poet's mother, who seems to have been aware of the genius of her son, was neither an indiscreet nor an uncultivated monitress. The following home picture is pleasing:—

"The circumstances in which Gerald was placed, though they did not afford opportunities for extensive or varied information, were not on the whole unfavourable to the cultivation of literature, and his early love for it was remarkable. It evinced itself at this time by his generally sitting to his breakfast or tea with a book before him, which he was reading, two or three under his arm, and a few more on the chair behind him! This was often a source of amusement to the rest of the family. He had a secret drawer in which he kept his papers, and it was whispered that he wrote scraps and put them there, but he was such a little fellow then that it was thought to be in imitation of one of his elder brothers who had a strong taste for poetry, and as it did not on this account excite the least curiosity, no one ever tried to see, or asked him a question about them. My mother met him one night going to his room with several large octavo volumes of 'Goldsmith's animated Nature' under his arm. 'My dear child,' said she with astonishment, 'do you mean to read all those great books before morning?' He seemed a little puzzled, but looking wistfully at the books, and not knowing which to part with, said he wanted them all, upon which he was allowed to take them. One evening while one of our young people was reading aloud something about the trade-winds, one of his elder brothers, to whose tastes I have before alluded, and who from his childhood had shown the greatest activity of mind, imagined he could illustrate the subject with a spinning wheel that was in the kitchen, and went out to try. While the servants observed him with astonishment, and some concern for his senses, Gerald instantly guessed what he was about. On returning to the parlour, my mother asked, 'Gerald, where is William?'—'He is *spinning monsoons*, mamma,' said Gerald with an air of great gravity. He made a blank book and many of his hours of recreation were occupied in copying pieces of poetry into it. As our library was not large, the poetry it contained was very select in its character, so that anything he could lay hands on in general quite satisfied him, but for the most part the pieces he copied consisted of Moore's Melodies, or extracts from his longer poems, which were written out with a care and completeness that showed his high admiration of them, the air being marked at the head of each of the melodies, and even the notes to them being included."

Gerald was fond of animals, and yet, withal, a sportsman so keen that he manufactured his own gunpowder. He used to fish most patiently, too, attended by an idiotic familiar:—

"A little simpleton named Kilmartin, who went about with a sort of one-sided jerking gait, like St. Vitus's dance, spoke with a very indistinct articulation, and stammered dreadfully, his attempts to make himself understood throwing his countenance into contortions, that only in a more horrible manner relieved its natural expression of imbecility. Wherever Gerald's line was thrown, little Kilmartin's was sure to be beside it, or sometimes flung across it, as if he was determined to share in all his fortunes whether good or evil, and it was amusing and yet touching and pitiful to observe the joyous light that struggled feebly in his eyes, and the distortions of face and indistinct chuckling that expressed his pleasure, and his triumph, whenever he drew a trout from the spot where the line of his companion lay in dull and unpromising repose."

When fourteen, Gerald Griffin was sent to Mr. O'Brien's school, Limerick. Three years later the establishment at Fairy Lawn was broken up. The father, and part of the family, emigrated to Pennsylvania, while four of the children, including Gerald, remained with their elder brother, Dr. Griffin, at Adare, near Limerick. At this place are the remains of three abbeys, and of an old castle belonging to the Earls of Desmond. These ruins became the favourite haunts of the visionary boy: and who can tell how far remembrances of his evening walks, rising up to his mind's eye in the midst of the fever and drudgery of London, may have disposed him, by their influence, to the last step of his life? The spirit of such scenes, at all events, was vividly reproduced in both his prose and his poetical works, and some extracts given from the latter, besides this merit of local colour, have a true *Irish* sweetness. At Adare, Gerald first began to dream of the drama. A letter addressed to one of the Limerick journals, which excited some notice, led to his connexion with the *Limerick Advertiser*. The policy of the paper at that time was to "please the Castle," and Gerald, taking small heed of this, soon gave offence by unpalatable opinions. In a letter to his mother, he expresses his regret, that "through so vain a weakness as an eagerness to display elevated feelings," he should have run the hazard of injuring the poor proprietor; and, therefore, compelled himself to write a flattering portrait of Lord Wellesley, by way of *placebo*—his first, and he determined it should be "his last step into that commodious versatility of principle which is so very useful to newspaper writers." How this determination was kept we shall see hereafter. The drama now so far gained the ascendant over journalism, that we find young Griffin seriously bent upon migrating to London, to produce 'Aguire,' a tragedy which was "to bring the playhouse down." Relations doubted, wise heads were shaken, the usual dissuasive arguments used: which he answered by employing the interval of suspense in the construction of a new 'Tancred and Sigismunda,' and in 1823 he had so far made good his purpose, that we find him fairly planted in the arena of his ambition—"that monster London," as wise old Abraham Cowley called it even in his day.

There are few states of existence more chequered and trying than the life of a young man who has to depend exclusively upon literature. Uncertain gains, promises, which are almost crimes when uttered by those who have themselves felt the heart-sickness of hope long-deferred, the courage which feels itself equal to any task, so but the opportunity be vouchsafed! and a keen sense of every social pleasure,—are so many elements of disquiet and temptation. Gerald Griffin's began in the midst of the delusive and dazzling uncertainties which tantalize the dramatic aspirant. He found a strenuous friend in Mr. Banim, gathered sound counsel from Mr. Young and Miss Kelly, was courteously received by managers—yet his drama 'Aguire' never even came to a hearing; and of the four in which so large an amount of youthful expectation and endeavour was invested—but one, 'Gisippus,' obtained a trial, and that only after its author had ceased to hear the plaudits of men! That tragedy, by the way, was written "on little slips of paper, in coffee-houses," the others were destroyed. Meanwhile, its author must live—and he did live, by reporting for the daily press, contributing to the magazines, and ill-remunerated drudgery for a great publishing house. But Gerald Griffin was more willing to work hard than to lie under obligations—possibly he carried the latter reluctance to the extremes of morbid pride and suspicion:—

"'You have no idea,' he writes, 'what a heart-breaking life that of a young scribbler, beating about, and endeavouring to make his way in London is: going into a bookseller's shop, as I have often done, and being obliged to praise up my own manuscript, to induce him to look at it at all—for there is so much competition, that a person without a name will not even get a trial—while he puts on his spectacles, and answers all your self-commendation with a 'hum—um;'—a set of hardened villains! and yet at no time whatever could I have been prevailed upon to quit London altogether. That horrid word failure,—No!—death first.' * *

"He had, (says his biographer) on all occasions,

Digitized by Google

an almost morbid horror of patronage, arising partly from a natural independence of mind, but yet more from the depressing disappointments of his early literary life. When first he came to London, he sought by a few introductions and the friendly exertions of literary acquaintances, to bring his productions favourably before the public, but without the slightest success. His powers seemed to be undervalued precisely in proportion as he made interest to procure them consideration, until at length disgusted by repeated failure he resolved in future to trust wholly to his own unfriended exertions, and if they should not sustain him, to abandon the struggle. It was soon after forming this resolution that success first dawned upon his efforts, and that he was anxiously sought for as an anonymous contributor by the editors of periodicals, who when he was previously introduced to them, would give him nothing to do. In proportion as his success increased, the remembrance of the many mortifying disappointments he had formerly experienced, seemed to sink more deeply into his mind, and he gradually acquired a degree of sensitiveness with respect to patronage, that made him recoil from even the ordinary and necessary means of obtaining attention for his pieces."

The periodicals, at that time in their palmy days, proved more accessible than the theatres —and to several of them Mr. Griffin became a welcome contributor. A letter describing his avocations is curious, as throwing light upon a dynasty of criticism, the form and fashion of which has passed away:—

"London, Nov. 10, 1824.

"My dear William.—Since my last I have visited Mr. J—— several times. The last time he wished me to dine with him, which I happened not to be able to do, and was very sorry for it, for his acquaintance is to me a matter of great importance, not only from the engine he wields—and a formidable one it is, being the most widely circulated journal in Europe—but also because he is acquainted with all the principal literary characters of the day, and a very pleasant kind of man. He was talking of Maginn, who writes a good deal for Blackwood, and spoke in high terms of his talents: nevertheless, though he is his friend, he confessed he did not think him a very considerate critic, and thought there was something unfeeling in his persecution of Barry Cornwall, who by the way is an acquaintance of my Spanish friend's. You may have seen those letters to Bryan Proctor in *Blackwood's Magazine*. Barry Cornwall is, he says, one of the mildest, modestest, young fellows he ever knew, and does anything but assume. Maginn, however, imagines that those he attacks, think as little of the affair as himself, which is by no means the case. The other day he attacked Campbell's 'Ritter Bann' most happily, and at the same time cuttingly, and afterwards wanted J—— to get up a dinner and bring Campbell and him together. J—— begged leave to decline. He is a singular looking being, Dr. Maginn. A young man about twenty-six years of age, with grey hair, and one of the most talented eyes, when he lets it speak out, I ever beheld. Banim, who is his bosom crony, says, he considers him the most extraordinary man he ever knew. He attacked Banim too before they were acquainted, but that's all forgot long since. Hazlitt praised Banim in the *London Magazine*, and of course rendered it imperative on *Blackwood* to abuse him. Have you seen Campbell's late poems, any of them? I have been told that the volume of his, which is coming out shortly, Theodric, &c., is very poor indeed—lamentably so. Campbell is the most finical exact kind of fellow in the whole world. As an instance, I have heard that he was asked to write a little poem some time since for the occasion of Burns' monument, which was then in agitation, and in which my informant took great interest. Campbell consented, but directed that proofs should be sent to him to the country, and before the poem appeared, had actually sent five or six messengers back and forward to and from town, with revisions of commas and semicolons!! There is a young writer here, Miss Landon, the author of the 'Improvisatrice,' a poem which has made some noise lately, who has been brought out by J——, and to be sure he does praise her. She sent some pieces to the *Literary Gazette* a few years since, and through that journal (without intending any insinuations as to desert,) has made herself popular enough to run through a few editions. J—— has asked me to meet Alaric Watts at his house, when the latter comes to town, which he intends shortly. Watts is a very sweet writer in his own way, and rather a favourite. I have got a few days since, a note from my friend Banim, to know 'what has become of me?' and he adds as a spur that Dr. Maginn has just been with him, and said that Mr. J—— expressed himself highly pleased with the series I am at present furnishing him. I dined the other day—at least about a month since—with him and a friend of his, an artist of the name of Foster, (to whom, if you recollect, Madame de Genlis dedicated one of her works, and expresses her gratitude for his assistance in some of her literary labours). He is one of the most delightful facetious fellows I ever saw. My dear William, ever affectionately yours,

"Gerald Griffin."

There are also meagre notices of Mr. Neal, the author of 'Brother Jonathan,' Mr. Llanos, and other of the literary men, then about town, interwoven among passionate self-questionings and complaints of opportunity and success denied: and noticeable, as reflecting a past time, is the picture which the biographer gives of his brother's services as a reviewer:—

"This occupation of reviewing and of passing judgment on unpublished manuscripts, gave him little trouble, and the remuneration was liberal. He was often highly amused at receiving from the editor of some periodical, three volumes of a newly published novel, accompanied by a request that he would not cut the leaves. This, which he at first conceived so very ridiculous, and so apparently impossible with any justice to the author, he eventually found was almost a matter of necessity with many of the publications sent to him. They were of so trashy a description, that no one of ordinary taste could possibly get through even the first few chapters. His usual plan was to glance through the early part of a work, so as to obtain some notion of the plot, a peep here and there in the second volume gave him an idea of the skill with which it was developed, and a slight consideration of the latter end of the third or slaughter-house as he used to call the concluding part of a disastrous story, or fifth act of a tragedy, satisfied him both as to the genius of the author, and the merits of the performance. He no doubt made a more intimate acquaintance with his subject, when his first hasty supervision gave him reason to believe it was written by a person of more than ordinary talent, and did not appear to feel conscious of having done any injustice during the short period he was engaged as a professional critic."

Here is a text on which a homily might be written, showing the extent to which an unhealthy condition of critical morality could palsy and vitiate the mind of one so sensitive and conscientious. It seems never once to have suggested itself to this practiser of the "uncut" system of cutting up, that the publications, trashy as they seemed to his fastidious eye, might be each the 'Gisippus' or 'Collegians' of some family circle, as affectionate as that at Pallas Kenry. Mr. Griffin, indeed, never learned to be as patient with the efforts of others, as his own struggles should have taught him—never attained the blessing of a tranquil and tolerant spirit, without which, he who ventures on the vexed waters of literary life can hardly fail to wreck his happiness. It is bad enough to see all discriminating power lost, and truth itself sacrificed to a sickly benevolence or personal good-nature—but it is worse to sport with inferiority, and, because the mind is self-occupied, and the labour ungracious, to cast on one side the responsibilities which author owes to author—and to the public who, more or less, put trust in his verdict!

Mr. Griffin's health seems to have suffered severely in the wear and tear of his London life. He was subject to palpitations of the heart, which were only to be subdued by a very severe regimen. In the year 1825, an operatic melodrama was accepted, and produced by Mr. Arnold at the English Opera House. It was on this occasion, that what may be called the morbid jealousy of his nature led to a temporary misunderstanding with his active friend, Mr. Banim. This, at the time, was much talked of in the coteries—but we will not dwell on it, adverting in preference, to the sound notions with regard to the English musical drama, which Mr. Griffin seems to have entertained, in advance of his manager. Had Mr. Arnold listened to his suggestions, we might now have had an operatic theatre for authors and composers, instead of—

Bare ruined quires, where late the sweet birds sung.

Early in 1827, the publication of the 'Hollandtide' established Mr. Griffin's reputation, and enabled him to take a holiday among his own people. The boy returned home a man —thin and pale, his "cheeks flattened, and as it were bloodless, and his voice feeble and slightly raised in its pitch, like that of one recovering from a lingering illness." He was doomed, too, to receive a terrible shock in the moment of his return: being met by tidings of the death of a favourite sister. From this time we find traces of a self-reproaching and anxious spirit in the records of his life. Even while completing his impassioned and pathetic tale, 'The Collegians,'—in right of which, we think, he must be placed as an Irish novelist above Banim and Carleton—Mr. Griffin was troubled in his mind, as to the morality of the story: owing to the superior interest which attached itself to its Lovelace. Gradually, such thoughts gathered round him like a mist: at first overclouding his imagination, then obscuring it. He began to imagine himself called to a more spiritual devotion of his powers, in the service of the Roman Catholic Church; the bias of his mind receiving no inconsiderable direction from the circumstances of a female relative having set him the example by taking the veil. This will be seen in the following verses, the sincerity of which will affect those who refuse sympathy, and deny their poetical merit:—

Seven dreary winters gone and spent,
Seven blooming summers vanish'd too,
Since on an eager mission bent,
I left my Irish home and you.

How passed those years I will not say;
They cannot be by words renewed—
God wash their sinful parts away!
And blest be he, for all their good.

With even mind and tranquil breast,
I left my youthful sister then,
And now in sweet religious rest
I see my sister there again.

Returning from that stormy world,
How pleasing is a sight like this?
To see that bark with canvass furl'd
Still riding in that port of peace.

Oh darling of a heart that still,
By earthly joys so deeply trod,
At moments bids its owner feel
The warmth of nature and of God.

Still be his care in future years
To learn of thee truth's simple way,
And free from foundless hopes or fears,
Serenely live, securely pray.

And when our Christmas days are past,
And life's faint shadows faint and dim,
Oh, be my sister heard at last,
When her pure hands are raised for him!

Christmas, 1830.

While, however, the feet of the novelist—to whose further successes it is needless to advert —were thus involuntarily moving cloister-ward, he seems for awhile to have enjoyed home, and friends, and increasing renown, with great zest, and even cheerfulness. The indications of the gradual increase of religious melancholy are alternated with warm-hearted letters to a kind Quaker family—pleasant notices of domestic intercourse and journeyings to and fro—and here and there a lively glimpse of some of those greater ones to whom his literary successes introduced him. He was nominated by the

Digitized by Google

electors of Limerick, in 1838, to carry to Mr. Moore their request that the Irish Melodist would represent their ancient city in Parliament: and though the extract be long, we cannot but give the account of the visit to Sloperton, as remembered and recorded by his brother:—

"Mr. Moore has been often spoken of, as one whose wit and liveliness in conversation shed a lustre on any society he enters; but he must be seen in his own house, and among his own immediate friends, to have the charm of his manner thoroughly felt and appreciated. The only person we met at dinner besides Mr. and Mrs. Moore, was a Mr. ——, who seemed very intimate with the family, and who, we afterwards understood, was gay and sprightly beyond all previous custom. Mr. Moore was fond of anecdote, and full of it; especially of Irish anecdote. * * He spoke with the enthusiasm of a youth of nineteen of the ever-memorable debates in the Irish Parliament in the times of Grattan, Corrie, and Flood; and, remarking upon the number of men of extraordinary talent who flourished about that period, and their rarity since, seemed to be of opinion that one of the most lamentable effects of the Union was the manner in which it appeared to operate to the destruction and annihilation of all Irish genius. He had the most intense admiration of Grattan, and told several amusing stories of him which I had not heard before. One of them I cannot omit noticing, as it related to Mr. Moore himself, and was one he took a very justifiable pride in. In his younger days, though after he had been already known to the world, he happened one day to be in Mr. Grattan's company at the house of a mutual friend. Grattan was holding forth, with some sharpness, on the servility of literary men, and the manner in which they almost universally prostituted their talents to the great and powerful. He appeared at first to exclude no one from this sweeping censure; but, suddenly recollecting himself, he continued, 'but I'm wrong; there are *some* exceptions;' and, turning to Mr. Moore, who stood near him, and patting him kindly on the shoulder, he said to those he had been addressing, 'I'm wrong; my young friend here is one who'—he paused a moment and then added emphatically—'*who wears his hat before the king*.' He mentioned another incident which I may just speak of, as it serves to show the feeling with which Irish interests are frequently regarded in England, even by those who profess liberal opinions. At a reform dinner, given, I believe, in Bath, to the Marquis of Lansdowne, Mr. Moore's health having been drank, he rose to return thanks, and was received with a good deal of enthusiasm. On such occasions as these his country was never forgotten, and he ventured in the progress of his speech, though cautiously, to make some allusion to it. 'England,' said he, in one of his happy illustrations, 'will not permit so large a segment of her orb as Ireland to remain for ever shrouded in darkness.' He expected this sentiment to awaken a few cheers of sympathy; but there was immediately a dead silence, as if he had said something very disagreeable. It was evident he had entered upon forbidden ground, and that he could not venture further in that direction with safety. He therefore sounded a retreat as quickly as possible, and slipping gently into some other subject, restored harmony to the hearts of his hearers. He could not, however, avoid feeling some degree of surprise at such a result; and after he had sat down, he asked of some person who sat next him, a stranger, what *could* be the reason that sentiment about Ireland was received with so much coldness? 'Ah, Sir!' said the other, '*Irishmen and pigs are very unpopular all along this line*.' It was singular, though I could perceive that Gerald enjoyed himself very much during the evening, and though the gaiety and freedom of Mr. Moore's manner were calculated to put all kinds of formality to flight, he could not shake off that constitutional timidity and reserve which was so apt to assail him before strangers; he did, it is true, take a part in what was going forward, yet he did not, as he would have done on a little further acquaintance, fling himself into it with all his heart. It is evident that nothing could tend more effectually to lessen the interest of his conversation than the existence of any such feeling, yet I think Mr. Moore, though he could not perhaps distinguish all the light that was hidden, had too much penetration not to see pretty fully into his character; for, on our visit next day, when we chatted over the proceedings of the evening, and Mrs. Moore said, 'But did you observe —— last night, what wild spirits he was in, and how he did talk? Why I thought he was mad! I never saw any thing like him.' 'Oh!' said Mr. Moore, 'don't you know the meaning of that? That was,'—he continued, turning playfully to Gerald, and darting his finger towards him with a good natured smile,—'that was in order to get *you* to talk.' Gerald seemed rather taken aback by the suddenness of this gentle little reproach, but made no reply."

Not all his rapidly strengthening views of the worthlessness of literary distinction or the necessity of self-mortification could prevent Mr. Griffin from taking pleasure in the introduction, as the following sprightly letter shows:

"Monday Morning, March 31, 1833.
Pitman's, senior, Taunton.

My dear L.—Procrastination—it is all the fruit of procrastination. When Dan and I returned to the inn at Devizes, after our first sight and speech of the Irish melodist, I opened my writing case to give L—— an account of our day's work; then I put it off, I believe, till morning; then, as Dan was returning, I put it off till some hour when I could tell you about it at full leisure; then Saunders and Otley set me to work, and I put it off until my authorship should be concluded for the season, at least; and now it is concluded, for I am not to publish *this* year; and here I come before you with my news, my golden bit of news, stale, flat, and unprofitable. Oh dear, L——, I saw the poet! and I spoke to him, and he spoke to me, and it was not to bid me 'get out of his way,' as the King of France did to the man who boasted that his Majesty had spoken to him; but it was to shake hands with me, and to ask me 'How I did, Mr. Griffin,' and to speak of 'my fame.' *My* fame! Tom Moore talk of my fame! Ah, the rogue! he was humbugging, L——, I'm afraid. He knew the soft side of an author's heart, and perhaps he had pity on my long, melancholy-looking figure, and said to himself, 'I will make this poor fellow feel pleasant, if I can;' for which, with all his roguery, who could help liking him and being grateful to him? But you want to know all about it step by step, if not for the sake of your poor, dreamy-looking *Beltard*, at least for that of fancy, wit, and patriotism. I will tell you, then, although Dan has told you before, for the subject cannot be tiresome to an Irishwoman.—I will tell you how we hired a great, grand cabriolet, and set off—no, pull in a little. I should first tell you how we arrived at the inn at Devizes, late in the evening, I forget the exact time, and ordered tea (for which, by the bye, we had a prodigious appetite, not having stopped to dine in Bath or Bristol), when the waiter (a most solid-looking fellow, who won Dan's heart by his precision and the mathematical exactness of all his movements) brought us up, amongst other good things, fresh butter, prepared in a very curious way. I could not for a long time imagine how they did it. It was in strings, just like vermicelli, and as if tied in some way at the bottom. King George, not poor *real* King George, but Peter Pindar's King George, was never more puzzled to know how the apple got into the dumpling; but at last, on applying to the waiter, he told us that it was done by squeezing it through a linen cloth; an excellent plan, particularly in frosty weather, when it is actually impossible to make the butter adhere to the bread on account of its working up with a coat of crumbs on the under side; but that's true—Tom Moore—and besides, 'tis unfashionable now to spread the butter, isn't it? I'm afraid I *exposed* myself, as they say. Well, we asked the waiter: out came the important question, 'How far is Sloperton Cottage from Devizes?' 'Sloperton, Sir? that's Mr. Moore's place, Sir; *he's a poet, Sir*. We do all Mr. Moore's work.' What ought I to have done, L——? To have flung my arms about his neck for knowing so much about Moore, or to have knocked him down for knowing so little? Well, we learned all we wanted to know; and, after making our arrangements for the following day, went to bed and slept soundly. And in the morning it was that we hired the grand cabriolet, and set off to Sloperton; drizzling rain, but a delightful country; such a gentle shower as that through which *he* looked at Innisfallen—his farewell look. And we drove away until we came to a cottage, a cottage of gentility, with two gateways and pretty grounds about it, and we alighted and knocked at the hall door; and there was dead silence, and we whispered one another; and my nerves thrilled as the wind rustled in the creeping shrubs that graced the retreat of—Moore. Oh, L——! there's no use in talking, but I must be fine. I wonder I ever stood it at all, and I an Irishman, too, and singing his songs since I was the height of my knee,—The Veiled Prophet; Azim; She is far from the Land; Those Evening Bells. But the door opened, and a young woman appeared. 'Is Mr. Moore at home?' 'I'll see, Sir. What name shall I say, Sir?' Well, not to be too particular, we were shown up stairs, where we found the nightingale in his cage; in honester language, and more to the purpose, we found our hero in his study, a table before him covered with books and papers, a drawer half open and stuffed with letters, a piano also open at a little distance; and the thief himself, a little man, but full of spirit, with eyes, hands, feet, and frame for ever in motion, looking as if it would be a feat for him to sit for three minutes quiet in his chair. I am no great observer of proportions; but he seemed to me to be a neat-made little fellow tidily buttoned up, young as fifteen at heart, though with hair that reminded me of the 'Alps in the sunset;' not handsome, perhaps, but something in the whole *cut* of him that pleased me; finished as an actor, but without an actor's affectation; easy as a gentleman, but without *some* gentlemen's formality; in a word, as people say when they find their brains begin to run aground at the fag end of a magnificent period, we found him a hospitable, warm-hearted Irishman, as pleasant as could be himself, and disposed to make others so. And is this enough? And need I tell you that the day was spent delightfully, chiefly in listening to his innumerable jests, and admirable stories and beautiful similes—beautiful and original as those he throws into his songs and anecdotes, that would make the Danes laugh? and how we did all we could, I believe, to get him to stand for Limerick; and how we called again the day after, and walked with him about his little garden; and how he told us that he always wrote walking, and how we came in again and took luncheon, and how I was near forgetting that it was Friday (which you know I am rather apt to do in pleasant company), and how he walked with us through the fields, and wished us a 'good-bye,' and left us to do as well as we could without him."

A tour in Scotland is journalized in a style no less lively: and yet it was on his return from this, that Mr. Griffin announced to his family, his intention of retiring from the world. His tender conscience had become impressed with the idea of his unworthiness for the priesthood, and in place of attempting its duties, he resolved on joining the Christian Brotherhood, who devote themselves incessantly to the humbler task of instructing the poor. This purpose he carried into effect in the autumn of 1838. But the conflict, or the repose, in whichever light we are to view his retreat, did not last long. He was seized with typhus fever in the second year of his noviciate; and his weakened frame offering small resistance to the malady, he died on the evening of Friday the 12th of June, 1840.

Quarterly Papers on Architecture. Part I. 4to. Weale.

A new Quarterly, devoted exclusively to original papers on architecture, in the various branches of study comprehended under that art. As regards externals, the work is unusually prepossessing, being got up in a very handsome manner. Ten years ago there was not a single architectural periodical; for the first of the class, *Loudon's Magazine*, did not commence till 1834. That magazine, since discontinued, has been succeeded by three or four others, yet while these serve to show the demand that exists for such journals, they are, for the most part, mere journals affording matter-of-fact information;—nor do we say this by way of reproach, for we rather wish that more matter of that kind, especially in regard to architecture,

Digitized by Google

could be found in them. Mr. Weale's 'Quarterly,' therefore, neither interferes with existing architectural periodicals, nor is it interfered with or forestalled by them. Instead of trespassing upon their grounds, it has a domain of its own, and one of considerable extent. Still, with every wish for its ultimate success, we cannot say that this first Part is quite so attractive as it might have been. The leading, and by very far the longest, article, "an Essay on those powers of the mind which have reference to Architectural Study and Design," is one hardly to be judged of from a mere perusal. Highly creditable as it is to its author, Mr. George Moore, it is too abstruse, and deals too much in abstractions; and while there is somewhat more than enough about "Parthenon" and "Pantheon," there is no exemplification of the principles sought to be established, derived from modern buildings, whether in regard to beauties arising from the observance, or defects from the neglect of them. There are, besides, not only various degrees, but even different modes in which the same general qualities, or what are considered such, manifest themselves; and others almost as innumerable as they are indefinable, which, though they operate imperceptibly, may in some cases be more influential than those primary qualities which are almost at once recognizable. Any theory, therefore, which refers everything to these last, and takes no notice of more recondite and latent influences, must, even though correct, be imperfect, and still leave us a great deal unaccounted for. Accordingly, though speculation of the kind may have its value; and be useful to a certain extent, it is nearly useless as regards practical application. The office of criticism is to explain, and to render us the more keenly sensible to beauties which already exist; but it cannot pretend, otherwise than by vague hints and suggestions, to direct us to those which lie buried in the unfathomed possibilities of art. No one has yet discovered the power of transmuting precepts and rules into inspirations of genius. In every true work of art, there is always more or less of that felicitous *non so che* which is altogether incommunicable, and which cannot be repeated at will even by him who has achieved it. We do not, however, mean to say that theoretical criticism is profitless, or that this "Essay" may not be studied to advantage; but it requires to be deliberately studied, and for that reason we question if it were altogether judicious to make it the leading article in the first number of a periodical.

The next article, which gives an account of the "Deptford, Greenwich, and Woolwich Union Poor House," is in strange contrast with the preceding, for, in regard to design, the building seems intended to serve as a pattern for ugliness; and it unluckily happens to be the only architectural design in this the first number—at all events, the plans would have been quite sufficient, to show the arrangement and accommodation, which constitute the sole claims which the building has to notice.

The third paper is of interest as a contribution to architectural biography. The subject is W. Vitruvius Morrison, son of the present Sir Richard Morrison, of Dublin. As an architect, Mr. Morrison, we are told, had the merit of being the first to introduce the Tudor style into Ireland, for mansions and private residences; and is said to have been particularly attentive to keeping up character throughout and in every respect, not as regards the house alone, but furniture and other accessories within, and the gardens and grounds without. No information, however, is afforded as to any particular instances, for though there is a list of his principal buildings, it is a mere list, without any thing amounting to description.

The two other subjects—for articles they cannot very well be termed, consist of specimens of stained glass, printed in colours; and of carvings and other details of the primitive timber architecture of Norway; all of which are curious, and some of them not devoid of taste.

The H—— Family. By Frederika Bremer. Translated from the Swedish. Smith.

Here—forming part of 'Smith's Standard Library'—comes the reprint of another of the American translations which will so sadly disconcert the arrangements of Miss Bremer's first English chaperon. On the whole, and after a second reading, 'The H—— Family' seems to us the most unequal of the Swedish novels. The finely discriminated nature of what may be called Miss Bremer's level characters makes us all the more impatient of the high-flown personages and scenes she falsely imagines it necessary to introduce. Could our remonstrances reach Stockholm, we would have no more blind girls, such as Elizabeth, with her almost demoniacal passion and its frightful disclosure,—no more such wives for eldest sons as the Italian maiden in the forest house, drinking tea out of "Rorstrand's coarsest ware" (the commonest Swedish crockery), and yet decked out in a white crape robe and a golden arrow; while, on the other hand, we would welcome as many Beata Everydays, and Bobina Bults, and red-nosed custom-house officers, and Lieut. Arwids, and Professor L——s, as Miss Bremer will send us. Her variety, as we said some five weeks ago, seems without stint; she has no need of the spasms and trickeries by which poorer novelists conceal their weakness of invention.

This petition respectfully laid on Miss Bremer's writing-desk, we have now to draw upon 'The H—— Family' for such sketches as do the heart good by their truth and feeling. The very beginning of the story has a humanity in it, which Sterne rarely reached with twice the effort.

"About the end of February, in the year 1829, I found myself at the barrier one evening, awaiting the compulsory visit of the Custom-house officer, who was to admit me into the Swedish capital. It was amid a violent drifting of snow, and in a small open sleigh, I sat there, frozen, tired, and sleepy, no very enviable situation, as my fair and gentle readers will allow. My poor steed, who had a cold, coughed and sneezed. The servant who drove my sleigh beat his arms across his body to warm himself; the storm howled, and the snow drifted about us. I closed my eyes and waited, as I have often done in snow-storms, within as well as out of the house; and this I have always found the best way, if one cannot escape such evils. At last I heard the slow steps on the crackling snow. The officer approached with his lantern. He had a red nose, and appeared unhappy. I held a gold piece in my hand, and was desirous of transferring it unperceived into his, that I might secure for myself a quiet and an undisturbed ride. He drew his hand back. 'It is not necessary,' said he, dryly, but politely. 'I will not give you much inconvenience,' continued he, while he began to examine my carpet bag, and look over my packages. I found myself compelled, not without vexation, to alight. Out of humour, and with some malicious pleasure, I put my money back into my reticule, and thought,—'Well well, he is too proud to take anything for his trouble.'"

It appeared, in answer to questions, that this pearl of custom-house officers was a poor man with four children. We must give the sequel:

"After the inspector had convinced himself that a goodly variety of cheeses, loaves of bread, and ginger cakes, made up the principal part of the lading of the sleigh, he replaced everything in the neatest order, gave me his hand to assist me into it, and carefully tucked the furs about me. My ill-humour had vanished long ago. Is it, thought I, the fault of the poor inspector, that he is the plague and torment of travellers? This one, certainly, has performed his duty in the most civil manner. And while he went on to restore everything to its place, carefully and conscientiously, various considerations arose in my mind which disposed me to still more kindness. The red, frozen nose, the depressed expression of countenance, the stiff fingers, the poor children, the snow-storm, the dark dismal evening, all these passed before me like the shadows in a camera obscura, and my heart was quite softened by them. I felt again after the piece of money. I thought of some gingerbread and a cheese for the four children's supper; but while I was feeling, and while I was thinking, the man opened the bar, took off his hat politely, and I quickly passed through the gateway. I would have cried out 'Halt!' but I did not. With an oppressed heart and uncomfortable feelings, as if I had lost something valuable on the way, I proceeded through the city, and saw in the white snow-flakes before me as in a transparency, the frozen red nose and sad face, on which I might so easily, at least for a moment, have called up a cheerful look."

The lady who has spoken in the above extract, is a sort of Swedish Miss Becky Duguid, with a touch of poetry in her nature not owned by her Scottish prototype. And, by the way, the skill with which this is always kept in sight, without the slightest intrusion of fustian or sentiment, is enough in itself to establish the authoress as an artist of the highest order. Has not she looked in the glass for her original? Beata, as we have seen her, was on her way to assist at a wedding in the H—— family, and to do her part in reconciling the tender-conscienced bride to be happy without questioning the future over curiously. We must say that Emily's struggles with herself teaze rather than interest us; and we only exhibit her to our fair readers in the crisis of her malady, in the hope that they will take warning by the catastrophe, and behave better when their time comes.

"Some one now came in, and said the stairs and entry were full of people who wished to see the bride. A new trial for the timid Emily. She stood up, but quickly sat down again, and grew pale. 'Cologne water, Cologne water!' cried Julia to me; 'she looks pale, she is fainting.' 'Water!' cried the Colonel in a thundering tone. The tutor seized up the tea-kettle, and rushed forward. I do not know whether it was this sight, or the reaction of her spirits, but it had the effect of restoring Emily from her weakness; she arose quickly, and accompanied by her sisters went out, while she threw a glance of uneasiness and discontent towards Algernon, who stood immovable at some distance, and looked at her with an unusual, almost severe earnestness. 'Are you mad?' cried Uncle P., in a half whisper, as he pulled the arm of the master, who was still standing there, his eyes wandering, and the tea-kettle in his hand. The master in alarm turned hastily round, and knocked down the little Thickeys like two pins thrown over by the ball. The kettle slipped in his hand, burnt his fingers, and he let it fall, with a cry of pain, upon the unfortunate boys, over whose immovable bodies a cloud of steam arose. If the moon had fallen, greater confusion could not have been enacted, than was at the first moment produced by this catastrophe of the kettle. Axel and Claes made no noise, and their mother began to fear it was all over with them. But after Algernon and the Colonel had raised them up and shaken them, it was apparent they were all alive. They had been so surprised and frightened, that in the first moment they could neither move nor speak. Fortunately, the hot water which was spilled upon them mostly came upon their clothes, and it was beside pretty well cooled, as tea had been over for half an hour. Only one spot on Axel's forehead, and one on the left hand of Claes, required treatment. The master was in despair, the children cried, they were carried to bed, and I promised as soon as I had time, to come and see them. The amiable disposition of Madame H., which would never allow her quietly to see a troubled face, led her to console the master. She succeeded in so doing by making him observe with what real Spartan spirit the boys had received the first shock, and by declaring that she considered it a decided proof of the excellent education he was giving them. The master was very happy,

Digitized by Google

and grew quite excited, and said while he drew himself up, that he hoped to make real Spartans out of the lady's promising boys. The lady hoped this newly invented shower-bath of hot water might not be tried again, but she kept her hopes to herself. Meantime the exhibition of the bride had ended; and Emily, exhausted, had left the room, where according to the old and singular Swedish custom, it had been necessary for her to show herself to a multitude of curious and indifferent people."

Once married, no one could do more credit to her education than Emily, with the aid of a touch of domestic Machiavelism from Julia, worth imparting to bridesmaids:—

"The following day was full of consolation for Julia. Emily was gayer; and, happy to be able to receive her parents and brothers and sisters in her own house, she busied herself with unrestrained care and with heartiness to entertain them well. The Colonel had all his favourite dishes at dinner, and joy sparkled from Emily's eyes, when her father a second time asked for some turtle soup, and added, 'It is very excellent!' Her mother was not a little satisfied with the arrangement of the meal, and with the preparations; she stared a little anxiously at a pudding which had somewhat of a ruin on one side, but Julia quickly and unobserved turned the dish round, and the good lady, who was somewhat short-sighted, thought the fault was in her own eyes, and was quiet."

There is a larger amount of cookery than usual in this 'H—— Family,' and *apropos* of this, we may advert to a second pair of lovers. The gentleman is one of the characters in whom Miss Bremer delights: a young soldier, as beautiful as Adonis, and with a voice as "musical as is Apollo's lute," since it makes a stupid exclamation fascinating for a while to the ears of the gifted and faëry Julia. Excellent is Lieutenant Arwid, her betrothed! sufficient to her happiness when they are in town together, and he has the nothings of polite society to retail to her, but becoming progressively wearisome when they get out to Thorsborg, Colonel H——'s country seat. There this dull mortal finds no pleasure save in sleeping on a sofa, however "stimulating" (as the American said) be the conversation passing round him. At length the fair Julia becomes so impatient of dreaming in his company, and her ire is so justly aggravated by his preferring the smell of hot cutlets in the house, enjoyed alone, to the "incense airs from beds of flowers" on a summer's evening, in her company, that she determines to break her engagement: a serious thing to achieve, it appears, in Sweden, and in her case only to be brought about by Miss Bremer's art. For the manner in which the same is exhibited, we must refer to the work.

We could go on lecturing from this lesson to young ladies, and guessing what the happy pairs we take leave of at its close are now doing, an hour by "Shrewsbury clock," so pleasantly is the circle of our acquaintance enlarged by its means. Enough, however, has been said to recommend the tale. As we have not hitherto noticed one of Miss Bremer's excellencies, we must repair the omission ere our article is closed: this is the care bestowed on her secondary figures. The musical family D——, whose skill in performance and in French are alike so wonderful, —the two children, Claes and Axel, with their mining experiments, and their master Nup, who, while reading, burnt his hair four times on the same evening, are life itself. We have already given in our adherence to the Provost's widow, Madame Bobina, of whom we have too passing a glimpse in the closing chapter. May these not be the last, by a hundred, of the odd and worthy men and the brave housewives who shall be-made known to us—an honour to Sweden —by their still more honourable countrywoman, Frederika Bremer!

Chaplain's Report on the Preston House of Correction, presented to the Visiting Justices at the October Sessions, 1843. Preston, Clarke.

We always turn to Mr. Clay's Report with interest and anxiety. Let all who consider its melancholy iteration as tedious or painful, remember the necessity which exists for making known the extent of intellectual darkness and moral depravity by which we are surrounded, that society may exert itself for their removal. We have at length reason to hope that instruction and discipline have not been without their beneficial influences: it appears that, but for the unfortunate riots in August, 1842, the criminality of the year would have been less than that of the preceding by about twenty per cent., and that the frequency of *relapse* into crime has greatly diminished. Other facts of interest and importance may also be gleaned from this Report. We constantly hear poverty described as the mother of crime, and are ourselves by no means accustomed to underrate its influences; yet it appears from the official returns that 1404 males and 2146 females received out-of-door relief within the Preston Union, thus proving that, *as suffering distress*, the females are to the males nearly as two to one; while as guilty of dishonesty, *the reverse exists in the proportion of more than six and a half to one!* Another fact, and of great interest, is recorded by this shrewd observer and benevolent man:—

"It is one of the greatest disadvantages attached to the condition of the working classes that there are so few places calculated to afford them healthy and innocent recreation. A few years ago, when an exhibition of natural curiosities, works of art, &c., was open to them in Preston, *the public-houses were deserted.*"

How often have we sought to impress this truth on the public?—how often have we suggested the beneficial consequences that would result from like exhibitions in London?—(see *ante*, p. 264, and other places).

The amount of ignorance will appear to many persons wholly incredible. Could it be believed that sixty-two per cent. of those committed could not read, seventeen per cent. could only read, and twenty per cent. read and write badly—that forty-three per cent. of the male and female prisoners "were ignorant of the Saviour's name" —that some had never even heard of the Duke of Wellington, and though they seemed more familiar with the name of Nelson, they did not know whether he was dead or alive?—

"The following is a literal account of part of a conversation held with a young man of twenty-one, which I give as furnishing a specimen of the unintelligence which I have, too often, met with. 'Did you ever hear tell of the Duke of Wellington?' 'No,—but I *seed* his *shape* once.' 'Did you see it over a public-house door?' 'No; I seed it ridin' on a jack-ass, with a pair o'owd boots on, and a pipe in his mouth.' 'And where did this happen?' 'Why at Marsden;' —where, as I subsequently gathered, this effigy of his grace had been paraded on the occasion of some political excitement."

Surely with such facts before them, Churchmen and Dissenters will hereafter agree, that any Education Bill is better than none at all.

We have before alluded to the improved discipline in the Preston House of Correction, and after reading the following statement our readers will agree with us, that it was needed:—

"The discipline in the Preston House of Correction has been gradually improved for some years past; but within the last eighteen months its progress towards complete efficiency has been very great. The management now, compared to the strange kind of imprisonment once existing,—it can scarcely be said, *within* the jail, presents a remarkable contrast. There are gentlemen now in the magistracy who recollect the time when it was *usual* to hire felons under sentence, to act as labourers in the neighbouring factories; and it is within their knowledge that a man convicted of felony, and sentenced to a year's imprisonment, was employed, during the whole of that term, *in the capacity of gardener at the residence of a gentleman within two miles of the town:* this 'prisoner at large' merely coming *home* in the evenings to sleep. Long after such extraordinary laxity had disappeared, it still continued an almost daily practice to send prisoners into the town for weaving materials, &c., in the society—rather than in the custody—of an officer. I have known, too, as a proceeding indeed which was of common occurrence until the establishment of the county constabulary, prisoners brought to the jail in charge of coachmen, carriers, and carters; and sometimes, in order to avoid unnecessary expense, the services even of these special constables have been dispensed with, and prisoners have arrived at the jail in no custody *but their own;* and have surrendered themselves to the prison authorities by virtue of the commitments carried in their own pockets! This may now occasion a smile; but it implied a sad absence of discipline; for it showed that the prison did not possess its proper terrors for the idle and depraved."

We shall leave the facts here adduced to their just and natural influence.

Statesmen of the Reign of George III. Third Series. By Lord Brougham.

[Concluding Notice.]

Having got rid of Lord Brougham and his pamphleteering, we shall repose for a few columns on a reminiscence, contributed by Earl Stanhope, of—

Fouché Duke of Otranto.

"I formed his acquaintance at Dresden, where he arrived about November, 1815, as French Minister, but in a sort of honourable exile; and he told me that the Duke of Wellington had advised him not to accept that mission, saying, 'You will get into a hole which you will never be able to leave.' He afterwards expressed to me his regret at not having followed that advice, and his opinion that the anticipation was realized by the event. From an exaggerated opinion, both of his own importance and of the malice of his enemies, he had left Paris in disguise, and was so apprehensive of being recognized, that when he met his wife on the road he would not acknowledge her. He had remained some weeks at Brussels, and carried on a correspondence with the Duke of Wellington and others, but, after receiving from the French government a peremptory order to repair to his post, he continued his journey under the name of M. Durand, marchand de vin, till he came to Leipzig, where he resumed his own name. He was accompanied by his wife, who was of the family of Castellane, and related, as he said, to the Bourbons, with four children by his former marriage, by an eldest son who appeared to be of weak intellect, and who became remarkable for his avarice, by two other sons who, even in their childhood, exhibited a strong disposition to cruelty, by a daughter, and by a very intriguing governess, Mdlle. Ribaud. He had been early in life a professor in the Oratoire, and it was said very truly at Dresden that he had 'le visage d'un moine, et la voix d'un mort,' and, as he was for some time the only foreign minister at that court, that he appeared 'like the ghost of the departed corps diplomatique.' His countenance showed great intelligence, and did not indicate the cunning by which he was eminently distinguished; his manner was calm and dignified, and he had, either from nature or from long habit, much power of self-possession. When I announced to him the execution of Marshal Ney, o which by some accident I had received the earlies information, his countenance never changed. He appeared to be nearly sixty years of age, and his hair had become as white as snow, in consequence of his having according to his own expression, 'slept upon the guillotine for twenty-five years.' His conversation was very animated and interesting, but it related chiefly to events in which he had been an actor, and his inordinate vanity induced him to say: 'I am not a king, but I am more illustrious than any of them.' His statements did not deserve implicit credence, and I may mention as an instance his bold denial that during the whole course of his long administration as

Digitized by Google

Minister of Police, any letter had ever been opened at the post-office."

"Amongst a great number of anecdotes which he related to me, there were two that exhibited in a very striking manner the fertility of his resources when he acted on his own theatre, though, as I shall afterwards show, he appeared utterly helpless amidst the difficulties which he encountered at Dresden. While he was on a mission to the newly-established Cisalpine Republic, he received orders from the French Directory to require the removal of some functionaries who were obnoxious to the Austrian government. He refused to comply, and stated in his answer that those functionaries were attached to France; that the ill-will with which they were viewed by the Austrian government was not a reason for the French government to demand their dismissal; that, according to intelligence which had reached him, Austrian troops were advancing, and that the war would be renewed. The orders were reiterated without effect, and one morning he was informed that an agent of the Directory was arrived at his house, and was accompanied by some gens-d'armes. Fouché desired that the agent might be admitted, and that a message might be sent to his friend General Joubert, who commanded some French troops then stationed in the same town, requesting him to come immediately, and to bring with him a troop of cavalry. The agent delivered to Fouché letters of recall, and showed to him afterwards an order to arrest him and to conduct him to Paris. Fouché made some observations to justify himself till the arrival of Joubert with the cavalry was announced, when he altered his tone, and told the agent: 'You talk of arresting me, and it is in my power to arrest you.' Joubert said, on entering the room, 'Me voilà avec mes dragons, mon cher ami; que puis-je faire à votre service?' and Fouché replied: 'Ce drôle-là veut m'arrêter.' 'Comment!' exclaimed Joubert,' 'dans ce cas-là je le taillerai en mille pièces.' The agent excused himself as being obliged to execute the orders which he had received, and was dismissed by Fouché with the remark, 'Vous êtes un sot; allez tranquillement à votre hôtel.' When he had retired, Fouché observed that the Directory was not respected either at home or abroad, that it would therefore be easy to overthrow the Government, and that Joubert might obtain high office if he would assist in the undertaking. Joubert answered that he was merely a soldier, and that he did not wish to meddle in politics; but he granted Fouché's request of furnishing him with a military escort to provide for his safety till he reached Paris. On the road he prepared an address to the Council of Five Hundred, which was calculated to be very injurious, and perhaps fatal, to the government. When he arrived at Paris he called on each of the Directors, but was not admitted, and he expressed to me his conviction that he should have been arrested the next morning if he had not immediately insisted upon having an audience with Talleyrand, then Minister for Foreign Affairs. Fouché, after defending his conduct, said that he considered it his duty, before he presented his address, to show it to Talleyrand, who no sooner read it than he saw its dangerous tendency, and the whole extent of the mischief to which it might lead. He told Fouché: 'I perceive that there has been a misunderstanding, but everything may be arranged;' and added, 'the post of Minister to the Batavian Republic is now vacant, and perhaps you would be willing to accept it.' Fouché, who perceived that the other was intimidated, determined to avail himself of the advantage which he had acquired, and replied that his honour and character had been attacked, that immediate reparation was necessary, and that his credentials must be prepared in the course of the night, in order that he might the next day depart on his mission. This request having been granted, Fouché proceeded to state that his journey to Paris had been very expensive; that he had, through his abrupt departure from the Cisalpine Republic, lost several valuable presents which he would have received; and that his new mission required another outlay, for all of which he demanded an order for the immediate payment of two hundred thousand francs by the national treasury. Talleyrand gave the order without hesitation; and Fouché, who had arrived in disgrace, if not in great danger, departed the next morning as a minister plenipotentiary with a considerable sum of money. After Napoleon, on his return from Elba, had made such progress as alarmed the French government, Monsieur, afterwards Charles X., sent a message to Fouché requesting a meeting with him in the Tuileries. Fouché declined it, saying that as the circumstances would be known, it would place his conduct in a very ambiguous light, and he then received another message proposing to meet him at the house of a third party. To this proposal Fouché assented, on the condition that the interview should take place in the presence of witnesses, two of whom should attend on each side. On such an occasion any questions of etiquette must have appeared of very subordinate importance, the condition was accepted, and in the interview, which lasted several hours and till long after midnight, Fouché was offered the appointment of Police, the title of Prince, and the decoration of the St. Esprit. Fouché replied that the advance of Napoleon was the natural and necessary consequence of the general discontent which prevailed; that no human power could prevent his arrival at Paris; that Fouché's acceptance of office under such circumstances might create an impression of his having betrayed a sovereign whom he ought faithfully to serve; and that he was therefore obliged to reject the offers which in the course of the conversation were repeatedly pressed on his acceptance. It seemed to be supposed by the French Government that the refusal of such offers was an indication of attachment to Napoleon, and the next morning, when Fouché was in his carriage, at a short distance from his own house, he was stopped 'in the name of the King,' by an officer of police, attended by gens-d'armes. Fouché desired them to accompany him to his house, when, on getting out of the carriage, he demanded the production of the warrant by which he was arrested; and on its being shown to him, he threw it on the ground, exclaiming, 'It is a forgery; that is not the King's signature.' The officer of police, astounded by the effrontery with which Fouché spoke, allowed him to enter the house, when he made his escape through the garden, and went to the Princesse de Vaudremont, who concealed him till the return of Napoleon. Mdlle. Ribaud, the governess, sent a message to the National Guards requesting their immediate attendance, and conducted through the house the officer of police, as he told her that he had orders to take possession of Fouché's papers. His bureaus, &c. were searched, but nothing of any importance was found in them, and Mdlle. Ribaud when passing through her own room drew a trunk from beneath her bed, and, taking a key out of her pocket, offered to show her clothes to the officer of police, who said that he had no wish to give her that trouble. It was, however, in that trunk that Fouché's important papers were deposited. In the meantime the National Guards had arrived, and after they were harangued by Mdlle. Ribaud on the merits and services of Fouché, and on the insult and injustice with which he had been treated, they drove away the gens-d'armes who attended the officer of police.

"Fouché, who after the return of Napoleon was reappointed Minister of Police, was asked by him whether it was not very desirable to obtain the services of Talleyrand, who was then one of the French ambassadors at Vienna. Certainly, replied Fouché; and Napoleon then said, 'What do you think of sending to him a handsome snuff-box?' Fouché was aware of the extreme absurdity of endeavouring to bribe a minister, who was supposed to be rapacious, by a present which, as a matter of course, he had received on the conclusion of every treaty, observed, if a snuff-box were sent to Talleyrand, he should open it to see what it contained. 'What do you mean?' inquired Napoleon. 'It is idle,' replied Fouché, 'to talk of sending to him a snuff-box. Let an order for two millions of francs be sent to him, and let one half of the sum be payable on his return to France.' 'No,' said Napoleon, 'that is too expensive, and I shall not think of it.' When Napoleon determined to hold the Assembly of the *Champ de Mai*, he convened his Council of State, and read to them the speech which he intended to deliver on that occasion. Some of the members expressed their entire and unqualified approbation, and others suggested a few verbal alterations; but Fouché, when it came to his turn, said that he disapproved of it both in its form and in its substance, and he then strung together some of the commonplace phrases with which his ordinary conversation so much abounded, that 'truth must be heard,' that 'illusions could no longer prevail,' &c. One of the Councillors having remarked that a written document would be very desirable for the discussion, Fouché produced the speech which he had prepared. It stated that the Allied Powers had declared war not against France but against Napoleon; that if they were sincere in their professions, they would guarantee to France her independence, and the free choice of her own government, and that he would in that case abdicate the throne; but that if such a guarantee were refused, it would be a proof that they were insincere, and that he would then ask permission to place himself at the head of the French armies in order to defend the honour of the country. Napoleon made no observation; but, calling the Councillors to him in succession, and whispering a few words to each of them, they rejected the proposal. He must have perceived that the Allies, who viewed with anxiety and mistrust the mighty conflict in which they were about to engage, would have granted the guarantee which was required; that he should have been obliged to abdicate; and that a Republic would have been established in which Fouché hoped and expected to acquire more power than he had yet possessed. Napoleon had on a former occasion removed Fouché from office, and reproached him with his insatiable ambition, saying, 'You might always have been minister, but you aspired to be more, and I will not suffer you to become a Cardinal Richelieu.' The Memoirs which after Fouché's death were published under his name do not appear to be authentic, and the statements contained in them differ in many respects from those which I received from him, but neither the one nor the other may have been founded in truth. He read to me occasionally some detached passages, which he composed without any reference to chronological order, but as the circumstances occurred to his mind, and according to his original plan, which he communicated to me in a letter. He intended to divide his narrative into the following parts:—'La 1e explique la révolution qui a fait passer la France de l'antique monarchie à la république; la 2e celle qui a fait passer la France de la république à l'Empire de Bonaparte; la 3e celle qui à fait passer la France de cet Empire à la Royauté des Bourbons; la 4e partie dira la situation de la France et de l'Europe.'"

"In another letter he states:—'Je travaille huit heures par jour à mon mémoire. Ceux qui croyent que ce sont les hommes qui font les révolutions seront étonnés de voir leur origine. J'ai déjà peint le premier tableau des événemens d'où sont sorties nos tempêtes passées. Le pendant de ce tableau sera un assez gros image d'où partira la foudre qui menace notre avenir.' His participation in the atrocities of the Revolution inspired horror at Dresden, where he formed very few acquaintances, and received hardly any visits except from Count Salmur, a Piedmontois, who had known him at Paris, and from General Gaudi, who had been sent by the Prussian Government to negotiate with respect to the line of demarcation of the Saxon provinces which were ceded, and who had received instructions from Prince Hardenberg to see Fouché frequently, and to watch his proceedings. Fouché said to me very often, 'J'ai une folle envie d'écrire, et il faut que j'aille à la campagne;' and I knew that he was not disturbed by many visitors, but I observed to him that he might give directions not to admit them. He replied, 'Ne voyez-vous pas que j'ai une jeune femme, et quand je me pousse en force, je la perds d'une autre manière.' I told him that he might very easily hire one of the country houses which at that time of year were unoccupied; but he said that he should expect the owner to remain there during his residence, and to treat him with the respect and attention which were due to him. He seemed to think that even a stranger would be too happy to accept the proposal, and to have an opportunity of associating with a person who, according to his own opinion, was 'more illustrious' than any king. The confidential communications which he received from Paris were addressed to him under another name, and directed to the care of a pastrycook in that part of the town which lies on the other bank of the Elbe. He preserved his former habits of 'espionnage,' and remarked to me that a person who lived on the opposite side of the street sat close to the window, was much occupied in writing,

Digitized by Google

was very regular in his habits, &c. He seemed to be amused in watching this unknown individual, who was afterwards discovered to be a spy sent by the French Government to observe Fouché. His ignorance of geography, &c., was really ludicrous. When he heard that Napoleon was sent to St. Helena, he inquired on which side of the Cape it lay; and when he was told by an Englishman that he was going to Hamburgh to embark for England, he asked, 'Are you not afraid at this time of year of making a voyage in the Baltic?' The other replied that he did not embark on the Baltic. 'No,' said Fouché, after some consideration, 'you will go by the sea of Denmark.' He was extremely delighted when he was informed that Lavalette had effected his escape by the good offices of Sir Robert Wilson and two other Englishmen, and after making a pompous eulogium on them, he said that although they had been punished by the French Government, they would everywhere be respected and honoured; that their conduct must excite general admiration, &c.; and after a long course of high-flown compliments, he concluded by an anticlimax, 'if they should come here I will even invite them to dinner.' According to a homely expression, 'there was no love lost' between Fouché and Talleyrand. The former said, 'Talleyrand est nul' till after he has drunk a bottle of Madeira: and the latter asked, 'Do you not think that Fouché has very much the air of a country comedian?' Fouché spoke very contemptuously of the late Emperor of Austria, whom he called 'un crétin.' I thought it indiscreet to ask any questions of Fouché on the cruelties of which he was represented to have been guilty at Lyons and at Nantes; but I took an opportunity of mentioning to him that a biographical memoir of him had appeared in the German language. It excited, as I expected that it would, his curiosity, and he requested me to translate it *viva voce*, which I accordingly did; and when the sanguinary scenes of Lyons were noticed he exclaimed, 'I went there to save the inhabitants, all of whom would otherwise have been murdered by Collot d'Herbois. As for Nantes, I never was there.' I remarked to him that the Memoir referred to letters which were signed both by him and by his colleague, and which had been published in the 'Moniteur,' but he replied that it would at that time have been dangerous to disavow them. He had received from the Prince of the Asturias, afterwards Ferdinand VII., during his residence at Valençay, the most servile letters, earnestly entreating that Napoleon would confer upon him the high honour of allowing him to be allied with some relation, however distant, of the Imperial Family. Fouché said that his hand was kissed by the prince whenever he had occasion to see him; and added, 'I washed it afterwards, for he was very dirty.' The intelligence which he received from Paris, through private as well as through public channels, and the hostility which was shown towards the regicides, of whom he was one, rendered him very apprehensive that his property would be confiscated, and he spoke to me frequently upon the subject. He observed that the Charter did not allow confiscation, but added, 'ils ne se gênent pas;' and he proposed to make a nominal sale of his property to me, in order to place it beyond the grasp of the French Government. I objected to it on the ground that it would not be a *bonâ fide* transaction; but a day or two afterwards I received from him a note, expressing a wish to see me immediately. On going to him, he read to me some papers prepared in technical and legal phraseology, which stated that I had purchased his estates, the annual value of which was, I think, 7000*l.*, and also his house at Paris, with the furniture that it contained. I told him that I had already expressed my disapprobation of the principle on which the transaction would proceed; and I observed to him that the fraud would be discovered, for the French Government would upon inquiry learn from the English ambassador at Paris that I was only an eldest son with a very limited income, and that it was utterly impossible for me to make such purchases. He replied that I might be supposed to have given bonds, or other securities, which were satisfactory to him. I represented to him that the French ambassador in London might by a Bill in Chancery compel me to declare upon oath whether I had or had not purchased his property; and if so, with what funds? And he answered, 'Ces parjures-là ne blessent point la conscience.' I then said, 'You have already informed me that one half of your property is settled on your children, and the easiest way of placing the whole of it in safety would be to settle the remainder on Madame la Duchesse.' He exclaimed, 'Parbleu, vous avez plus d'esprit que moi, et je ferai venir mon secrétaire sur le champ.' An Act in due form was instantly prepared, and, being registered in Dresden, became the subject of general conversation: but I considered his communications as confidential, and I said nothing as to the suggestion which I had offered, or as to my knowledge of the transaction. He was also very apprehensive as to his personal safety, and said, 'I fear that I may be carried off by some gens-d'armes, and that no person will ever hear of me again.' He then asked whether, in the event of his being arrested, he should not request General Gaudi to intercede for him with the prime minister, Count Einsiedel? I answered, that they had no doubt much personal regard for each other, but that in their respective positions it could not be supposed that the former could have any influence with the latter. 'Then,' replied Fouché, 'I will write to the King of Saxony, inquiring what course he will pursue if an order should arrive here for my arrest.' He did so, though he was at that time French plenipotentiary; and he received from Count Einsiedel an answer, informing him that the King would under any circumstances act as became a man of honour.

"On one occasion, when he was more than usually disquieted by the information which he had that morning received from Paris, he called on me, and after mentioning that he was in great danger, and that he wished to go into the Prussian dominions, he inquired if I would accompany him thither? I assented; and we went together to General Gaudi, who was not acquainted with the objects and motives of the intended journey, but seemed much astonished when Fouché abruptly said to him, 'You once told me that you have an aunt who is settled in Silesia; and I should like to go and live with her.' General Gaudi replied that his aunt was old and infirm, and not accustomed to company, and that she would not like to see a stranger. Fouché then conversed with General Gaudi on the choice of a residence, and was with great difficulty dissuaded from going to one of the ceded provinces, the governor of which entertained for him the strongest aversion. After we had left General Gaudi, I asked Fouché when he intended to depart? and he answered, 'At twelve o'clock to-night.' I told him that it would have a better appearance if he went by daylight; and, I added, 'You should prepare a passport for yourself.' 'No,' replied Fouché, 'I intend to travel under your passport.' 'How so?' I inquired. 'As your valet-de-chambre,' answered Fouché. I then said that I was willing to accompany him in his quality of French minister, but that I would not convey him under a false character, or smuggle him through the country as if he were contraband goods. He was much displeased, and employed by turns flattery and abuse; but I remained inflexible; and, as I would not accompany him in the manner which he proposed, he determined to remain at Dresden. At length there appeared in France a law, or edict, which allowed the regicides to reside, at their own choice, either in Austria, in Prussia, or in Russia; and the Austrian minister desired Fouché to determine which of them he would prefer. He wished to settle at Berlin, where, as he said, his advice would be very useful; but he found upon inquiry that this would not be permitted, and Breslau was proposed to him for a residence, which he did not approve, and he went into the Austrian dominions—first to Prague, where he lived very obscurely and with great economy—afterwards, and for a short time, to Linz on the Danube—and then to Trieste, where he died. His widow, who had a life-interest in half his property, re-married. His house at Paris was sold to Baron Rothschild; and it was said, but I know not with what truth, that he bequeathed his manuscripts to Louis XVIII."

THE ANNUALS FOR 1844.

It is no safe task to criticize the Illustrations to Heath's *Book of Beauty*—seeing that they are all portraits. Were we to object to this nose, or the other chin—to wonder at a redundancy of tresses—to ask how it is that so many short-faced beauties find themselves assembled in one given book—affectionate relatives and friends might be pained, when our intention was to admonish the artists. For what beauty-painter could be cynical enough to exaggerate the peculiarities of the Hebes and Dianas and Minervas, who are willing to oblige the public through his unworthy agency? Let, then, brown and fair be passed by in admiring silence: while, unwilling to deal in Iago's vein with contemporary lilies and roses, we perform the easier task of applying the standard of perfection to more mortal prose and verse. This, it needs not be added, is, as far as the Gift-books are concerned, "a sliding scale." We do not look for Byrons and Shelleys and Moores in the pleasant rhymesters whom year by year Lady Blessington so skilfully assembles. Nor is her *cento* of tales, daintily worded though these be, quite a new Decameron. But, drolling apart, the letter-press of these books is good and pretty. The garland of fugitive verse, which the series could now furnish, besides many a gay and scented window flower, would show also its sturdier plants, though, to bring these into a requisite harmony they were planted, after the Chinese fashion, in porcelain vases. We shall presently give a specimen from the *Keepsake*, in proof of our assertion. In the meanwhile, let those who busy themselves with the social position of what Jonathan Oldbuck called "the Womankind," settle accounts with Mr. R. M. Milnes, for the following view, through a rose-coloured veil, of

The Harem.

Behind the lattice closely laced
With filagree of choice design,—
Behind the veil whose depth is traced
By many a complicated line,—
Behind the lofty garden-wall
Where stranger face can ne'er surprise,
That inner world her all-in-all,
The Eastern woman lives and dies.

Husband and children round her draw
The narrow circle where she rests;—
His will the single perfect law—
That scarce with choice her mind molests,
Their birth and tutelage the ground
And meaning of her life on earth,
She knows not elsewhere could be found
The measure of a woman's worth.

If young and beautiful, she dwells
An idol in a secret shrine,
Where one high priest alone dispels
The solitude of charms divine.
And in his happiness she lives,
And in his honour has her own,
And dreams not that the love she gives
Can be too much for him alone.

Within the gay kiosk reclined
Above the scent of lemon groves,
Where bubbling fountains woo the wind,
And birds make music of their loves,
She lives a kind of faëry life,
In sisterhood of fruits and flowers,
Unconscious of the outer strife
That wears the palpitating hours.

And, when maturer duties rise
In pleasures' and in passions' place,—
Her duteous loyalty supplies
The presence of departed grace;
So hopes she by untiring faith
To win the bliss, to share with him
Those glories of celestial youth
That Time can never taunt or dim.

Thus in the ever closed hareem,
As in the open western home,
Sheds womanhood her starry gleam
Over our being's busy foam.
Through latitudes of varying faith,
Thus trace we still her mission sure,
To lighten life, to sweeten death,
And all for others to endure.

Then follow two awful verses describing Man's despotic supremacy, which we are too generous to quote, satisfied with the moral of the whole, as under:—

Then let the moralist, who best
Honours the female heart that blends
The deep affections of the West,
With thoughts of Life's sublimest ends,
Ne'er to the Eastern home deny
Its lesser, yet not humble praise,
To guard one pure humanity
Amid the stains of evil days.

Never, we imagine, have the *yashmac* and the *arabah* been so plausibly defended:—Mr. Milnes must surely aspire to be the modern Hafiz, as well as the modern Chaucer. We had marked for another extract Sir E. L. Bulwer's 'Content and Desire;' but, on returning to it, its mysticism somewhat cooled our first admiration. Mr. W. S. Landor has some lines to Lady Charles Beauclerk, terse as a monumental inscription, but tender and elegant as some old Provençal *lai;* Mr. Hallam, a somewhat Johnsonian tribute to another fair lady; Horace Smith, a sensible "copy of verses" on a like subject; Barry Cornwall, a snatch of song worth a score of such personalities. "The sex" speaks for itself through the Editor, Mrs. Torre Holme and Mrs. Garrow, Mrs. S. C. Hall, and others. But, with all deference to their graces (not airs), we are inclined to think that the 'Book of Beauty' is this year surpassed by

The Keepsake.—The illustrations of this twin-volume are better than has been usual of late years. Mr. C. Heath's name is affixed to several of the plates; and 'The Anglers,' 'The Coquette,' and 'The Gleaners,' are among his best efforts. Redgrave's 'Daily Teacher,' a gracefully modest portrait by Chalon; and the 'Queen of the Belgians,' after one of Sir William Ross's excellent miniatures, are all attractive. Then for contributors, Lady Blessington has gathered a sketch by Capt. Marryat, a story of a picture by Mr. Westmacott, jun., with much lively and various prose and verse; among which it were shame to pass 'The Ghost of the Private Theatricals,' a tale of terror so well told, that we incline to ask whether it be original or a translation. Nor can we overlook Barry Cornwall's pæan to Lady Sale, which is excellent, all but the last stanza,—the name not lending itself kindly to the uses of poetry. This, by the way, is one of the racier and more manly contributions indicated awhile since. Another, which will be a greater novelty, and, we should think, will startle a round hundred at least of aristocratic readers in their country houses, is

A Word in Season.

BY CHARLES DICKENS.

They have a superstition in the East,
That ALLAH, written on a piece of paper,
Is better unction than can come of priest,
Of rolling incense, and of lighted taper:
Holding that any scrap which bears that name,
In any characters, its front imprest on,
Shall help the finder through the purgiug flame,
And give his toasted feet a place to rest on.

Accordingly they make a mighty fuss
With every wretched tract and fierce oration,
And hoard the leaves; for they are not like us,
A highly civilized and thinking nation;
And always stooping in the miry ways
To look for matter of this earthy leaven,
They seldom, in their dust-exploring days,
Have any leisure to look up to Heaven.

So I have known a country on the earth,
Where darkness sat upon the living waters,
And brutal ignorance, and toil, and dearth,
Were the hard portion of its sons and daughters;
And yet, where they who should have oped the door
Of charity and light, for all men's finding,
Squabbled for words upon the altar-floor,
And rent The Book, in struggles for the binding.

The gentlest man among these pious Turks
God's living image ruthlessly defaces:
Their best high churchman, with no faith in works,
Bowstrings the Virtues in the market-places.
The Christian Pariah, whom both sects curse,
(They curse all other men, and curse each other,)
Walks thro' the world, not very much the worse—
Does all the good he can, and loves his brother.

Taken in conjunction with Mr. Milnes's 'Hareem,' this poem is noticeable as an illustration of the different modes in which human tolerance may utter its large thoughts of benevolence. After such a reality, we can have nothing to do with *boudoir* verses. For like reasons,—and having given the reader enough from the Gift-books of 1844, for one dessert,—we shall reserve *The Picturesque Annual*, with M. Jules Janin's 'Summer in Paris,' for another sitting.

List of New Books.—Eton Latin Grammar, by T. W. C. Edwards, M.A., 19th edition revised and corrected, 12mo. 2*s.* 6*d.* cl.—Selecta e Poetis Latinis ordine temporum disposita, 12mo. 5*s.* bd.—A Summer at Port Phillip, by the Hon. METROPOLITAN IMPROVEMENTS.

"A tree is a nobler object than a prince in his coronation robes."—*Pope.*

"A jet d'eau is a nobler object than a princess in her coronation jewels."—*Anon.*

EVERY successive summer, we have remarked, there is a cry to heaven, (as for water in the Great Desert,) raised in this wilderness of Sin, London, for fountains, baths, jets, pumps, crystal-dropping basins and silver-flowing kennels; but, like any other summer fashion, though all the rage then, it never lasts beyond the season. We do not mean to laugh at a cry so well founded, which only appears ridiculous when, from a howl almost loud enough to frighten the sun out of the firmament, it dwindles into utter silence. But neither can we laud such deciduous patriotism. Real public spirit, instead of pairing-off with the Dog-star, would still burn as bright as before,—instead of making just three months' hubbub per annum, would continue a temperate firm demand until the object was attained. Let us keep up a little mild clamour about it, since the first cool blast has frozen the lips of our summer-patriots thereupon. We have slender hopes indeed that Government will establish a *jet d'eau* beside each lamp-post, or the Lord Mayor with his magic wand strike a river of life and health from every second flag-stone; but something towards a sanatory system, by means of aqueous supplies proportional to this immense town's consumptive powers, may be accomplished, or at least attempted. It is singular how much more timid and circumspect and sluggish men are in doing good than evil. The most luxurious capital on the face of the globe wants the greatest of all luxuries—water! the people who most plume themselves on their superfluous comforts want the simplest of all conveniences—water! No marvel if mad dogs abound, when hydrophobia prevails among men themselves! Englishmen can find a way to transport the means of drunkenness—of drenching their insides—from France and Portugal, yet not the means of cleanliness from the next shire! But a combination of other rustic features with aquatic would prove, we think, as salutiferous as ornamental to a large town like London, and are more indispensable the larger it becomes. We would lift up our voices for a few *Oases* amidst the labyrinthine tracts of livid mud and masses of red brick which constitute our endless, or so far forth, Eternal City—the preservation and improvement of those few green spots already existing, the creation of more—whereby to refresh both sight and spirit, to be the lungs and spiracles and air-cells, of our giant metropolis. We do not, however, contend for "hanging gardens" in this Modern Babylon, not even for circuses and campuses and stadia and naumachia, as in Ancient Rome; no more than we do for an *Aqua-Vergine* at Seven Dials, or Antonine *thermæ* at Cold-Bath Fields, or for Sadler's Wells being expanded into a *Lake Mœris.* As there is a medium between hydrophobia and hydromania, there is one between childish "babble about green fields," and a love of hollow brick-stacks, called houses, street after street without cessation. A Frenchman once offered the politest suggestion—whether in our island we had not *trop de verdure;* with a Frenchman, too much verdure may be a fault even in "*la campagne,*" but he could hardly find that fault in our great towns and cities. Beyond all, London, from its present and prospective vastness should have, we repeat, numerous little Goshens interspersed throughout its area, wherever and whenever they are practicable. Instead of which observe what the great Logothetes of Lincoln's Inn have decided on:—blocking up the one open side of Lincoln's-Inn Fields with a huge and heavy morone brick library! disfiguring the beautiful broad green esplanade that lent such a bright aspect to their Cimmerian courts and three-storied caverns, with a dull specimen of bastard Gothic called Elizabethan! Those long wigs who formed the Committee of Taste, seem anything but able judges of architectural improvements; for this capital offence against the public, they deserve less to be *on* the Queen's Bench than *in* it. Are they so fond of incarcerations that they must make their own residence look like a jail? or of dark and crooked ways that their Inn must typify them yet further?

London, let us recollect, is not altogether a bee-hive, though perhaps as full of business and of humming; the business is somewhat less *clean,* and the hummers exhale effluvium rather less fragrant than the breath of flowers, the treasures they collect by no means resemble the pure and innocent products of Hybla or Hymettus, nor does their diet consist of heaven's own dew, liquid amber, bee-bread, and pollen. The bills of mortality do not include many such "garden-houses" as Milton tenanted—nor the bills of immortality many such ethereal natures as he. Now that the dead are about to be rusticated, we hope their ci-devant receptacles, the churchyards, will be suffered to lie fallow, and thus form a kind of rus-in-urbe for the living. We advocate this on other accounts, besides their ventilative and respirative uses, and their verdure,—the moral effect of their quiet and cloister-like seclusion amidst tumult and uproar that would drown the voice of Moses giving the commandments. What is there fitter to arrest the foot and the thoughts of a passenger than one of those silent, dim grave-yards in the heart of the worldliest capital in the world—such as old St. Laurence Pountney, or St. Alban's—close behind the noisiest, most crowded thoroughfares, yet breathing perfect stillness? Buried themselves amongst innumerable edifices, they afford to the toil-wearied spirit a momentary rest if no more. They perhaps echo the din outside, but with a deadened sound that

Digitized by Google

mimics and mocks its hollowness. We would have all these verdant recesses, however disused as cemeteries, kept as sanctuaries—sacred at least to contemplation: their very gloom has an impressiveness which must affect the lightest mind—now perhaps a little, much perhaps years hence, though but half-remembered—and their pallid headstones gleaming above the heavy grass utter a mute *Memento mori* where everything else proclaims *Memento vivere* the single important motto. Useful things are not always *utensils*. Believe us, materialists! these idle patches of ground are amongst the utilities.

Again: those isolated trees which stand in odd nooks and angles, or lean against blind walls, or fling their boughs over the foot-pavement, have a like healthful effect both on the spirits and the spirit; we would preserve them as so many off-sets from the Tree of Life—for all the sylvan tribe may be considered emblems and invigorators of vitality. Look where Wood-street empties its dark chasm-like sewer of pedestrians into the torrent along Cheapside; there a beautiful "lady of the forest" extends her arms like an Elysian willow at the conflux of Styx and Phlegethon: what an eye-salve is her summer-foliage in that adust atmosphere, and her moist-green rind in the lurid winter! What a freshness and sweetness she breathes through that foul and pestilent congregation of vapours! her delicate virgin form hallows that most secular (not to call it profane) neighbourhood, as it were a shrine which sanctifies even the unholy ground within its view. We could point out many other trees whose retiredness and repose furnish a grateful contrast to the bustle and wretched turmoil beyond their pale, but there is one now threatened with destruction, too near at hand peradventure for this late plea and humble petition to save her. Our gentle client stands on or nigh the projected line of "improvement" between St. Martin's Court and Newport Street, forming the sole natural object, except sky (and a fool or two) visible in that semi-subterranean quarter: dilapidation and ruin surround her, how can the helpless, solitary thing, escape a similar fate? Will not mighty Pan—we mean my lord of the Woods and Forests—be chivalrous enough to defend the Dryad of St. Martin's-in-the-Fields (or rather out-of-the-Fields) from the hatchet or tomahawk of savage tree-butchers? Ought not the Maiming and Mutilation Act to protect from wanton defacement and disfigurement the vegetable form divine, as well as the human, which has often as much of the block or stock about it as the other? Our own proposition is that, where possible, all such trees should, like those on village-greens, be made parish properties, approachable but still isolated; that where no such tree exists, one should be planted at every commodious spot; and that a fountain, jet, basin, or pump, should be constructed beside it. Oriental barbarians do this; are the most civilized people of the West to remain compared with them "asses unpolicied"? We cannot grant our proposition in any particular Utopian, unless, perhaps, in its visionary expectation of sufficient public spirit or common sense among London citizens for carrying it out. But a large portion of the present *terra practica* was once part of Utopia, and more and more of the latter region is reclaimed and rendered profitable every year: so we do not despair. "Pressure from without" would soon make water rise; let the Press produce that pressure, and become a force-pump of many handles, to compel an abundant flow. We are neither nympholepts nor partizans of the cold-water cure as a panacea; we consider our fellow-townsmen neither owls nor loup-garous, to be shut up in ivy-mantled abodes, or have London streets like forest walks "shagged with horrid shades" to roam in: but the metropolis, we humbly submit, may reform its unclean and un-sane habits—may enjoy after a rather more plentiful fashion, the advantages of wood and water, without being turned into a Lake of the Dismal Swamp or a Vallombrosa.

These remarks were written before Mr. Towers's 'Account of the Croton Aqueduct' reached us (see *ante*, p. 974), and as a stranger, we gave him welcome and precedence;—what New-York has done towards self-purification and self-preservation, proves what a wealthier town could do, and would, were the Typhus as aristocratical a disease as the yellow fever.

DR. ROBINSON'S REPLY TO SIR JOHN HERSCHEL.

My assertion, that the forty-feet telescope did not produce effects proportioned to its magnitude, is virtually admitted by Sir J. Herschel in his last letter. The two satellites of Saturn, which were supposed to be its tribute to astronomy, now are confessed to have been discovered by a twenty-feet reflector; and "their motions were followed out, to the determination of their periods and calculation of their tables," with that instrument. What then has its gigantic companion really achieved?

Sir John objects to my "à priori reasonings," "hypothetical interpretations," and thinks I ought to have "confined myself to reasoning on facts before the public." In these respects I cannot see how I could act otherwise; I had expressed an opinion, which had been formed on careful examination of every circumstance that could bear on it, in terms which ought not to have offended any one. For this I was arraigned by him, and in my defence stated at length the motives which induced me to form it, which I think are not impugned by any of his statements. Yet they admitted of a very simple answer. If Sir John had used this telescope in his father's lifetime, his testimony would be decisive; if not, he might at least explain why this singular "reserve" was extended to him. If any *test* double stars were observed with it, he might have given us their names, as I suggested. If any comparison of its light to that of the twenty-feet was made by diaphragms, it might have been stated. This, at least, was the course I pursued when I made public my opinion of the power of Lord Rosse's three-feet speculum, and Sir John himself, by his valuable list of test objects, has shown its propriety.

In one respect this discussion is "likely to advance science." It has brought to light the existence of the journal and treatise, which must be invaluable as stores of experimental research; and I hope that public opinion will be so powerfully expressed, as to induce Sir John to give them to the world. Any reason for withholding them must have ceased long since, and he ought not to subject himself to the charge of wishing to be the solitary possessor of intellectual wealth. At the same time I cannot refrain from remarking how much astronomy might have gained, if the few, who have been labouring at the construction of large reflectors, had been enabled to start from the vantage ground of his father's experience, instead of wasting time in inventing what already existed, or trying experiments which had already proved vain.

Some parts of Sir John's references to the journal require notice, and especially that where he taxes me with being "somewhat uncharitable," in believing a certain white metal to be an impure alloy. I am sorry he should form such an opinion of me, but I think the words of Smeaton's letter will show that I do not deserve it. They are:—"Mr. Herschel tells me there is a warehouse in Thames-street where they keep for sale metal ready made into ingots, of which they have two sorts; what they call white and bell-metal, I suppose such as the bells of clocks are made of, but *he did not know exactly their composition*. For his speculum they put two ingots of bell-metal to one of white metal. He *thinks* it a lower metal than what he used for his former specula of nineteen inches." Here is a distinct statement that Sir W. Herschel did not know the composition of this metal, nor even of the mirror; he describes the bell-metal by its use, but not the other. Some years since I requested a friend to inquire among the warehouses in Thames-street, and similar shops, for it, but found that no such article was known. Afterwards, visiting the copper-works at Hafod, I observed such a material, looking like coarse speculum metal, and called white metal by the workmen. This, I supposed, might be the material in question.

But this extract gives rise to another question. Sir William Herschel did not know the composition of metal in 1785: his son declares it to have been "the highest speculum metal then known." If so, the other must have known what it was. London opticians did not surely work at random; and it must have been some standard composition. Mudge's, of 32 copper+14½ tin, was long known; Edwards had just published his. Either this is stated as Sir John's *opinion*, or on the authority of the journal: if the former, it should have been mentioned; if the latter, the words should have been given, *and the date*, for possibly Smeaton's question might have prompted subsequent inquiry on the part of Sir William.

It appears that the second mirror was not the same composition. This Sir William had quite suppressed. And I think it is also evident that he had attempted to cast one of the "higher" alloy, but failed, possibly from cracking in cooling; else why form such a quantity, and then debase it? When reduced to Mudge's standard, it is 32 copper + 10.7 tin, which can only be called "real speculum metal" by courtesy; and we need not wonder that it tarnished rapidly and wanted brilliancy.

If I considered the instrument "finished" in 1789, I did so on Sir William Herschel's express statement. Sir John thinks it was "completed" in 1796; but could it ever be called finished if it required constant repolishing?

My estimate of the time required in polishing is necessarily vague; so is Sir John's, though I have no doubt that every day spent in that work, as well as in grinding and making machinery, is recorded in the journal. The latter two ought not to have consumed much time; and as, of course, Sir William Herschel did not do the work of a common labourer, these operations could only require a superintendence not inconsistent with his "astronomical work." Why rely on indefinite declamation instead of dates?

The defects in the nebula figures, to which I alluded, are not errors of drawing, as would seem to be implied by Sir John; they show want of sufficient power to show them well in the telescopes employed.

It remains only to notice the answer given to that proof of imperfect definition, which I deduced from the invisibility of the fifth star in the trapezium of Orion; and I do this, specially because it seems to insinuate against me a want of respect for the infirmities of age. "Dr. Robinson (it is said) complains that, in 1815, the eye of an observer in his seventy-seventh year failed to detect two new stars in the nebula." Quite the reverse: I asserted, that if on the 19th of January, 1811, (not 1815,) "in a clear view," he failed to see these stars, the fault was in the telescope, not the observer. I did so, because published observations show that at no great distance from that date he was fully capable of it. With his seven-feet Newtonian 6.3 inches aperture, he observed, in July 12, 1807, the difficult double star ζ Bootis, and on January 17, 1809, a faint companion of α Cygni, and that of 39 Eridani, which is neither very much larger nor more distant than the 5th of the trapezium. The eye which could do this would, I confidently assert, have detected at once both stars in Lord Rosse's three-feet, though this ought only to have four-tenths of the other's light. Then, as to Struve's not having at once perceived the fifth, and Sir John Herschel himself having overlooked it while drawing the nebula with the twenty-feet, (facts which he was disposed to explain by supposing it variable,) this is quite disposed of by Struve, who *now* (Mens. Microm. p. 242,) rejects all such notions, and refers the occasional difficulty of seeing it to the state of the air. But is it not illogical to reason from this difficulty, with a telescope of 9½ aperture, to one of 48?

The allusion to De Vico, if a jest, is out of place; if serious, is at least surprising from a man like Sir John Herschel; I may add imprudent; for that privileged astronomer is said to see in a telescope of 8 inches aperture even the 7th satellite of Saturn, the *chef-d'œuvre* of the forty-feet! If, however, his observations are to originate such speculations as the abrupt emergence of "a brood of stars," or even to cloak the defects of instruments and observers, I hope I may be permitted to say that they should be confirmed by some other observer. Should my friend and countryman, Mr. Cooper, not be prevented by illness, this will not long be delayed, for he has taken to Nice his achromatic of 13 inches aperture.

To conclude: in defending myself from the attack of Sir John Herschel, I have kept in mind the motives which prompted him to it, and admitted them as an excuse for the tone of asperity which pervades it. What I said before, I repeat; that his father's true fame is quite independent of this instrument. He discovered the planet that bears his name with a seven-feet Newtonian, which also was the source of his Catalogue of double stars. With the twenty-

Digitized by Google

feet he achieved his triumphs in the field of satellites and nebulæ. It is the employment, not the making of these telescopes, that constitutes his glory; and whatever be the amount of mechanical skill or patient labour expended on the forty-feet, however honourable to another it might have been, to him it is nothing. If, however, Sir John think otherwise, and estimate so highly this practical knowledge, let him take the advice I have already given, and by publishing the treatise referred to, he will erect a memorial of his father's skill, which will be precious when every specimen of his art shall have perished.

I have the honour to be, &c.

Armagh Observatory, Nov. 9, 1843. T. R. Robinson.

MR. WILLIAM SEGUIER.

We record the death of this well-known public officer, which took place on the 5th ult., less on its own account, though it deserves mention, than because it allows us to express certain opinions regarding the superintendence of national establishments—opinions that we have long held, from profound conviction of their truth, but also withheld from delicacy towards an amiable and most respectable man. Our acquaintanceship with Mr. Seguier was in matters of *connoissance* alone, and would enable us to furnish few details of his private life and character, were they even relevant or important. He once informed us, as we recollect, of his having been "taught" by the celebrated William Blake—how different the master and the pupil! how different their lot! Blake earned eighteen shillings a week and immortal renown, while his scholar earned the directorship of almost all the great picture galleries—and such slight memorials as this! But if he did not imbibe any of that fanciful painter's sublime and singular genius, Nature had bestowed upon him a far more profitable gift—common sense—which he best evinced, perhaps, by resigning an art that promised him neither fame nor fortune, and undertaking a lowlier one, that ensured the latter. Instead of an artist, he became a pictorial artizan, called a picture-cleaner; and by his diligence, his adroitness, and discretion, did, we believe, as much service in the reparation of ancient master-pieces as any other adept, and rather less than the customary damage—no small praise. Extended and observant practice of this kind matured his judgment, and made him, before long, a wary connoisseur—a leading critic—and, at length, an oracle. To his successful career, no doubt, conduced his extreme urbanity, good humour, kindliness, and communicativeness upon the subject of art. Although an uneducated man (we might use a stronger adjective), and speaking, as some persons not illiterate do, the vernacular *patois*, with all its characteristic redundancy and deficiency and vicarious interchange of letters, Mr. Seguier frequented the highest circles, where his natural good breeding received a polish that, despite the said drawbacks, carried him well through conversations not over-refined. We particularize these little items, because they afford an irrefragable test of the state in which artistic criticism stood under the last two reigns: how any one who possessed no intellectual endowments or acquirements—no very purified, or exalted, or expanded tastes—who had no pretensions beyond those of a skilful picture-mender, should have obtained the sovereign chair of connoisseurship, above all his coevals, can be accounted for only by the despicable nature of the "æsthetics" then prevalent. George the Fourth was, at best, a dignified *petit-maître*, ostentatiously elegant, and essentially vulgar-minded: to him we owe Buckingham Palace, Regent Street, and Brighton Pagoda—each a gigantic display of littleness; through him and his patronage, *Nash*, from a confectioner of lath-and-plaster houses, became a popular architect—*Lawrence*, from an exquisite limner a limner of exquisites—*Seguier*, from a picture-cleaner, superintendent of all the royal and national picture-collections together! We do hope, that if these numerous pinacothecas must have, like the separate wings of Millbank Penitentiary, but one overseer, this lay-plurnlist will be sought in a more elevated class of *savans* than picture-cleaners;—let him be a gentleman, either artist or amateur, not unacquainted with ancient and middle-age and modern literature, familiar with the whole department of Criticism, theoretical as well as practical, possessing enlightened taste, and a comprehensive esteem for *all* the Arts, and all the Schools, and all the Masters, in their distinct yet connected and convergent lines. We may have here sketched out a "Grandison" director—

A faultless monster which the world ne'er saw.

Yet we could *point out* a close approximation to our model—on the Continent. The very low standard, likewise, taken hitherto by our countrymen makes them, we suspect, imagine the qualities above-mentioned not so much incompatible as superfluous. The late Director's knowledge of art suited their ignorance; it was chiefly, or altogether, anecdotical and traditional; he could cite a pleasant tale about Claude when a pastrycook, or tell what Cromwell said about his warts to the portraitist, or all the Emperor of Austria remarked about Sir Thomas's 'Pope Pius;' he could descant upon the grace of Raffael, and the airs of Guido, &c. &c.; but a deeper vein of criticism is, we trust, now in demand. The Catalogue he drew up for the National Gallery would vindicate more than we have said against his limited attainments; it swarmed at first with errors, and is still over-run with them. Of the Spanish school he knew as much as any cognoscente among us—quasi nothing; of the German little more; of the Italian far from enough; of the French perhaps a good deal (though his mistake between *Lancret* and *Watteau* renders us sceptical); but of the Dutch and Flemish schools we believe him to have been an excellent judge, and no ill one of the English. About Sculpture we should guess he understood a *minimum*, about Architecture nought whatever, about Engraving much, especially of the particular schools. Upon the whole, as a connoisseur, if he was not in advance of his own era, he was fully abreast of it, and let this merit enjoy its due praise, when so many a presumptuous man lags behind the present age while he thinks to lead it.

OUR WEEKLY GOSSIP.

Germany has sustained a heavy loss, in the department of Medical Science, by the death, at Leipsic, at the advanced age of seventy, of Doctor Heinroth. Heinroth was a pupil of the celebrated Pinel; whose views and those of Esquirol, as to the substitution of moral treatment for physical coercion, in the cure of madness, he was the first to introduce into Germany, both in his own practice, and by his publication and annotation of the works of those two eminent physicians. On his return from France, the Saxon government created a chair, for the teaching of this class of medical science, expressly for him; and appointed the new professor, head physician to the St. George's Hospital for the insane—the functions of both which offices he discharged till his death. He was the author of many works of reputation, connected with his own specialty,—besides some popular novels and romances, published under the pseudonym of Treumund Wallentreter—and member of most of the learned bodies in Europe, including the Royal Society of London.

The members of the Royal Society will hear with regret of the sudden death of Mr. Roberton, the assistant-secretary. It appears, by the evidence given at the inquest, that on Monday evening the wife of the Porter took letters to Mr. Roberton who was then in apparent good health, said he was going out, but should return in about an hour. The next morning his servant, when she went to call him, found his door fastened. She at first presumed that he had gone out, and locked the door, as was his custom; but as he did not make his appearance, a blacksmith was sent for, and upon the door being opened he was found lying upon the sofa in a reclining position, quite dead; and Dr. Bostock has given it as his opinion that he had been dead about seventeen hours. Mr. Roberton was a most obliging and amiable man, and an indefatigable officer of the Society.

It is with pleasure we announce that a pension of 200*l.* a-year has been granted by Her Majesty to Sir William Hamilton, Professor of Astronomy, and President of the Royal Irish Academy.—Rumours are current that the Presidency of King's College, London, is about to be given to Dr. Mill, formerly President of Bishop's College, Calcutta.

The Paris papers mention a rumour that there is to be a new creation of Peers, and that M. Victor Hugo will be one of them. They also announce the death, on the Blue Nile, of Dr. A. Petit, who had been sent by the National History Society of Paris on a scientific mission to Abyssinia. The *Univers* expresses great indignation at the neglect which has suffered the magnificent Pagan Sarcophagus—brought from Salonica—and the frieze of the Temple of Diana,—from Ephesus—by the government, at great pains and expense, to lie for six months, at the foot of the Colonnade of the Louvre. "Since their arrival in the inhospitable climate of Paris," says the *Univers*, "they have endured more fog and rain than during their long existence in their native soil. When the frost shall attack them there will remain but the degraded fragments of what have cost several hundred thousand francs, and the lives of seven men,—among whom we have to mourn the ill-fated painter, Clement Boulanger." The Paris Mint has just struck a very fine medal, in commemoration of the visit of Queen Victoria to the Château d'Eu. On the obverse is the profile of the young Sovereign of Great Britain, and on the reverse the following legend: "*S.M. Victoria, Reine d'Angleterre, visite S. M. Louis Philippe, Roi des Français, au Château d'Eu, en Septembre, 1843.*" The die was cut by M. Borrel.—The king has ordered, of M. Davéria, for the next annual exhibition at the Louvre, a picture representing the ceremony of inaugurating the statue of Henri Quatre, at Pau.

Donizetti's 'Don Sebastian' was performed early in the week at the *Académie Royale*, with but a dubious success, (if the reports hitherto received are to be relied on,) as regards that essential of an opera—its music. All that M. Scribe's practised pen could do, in setting forth the striking passages of the romantic story, seems to have been done; and the presence of Camoens, the poet, has enabled the librettist to introduce a higher strain of interest than usually pervades such melodramatic productions as French opera books. The pageantry is sumptuous beyond precedent, the singers impassioned and energetic: nothing seems to have been wanting but inspiration to Donizetti, whose music, as might have been foreseen, is blamed for its deficiency in originality and local colour.

The south of France has again been the scene of inundations, which, though less fruitful in calamity than those of the years 1840 and 1843, wore, for a time, an aspect as threatening, and appear to have created almost as great an amount of alarm throughout Provence, from the apprehension that each year's harvest is to be at the mercy of this destructive visitation. The valleys of the Rhone and the Durance have been everywhere invaded by these rivers, which make the fertility they thus periodically destroy. Bridges swept away, and dikes broken through in all directions, are among the least painful characters in which the story of these wild irruptions is written; and one of the finest provinces of France is in danger, unless a remedy be found, of being, at no distant day, lost to civilization,—a mere waste, or succession of marshes, replacing one of the richest soils in Europe. Surely, however, the resources of science, in this its age of power, wielded by a great and wealthy nation like France, may find the means of curbing these torrents at their sources, or in their course.

Speaking of natural convulsions, the Continental papers have been filled with accounts of an alarming earthquake, which has left terror and suffering in Ragusa: and the small, but fertile, island of Nias, situate to the westward of Sumatra, has undergone a still more dreadful visitation of the same scourge, which has overthrown several hundreds of houses, the Government House, the hotel of the Military Commandant, and three churches; and left an awful list of 1500 persons killed or wounded. A large part of the hill on which the citadel stood, which contained a garrison of about 300 men, was thrown down, and the land on the sea-border was submerged. Several small Hindoo barks, at anchor near the mountain Lie-Tobiá, were thrown to a distance of from 150 to 200 feet inland, and there dashed to pieces.

A letter from Rome in the *Post* mentions that "An event is on the *tapis* which causes much satisfaction amongst the English artists here. The English students have hitherto been unable to follow their professional avocations without many disadvantages, as the institutes here have not afforded them facilities to carry out their artistic pursuits, not from any want of courtesy, but from actual want of space and accommodation. The British Minister resident at Naples, Sir George Hamilton, has opened a subscription among the English nobility and others re-

Digitized by Google

sorting to the Italian States, and the fund already amounts to near three thousand pounds, with which it is intended to erect an Academy, in which all English students will be enabled to progress with their studies throughout the year, and not to be compelled to remain inactive for months, without access to the public collections. The establishment is to contain all that is necessary for their use, also a large and magnificent collection of casts from the antique and the chief works of the most celebrated modern sculptors, &c.; likewise an extensive library."

The next meeting of the Scientific Association of Italy is to take place at Milan, and that city has come to a resolution to grant 10,000 Austrian livres "to be expended in one or more grand experiments within the region of the physical or natural sciences, to be made during the meeting of the Congress. The Italian *savans* are requested to send to the Municipal Council of Milan, by the 1st of January, 1844, indications of the experiments they propose to make. These are to be submitted to a committee, which, after considering their importance and their cost, is to decide which shall be undertaken. The report of the committee will be communicated to the proposers of the experiments adopted, and conjoint measures will be taken for their execution. The experiment must be of a nature to elucidate and establish some new fact, or some progress in one recently discovered. It must be capable of being finished within the duration of the Congress, so that the members may participate in it." In the North, too, a fact is recorded, in connexion with these Scientific Associations, which is a pleasant evidence of their tendency to open themselves a way through the prejudices of darker times. The Congress of Scandinavian Naturalists assembled last year at Stockholm, having decided on holding their next meeting at Christiania, the President had to express his regret that several distinguished members of that body would be precluded from taking part in the coming year's proceedings, because of the law which forbids the entrance of persons professing the Hebrew faith into Norway. The Association, thereupon, determined to memorialize the Norwegian government on the subject, and the result has been a suspension of the interdict in favour of such Jewish naturalists as shall desire to make part of the Congress,—with a good prospect of its expansion, at the next sitting of the *Storthing*, into a larger measure of religious liberty.

Letters in town, from Germany, announce the successful appearance of Miss Birch at the Leipsic Concerts. Her reception is said to have been the warmest witnessed for many seasons. Among other "musical changes," the approaching visit of Strauss to St. Petersburgh may be mentioned. Nor must the recent appearances of M. Raphael and Mdlle. Rebecca Felix at the *Odéon* be forgotten. These young tragedians seem to have been pushed forward on the strength of their sister's name, rather than their own merits. A new opera by *Maestro* Persiani, 'Il Fantasma,' is in preparation at the Italian Opera House, at Paris. To these matters, we may add a home rumour which is current, and on tolerably good authority: this promises the return of Madame Vestris to her old throne in Covent Garden Theatre.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—BRILLIANT EFFECTS are produced by ARMSTRONG'S HYDRO-ELECTRIC MACHINE at three o'clock, and at Eight in the Evenings (except Saturday Evening). By LONGBOTTOM'S OPAQUE MICROSCOPE the singular Optical Illusion of converting a Matrix into the appearance of being a Cast in bold relief, is exhibited, with a variety of other curious effects. Particulars of the CHEMICAL and PHILOSOPHICAL LECTURES, which are delivered Daily, are suspended in the Hall of Manufactures. DISSOLVING VIEWS. DIVER and DIVING BELL. Numerous STEAM ENGINE and other MODELS at work. The original CRAYON DRAWINGS of RAPHAEL'S CARTOONS, &c. &c.—Admission, One Shilling.—Schools, Half-price.

A NEW EDITION of the CATALOGUE, with Illustrations, One Shilling each.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.—*Nov.* 13.—R. I. Murchison, Esq., President, in the chair. The Secretary having announced the departure of several travellers for different parts of the world, and read various letters received during the recess from correspondents abroad, the donations were announced, among which we noticed the 'National Atlas,' by Mr. A. K. Johnston, of Edinburgh, and a pair of Globes, constructed and presented by Mr. Malley. Various papers had also been received, which will be read at subsequent meetings. These preliminaries terminated, Dr. C. T. Beke, lately returned from Abyssinia, proceeded to detail some of his routes in that little-known country, and to explain the manners and customs of the inhabitants, the features of the country, and its productions, &c. An abstract of Dr. Beke's account will be given next week.

ASIATIC SOCIETY.—*Nov.* 11.—Sir T. E. Colebrooke, Bart. M.P., in the chair. This was the Society's first meeting for the season. A large number of presents were laid upon the table. The Secretary read the commencement of a paper on the History, Geographical Limits, and Chronology of the Chera Kingdom, one of the three great divisions by which the peninsula of India was anciently occupied. We shall defer our notice of its contents to our report of the next meeting.

ROYAL SOCIETY OF LITERATURE.—*Nov.* 9.—L. H. Petit, Esq., in the chair. The routine business, being the first meeting of the season, electing members, &c., being finished, Mr. Osburn, jun., of Leeds, read a paper on the funeral rituals of the Egyptians, and illustrated it by copies made from the ancient papyri.

SOCIETY OF ARTS.—*Nov.* 15.—W. Tooke, Esq., V.P., in the chair, read a communication, by Mr. Pellatt, on Elkington's process of Coating Iron with Zinc, Copper, &c. Several specimens of hinges, ornamental railings, &c., were laid on the table. Ordinary crystallized sulphate of zinc is dissolved in water, with a proportion of 1 lb. of the sulphate to one gallon of water, which forms the zinc solution. The iron to be zinced having been cleansed, by remaining for a short time in dilute sulphuric acid, and afterwards well scoured with sand, is placed in the zinc solution, and being attached to the negative pole of the galvanic battery, (plates of zinc being connected with the opposite pole which face the articles in the solution,) the deposit takes place. After being a short time in the solution the article should be taken out and brushed all over, so that any portion which may not have been properly cleansed, and to which the zinc has not perfectly adhered in consequence, may be discovered. It is then returned to the solution, and allowed to remain until a covering of the requisite thickness is obtained. In coppering iron, a solution is formed of ferro-cyanide of copper dissolved in the cyanide of potassium. When the iron to be coated has been cleansed, it is placed in this solution, heated to about 120 degrees and in connexion with the battery. In from two to five minutes the article is coated with copper; it is then scoured with sand, and placed in an acid solution, when, if any portion of the iron is found to be uncovered with the alkaline solution, such part will turn black, and must then be cleansed and returned to the solution for one or two minutes. In order to test the adhesion of these metals, bolts of iron coated with copper have been driven through African oak twenty-four inches thick without at all disturbing the coating of copper; they have also been heated above redness, and then plunged into cold water, without any injury arising thereto from the difference of expansion and contraction of the metals.

MEETINGS FOR THE ENSUING WEEK.

MON. Statistical Society, 8, P.M.
— Institute of British Architects, 8.
— Chemical Society, 8.
TUES. Linnean Society, 8.
WED. Society of Arts, 8.—Mr. C. W. Williams's smokeless Argand Furnace will be described.
THUR. Royal Society, half-past 8.
— Royal Academy.—Anatomical Lecture.
— Royal Society of Literature, 4.
— Society of Antiquaries, 8.
— Medico-Botanical Society, 8.
— Numismatic Society, 7.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY.—*Deborah.*—As affording the public an opportunity of hearing the less known works of Handel, the performances at Exeter Hall maintain their value in spite of their incompleteness: the above word meaning not only to reprove imperfections of execution, but also to remonstrate against the mystification of Handel's intentions by Mr. Perry's "additional accompaniments." Such patchings-on and decorations are only sufferable when the artist is a Mozart; a truth which, at the risk of being thought tedious and pragmatical, we must again and again repeat, till our manufacturing professors "assume a virtue, though they have it not," and refrain from these presumptuous tamperings with the works of the great masters. 'Deborah' is one of Handel's least worthy Oratorios. The passage of scripture history on which it is based, is too restricted to admit of greater variety, in sentiment or description, than the obvious contrast between Pagan tyranny and Israelitish valour: since the scene of *Sisera's* destruction by *Jael*, if treated otherwise than in recitative, must of necessity have become too dramatic for the solemnity of Oratorio. It is observable, by the way, how, for the most part, Handel seems to have shrunk from dealing with such portions of his subject, save in chorus. With the aid of this engine, no judgment was too tremendous, no surprise too sudden for him to represent. Is it not possible that he felt that in this manner of illustration was a more complete escape from the passion and *attitude* of stage representation, than if he had thrown the weight of situation upon single interlocutors? We are inclined to doubt whether the Great Poet so deliberately reasoned with himself, but the idea has again and again suggested itself, and may be worth recording. Nothing, at all events, can be worse contrived than the text of 'Deborah,' which was concocted by one Samuel Humphreys, in the foolish and bombastic manner of the time. The Prophetess is all but degraded to a scold. *Barak*, her associate—save in one *aria*, where he compliments the gentler sex for *Deborah's* sake—repeats the same warlike sentiments, while *Abinoam*, the Jewish patriarch, has but one song in a paternal strain. We are writing without a score of the Oratorio before us, and therefore can take no exact account of the omissions which were probably made. It is fair, however, to presume, that the best songs have been retained, and these justify the above character. Our favourite is the solemn air "In Jehovah's awful sight"—here the modulation of the accompanient ought to silence for ever all such as fancy Handel old-fashioned: but the public prefers "Tears such as tender Fathers shed." The airs given to *Barak* were probably written for a different voice than is now to be obtained, the female *mezzo soprano* or *contralto* being not poignant enough, especially in *bravura*, to replace the penetrating tones of the artificial *soprano*. This must be pointed out for Miss Dolby's sake: whose endeavours were but ineffective in spite of the real genius they displayed. We never heard her put forth so much dramatic power. Were her delivery of text equal to her conception of music, we should be inclined from this, as from other recent indications, to augur a first-rate addition to our stage singers. Little space remains for the choruses—which are, as usual, the finest part of the work. The first very striking burst, unfamiliar to the audience, is "O blast, with thy tremendous blow." "Immortal Lord" and "See the proud chief" have been long stock pieces at our sacred concerts. Next must be mentioned the wonderful "O Baal": for wonderful are its expression, colour, and character: and how much so, will best be felt on comparing it with two choruses in which a similar rhythm of $\frac{12}{8}$ is employed by Handel: the one being the stupendous "But the waters overwhelmed their enemies" ('Israel'), the other, "Happy we" ('Acis and Galatea'). It was a pity that the alluring grace of the middle portion of the movement was so largely impaired by want of firmness in entry among the choralists. "Lord of Eternity" is a noble contrast to this Pagan hymn. To us, too, the opening of the third part, "Now the proud insulting foe," is peculiar for its dignified and picturesque beauty. It is an evening scene after a victory—in which the thoughts of the desolation upon which the sun is going down, give a certain sadness even to the triumphant jubilations of the conquerors. The last chorus we can mention is the short "Doleful tidings,"—another noble example of modulation and dramatic effect. As a whole, 'Deborah' was better performed than any oratorio given for the first time at Exeter Hall, which we recollect. Miss Rainforth, Miss Cubitt, Mr. Giubilei, and Mr. Phil-

Digitized by Google

lips—with Miss Dolby—were the singers. The band and the chorus were steady. 'The Messiah' is to be the next of the winter series.

MISCELLANEA

Old London Wall.—Respecting the fine old fragment on Tower Hill, a Correspondent reminds us that, on the petition of the Church Building Society, the Common Council lately granted the site for the erection of a new church, which necessarily involved its destruction; but that the Members of the Council of the Society were no sooner made aware of this than they suspended operations. He urges on us the propriety of establishing in this country, as in France, a permanent Commission for the better conservation of our national antiquities; and quotes a passage from Smith's 'Collectanea Antiqua' in support of this argument. "Ecclesiastical buildings surely are public property, the property of past and future ages as well as of the present; and their existence or destruction ought not to be decided by such reasons as would be advanced for the pulling down of a shop or warehouse: it should be the duty of government at least to provide some competent tribunal to decide on so serious a question as that of their demolition. And yet it can be shewn that even in the City of London, within the last few years, several ancient churches have been needlessly destroyed. It can be proved that, at the Coronation of George the Fourth, the fine monument of Anne of Denmark, Queen of James the First, Great Britain's Solomon, was at one fell swoop pulled down and carted away. Its choice marble columns and statuary were long exposed for sale in a mason's yard near the Wooden Bridge at Pimlico! This superb monument is the subject of one of the finely engraved plates in Dart's History of Westminster Abbey. It can be proved that, in the same sacred edifice, at a date not more or less remote than that of the last coronation, the splendid monumental brass of John of Salisbury was torn up and stolen! It can be proved that another kind of monument, the records of the City of London, have been in part sold out of the Guildhall itself for *waste paper*."

Stybarrow Crag, Ullswater.—The papers mention that this stupendous cobble crag has been shattered and has in part fallen, so that the road was impassable, from the large masses of rock, and the postman was obliged to return to Patterdale with his gig, and find his way back to Penrith by traversing the higher part of the mountain on foot. The largest blocks, which were of immense size, have rolled down into the lake of Ullswater. Large numbers of the country people have repaired to the place to witness the devastation caused to one of their favourite scenes of stern romantic grandeur. This singular convulsion has given rise to much excitement in that part of Westmoreland.

Relics at a Discount.—The mortal remains of two saints, coming from Civita Vecchia, and destined for Belgium, were presented, a few days back, at the Custom-house of Lisle, says a journal of that town, where they were subjected to duty as objects of curiosity.—*Galignani.*

An Ancient Coffin was discovered some time since in the cemetery of Lens (Pas de Calais). The body, which fell to dust when exposed to the air, was supposed to have been that of a person of rank, from a certain quantity of jewels found with it. They consist of a pair of earrings, a brooch, two cloak-clasps, a large pin, and a bulla or medallion, all of gold. Several are covered with rose-coloured quartz, exceedingly thin, and having imitation pearls and coloured stones at the corners. The workmanship, though not remarkable for excellence, produces a good effect. The clasps are covered over with a fine tracery of gold, giving the appearance of net-work. The whole of these articles were submitted to the Historical Committee of Paris. The opinion given by the committee is, that the objects date from the time of the Merovingian race, and that they formed the ornaments of a princess. This opinion agrees with the tradition handed down, that Lens was formerly inhabited by the Merovingian princes.

W. C.—G. W. B.—received.

J. C.—We admit the hardship, but do not see how it concerns the public.

PATRICK, LOWTH, ARNALD, WHITBY, and LOWMAN.
On Monday, the 1st of January, 1844, will be published,
PART I. price 2*s.*, and Vol. I. price 24*s.*, to be continued on the 1st and 15th of every Month, until completed in Forty-seven Parts, at 2*s.* each; or in Volumes, published every Three Months, at 24*s.* each,

A CRITICAL COMMENTARY and PARAPHRASE on the OLD and NEW TESTAMENTS, and the APOCRYPHA,
By PATRICK, LOWTH, ARNALD, WHITBY, and LOWMAN.
A New Edition, in 4 vols. imp. 8vo.

Conditions of Publication.

1. A Part of this valuable Work will be published every fortnight until completed, in Forty-seven Parts, each averaging Six Sheets, at 2*s.* each.
2. For the convenience of Families, the Work will be published also in Volumes every Three Months, at 1*l.* 4*s.* each, in cloth boards.
3. The Work will be uniformly printed on a superfine paper made on purpose by Mr. Dickinson.
4. The Work is in such a state of progress, that no delay is expected to take place in the course of its publication.

Advantages of this Edition.

In all previous editions of this valuable Commentary the Annotations were printed WITHOUT THE TEXT, thus rendering it a mere book of reference for the study. In this edition the text is placed at the head of each page, as in other Commentaries on the Holy Scriptures, thus adapting it to general use both in the family and the closet.
London: printed for Thomas Tegg, 73, Cheapside; and may be procured by order of every dealer in Books in the United Kingdom.
*** Persons desirous of becoming Agents are requested to address a letter to the Publisher.

*** *To be had of all Booksellers, and at all the Libraries.*

Just published, neatly stitched, in 8vo. price 2s.

STORIES of GREEK HEROES, in a Series of Tales related to his Son, by the celebrated Historian, B. G. NIEBUHR. Translated from the German.
London: D. Nutt, 158, Fleet-street.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security. F. G. P. NEISON, Actuary.

NORTH BRITISH INSURANCE COMPANY, 4, New Bank-buildings, and 10, Pall Mall East: instituted in 1809. Incorporated by Royal Charter.
His Grace the Duke of Sutherland, *President.*
Sir Peter Laurie, Alderman, *Chairman of the London Board.*
Francis Warden, Esq. (Director H. E. I. C.) *Vice-Chairman.*
John Webster, M.D. 24, Brook-street, *Physician.*
Capital 1,000,000*l.* fully subscribed.
Annual Revenue, from Life Premiums.....£84,000
Accumulated Assurance Fund, exceeding 380,000

DIVISION OF PROFITS.

The Directors beg to remind those desirous of effecting Assurance on their lives, that all Policies opened with this Office on the participating scheme, before the 31st of December next, will secure the full benefit of the current year's entry at the approaching septennial investigation in 1844, when, from the prosperous state of the Company's business, a considerable addition, or bonus, to the existing policies may be confidently expected.

Fire Insurances may be effected at the Company's Western Branch Office, 10, Pall Mall East, on Private Houses, Country Mansions, Furniture in the same, and Farm Steadings, at the lowest rates of premium corresponding to the risk.

Prospectuses, containing Tables of Rates, and a full List of the Directors, &c. who are all responsible *Partners*, may be obtained on application to Messrs. B. and M. Boyd, Resident Members of the Board, 4, New Bank-buildings; or to the Actuary, 10, Pall Mall East. JOHN KING, Actuary.

WESTERN LIFE ASSURANCE SOCIETY, 49, Parliament-street, Westminster.—Capital 500,000*l.*

Directors.

Henry Edgeworth Bicknell, Esq.	James Hunt, Esq.
William Cabel, Esq.	John Arscott Lethbridge, Esq.
Thos. Somers Cocks, jun. Esq.	Edmund Lucas, Esq.
George Henry Drew, Esq.	George Kennet Pollock, Esq.
William Evans, Esq.	James Lye Seager, Esq.
William Freeman, Esq.	John Bazley White, Esq.
Francis Fuller, Esq.	Joseph Carter Wood, Esq.
Joseph Henry Goodhart, Esq.	

Physician—William Richard Basham, M.D.
Surgeons—Alfred Leggatt, Esq.; George D. Pollock, Esq.
Bankers—Messrs. Cocks, Biddulph & Co.
Solicitors—Messrs. J. L. Bicknell and J. C. Lethbridge.

The leading features of this Society are—
The very moderate Rate of Premium when viewed as combined with *perfect security* to the assured.
The advantage to the Assurers (by Table 2) of becoming entitled to *three-fourths* of the *profits*.
The assurance of a *certain bonus*.
The facility for *securing debts*.
The allowance of *half* the Annual Premium to remain unpaid for *seven years*, and
The accommodation of *temporary loans* to the Assured on available security. Immediate and deferred Annuities are granted by this Society on terms advantageous to the Public.
A liberal Commission allowed to Professional Gentlemen and Agents introducing business to the Office.
EDWARD T. RICHARDSON, Secretary.

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.
President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Park-square, Regent's-park.
With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. Or one-half only of the usual rate, with interest on the remainder, will be received for five or seven years, the other half to be paid at the convenience of the assured.

The insured for life participate septennially in the profits realized.

A liberal commission is allowed to Solicitors and Agents.
DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have been yet appointed.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.
Manufactory, No. 6, Francis-street, Gray's-inn-road.

F. ARNOLD'S

INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

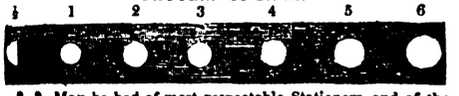
To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

ALLNUTTS' FRUIT LOZENGES, for Coughs, Colds, Sore Throats, Hoarseness, &c., prepared solely from the BLACK CURRANT.—In the above preparation the acidity of the Black Currant alone is introduced, and that in the highest degree of concentration. The Lozenges may therefore be strongly recommended (even to persons of the most delicate constitutions), in the above complaints, as they tend to allay inflammation, and particularly to promote a free expectoration. Public speakers and singers will find them of peculiar service. They have been also remarkably useful in cases of the Influenza. The annually increasing sale for the last 30 years of this article, notwithstanding the numerous attempts to equal it, will sufficiently prove its decided superiority to all other preparations of a similar description.—Be careful to ask for "ALLNUTTS' FRUIT LOZENGES," prepared only by the Proprietors, Allnutt & Son, Queen-street, Portsea.—Sold in boxes, at 1*s.* 1½*d.* each, by all Patent Medicine Vendors in the Kingdom.

THE OMBROSOME, or PATENT PORTABLE SHOWER BATH, especially adapted for travelling and exportation. By this Bath an inexhaustible shower is produced from a few quarts of water: the height of the shower may be increased or lessened to suit adults or children, and occupying so little room, is peculiarly suited for bed-rooms and dressing-rooms; it is also an excellent Douche Bath. Being little larger than a writing-desk when packed, it will be a great desideratum for exportation to India and other hot climates. To Military Men and others of a migratory life, also to Students of the Universities, Inns of Court, &c. (where rooms are low and water scarce), the present invention cannot fail to be most acceptable. It is made entirely of brass, and is at once simple and elegant.—May be seen at the Royal Polytechnic Institution; and be had, with Prospectuses, wholesale and for exportation, at the Manufactory, 115, Old-street; and retail at the Bazaar, Panklibanon Iron Works, 58, Baker-street; Mr. J. L. Benham, 19, Wigmore-street; Mr. C. Bray, 16, Cranbourne-street; Mr. J. Deacon, 4, Moorgate-street; Mr. J. Evans, London Bridge; Messrs. Pallows & Adcock, 4, Halkin-street West; Messrs. Glenton & Chapman, 147, New Bond-street; and of all the leading Ironmongers throughout England.—Price 4*l.* 10*s.* and 5*l.* 5*s.*

WOLFF & SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK, in various Colours.

E. WOLFF & SON beg to apprise Artists and Amateurs that they have, by the introduction of great improvements in their CRETA LÆVIS, enabled it to be used the same as the ordinary pencil; and effects can now be produced equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline. For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c. all the various tints can be obtained with a truthfulness that cannot be surpassed,—thus superseding every other method in general use. The drawings may be carried in a portfolio with safety, as, unlike other crayons, they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio. The CRETA LÆVIS will not be affected by heat or change of climate. Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and all respectable Stationers, where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.



Instructions for Use.—In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.—Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF & SON beg to recommend their newly-invented SKETCHING PENCILS, or Permanent Black Chalks:—B B, very black, for foreground; H B, middle tint; N, neutral tint for distance. These Pencils are peculiarly adapted for sketching heads and landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

The method of using the CRETA LÆVIS is taught by Mr. W. H. KEARNEY, Member of the New Water-Colour Society.
Manufactory, 23, Church-street, Spitalfields.

E. WOLFF & SON'S newly-invented MATHEMATICAL PENCILS, for Mathematicians, Engineers, Architects, &c., manufactured of Extra Hard Lead, and warranted to retain a very fine Point.—E. WOLFF & SON, in introducing their Extra Hard Lead Pencils for Mathematical and Architectural purposes, beg to draw attention to the advantages resulting from their adoption in preference to the ordinary Pencils. They are made of six distinct sizes, by which means they can be fitted to all instruments, and are so constructed that each pencil may be cut in halves without waste, thus making two Pencils, each of a length the most convenient for use, and obviating the difficulties existing with respect to the ordinary pencil.—E. WOLFF & SON have also Half-round Pencils suitable for the Spring Bow Instrument, thus preventing the necessity of dividing the Pencil down the centre. They are also manufactured of extremely hard Lead, of the finest quality, which will retain a very fine point, and give a clear, even, and distinct line.

PATTERN OF SIZES.

*** May be had of most respectable Stationers, and of the Manufacturers, 23, Church-street, Spitalfields, London.

A Sample of each Size will be sent by post to any part of the Kingdom on receipt of postage stamps equal to the amount.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle: the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 71½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Enfield-street, Hoxton; S. Game, Fish-street-hill; J. Bain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

SHARPE'S SOLUBLE QUININE DENTIFRICE. Recommended and used by the FACULTY, for preserving the TEETH to the latest possible period. The advantages of this truly scientific preparation arise from its holding, in a state of quintessence, the medicinal properties of Bark and Myrrh, which, by a chemical combination, known only to the proprietor, are rendered instantly soluble in the juices of the mouth; at the same time, it is perfectly free from acid, grit, or any pernicious ingredients. By its astringent qualities it prevents decay, eradicates scurvy, and, by exciting healthy action of the gums, prevents their separation from the teeth; or, if subject to bleeding, gives, in most cases, immediate, and, by continued use, permanent relief. It is strikingly beneficial in affections of the mouth, the result of a mercurial or medicinal course; and, when subject to tenderness of the gums arising from cold, its use is a positive preventive of future attacks. The virtue of this celebrated Dentifrice in cleansing, removing incrustations, and speedily giving a beautiful whiteness to the teeth, as well as sweetness to the breath, is unrivalled by any other Tooth Powder, whilst its refreshing bitter imparts an agreeable sensation to the most discriminating palate.

Be careful to observe the Proprietor's Signature on the Government stamp.—Prepared and sold by G. Y. SHARPE, Chemist, Islington-green, London. To be procured of all respectable Medicine Venders, in boxes at 1*s.* 9*d.* and 2*s.* 9*d.* each; and through the following Agents:—Sanger, 150, Oxford-street; Butler, 4, Cheapside; Hannay & Co. 63, Oxford-street; Edwards, 67, St. Paul's Churchyard; Barclay & Sons, 95, Farringdon-street; Sutton & Co. 10, Bow Churchyard; and J. D. Best, 14, Grosvenor-street West, Eaton-square.

N.B. Orders by post immediately attended to.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 839. LONDON, SATURDAY, NOVEMBER 25, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

HANWELL COLLEGIATE SCHOOL, Middlesex. Principal, the Rev. J. A. EMERTON, M.A., Curate of Hanwell, Middlesex.—Parents and Guardians desirous of selecting a School in a healthy situation, combining the intellectual advantages of a Collegiate Course with Religious Instruction, Moral Training, and Domestic Care, may obtain Prospectuses on application to the Rev. Dr. Walmsley, Rectory, Hanwell; J. D. Macbride, Esq., D.C.L., Principal of Magdalene Hall, Oxford; or of the Principal, at the School.

A CLERGYMAN, for many years accustomed to prepare a few PRIVATE PUPILS for their several stations in life, wishes to ADD ANOTHER to the three or four now residing with him.—Any letter addressed to the Rev. D.D., to the care of Mr. West, No. 1, St. James's-street, London, will reach him in the country.

INSTRUCTION at PARIS in the FRENCH and GERMAN LANGUAGES.—YOUNG MEN, and PARENTS anxious to obtain for their Sons a knowledge of the FRENCH LANGUAGE, with the best pronunciation, and every care and attention to their moral and religious instruction, are informed that a FRENCH GENTLEMAN, lately a Professor at one of the Royal and other Colleges of France, is desirous of RECEIVING into his Family THREE or FOUR YOUNG MEN, or STUDENTS. Terms, 2000 fr., or 80l. a year, which includes every expense, except washing.

Several Courses of Lectures are open to the Students without additional cost; but any particular study or course can be followed on payment. Gymnastic and Manual Exercises of every description. Also Fencing and Riding Lessons can be had if required.

The Professor, Monsieur BLED DE BRAINE, will be happy to give every information to persons residing in Paris, at his residence, No. 21, Rue Guillon; and he is permitted to refer parents and others resident in England for further information to a gentleman, whose son is now under his care, and who may be addressed as D., *Gardeners' Chronicle* Office, 3, Charles-street, Covent-garden.

FRESCO AND ENCAUSTIC ORNAMENTAL PAINTING.

MR. FREDERICK SANG, Artist, from the Royal Academy at Munich, begs to inform the Nobility and Gentry (Architects particularly), that he continues, with a considerable number of his Pupils, to decorate Public and Private Buildings in the above manner, and in the different ancient and modern styles, on reasonable terms, and with the greatest dispatch. Orders executed in all parts of the United Kingdom.—Apply by letter to Mr. Frk. Sang, 27, Portland-terrace, Regent's-park, London.

ART-UNION of LONDON.—4, Trafalgar-square, Charing-cross. Established 1837.

President.

His Royal Highness the Duke of CAMBRIDGE.

Vice-Presidents.

The Most Noble the Marquis of NORTHAMPTON, P.R.S.

The Subscribers of the current year will receive for each guinea paid, besides the chance of obtaining a valuable Work of Art, an impression of a Line Engraving, by Mr. E. Goodall, from the Picture by Clarkson Stanfield, R.A., 'CASTELLO D'ISCHIA;' and, *in addition to this*, a series of Twenty-two Designs in Outline, (size, 12 inches by 8,) made expressly for the Society by Mr. H. C. Selous, and engraved by Mr. Henry Moses, illustrative of the 'Pilgrim's Progress.' Several of the Outlines are already engraved, and may be seen at the Office: an EARLY Subscription is earnestly solicited, to enable the Committee to make arrangements for their immediate distribution.

A finished Proof of the Engraving due to the Subscribers of the year 1843, 'RAFFAELLE AND THE FORNARINA,' engraved by Mr. L. Stocks, after Sir A. Callcott, R.A., may be seen at the Office. GEORGE GODWIN, F.R.S. F.S.A. } Hon. Secs.
LEWIS POCOCK, F.S.A. }

November, 1843.

SCHOOL OF METHOD.

Under the Sanction of the Committee of Council on Education.

APOLLONICON ROOMS, 101, ST. MARTIN'S LANE.

SINGING on the METHOD of WILHEM, under the Direction of Mr. JOHN HULLAH.

CLASS No. 29, for TRADESMEN and OTHERS ENGAGED in BUSINESS, commenced on Tuesday Evening November the 21st, at a Quarter past Nine o'clock, and meets on Tuesday and Friday Evenings.

Terms.—Fifteen Shillings for the Course of Fifty Lessons, of One Hour and a Quarter each, or 3s. per Month (Eight Lessons).

Persons desirous of admission to this Class must apply on or before Friday, December 1st.

Tickets and full particulars may be obtained at the Office, 101, St. Martin's Lane.

AN IN-DOOR APPRENTICE is required in a large BOOKSELLING and STATIONERY BUSINESS in the WEST of ENGLAND. References will be required and given. Address X, care of Messrs. Simpkin, Marshall & Co. Booksellers, Stationers'-hall-court, London.

TO SCIENTIFIC INSTITUTIONS, AND OTHERS.—A Gentleman, at present disengaged, would be happy to treat with the above, to exhibit the Dissolving Views, Hydro-Oxygen Gas Microscope, or deliver Lectures on Astronomy, for any term of weeks, having a most splendid Apparatus, and upwards of 60 beautifully-painted Views, illustrative of every country. Apply by letter, post paid, to E. L. B. 7, Clement's Inn, Strand, London.

A PARTMENTS TO BE LET, in a most desirable situation, in every way calculated for an Artist. They have been recently occupied by a Portrait Painter; and there are gas-fittings, and a variety of other things useful in the Arts, that would be sold if required. Apply at 67, Berners-street, Oxford-street.

AN INJUNCTION was granted on the 15th of November, by the Vice-Chancellor, to restrain Mr. THOMAS KEY, Military Musical Instrument-maker, 20, Charing Cross, from making, using, selling, or exporting for Sale, any Drums, to which the *Patent Improvements* of C. WARD, Musical Instrument-maker, 36, Great Titchfield-street, are applied. All persons are therefore *cautioned* against selling or purchasing Drums, which in any way are infringements upon the said Patent.

Just published, price 1s. prepaid by post,

REASONS for ESTABLISHING an AUTHORS' PUBLICATION SOCIETY, by which Literary Labour would receive a more adequate reward, and the price of all new books be much reduced.

Part XXV., A Catalogue of Old and New Books, will be sent post free to Book-buyers.

John Petheram, 71, Chancery-lane.

IMPORTANT TO BOOK-BUYERS.

JOHN RUSSELL SMITH has this day published PART I. for 1844, (112 pages) of his CATALOGUE of Choice, Useful, and Curious Books in the Fine Arts, Topography, Heraldry, Numismatics, Philology, Natural History, Voyages and Travels, &c. &c. at very moderate prices. Sent *gratis* in London, and by post into the Country, on receipt of six postage labels to frank it.

No. 4, Old Compton-street, Soho, London.

CHOICE BOOKS.—W. POTTER respectfully intimates that to the present Monthly Part of the ATHENÆUM is appended his List, Part 76, comprising about 600 Works in most Languages and Classes of Literature; including fine Specimens of early Typography, German and Dutch Works, curiously illustrated—a singular Collection of Latin and French Facetiæ; many of a rare or uncommon description.—W. P. has also another List, Part 75, issued this month, of 1200 different Works, including finely illuminated MSS., with Miniatures and Paintings, and many other choice Articles of scarcity and value. Gentlemen resident in the Country desiring the two Lists, will please send four stamps with their address, to cover the postage.

12, Bear-street, Leicester-square.

W. P. has also on Sale,

A Collection of upwards of 1200 Portraits, Views, Engravings of Old Buildings, Monuments, large fine coloured Maps, mounted on canvas, &c. &c., illustrative of the Counties of MIDDLESEX and SURREY, with Descriptive Notices and Remarks by the late possessor. The whole mounted on tinted drawing paper, in 5 vols. royal folio, half-bound russia, 9l. 9s.

N.B. The original cost was near 40l.: the binder's charge for the portfolios alone being 10l.

HORNE & CO.'S PUBLIC SUBSCRIPTION LIBRARY, No. 105, CHEAPSIDE, London, consisting of a Collection of upwards of 50,000 Volumes of Works, by the best Authors, in the various departments of Literature.

Terms of Subscription.—Subscribers of 5l. 5s. per annum; 3l. 3s. the half year; or 1l. 14s. the quarter, are entitled to 18 vols. at a time, in Town, or 24 vols. in the Country.—4l. 4s. per annum; 2l. 10s. the half year; or 1l. 8s. the quarter, 12 vols. in Town, 16 in the Country.—3l. 3s. per annum; 1l. 16s. the half year; or 1l. 1s. the quarter, 8 vols. in Town, 12 in the Country.—2l. 2s. per annum; 1l. 6s. the half year; or 15s. the quarter, 4 vols. in Town, 6 in the Country.—The New Publications are added to the Library as they issue from the press; from which Subscribers may select one-half their complements.

BOOK SOCIETIES, or Families desirous of entering into a joint subscription, can be supplied with any number of books, entirely new, and of their own selection, whether in the Library Catalogue or not, upon the following terms:—If 30 volumes be required constantly in circulation among the members, 12l. 12s. per annum. And if a greater or less number be required, the same rate in proportion. The Books to be exchanged at the time and in the way best suited to the convenience of the members; the Society paying carriage to and from London.

*** Subscriptions to be paid in advance.

Sales by Auction.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, London.—Inventors and Capitalists are informed that all business relating to the securing and disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, and Drawings of Inventions, is transacted with care, economy, and despatch.

REGISTRATION OF DESIGNS.—Under the new Act, 6 and 7 Vict. c. 65, ARTICLES of UTILITY, whether in Metal or other substances, may be protected in the three kingdoms for 3 *years* at a small expense; *Ornamental Designs* may also be registered under the Act 5 and 6 Vict. c. 100.

A PROSPECTUS, with full particulars as to the course to be pursued, and the expense, &c., of being protected, either by Letters Patent or the Designs Acts, may be had *gratis*, upon application, personally or by letter, to Mr. Alexander Prince, 14, Lincoln's Inn-fields, London.

TO MICROSCOPIC OBSERVERS.—C. M. TOPPING, of No. 1, YORK-PLACE, Pentonville-hill, begs to announce that he has an extensive Collection of mounted OBJECTS for the MICROSCOPE always ready; and that he supplies gentlemen with all kinds of Glasses, Cells, &c. &c., for the mounting of Objects in Fluid, or in Canada Balsam: he also prepares thin Sections of Shells, Teeth, Fossils, &c., and furnishes various other requisites for the use of Observers. C. M. T. will gladly show gentlemen the method of preparing and mounting Objects in Cells and Glass Boxes if they will call at his residence.

CORPORATION OF THE LONDON ASSURANCE,

Established by Royal Charter, A.D. 1720.

Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

NOTICE is hereby given to all persons who have paid to this Corporation five years' premium on assurances effected on lives under the plan entitling the assured to a reduction of premium, commenced in 1831, and of which the details are already before the public, that on the 1st of January, 1844, when their next annual premium will become due, they will be entitled to an abatement of 31*l.* 1*s.* 11*d.* per cent. thereon.

Fire assurances may be effected with this Corporation at the most moderate rates.

Marine assurances may be made with this Corporation at the current premiums of the day.

Attendance daily, from 10 till 4, at both Offices, where prospectuses and every information may be obtained.

JOHN LAURENCE, Sec.

The cheapest, safest, and most brilliant Light extant.

THE BOCCIUS LIGHT is *now prominently before the public.* The advantages offered by the Patentee are,—*a very brilliant, soft, and intensely powerful light*, unaccompanied by *soot, smoke, or smell*; *free ventilation*; and a *saving* of from 35 to 80 per cent.: the greatest possible amount of light being obtained from an exceedingly small quantity of gas, by perfect combustion. The burners are sold, complete, with glasses, at the very moderate cost of 8*s.* 6*d.* upwards. The gas used is the *common* gas, burnt on a *new principle*; and the apparatus is so simple, that, on screwing it on to the ordinary fittings, it is ready for immediate lighting. It is adapted alike to Shops, Private Dwellings, Halls, Warehouses, Churches, Chapels, and Public Thoroughfares.

Apply daily, from 10 to 4, at the Office, 14, Duke-street, Adelphi, where the light may be seen, and full particulars obtained.

DESTITUTION IN THE METROPOLIS.—ROYAL FREE HOSPITAL for the DESTITUTE SICK and DISEASED, Gray's-inn-road (late Greville-street); founded A.D. 1828. *Patron*—The QUEEN.

This Hospital, which is entirely devoted to destitution in its most appalling and pitiable form, viz., accompanied by sickness and disease, is now established on a scale of sufficient magnitude, that with proper support it may be rendered capable of admitting into its wards all the "casual sick" of this great metropolis. It requires but the funds in order to have 500 beds immediately available for the reception of these, the most wretched of our fellow-creatures. Moreover, it gratuitously affords medical advice and medicine to more, on the average, than 1,800 out-patients a-week.

It is wholly supported by voluntary subscription, has no funded property of its own, nor any other income than that which is contributed by the philanthropic portion of the community. To these it is most earnestly recommended by the Committee at this period of extreme destitution and consequent sickness and peril of life. Its doors are daily thronged with the most miserable objects, and so great has been the demand upon its resources in consequence during the whole summer, that it has been compelled to borrow to a large amount from the fund subscribed towards the new building to defray the current expenses.

Contributions will be kindly received by Messrs. Coutts & Co.; Messrs. Drummonds & Co.; Messrs. Herries & Co.; Messrs. Smith, Payne & Smiths; Messrs. Glyn & Co.; Messrs. Jones, Loyd & Co.; Messrs. Barclay, Bevan & Co.; Messrs. Denison & Co.; Messrs. Williams, Deacon & Co.; Messrs. Prescott & Co.; Messrs. Ransom & Co.; Messrs. Overend, Gurney & Co.; Messrs. Nisbet & Co. Berners-street; and at the Secretary's Office, by the Rev. R. C. PACKMAN, Sec.

Cast-off apparel, male or female, will be gratefully acknowledged.

COMPLETION OF BROCKEDON'S ITALY.

In a few days will be published the Twentieth and concluding Part of

ITALY, HISTORICAL, CLASSICAL, and PICTURESQUE; described and illustrated in a series of VIEWS, engraved in the highest style of art, from drawings made and selected expressly for this work. By WILLIAM BROCKEDON, Esq. F.R.S., Member of the Academies of Fine Arts in Florence and Rome; Author of 'The Passes of the Alps,' 'The Road-book to Italy,' &c. &c.

Part XX. will contain Views of

ROME, from the Pincian Hill, drawn by Leitch, engraved by J. Cousen.

FARRARA, drawn by Prout, engraved by Godfrey.

BASSANA, drawn by Leitch, engraved by Willmore.

The Work is printed on imperial quarto paper, size fifteen inches by eleven. Prints, 2s.; India paper proofs, 4s.

"The public will at last have a descriptive picture of Italy within a reasonable compass, yet on a sufficiently extensive plan, which will do credit to the illustrated literature of the country."—*Times.*

London: Duncan & Malcolm, Paternoster-row; and Blackie & Son, Glasgow and Edinburgh.

THE PEOPLE'S EDITION OF

DR. COMBE'S PHYSIOLOGY APPLIED TO HEALTH AND EDUCATION is now ready. Price 2s. 6d.

Simpkin, Marshall & Co. London; Maclachlan, Stewart & Co. Edinburgh.

Just published, in 18mo. cloth, price 2s. 6d.

THE INFLUENCE of RESPECT for OUTWARD THINGS: in Two Dialogues. Dialogue I. On Respect for Outward Things in relation to Virtue and Happiness. Dialogue II. On Respect for Outward Things in relation to Religious Profession.

"This is a brief practical inquiry into the moral principles which actuate modern society, and a calm exposure of many of the current fallacies by which men regulate their conduct."—*Tait's Magazine.*

"The author of this little work is evidently a strong and original thinker, and he deserves credit in general for just views of the present condition of human society, and the remedies which should be adopted for its improvement."—*Christian Reformer.*

"The author of this little volume, Mr. John Taylor, is a man who feels deeply the evils of our present social condition, and is anxious to contribute something towards their remedy. No candid reader, we think, will deny him sincerity, benevolence, and earnest thought on a most important subject."—*Inquirer.*

London: Charles Fox, 67, Paternoster-row.

WHITTAKER'S IMPROVED EDITIONS OF PINNOCK'S CATECHISMS.

1. Pinnock's Catechism of Modern Geography, in simple Language, but on Scientific Principles, for Pupils in Classical Seminaries. Improved Edition, by G. H. Smith, Esq. M.G.S. &c. With Ten Maps (especially engraved on a new principle). 18mo. price 9d. sewed.

The great popularity of this Catechism has induced Messrs. Whittaker & Co. to expend a considerable sum in editing and illustrating it; and a desire having been expressed by the higher class schools, it has been arranged so as to lay a foundation for a scientific knowledge of Geography, by a gentleman of the highest attainments in the science. It may require a slight degree more application from the pupil at first, but will be found ultimately to afford him a sound and enlarged basis for a perfect knowledge of the subject. It should be ordered as "Smith's Improved Edition."

2. Pinnock's Catechism of Modern Geography, being an easy Introduction to the Knowledge of the World and its Inhabitants. The whole of which may be committed to memory at an early age, and adapted for pupils in Infant Preparatory Schools. The Original Edition, brought down to the present state of Geographical Knowledge. With numerous Maps, &c. 18mo. price 9d. sewed.

Some instructors merely requiring a simple statement of the common facts relating to the science, this, the original edition, is now corrected, and will be found to be adapted to the narrowest capacities, at the same time that it is extremely comprehensive. It should be ordered as "The Original Edition, corrected."

N.B.—Care should be taken to order WHITTAKER'S EDITION of all PINNOCK'S CATECHISMS and HISTORIES, as, from their universal popularity, unprincipled attempts are made to substitute works of a somewhat similar appearance. Messrs. Whittaker & Co. have expended very large sums, both in the purchase of the original copyrights, and in procuring the highest talent in each department of art or science in re-editing them, and are determined to protect their property and the public from being imposed on by surreptitious imitations.

Whittaker & Co. Ave Maria-lane, London.

In 1 thick vol. 8th edition, much enlarged, price 16s.

MODERN DOMESTIC MEDICINE; a POPULAR TREATISE, exhibiting the Symptoms, Causes, and most efficacious Treatment of Diseases; with a Collection of approved Prescriptions, Management of Children, Doses of Medicines, &c. Forming a comprehensive Guide for the Clergy, Families, and Invalids. By T. J. GRAHAM, M.D.&c.

"It is evidently the result of great professional talent, experience, and judgment; the author everywhere appears conscientious and candid. *One object* is prominently evident—a sincere desire to benefit his suffering fellow-creatures. To recommend a work like the present to our readers, is only to manifest a proper regard for their welfare."—*Literary Journal*, Feb. 1843.

"It is altogether deserving of permanent popularity."—*London Weekly Review.*

London: W. S. Orr & Co. Amen-corner.

DENHAM PARK INSTITUTION, FOR THE TREATMENT OF MENTAL DISORDERS AFFECTING THE UPPER CLASSES OF SOCIETY OF BOTH SEXES.

Director—EDWARD HORNOR, Esq.

Consulting and Visiting Physician—JOHN FORBES, M.D. F.R.S., Physician in Ordinary to Her Majesty's Household, and Physician Extraordinary to His Royal Highness Prince Albert, 12, OLD BURLINGTON-STREET, LONDON.

Resident Medical Officer—WILLIAM WILSON, M.D.

Medical Referee in London—ERASMUS WILSON, Esq., 55, Upper Charlotte-street, Fitzroy-square.

SOME changes in the direction of this Institution, and an important addition recently made to its medical staff, seem to justify the Director in calling attention to the claims which it possesses to the confidence of the public and to the support of the medical profession. It is believed that a fuller knowledge of the character of this establishment, on the part of medical men, will be found of importance to them, in many cases, when called upon to recommend a temporary abode for a patient who may be required to be removed from home. It is the object of the Director and Medical Superintendents to give to the Institution the character and appearance of a domestic retreat during the removal of a temporary disease, not of a place for the seclusion and punishment of dangerous and incurable persons. Accordingly, the greatest care is taken, not merely to discard every form of personal restraint, but, as far as practicable, to remove from the observation of the inmates everything that could tend to irritate or distress their feelings; and no pains are spared to cheer the mind, and to lessen the gloom and despondency to which so many of this class of persons are unhappily subject. Opportunities for varied occupation and amusement, within and without doors, are studiously supplied, and exercise in the open air, in the carriage and on foot, is carefully enjoined.

The excellence of the accommodations generally, and the great conveniences and comforts to be found in Denham Park, are, it is believed, of a kind that cannot fail to be approved of. The building is a fine specimen of the old English mansion, having apartments sufficiently spacious for in-door exercises during wet weather, and designed on a scale of magnificence rarely met with in modern houses. The general appearance of the house betrays nothing of its present destination, either in external or internal arrangements; and, besides the usual suites of apartments, it contains a billiard-room, a library, and a consecrated chapel, in the latter of which the patients, officers, and servants of the establishment meet daily for morning and evening prayer.

Classification forms an important part of the arrangements. The Ladies and Gentlemen have each their distinct moiety of the house, and assemble in their separate saloons, from which those are excluded who, from the state of their disorder, would be likely to prove annoying to the convalescents, or be themselves excited by the presence of company. In these reunions the invalids mingle constantly and systematically with the sane; the observances of polite society are carefully maintained; and, by judicious intercourse, the minds of the invalids are strengthened and prepared for that exercise which a return to the world may require. In some instances, where benefit is likely to result to the sufferer, and no inconvenience to the rest of the inmates, relations and friends are admitted to stay with an invalid in the house. This permission has on several occasions been found a desirable privilege, and been eagerly embraced; the arrangements, society, and resources of the establishment being such as to render it an agreeable place of residence to all.

The advantages offered by this Institution for the retirement of Ladies are considered to be especially worthy of notice: they will be found to be highly appreciated by several now resident there.

The Terms of Admission for both Sexes at Denham Park are moderate, and are regulated according to the following among other circumstances: I. The nature and extent of private accommodation required. II. The amount of domestic attendance rendered necessary by the nature of the individual case; or required for the special comfort and convenience of the patient. III. The kind and amount of horse or carriage exercise required as a luxury, beyond what is deemed of importance medicinally, and which is always furnished. IV. The pecuniary means of the Patient; a small number, to whom it is an object, being from time to time received at an inferior charge, provided they are desirable inmates from their position in society and the nature of their malady.

When required, highly responsible persons are sent for patients to any part of the kingdom.

Denham Park is situated on the Oxford Road, two miles from Uxbridge, and within easy reach of the West Drayton and Slough Stations of the Great Western Railway.

Full particulars may be obtained from the Director by letter or personal application, (Denham Park, Uxbridge, Middlesex,) or of any of the Medical Officers.

JUNE 20th, 1843. EDWARD HORNOR.

THE HISTORY OF TEN YEARS: 1830—1840.

Part the First.

By LOUIS BLANC.

"This is a remarkable work. The ten years, 1830—1840, were troubled, stirring, and important times to every European nation—to none so much as France. It is a narrative of events, real, striking, absorbing—the subjects of immense interest to all readers—the style unusually excellent."—*Foreign Quarterly Review.*

CHAPMAN & HALL, 186, Strand.

MISS ELLEN PICKERING'S NEW NOVEL

Is published this day, and may be had at every Library,

THE GRUMBLER.

By the Author of 'The Fright,' 'Nan Darrell,' 'Friend or Foe?' &c.

A NEW NOVEL BY THE POPULAR AUTHOR OF 'THE SCOTTISH HEIRESS.'

Immediately, in 3 vols. post 8vo.

THE GRAVE-DIGGER.

OPINIONS OF THE PRESS UPON 'THE SCOTTISH HEIRESS.'

"The 'Scottish Heiress' is a powerfully-written and interesting novel. His characters are conceived and developed with metaphysical accuracy and life-like nicety." *Spectator.*—"Written with spirit, and the interest is well kept up." *Morning Chronicle.*—"Described with a simple, unaffected tenderness, that at once makes its way to the heart." *Sun.*—"'The Scottish Heiress' will repay whatever attention it may receive. It displays considerable knowledge of external life." *Tait's Magazine.*—"This novel possesses much higher claim to literary distinction than half the works of fiction that, heralded by puff and paragraph, and resting their pretensions on the celebrity of a popular author's name, are poured upon the public." *Sunday Times.*—"The hero might claim cousinship with *Scott's* Alan Fairford."—*Athenæum.*

Popular Works now ready:—

1. THE BELLE OF THE FAMILY. 3 vols.
2. IRELAND AND ITS RULERS SINCE 1829.
3. THE SMITHS. 3 vols.

*** *Several new Volumes are in preparation.*

This is the only Modern Collection of Greek Authors that has the Latin Versions and Complete Indexes. The most correct editions have been selected as the ground-work of the Text, and have been collated with manuscripts in the Royal Library of Paris, and in the Libraries of the Vatican and Florence. The numerous fragments which have been recovered by the enthusiastic industry of Angelo Mai and others, are inserted in this edition, which is distinguished in consequence by important additions, as well as by emendations in the text. Each Volume may be had separately, and the complete collection will contain what in other editions would make 400 volumes, and sell at four times the price.

VETUS TESTAMENTUM GRÆCUM juxta Septuaginta interpretes, cum Latina Translatione. Cura et studio J. N. Jager. 2 vols. royal 8vo. cloth .... 36*s.*

6.

AN ELEMENTARY GRAMMAR OF THE GREEK LANGUAGE.

By Dr. RAPHAEL KÜHNER, Co-Rector of the Lyceum at Hanover. Translated by J. H. MILLARD, St. John's College, Cambridge; late Second Classical Master at Mill Hill Grammar School. 8vo. 9*s.* cloth.

"To those who would learn or teach Greek logically, systematically, and thoroughly, Dr. Kühner's 'Elementary Grammar' will be advantageous, if not indispensable. Its peculiar features are propriety of arrangement and copiousness of illustration, both in declension and conjugation, as well as in the rules of syntax, which last is celebrated for perspicuity and completeness. The stem of nouns and verbs is also distinguished throughout from the inflectional parts."—*Spectator.*

In the same size as the Nonpareil Twenty-fours Editions of the Prayer Book, and adapted by its cheapness to general use and gratuitous distribution.

☞ *In ordering the Psalter, whether in Score or in Separate Voice Parts, it will be found convenient to describe the Edition as well as the binding required, in the words used in this List.*

In these Editions of the *Psalter*, each, or one or more portions of each of the Psalms, is set to an appropriate Tune; and every word of each verse is placed under the note to which it is to be sung. The Work, therefore, forms a complete Psalm Book for those who do not, as well as for those who do, join in congregational singing.

Each volume contains Three Hundred and Fifty Pages of Music, besides the Indices and Tables; and every Volume, whether of the Score or of the Separate Voice Parts, being printed page for page, the most perfect uniformity extends throughout the whole Series.

REVIEWS

Mohammed the Prophet, his Life and Doctrines, &c. — [*Mohammed der Prophet, &c.*] By Dr. Gustave Weil. Stuttgart. London, Williams & Norgate.

It is essential to the actual progress of society, and accords well with the enlightenment of modern times, that the historical critic should occasionally trace back, from original sources, the views which have come down to us of characters that belong to universal history, should judge them impartially, and present them to the eyes of the world in their true light. That the history of Mohammed—of a man who brought about a political and religious revolution, so deeply and so widely rooted—should up to this day have been comparatively neglected, is not a little surprising. Who, indeed, can deny that one who founded an empire, which soon after his death overturned the Persian, and inflicted a mortal wound on the Byzantine monarchy, who was the propagator of a creed that counts among its believers the fairest portion of the old world,—whether we look to his authenticated exploits or to less authentic tradition—deserves to be better known and appreciated? It was the conviction of this truth in the mind of the author, that led him to undertake the work now before us.

Dr. Weil is known in Germany as an oriental scholar, by his translation of the 'Thousand and One Nights,' Samaschari's Golden Necklace, an Essay on the Literature of the Arabs, and numerous contributions to the periodical reviews on subjects treating of the East. He passed several years at Cairo, and on his return to his own country was appointed Arabic Professor, and one of the librarians of Heidelberg. He says in his preface—

Having occasion to lecture on the Life of Mohammed, I found only one work, that could in any way serve me as a guide. This work was the ill-digested biography of the Arabian Prophet by Gagnier, which appeared in 1732. It however by no means entered into the contemplation of this French scholar to paint Mohammed as he was, but only, as the title implies, to make Europeans acquainted with what orthodox Mussulmans *relate* and *believe* of him. With this view he contented himself with translating some oriental texts, in which many lacunæ remain to be filled up, texts not only faulty, but here and there misunderstood and misinterpreted. With all its defects, however, this Life has served as the groundwork for all later biographers. None of them undertook to compare the translations with the originals, or to exercise an historical criticism on their contents. Every one, from the very onset, more or less propped up his labours according to his political bent or party spirit, now with this, now with that fragment of this colossal edifice, (*Riesen-Gebaüde*), discarding as useless lumber, all that did not coincide with his own particular preconceived notions. Other sources than those which were open to Gagnier have since been at the disposal of biographers, but they led to little that was new, and these materials were slurred over with such superficiality and negligence that little confidence can be placed in them. Of late also, not only, as in Gagnier, have historical facts been confounded with fabulous legends which common sense disowns, but contradictions of all kinds, anachronisms which scarcely Arabs themselves would pardon, and similar improbabilities, have been heaped together in such masses, that the reader in the most important periods of the life of the Arabian prophet, in vain seeks to reconcile them.

The introduction presents a picture of the moral, political, and religious condition of Arabia at the birth of Mohammed, and gives some details respecting his family. The first chapter brings down the history from his birth, to the time when he appeared as a prophet. But few facts are known concerning Mohammed's youth and education, except that he led for several years a shepherd life. Dr. Weil attaches but little importance to his travels in Syria and Arabia, and considers that Mohammed owed his knowledge of Judaism and Christianity to his dealings with Jews and Christians that dwelt in Arabia, and especially to a cousin of his wife Kadija, an Arab, who first embraced Judaism and afterwards became a Christian:—

We hear (says Weil) nothing further of Mohammed for the next five years, save that he grew fonder and more fond of solitude, and retired for many days together, sometimes alone, sometimes in company with Kadija, to a cavern of Mount Hara, and where, after the example of his grandfather, Abd Almultalib' he passed the entire month Ramadan engaged in devotional offices and pious meditations. Here he had ample leisure for musing over the different religions of his time, and detecting their prominent defects. We may easily conceive, too, that during his journeys, as well as in Arabia itself, where very many Jews and Christians abode, he, without having even read the Holy Scriptures, might have become acquainted with their contents. This intercourse, as well as his own reflections, must have convinced him, that the idol or star-worship, which prevailed in Mecca, was an error and a superstition; but at the same time the dark side of both the other religions, as taught in his day, did not escape his observation. * * When, also, he looked back to Abraham, who, though neither a Jew nor a Christian, was accounted as a true believer, a Muslim (a man of God), and not only admitted by Jew and Christian to *be* a holy prophet, but adored by the Arabs as the father of Ishmael and the builder of the Caaba, he naturally came to the conclusion, afterwards so frequently avowed and declared, that Holy Writ had been partly falsified—in part falsely interpreted, and thus he might feel himself called upon to re-establish a purer faith, such as we find it in the time of Abraham and in the Old Testament. Having in the way of reflection reached this point, his ardent imagination could not long remain inactive, and he soon, whether in night or day dreams, saw an angel sanctioning with divine revelation, what he had satisfied his own mind to be true. Such self-deception on the part of Mohammed is the less surprising, when we reflect that, being at one time, epileptic he, in accordance with the received opinions of his time, considered himself "possessed," and that unconsciousness, which succeeded to his frequent intense mental excitement, might make him suppose, that during the continuance of this lethargy he had been holding communion with angels in another world, and after awakening from his trance look upon whatever was clearly present to his soul as a divine revelation.

In the second chapter we find Mohammed opposed by the idolators of Mecca; at first they treated his doctrines with mockery, but in proportion as he gained proselytes, they persecuted him. The protection of his uncle was his only safeguard, but his defenceless partizans were obliged to take refuge in Abyssinia. At this critical moment Mohammed was on the point of making terms with his enemies, and acknowledging their idols as mediators between the Supreme Being and humanity. Scarcely, however, had he yielded for a moment, when he withdrew his concessions, and exposed himself anew to all the hostility of the Meccaites. We cannot follow the author in the details of the sufferings which Mohammed had now to endure, and the patience with which he supported them. Respecting Mohammed's nocturnal visit to heaven, Dr. Weil considers the marvellous narration as no other than a legend invented after his death, and founded on the mistaken sense of some passages in the Koran, in which Mohammed spoke of a vision, and not of a reality; which may be true, but we must observe, that Mohammed spoke equivocally, whether intentionally or not. The curious reader will find a passage from the Koran quoted in proof, *Athenæum*, No. 299.

The third chapter contains the history of Mohammed, from his flight till the Battle of Bedr. Mohammed once firmly established at Medina, thought more of augmenting his temporal dominions and satiating his vengeance, than of propagating his creed. His was no longer the religion of peace and suffering. It was no longer Allah who menaced unbelievers with eternal torments, but Mohammed, who arrogated to himself, in the name of God, the power of exterminating them. In short, he declares himself authorized by Heaven to take up arms against his enemies. But unprepared as yet for open war, he contents himself with the plunder of the caravans of Mecca. Dr. Weil treats with great lenity these marauding excursions, finding some excuse for them in the prevailing habits of his time;—what he cannot pardon, however, is the desecration of the sacred months, the violation of an unabrogated law, and his sending forth an expedition, which he at first disavowed and afterwards endeavoured to justify. This passage in his life tends so much to the elucidation of Mohammed's character, that we shall translate the words of our author:—

Mohammed desired Abd Allah Ibn Jash, to come to him, and told him, with eight, or as some say twelve, men, who were formerly under the command of Obeida, to take the road to South Arabia. In order to avoid all discussion, or difficulties that might be started, as to carrying on a war during the holy month Rajab, for such it was, perhaps also to insure the more obedience in the undertaking of so dangerous a mission, he gave him, instead of verbal instructions, a sealed letter, which he enjoined him to open on the third day of his journey, and bestowed on him as the price of his services, or rather as a bribe, the honourable distinction of Commander of the Faithful (Emir Al Mo'menin), a title which afterwards Omar was the first califf who assumed. Abd Allah complied with the will of the prophet, and when on the third day he broke the seal of the letter, he found therein an order to repair with his companions in arms to the Valley of Nachla, that lay between Mecca and Taif, and there to lay wait for the caravan of the Koreishites. Abd Allah communicated to his comrades the contents of this letter, and inquired who would follow him; for, added he, the Prophet has expressly enjoined me not to force the inclinations of any one: as far as concerns myself, I am resolved, even if I must do so alone, to execute the commands of the messenger of God. He thereupon continued on his way and all his followers with him. But a camel, on which rode two of his soldiers (Saad and Otba), went astray on the road; they, on that account, remained behind to look for it, whilst Abd Allah, and the remaining six or ten men, pursued their journey towards the Valley of Nachla. Having reached their destination, they saw the camels of the Koreishites laden with cubebs, leather, and other wares, pass along under the guard of only four men. Abd Allah followed at some distance in their rear until they made halt, and perceiving that he excited their suspicions, caused one of his number to cut close his hair, and go a round-about way to meet them, so that they believed him to be a pilgrim, who had returned from fulfilling the rite of Umra. Whilst, however, anticipating no danger, and trusting to the sanctity of the month Rajab, they neglected all further precautions for their safety, Abd Allah fell upon them with his band, killed one of them (he was the first Arab who fell by the hand of a Mussulman), made two others prisoners, and only the fourth escaped, and sought for help. This, however, came too late, for Abd Allah, with his two prisoners and his booty, lost no time in returning to Medina, which he reached in safety. The first news of the desecration of the holy month caused such discontent even among the Mussulmans in Medina, that Mohammed, dissatisfied with himself, endeavoured to lay the blame on Abd Allah, telling him that he had not commanded him to shed blood during the holy month, and refused to accept the fifth part of the booty offered. But as these brave soldiers were much blamed, and although Mohammed said they had exceeded his instructions, it went abroad through all

Digitized by Google

Arabia, that Mussulmans sanctioned robbery and murder during the holy month; nay, more, that Mohammed, utterly to destroy the commerce of the people of Mecca, grudged them four secure months in the year: then appeared the following verse from the Koran, "They will ask you (so spoke God to Mohammed) about the holy month (namely), about waging war in it: answer, war is a grievous thing, but to withhold men from the path of God, to disown him, and to drive away the faithful from his holy temple, is a far greater sin in the eyes of God; revolt (against him) is worse than murder, therefore you shall not cease from battle till they renounce their faith if they can. He, however, among you who becomes an apostate and dies an unbeliever, his works, both in this world and that to come, are of no avail, and he shall be among the companions (*Gefährten*) of hell, in which he shall abide for ever." After the circulation of this verse Mohammed took his share of the plunder. He demanded of the Koreishites eighty okk of silver as a ransom for the two prisoners; one of them, however, was converted to Islam, the other he did not send back to Mecca until Saad and Otba had arrived in Medina.

It is out of our power to follow Dr. Weil through the succeeding chapters, which contain all the memorable actions of Mohammed, as well public as private, from the affair at Bedr till his death. The last chapter embodies all that Dr. Weil has been able to collect respecting the Koran and the character of Mohammed. In his external appearance, and the simplicity of his private life, Dr. Weil depicts Mohammed much as he is represented by Gagnier, but differs from his predecessors respecting the courage of Mohammed. He considers him to have been absolutely wanting in active courage, and only endowed with a great inflexibility of purpose, and a passive bravery. Respecting the Koran, Dr. Weil relates the manner in which it was collected by Abu Bekr and Othman, and comes to a conclusion that many parts are lost. This supposition rests upon an ancient tradition derived from Omar, who declared one day that the Koran contained an injunction, that a woman taken in adultery should be stoned to death; whereas, no such injunction is to be found therein. Dr. Weil also attributes some interpolations to Abu Bekr; for in a passage of Sirát Ar-rasul, it is said that "on Omar's being unwilling to believe in the death of Mohammed, Abu Bekr proved it to him by the quotation of a verse of the Koran, *unknown to all the world;*" whereas we find this very verse, together with many others predictive of the death of Mohammed, in the Koran. The manner in which the fragments of the Koran were put together, explains to the reader the numberless contradictions and the want of order which are found in that volume: for instance, Mohammed at first pointed out Jerusalem as the place towards which to turn in prayer, but when he abandoned all hope of the conversion of the Jews and Christians, he, thinking to please the Pagans, put Mecca in its place. Not less remarkable are the want of chronological order, and the repetitions observable in the Koran, and we are tempted to believe, that Zeid, who was charged by Abu Bekr with editing the work, performed the office in a very slovenly manner, and put together the scattered materials as they came to hand, without troubling himself much with the epoch of their publication, their repetitions, or contradictions.

These contradictions, according to Dr. Weil, would have been more numerous still, had not Mohammed himself suppressed his earlier works, and commanded those who had learned them by heart to forget them. This will explain how it is that the word Koran figures in the oldest chapters. Dr. Weil considers that the most ancient of these compositions bore a strong resemblance to those of the poets and soothsayers (Kahen); that Mohammed intentionally changed his style, and adopted that of the prophets. On this subject he says,—

The names of Poet, Soothsayer, and Possessed, (*Besessener*) with which Mohammed was mocked by the Meccaites, may have induced him not only to put some check on his glowing imagination, but also to adopt a style of writing to distinguish him from the Seers of his own country, and hence, in all probability, arose the difference between the earlier and later Surats, not only as regards their matter but their manner. In proportion, however, as Mohammed changed his style, he became less and less poetical. His periods grew longer and longer, his rhythm more sparing, studied and hard; and before leaving Mecca, the style of the Koran sunk down into a heavy prose, disfigured rather than ornamented by the repetition dragged in at the end of every verse of "God is gracious—May ye be enlightened—God is omniscient—Heavy punishment awaits the Sinner," &c. The striking diversity of style observable in the Surats of Mecca and Medina, may also be accounted for as well by the changes that had taken place in his own mind, spiritually, as by the alteration of his temporal circumstances after his return from his flight. Whilst he had constantly before his eyes the idolatries of Mecca, Mohammed was impressed with such a lively conception of, and belief in one allmighty and allwise Allah, that his thoughts not only became elevated and sublime, but his language original and figurative, his expressions noble and powerful, God's creative power laid open to his poetic spirit all the wonders of Nature. The Earth with all it brings forth—Heaven with its glittering worlds—the interminable ocean, were depicted as the works of one Supreme Being. * * In the following verses, even if they possess no extraordinary claim to originality, who can fail to recognize a spirit at once pious and impressed with a firm persuasion of a deity? "God splits the seed and the kernel, brings life out of death, and death out of life. This is (the true) God, how can ye be so dull of comprehension? He it is who causes the morning red to break forth—has appointed the night for rest—the sun and moon for the reckoning of time. These are the dispensations of the Most High—the Allwise. He has created the stars as a guide in the darkness over the dry land and the sea. Such clear and indisputable signs has he given to the Intelligent. He it is who has made you all from one man, and allotted you a secure resting place. Those who reflect aright on these things find a sure sign therein. He it is who sends down the waters from Heaven, that make to sprout forth plants of all kinds, all verdant things, thickly growing corn, palm trees with heavily-laden branches, vineyards, olive grounds and gardens with pomegranates of all sorts. Observe only how these fruits grow and ripen, they are signs enough for a faithful people."

Equally rich materials for the developement of his poetical talents does Mohammed find in his lessons on the justice of God, which close with the last Judgment, Paradise, and Hell. Here his imagination revels in, and broods over, all that he had collected from the Talmud, and he dilates with equal satisfaction on the infinite torments that await the sinner, and in the description of the enjoyments and raptures that are to be the portion of true believers. On these topics, however, he shows less of grandeur and sublimity, from his entering too much into details, and dipping his pencil too deeply in sensual colours. After having cited, in proof of this last remark, the Resurrection as painted in the Koran, Dr. Weil goes on to say:—

The histories and legends of the old prophets borrowed from the Jews and Christians furnish no inconsiderable portion of the Mecca Surats. Mohammed by these entertaining narratives sought partly to amuse the people and partly to carry out and expound his mission; but his principal object was, by the example of the fate of earlier unbelieving nations, to warn the idolators of Mecca against the wrath of Heaven. This portion of the Koran which may be mostly dated from the last five years of his residence in that city, contains, indeed, here and there passages of much beauty, but on the whole exhibits a great falling off of poetical power, and betrays a mighty effort to make himself master of the substance of whatever heterogeneous materials he could collect from Jew and Christian. While, however, during his first stay in Mecca, the poetical, and during his last the prophetic element predominated, so in Medina, where he was no longer a persecuted innovator, but at the head of a political and religious party, the oratorical style most prevailed. Mohammed was, indeed, as great an orator as a poet, but the positive which is the province of the one, did not leave him free space as the other. He was obliged, too, from a daily increasing want of confidence in himself, and belief in his prophetic mission, whenever he wished more than ordinarily to raise his ideas, to substitute artistical flourishes for the involuntary expression of his feelings, empty sophisms for deep-felt truths; and one may mark well from his manner of writing, that his thoughts no longer sprung from an enthusiastic imagination, but were the produce of a cold and calculating understanding. Polemics with the Jews, and half-and-half Jews, and Christians of Arabia, were not so easily carried on, as with the heathens of Mecca. * * But at this time he was no longer a weak sinner whom God had been forced so frequently by his admonitions to warn not to quit the right path, no longer a mere prophet sent to bring back Jew and Christian to the natural religion of Abraham; no, he now set himself up as a political and religious lawgiver, the last and the most permanent that God had sent to mankind. Now, therefore, from the fear of betraying himself, not only when he treated of actual circumstances, but even when he reverted to earlier themes, no longer following the dictates of his own heart, and letting his language take its natural course, he was obliged to calculate and weigh every word beforehand.

Dr. Weil then proceeds to draw up a summary of the character of Mohammed.

In Medina, he showed himself no longer a patient sufferer, but an all-powerful actor; his ordinances, no less than his conduct, stamped him for a weak, passionate, inconsistent, artful indeed, but short-sighted man and legislator. First he flatters the Jews and seeks to win them over by various concessions; then he revokes all that he had done in their favour, and becomes their bitter enemy. Some he pardoned from fear of Abd Allah, others he allowed to be butchered in the name of God. To-day he sets limits to polygamy—to-morrow, also in the name of God, he himself oversteps the appointed bounds. Were any one assassinated or maimed, by the consent of the relatives the culprit was permitted to expiate his crime with money; whilst no mercy was shown to the thief, who lost his hand for his offence. In the most critical moments of his public and private life, he suffered himself to be biassed, contrary to his own better reason, by the opinion of others; as at Ohed where he engaged the enemy against his will; at the siege of Medina, where he wished to conclude a separate treaty of peace; and at Taif, where, according to some accounts, he gave orders for storming the place, though he well knew that it could be attended with no favourable result. The strongest proof, however, of the weakness of his character is, that he died without naming his successor, and thus as it were prepared the overthrow of an empire, of which he had been the founder. It was very possible that he could not make up his mind as to the succession. His heart probably leaned towards Ali, the husband of his beloved daughter—his understanding to Abu Bekr, who was not only better fitted to govern, than the all too-open-hearted and worthy Ali, but was supported (in his pretensions) by the powerful Omar. Mohammed, without any extraordinary gifts of the spirit, might in Mecca have been acknowledged by many as a prophet, because the faith that he preached was a vast improvement on the gross idolatrous worship there practised. His prepossessing person, his distinguished eloquence, his unexampled liberality, his self-sacrifice for his friends, and his protection and support of the poor, of slaves, and of exiles, must have swelled the number of his retainers, and made them passive instruments of his will. But if such were the sources of his influence in Mecca, he owed the extension of his power in Medina to his near relationship with the Ausites, to the prospect of the booty to be gained under his banner, the want of

Digitized by Google

unity among the Arabs themselves, to his flattery and artifices, rather than to a real greatness of mind, warlike talents, or personal bravery. No means were dishonourable in his eyes, by which he could overreach an enemy, or sow dissension among his adversaries. The main secret of his success consisted in his consummate art; for, making it his business to be thoroughly acquainted with all that transpired far and near, he was enabled to take his foes by surprise, and such was the mystery in which he enwrapped his plans, that only on one occasion, during the campaign of Tabuk, did he communicate them to his own followers. By these means, before the end of his career, the most remote Arab tribes submitted themselves to his rule.

At the same time that Dr. Weil exposes the vices and defects in the character of Mohammed, he does justice to him in other respects, and thus concludes:—

The doctrine of a Supreme Being, and the high destination of man, which Mohammed disseminated over a land sunk in the grossest idolatry, and almost without a conception of the immortality of the soul, must, in despite of his defects and weaknesses, reconcile us to him; the rather, because his own life exercised no disadvantageous influence on the converts to his faith; for, far from holding himself up as an example to his followers, he wished to be regarded, and was, indeed, ever more and more regarded as a person privileged by God himself to overstep all established laws. We must, indeed, be unjust or blinded by prejudice, not to acknowledge that his people were indebted to him for very many truths, blessings, and virtues. He united in the belief of one God and one brotherhood, the innumerable hostile tribes of Arabia; he substituted for arbitrary self-government, for redress of injuries by violence or bloodshed, an appeal to justice, which laid the foundation-stone of all the laws of the Islamite Empire; he limited blood-revenge (*Blut-rache*), which, before his time, was carried down to the remotest generations, to the individual convicted before the judges of his crime. Mohammed deserves, in an especial manner, the gratitude of the fair sex; for not only did he put an end to the barbarous custom, then prevalent, of female children being murdered at their birth by their own fathers, but protected widows against the next of kin of their deceased husband, by whom they were considered as heir-looms; and women in general against ill treatment by their husbands. He set bounds to polygamy; inasmuch as he limited the faithful to four wives, instead of eight or ten, as had been the custom before his time, particularly in Medina; and even this smaller number was only allowed to such as had the means of supporting them respectably. He forbade also that one should be preferred above the rest; and this law was so difficult to observe, that very few men could take more than one. * * Slaves, also, though slavery was not altogether abolished by Mohammed, found in the Koran many ordinances in their favour. Their emancipation is represented as a work pleasing to God, as an expiation for many transgressions, and their equality with the free in the eyes of God distinctly affirmed. Nor were the poor forgotten; for not only does the Koran contain repeated admonitions to charity, but provision is made for them by a formal tax, as well as by a stipulated share of the booty and tribute. By the prohibition of gaming, wine and other intoxicating liquors, many crimes and misdemeanors, not to speak of quarrels and broils, were repressed. Cruelty, pride, arrogance, lying, extravagance, avarice, ostentation, and other vices that debase human nature and disturb the peace of society, were, in energetic terms, denounced as ungodly. Philanthropy, humility, forbearance, integrity, chastity in word and deed, and, before all, truth and honesty, were enjoined as the first and greatest of virtues. Thus, if we do not acknowledge Mohammed to have been a true prophet, because he adopted forcible and unlawful means for the propagation of his faith; if he was fallible and weak, and set himself above his own laws; and if, in spite of his declaration that God might substitute a better revelation for his, he styled himself the seal of the prophets; yet inasmuch as he planted the finest precepts of the Old and New Testament among a people unenlightened by a creed, Mohammed, even in the eyes of unbelievers in Islam, must still be considered as a messenger of God.

Ned Myers; or, a Life before the Mast. Edited by J. Fenimore Cooper. 2 vols. Bentley.

Mr. Cooper vouches for the genuineness of this book, which contains the adventures of an old shipmate, recently told to the American novelist, and set down, as nearly as possible, in the language of the narrator. Together with the charm, we find in it some of the tediousness of a true tale; and, compared with young Dana's book, this can rank but as second in the marine library. We are sorry for the frequent shipwrecks of Ned Myers; we pity him for so perpetually getting into scrapes from his passion for drink—and are glad when that demon is at last exorcised; but we care little for the man. He is rude, unkempt, careless: displaying more than one indication of the true sailor's indifference, so finely pointed out by Charles Lamb, when descanting on the character of *Ben*, in Congreve's 'Love for Love.' There is little in him "rich or strange," and his confessions will be alone found interesting as a tale of adventure, not of character. That sea truth, however, is stranger than sea fiction, we have ample warrant for asserting. Take, for instance, the following scenes on board the *Scourge*, an American schooner of war, one of a fleet out against Sir James Yeo's squadron. Coil it up as we will, "the yarn" is of the longest.—

"It was a lovely evening, not a cloud visible, and the lake being as smooth as a looking-glass. The English fleet was but a short distance to the northward of us: so near, indeed, that we could almost count their ports. They were becalmed, like ourselves, and a little scattered. We took in our sweeps, as ordered, laying them athwart the deck, in readiness to be used when wanted. The vessels ahead and astern of us were, generally, within speaking distance. Just as the sun went below the horizon, George Turnblat, a Swede, who was our gunner, came to me, and said he thought we ought to secure our guns; for we had been cleared for action all day, and the crew at quarters. We were still at quarters, in name; but the petty officers were allowed to move about, and as much licence was given to the people as was wanted. I answered, that I would gladly secure mine, if he would get an order for it; but, as we were still at quarters, and there lay John Bull, we might get a slap at him in the night. On this the gunner said he would go aft, and speak to Mr. Osgood on the subject. He did so, but met the captain (as we always called Mr. Osgood) at the break of the quarter-deck. When George had told his errand, the captain looked at the heavens, and remarked that the night was so calm, there could be no great use in securing the guns, and the English were so near we should certainly engage, if there came a breeze; that the men would sleep at their quarters, of course, and would be ready to take care of their guns; but that he might catch a turn with the side-tackle-falls around the pommelions of the guns, which would be sufficient. He then ordered the boatswain to call all hands aft to the break of the quarter-deck."

There was a pilot on board, who used to keep a look-out occasionally, to make matters more secure.—

"The schooner, at this time, was under her main-sail, jib, and fore-top sail. The foresail was brailed, and the foot stopped, and the flying-jib was stowed. None of the halyards were racked, nor sheets stoppered. This was a precaution we always took, on account of the craft's being so tender. We first spliced the main brace, and then got our suppers, eating between the guns, where we generally messed, indeed. One of my messmates, Tom Goldsmith, was captain of the gun next to me, and as we sat there finishing our suppers, I says to him, 'Tom, bring up that rug that you pinned at Little York, and that will do for both of us to stow ourselves away under.' Tom went down and got the rug, which was an article for the camp that he had laid hands on, and it made us a capital bed-quilt. As all hands were pretty well tired, we lay down with our heads on shot-boxes, and soon went to sleep. * * I was soon asleep, as sound as if lying in the bed of a king. How long my nap lasted, or what took place in the interval, I cannot say. I awoke, however, in consequence of large drops of rain falling on my face. Tom Goldsmith awoke at the same moment. When I opened my eyes, it was so dark I could not see the length of the deck. I arose and spoke to Tom, telling him it was about to rain, and that I meant to go down and get a nip, out of a little stuff we kept in our mess-chest; and that I would bring up the bottle if he wanted a taste. Tom answered, 'This is nothing; we're neither pepper nor salt.' One of the black men spoke, and asked me to bring up the bottle, and give him a nip, too. All this took half a minute, perhaps. I now remember to have heard a strange rushing noise to windward as I went towards the forward hatch, though it made no impression on me at the time. We had been lying between the starboard guns, which was the weather side of the vessel, if there were any weather side to it, there not being a breath of air, and no motion to the water; and I passed round to the larboard side, in order to find the ladder, which led up in that direction. The hatch was so small that two men could not pass at a time, and I felt my way to it, in no haste. One hand was on the bitts, and a foot was on the ladder, when a flash of lightning almost blinded me. The thunder came at the next instant, and with it a rushing of winds that fairly smothered the clap. The instant I was aware there was a squall, I sprang for the jib-sheet. Being captain of the forecastle, I knew where to find it, and throw it loose at a jerk. In doing this, I jumped on a man named Leonard Lewis, and called on him to lend me a hand. I next let fly the larboard, or lee top-sail-sheet, got hold of the clew-line, and, assisted by Lewis, got the clew half up. All this time I kept shouting to the man at the wheel to put his helm 'hard down.' The water was now up to my breast, and I knew the schooner must go over. Lewis had not said a word, but I called out to him to shift for himself, and belaying the clew-line, in hauling myself forward of the foremast, I received a blow from the jib-sheet that came near breaking my left arm. I did not feel the effect of this blow at the time, though the arm has since been operated on, to extract a tumour produced by this very injury. All this occupied less than a minute. The flashes of lightning were incessant, and nearly blinded me. Our decks seemed on fire, and yet I could see nothing. I heard no hail, no order, no call; but the schooner was filled with the shrieks and cries of the men to leeward, who were lying jammed under the guns, shot-boxes, shot, and other heavy things that had gone down as the vessel fell over. The starboard second gun, from forward, had capsized, and come down directly over the forward hatch, and I caught a glimpse of a man struggling to get past it. Apprehension of this gun had induced me to drag myself forward of the mast, where I received the blow mentioned. I succeeded in hauling myself up to windward, and in getting into the schooner's fore-channels. Here I met William Deer, the boatswain, and a black boy of the name of Philips, who was the powder-boy of our gun. 'Deer, she's gone!' I said. The boatswain made no answer, but walked out on the fore-rigging, towards the mast-head. He probably had some vague notion that the schooner's masts would be out of water if she went down, and took this course as the safest. The boy was in the chains the last I saw of him. I now crawled aft, on the upper side of the bulwarks, amid a most awful and infernal din of thunder, and shrieks, and dazzling flashes of lightning; the wind blowing all the while like a tornado. When I reached the port of my own gun, I put a foot in, thinking to stop on the muzzle of the piece; but it had gone to leeward with all the rest, and I fell through the port, until I brought up with my arms. I struggled up again, and continued working my way aft. As I got abreast of the main-mast, I saw some one had let run the halyards. I soon reached the beckets of the sweeps, and found four in them. I could not swim a stroke, and it crossed my mind to get one of the sweeps to keep me afloat. In striving to jerk the becket clear, it parted, and the forward ends of the four sweeps rolled down the schooner's side into the water. This caused the other ends to slide, and all the sweeps got away from me. I then crawled quite aft, as far as the fashion-piece. The water was pouring down the

Digitized by Google

cabin companion-way, like a sluice; and as I stood, for an instant, on the fashion-piece, I saw Mr. Osgood, with his head and part of his shoulders through one of the cabin windows, struggling to get out. He must have been within six feet of me. I saw him but a moment, by means of a flash of lightning, and I think he must have seen me. At the same time, there was a man visible on the end of the main-boom, holding on by the clew of the sail. I do not know who it was. This man probably saw me, and that I was about to spring; for he called out, 'Don't jump overboard!—don't jump overboard! The schooner is righting.'"

Well it was for Myers that he gave himself no time to weigh this advice:—

"It came across me that if the schooner should right she was filled, and must go down, and that she might carry me with her in the suction. I made a spring, therefore, and fell into the water, several feet from the place where I had stood. It is my opinion the schooner sunk as I left her. I went down some distance myself, and when I came up to the surface, I began to swim vigorously for the first time in my life. I think I swam several yards, but of course will not pretend to be certain of such a thing, at such a moment, until I felt my hand hit something hard. I made another stroke, and felt my hand pass down the side of an object that I knew at once was a clincher-built boat. I belonged to this boat, and I now recollected that she had been towing astern. Until that instant I had not thought of her, but thus was I led in the dark to the best possible means of saving my life. I made a grab at the gunwale, and caught it in the stern-sheets. Had I swam another yard, I should have passed the boat and missed her altogether! I got in without any difficulty, being all alive and much excited. My first look was for the schooner. She had disappeared, and I supposed she was just settling under water. It rained as if the flood-gates of heaven were opened, and it lightened awfully. It did not seem to me that there was a breath of air, and the water was unruffled, the effects of the rain excepted. All this I saw, as it might be, at a glance. But my chief concern was to preserve my own life. I was cockswain of this very boat, and had made it fast to the taffrail that same afternoon, with a round turn and two half-hitches, by its best painter. Of course I expected the vessel would drag the boat down with her, for I had no knife to cut the painter. There was a gang-board in the boat, however, which lay fore and aft, and I thought this might keep me afloat until some of the fleet should pick me up. To clear this gang-board, then, and get it into the water, was my first object. I ran forward to throw off the lazy-painter that was coiled on its end, and in doing this I caught the boat's painter in my hand, by accident. A pull satisfied me that it was all clear! Some one on board must have cast off this painter, and then lost his chance of getting into the boat by an accident. At all events, I was safe, and I now dared to look about me. My only chance of seeing was during the flashes; and these left me almost blind. I had thrown the gang-board into the water, and I now called out to encourage the men, telling them I was in the boat. I could hear many around me, and, occasionally, I saw the heads of men struggling in the lake. There being no proper place to scull in, I got an oar in the after rullock, and made out to scull a little in that fashion. I now saw a man quite near the boat; and, hauling in the oar, made a spring amidships, catching this poor fellow by the collar. He was very near gone; and I had a great deal of difficulty in getting him in over the gunwale. Our joint weight brought the boat down so low, that she shipped a good deal of water. This turned out to be Leonard Lewis, the young man who had helped me to clew up the fore-topsail. He could not stand, and spoke with difficulty. I asked him to crawl aft, out of the water; which he did, lying down in the stern-sheets. I now looked about me, and heard another; leaning over the gunwale, I got a glimpse of a man, struggling, quite near the boat. I caught him by the collar, too; and had to drag him in very much in the way I had done with Lewis. This proved to be Lemuel Bryant, the man who had been wounded by a hot shot, at York, as already mentioned, while the commodore was on board us. His wound had not yet healed, but he was less exhausted than Lewis. He could not help me, however, lying down in the bottom of the boat, the instant he was able. For a few moments, I now heard no more in the water, and I began to scull again. By my calculation I moved a few yards, and must have got over the spot where the schooner went down. Here, in the flashes, I saw many heads, the men swimming in confusion, and at random. By this time little was said, the whole scene being one of fearful struggling and frightful silence. It still rained; but the flashes were less frequent, and less fierce. They told me, afterwards, in the squadron, that it thundered awfully; but I cannot say I heard a clap after I struck the water. The next man caught the boat himself. It was a mulatto, from Martinique, who was Mr. Osgood's steward, and I helped him in. He was much exhausted, though an excellent swimmer; but alarm nearly deprived him of his strength. He kept saying, 'Oh! Masser Ned—Oh! Masser Ned!' and lay down in the bottom of the boat, like the two others; I taking care to shove him over to the larboard side, so as to trim our small craft. I kept calling out, to encourage the swimmers, and presently I heard a voice, saying, 'Ned, I'm here, close by you.' This was Tom Goldsmith, a messmate, and the very man under whose rug I had been sleeping at quarters. He did not want much help, getting in, pretty much, by himself. I asked him if he were able to help me. 'Yes, Ned,' he answered, 'I'll stand by you to the last; what shall I do?' I told him to take his tarpaulin, and to bail the boat, which, by this time, was a third full of water. This he did, while I sculled a little a-head. 'Ned,' says Tom, 'she's gone down with her colours flying, for her pennant came near getting a round turn about my body, and carrying me down with her. Davy has made a good haul and he gave us a close shave; but he did'nt get you and me.' In this manner did this thoughtless sailor express himself, as soon as rescued from the grasp of death!"

Till now, with the presumption of landsmen, we have ever and anon asked whether Mr. Cooper had not made the most of the terrors and surprises of the deep, for the sake of scenic effect. With such an example as the above in our memory, we dare not hint such a thing again. The book abounds in like scenes, though few so graphically set forth.

Travels in the Great Western Prairies, the Anahuac and Rocky Mountains, and in the Oregon Territory. By Thomas J. Farnham. New York, Greeley & M'Elrath.

Mr. Farnham is one of the fervent pilgrims returned from the farthest West—that paradise of estates without bounds, revenue without taxes, and society without laws. We confess that on first looking into his journal, we felt reluctant to follow one so apparently headstrong, so full of words, and so pugnacious, for he tells us at the outset, that the best title of the United States to the territory of Oregon rests on their determination to fight for it. Moreover, though he professes to speak plain truth for the information of plain men, he runs in fact to the extreme limit of affectation and conceit. To say nothing of ordinary Yankee extravagance, his style is a perpetual exhibition of what may be called the grimace of language, or an attempt to convey some shade of meaning, together with an indescribable something more. Yet, as he advances on his journey, he comes to himself. Fatigue, and the increasing number of objects of observation, gradually restore him to a natural and sober mood, so that by the time of his arrival among the Britons in Oregon, he has become a reasonable and candid man, and we find his narrative, on the whole, to be instructive as well as amusing. Mr. Farnham's native good sense breaks out as often as he forgets himself, or relaxes in his effort at fine writing, and the reader is encouraged to go on by these unexpected gleams of sunshine.

Our author's narrative commences with the starting of his party (sixteen adventurers besides himself) from the town of Independence, which stands at the furthest limit of civilization, on the south-western bank of the Missouri, whence the track of the traders leads across the rivers Osage and Arkansas to Santa Fé, in Mexico. That town has some claim to notice, as having been the first seat of the Mormons, or Mormonites, west of the Mississippi. We long since gave an account of these fanatics—(see *Athen.* No. 701), and of the origin of their prophetic book. We shall therefore here confine ourselves to a glance at the suffering and downfall of these "latter-day saints," as they style themselves. In accordance with one of their prophecies, as our author relates, a band of the brethren was organized, called the "Tribe of Dan," whose duty it was to take and bring to "the Lord's store" any of the Lord's personal estate which they might find in the possession of the world, and which might be useful to the saints in advancing their kingdom. The depredations of the tribe of Dan increased to such an extent, that at length, in 1838, the Governor of Missouri ordered out the troops of the State against them, and their leaders were lodged in prison. Fanaticism takes the same shapes in all quarters of the globe, and it is curious to observe the exact parallelism between the Mormonites in Missouri, when the magistrate attempted to break open the "Lord's brick store," and the White Quakers in Dublin, recently suffering under proceedings in Chancery. In the former case, as our author tells the story, "one of the sisters, in robes of white, accosted the man, who was about to force his way into the depôt of stolen property, and with proper solemnity made known, that the Lord of the faithful had revealed to Joe, the prophet, that every hand raised against that holy structure would instantly be withered." The law took its course nevertheless, and stripped the wretched Mormonites of all, save their delusions.

The route across the Osage to the banks of the Arkansas, leads at first over fine prairies, with here and there a strip of forest; but as the latter river is approached, the country assumes that desolate appearance which afterwards continues westward for many hundred miles. In June, the season of our author's journey, the summer rains fall on these prairies in storms of extraordinary violence, converting the plains into quagmires, and swelling the brooks into impassable rivers. He observes—

"It would readily be presumed by those who have a correct idea of the floods of water that the thunder-storms of this region pour upon the rolling prairies, that a few miles of the channels of a number of the creeks over which the storms pass may be filled to the brim in an hour; and that there are phenomena of floods and falls of water occurring in this vast den of tempests, such as are found nowhere else. Still, with this evidently true explanation in mind, it was with some difficulty that I yielded to the evidences on the banks of the Little Arkansas, that that stream had fallen 15 feet during the last 12 hours. It was still too deep for the safety of the pack animals in an attempt to ford it in the usual way."

With these difficulties, together with insufficiency of food, our traveller and his companions had to contend. A little further on they began also to keep a sharp look-out for Indians, as they approached the hunting ground of the Pawnees, and of the Caws or Kausaus. Of the abodes of the latter we have the following description:—

"We crossed the Pawnee Fork, and visited the Caw Camp. Their wigwams were constructed of bushes inserted into the ground, twisted together at the top, and covered with the buffalo hides that they had been gathering for their winter lodges. Meat was drying in every direction. It had been cut in long narrow strips, wound around sticks standing upright in the ground, or laid over a rick of wicker-work, under which slow fires are kept burning. The stench,

Digitized by Google

and the squalid appearance of the women and children, were not sufficiently interesting to detain us long; and we travelled on for the buffalo which were bellowing over the hills in advance of us. There appeared to be about 1,500 souls: they were almost naked; and filthy as swine. They make a yearly hunt to this region in the spring—lay in a large quantity of dried meat—return to their own territory in harvest time—gather their beans and corn, make the buffalo hides, taken before the hair is long enough for robes, into conical tents; and thus prepare for a long and jolly winter. They take with them, on these hunting excursions, all the horses and mules belonging to the tribe, that can be spared from the labour of their fields upon the Konzas river—go south till they meet the buffalo—build their distant wigwams, and commence their labour. This is divided in the following manner between the males, females, and children: The men kill the game. The women dress and dry the meat, and tan the hides. The instruments used in killing vary with the rank and wealth of each individual. The high chief has a lance, with a handle six feet and a blade three feet in length. This in hand, mounted on a fleet horse, he rides boldly to the side of the flying buffalo, and thrusts it again and again through the liver or heart of one, and then another of the affrighted herd, till his horse is no longer able to keep near them. He is thus able to kill five or six, more or less, at a single heat. Some of the inferior chiefs also have these lances; but they must all be shorter than that of his Royal Darkness. The common Indians use muskets and pistols. Rifles are an abomination to them. The twisting motion of the ball as it enters—the sharp crack when discharged—and the direful singing of the lead as it cuts the air, are considered symptoms of witchcraft that are unsafe for the red man to meddle with. They call them medicines—inscrutable and irresistible sources of evil. The poorer classes still use the bow and arrow. Nor is this, in the well-trained hand of the Indian, a less effective weapon than those already mentioned.—Astride a good horse, beside a bellowing band of wild beef, leaning forward upon the neck, and drawing his limbs close to the sides of his horse, the naked hunter uses his national weapon with astonishing dexterity and success. Not unfrequently, when hitting no bones, does he throw his arrows quite through the buffalo. * * A cloud of squaws that had been hovering in the neighbourhood, now hurry up, astride of pack animals—strip off hides—cut off the best flesh—load their pack-saddles, mount themselves on the top, and move slowly away to the camp. The lords of creation have finished their day's labour.—The *ladies* cure the meat in the manner described above—stretch the hides upon the ground, and with a blunt wooden adze hew them into leather. * * Thus the Konzas, Kausaus, or Caws lay in their annual stores. Unless driven from their game by the Pawnees, or some other tribe at enmity with them, they load every animal with meat and hides about the first of August, and commence the march back to their fields, fathers, and wigwams, on the Konsas River. This return march must present a most interesting scene in savage life—700 or 800 horses or mules loaded with the spoils of the chase, and the children of the tribe holding on to the packs with might and main, naked as eels, and shining with buffalo grease, their fathers and mothers loaping on foot behind, with their guns poised on the left arm, or their bows and arrows swung at their backs, ready for action, and turning their heads rapidly and anxiously for lurking enemies."

Besides the wild Indians, these plains present another source of danger, not so easily foreseen or guarded against. If a panic seizes the herds of buffalo grazing around, the traveller may be trampled to death. Some stragglers from our author's party encountered these animals in immense numbers:—

"It appeared that they had found the buffalo troublesome as soon as night came on; that the bands of bulls not unfrequently advanced in great numbers within a few feet of them, pawing and bellowing in the most threatening manner; that they also lost the trail after midnight, and spent the remainder of the night in firing upon the buffalo, to keep them from running over them. Their situation was indeed dangerous in the extreme; for when buffalo become enraged, or frightened in any considerable number, and commence running, the whole herd start simultaneously, and pursue nearly a right-line course, regardless of obstacles. So that, had they been frightened by the Santa Fëans, or myself, or any other cause, in the direction of my companions, they must have trampled them to death. The danger to be apprehended from such an event was rendered certain in the morning, when we perceived that the whole circle of vision was one black mass of these animals. What a sea of life—of muscular power—of animal appetite—of bestial enjoyment! And if lashed to rage by some pervading cause, how fearful the ebbing and flowing of its mighty wrath! * * Another storm occurred to-night. Its movements were more rapid than that of any preceding one which we had experienced. In a few moments, after it showed its dark outline above the earth, it rolled its pall over the whole sky, as if to build a wall of wrath between us and the mercies of heaven. The flash of the lightning, as it bounded upon the firmament, and mingled its thunder with the blast, that came groaning down from the mountains; the masses of inky darkness crowding in wild tumult along, as if anxious to lead the leaping bolt upon us—the wild world of buffalo, bellowing and starting in myriads, as the drapery of this funeral scene of nature, a vast cavern of fire was lighted up; the rain roaring and foaming like a cataract—all this, a reeling world tottering under the great arm of its Maker, no eye could see and be unblenched; no mind conceive, and keep its clayed tenement erect."

During three days' journey, the plains, as far as the eye could reach, comprehending, according to our author's calculation, not less than 1,350 square miles, were crowded with buffalo; yet the country had but a scanty covering of vegetation, short prickly grass, and several species of cactus. While the buffalo were in the neighbourhood, famine was banished from the expedition; but dissensions took its place. Our author thus speaks of a critic in the company:—

"During the entire day's march, Shakspeare was on the tapis. Poor old gentleman's dust and ashes! If there be ears of him about the ugly world, to hear his name bandied by boobies, and his immortal verse mangled by barbarians in civilized clothing, those ears stood erect, and his dust crawled with indignation, as this savage in nature and practice, discharged from his polluted mouth the inspirations of his genius."

This last sentence will probably remind the reader of the late C. Mathews's impersonation of the showman describing the combat between the terrier dog and the lion Nero, when the latter "switched out *his* eyes with *his* tail."

The tract lying between the Mississippi and the western mountains, and to which our author gives the name of the Great Prairie Wilderness, has an extent of nearly 1,000 miles in longitude and 2,000 in latitude. But, notwithstanding the ampleness of its open plains, and the numerous great rivers which flow through it, it holds out but little temptation to settlers. Yet our author augurs well for the banks of the river Platte. He says that—

"In years to come, when the Federal Government shall take possession of its Territory West of the Mountains, the banks of this stream will be studded with fortified posts for the protection of countless caravans of American citizens emigrating thither to establish their abode; or of those that are willing to endure or destroy the petty tyranny of the Californian Government, for a residence in that most beautiful, productive country. Even now loaded wagons can pass without serious interruption from the mouth of the Platte to navigable waters on the Columbia River in Oregon, and the Bay of San Francisco, in California."

One of the most valuable portions of Mr. Farnham's volume is his account of the Indians, wild as well as semi-civilized, who now dwell or wander between the Mississippi and the Western Ocean. The half-reclaimed Indians form part of that congregation of the Red race, nearly 95,000 in number, which the government of the United States has established in the tract extending from the Missouri to the frontiers of Texas. This grand scheme of colonization is thus described by our author:—

"The 'Indian Territory' has been selected for this purpose. And assuredly if an inexhaustible soil, producing all the necessaries of life in greater abundance, and with a third less labour than they are produced in the Atlantic States, with excellent water, fine groves of timber growing by the streams, rocky cliffs rising at convenient distances for use among the deep alluvial plains, mines of iron and lead ore and coal, lakes and springs and streams of salt water, and innumerable quantities of buffalo ranging through their lands, are sufficient indications that this country is a suitable dwelling-place for a race of men which is passing from the savage to the civilized condition, the Indian territory has been well chosen as the home of these unfortunate people. Thither the Government, for the last thirty years, has been endeavouring to induce those within the jurisdiction of the States to emigrate. The Government purchase the land which the emigrating tribes leave—giving them others within the Territory; transport them to their new abode; erect a portion of their dwellings; plough and fence a portion of their fields; furnish them teachers of agriculture, and implements of husbandry, horses, cattle, &c.; erect school-houses, and support teachers in them the year round; make provision for the subsistence of those who, by reason of their recent emigration, are unable to subsist themselves; and do every other act of benevolence necessary to put within their ability to enjoy, not only all the physical comforts that they left behind them, but also every requisite facility and encouragement to become a reasoning, cultivated, and happy people."

The Americans propose to give the Indians a form of government similar to that of the United States, and pretend to have hitherto succeeded in the experiment. Our author does not hint at any disappointment encountered in the attempt to change the habits of the Red race, and to alter the whole system of Indian life within the Indian territory. A fine tract of land on the Osage river, about seven miles square, was surveyed in 1837, and fixed upon as a suitable site for the central government. Some of the tribes, as the Choctaws for example, have a written constitution, trial by jury, and even a kind of parliament wherein they smoke their pipes and palaver for the good of the nation. Our author, who states all these curious particulars with minute precision, adds also, that in these parliaments, "the journals are kept in the English language; but in the progress of business are read off in Choctaw." Without venturing to doubt the benevolent intentions of the Federal government towards the red race, we confess that we are somewhat incredulous respecting the rapid progress of civilization in the Indian territory. We know that the few Indians (chiefly Senecas) who showed any inclination towards industry and a settled life, did not join in the emigration, but remained in the United States, where they are cattle-keepers, rarely meddling with agriculture, and totally regardless of political rights. Several savage tribes, not easily reclaimable, were forced to enrol themselves among the emigrants; and besides, the fevers and other diseases consequent on change of climate, or, perhaps, the unwholesome waters of the new settlement, must have operated unfavourably on the progress of the Indian community.

Our author's party halted at Bent's Fort, on the Arkansas, a trading station belonging to merchants whose name it bears. It is situate on what may be called the neutral ground of many hostile tribes of Indians. The following picture will suffice for all these factories in the wilderness:—

"A trading establishment to be known must be

Digitized by Google

seen. A solitary abode of men, seeking wealth in the teeth of danger and hardship, rearing its towers over the uncultivated wastes of nature, like an old baronial castle that has withstood the wars and desolations of centuries; Indian women tripping around its battlements in their glittering mocassins and long deer skin wrappers; their children, with most perfect forms, and the carnation of the Saxon cheek struggling through the shading of the Indian, and chattering now Indian, and now Spanish or English; the grave owners and their clerks and traders, seated in the shade of the piazza, smoking the long native pipe, passing it from one to another, drawing the precious smoke into the lungs by short hysterical sucks till filled, and then ejecting it through the nostrils; or it may be, seated around their rude table, spread with coffee or tea, jerked buffalo meat, and bread made of unbolted wheaten meal from Taos; or, after eating, laid comfortably upon their pallets of straw and Spanish blankets, and dreaming to the sweet notes of a flute; the old trappers, withered with exposure to the rending elements, the half-tamed Indian, and half-civilized Mexican servants, seated on the ground around a large tin pan of dry meat, and a tankard of water, their only rations, relating adventures about the shores of Hudson's Bay, on the rivers Columbia and Mackenzie, in the Great Prairie Wilderness, and among the snowy heights of the mountains; and delivering sage opinions about the destination of certain bands of buffalo; of the distance to the Blackfoot country, and whether my wounded man was hurt as badly as Bill the mule was, when the 'meal party' was fired upon by the Cumanches; present a tolerable idea of everything within its walls. And if we add, the opening of the gates of a winter's morning—the cautious sliding in and out of the Indians whose tents stand around the fort, till the whole area is filled six feet deep with their long hanging black locks, and dark watchful flashing eyes; and traders and clerks busy at their work; and the patrols walking the battlements with loaded muskets; and the guards in the bastions standing with burning matches by the carronades; and when the sun sets the Indians retiring again to their camp outside, to talk over their newly purchased blankets and beads, and to sing and drink and dance; and the night sentinel on the fort that treads his weary watch away; we shall present a tolerable view of this post in the season of business."

The expedition here received an increase in the person of a trapper, (one who traps beaver) who had received an excellent education in Dartmouth College, New Hampshire. "He was altogether," says our author, "one of the most remarkable men I ever knew; a splendid gentleman, a finished scholar, a critic on English and Roman literature, a politician, a trapper, an Indian! His stature was something more than six feet; his shoulders and chest were broad, and his arms and lower limbs well formed and very muscular." That sentiments and moral habits are transmitted as certainly as physical characters, seems to be proved by the fact, that although many young Indians have been carefully educated in the United States, and have distinguished themselves as scholars while young, there is no instance of one of them remaining attached to a sedentary life, or who has not, on attaining maturity, gone off to the wilderness. The love of a wandering life is a feeling "that grows by that it feeds on." Our author met with trappers of different nations, French, English, Swiss, and Indian, all complaining bitterly of their ill-requited labours, yet passionately attached to their pursuits. This common passion, however, does not obliterate original difference of mood and feeling, as the following shows:—

"These solitary Frenchmen were apparently very happy. Neither hunger nor thirst annoys them, so long as they have strength to travel and trap and sing. Their camps are always merry, and they cheer themselves along the weary march in the wilderness with the wild border songs of 'Old Canada.' The American trappers present a different phase of character.—Habitual watchfulness destroys every frivolity of mind and action. They seldom smile; the expression of their countenances is watchful, solemn and determined. They ride and walk, like men whose breasts have so long been exposed to the bullet and arrow, that fear finds within them no resting-place. If a horse is descried in the distance, they put spurs to their animals, and are at his side at once, as the result may be, for death or life. No delay, no second thought, no cringing in their stirrups; but erect, firm, and with a strong arm, they seize and overcome every danger 'or perish,' say they, 'as white men should,' fighting promptly and bravely."

The Anahuac mountains now rose to view, 80 miles distant, and extending from south to north about 100 miles. As far as they were visible, they exhibited nothing but a mass of snow, towering to a stupendous height. For the particulars of the route from the Rocky mountains to the shores of the Pacific Ocean, we must refer to our author's volume. It will be sufficient here to state, that westward of those mountains, to the distance of 300 or 400 miles, the country is a complete desert, in which rain seldom falls. The rivers flow in deep rocky chasms, and the vegetation on the plains is (to use an American phrase) so "sparse," that a horse must be fleet of limb, as our author expresses it, in order to get food and water the same day. Grisly bears, the most formidable of the bear kind, are the only inhabitants of this forbidding region. Our author's party, originally ill provided, here began to feel the realities of famine. It was no consolation to them to hear from an experienced trapper, "many's the time that I have starved six or eight days, and when I have found meat, have eaten all night: that is the custom of the country." The paths, too, had their difficulties, and knocked up the horses. The passes down the mountains were steep and dangerous; the descent in one case is described, in true American style, as being "four miles perpendicular." The fatigues and fastings of these deserts did not subdue our author's sanguine temper. Speaking of certain springs, near which he dined on "the eighth part of a pelican," he triumphantly predicts, that "the magnificence of the scenery in the best routes to them from the States and from the Pacific, the manifest superiority of those waters over any others, will cause the Soda Springs to be thronged with the gay and fashionable of both sides of the Continent."

We now hasten to quit what our author calls "the ugly desert," and conduct him at once to Fort Vancouver, on the Columbia, the chief establishment of the Hudson's Bay Company on the western side of the American Continent. His examination of the much talked-of territory of Oregon appears to us to have been extremely hasty and superficial. Having consumed six months in the journey to that paradise, he gave but six days to the survey of its beauties. It is true that he visited the valley of the Willamette, which he candidly tells us, "is the only portion of Oregon from which grain can to any extent become an article of export," that is to say, the only fertile and eligible spot for an agricultural settlement, is a valley which would not accommodate one score of ambitious American settlers. He says, truly enough, that above nine-tenths of the territory called Oregon is a dreary waste; of the remainder, by far the greater part is a dense forest, of a kind which no one would ever think of clearing. The desirable territory, therefore, is thus reduced to a few small valleys near the Columbia and the sea. The American public has been unduly inflamed on the subject of the Oregon territory, by the Report of Lieut. Wilkes, the commander of a late scientific naval expedition, on whose ill-considered looseness of expression we have been already obliged to animadvert—(see *Athen.* No. 782). Our author appends this report to his volume, but, as a lover of truth, prefaces it with the following remark:—

"There is one point only of any importance that needs to be named, in regard to which truth requires a protest; and that is contained in the commander's concluding remarks. It will be seen, on reference to them, that the agricultural capabilities of Oregon are placed above those of any part of the world beyond the tropics. This is a most surprising conclusion; at war with his own account of the several sections which he visited, and denied by every intelligent man living in the territory."

Mr. Farnham evidently started on his journey an enthusiastic admirer of Oregon, and he does not distinctly tell us that his experience got the better of his enthusiasm, yet the plain facts which he states are certainly not calculated to propagate enthusiastic feelings. He tells us, too, that there are veteran backwoodsmen who, with better opportunities, saw things in a clearer light than himself. On his way down to the coast he met Paul Richardson; and what report did this "old Yankee woodsman" make of the country?—

"Oregon also came under discussion. Mr. Richardson had travelled over the territory; knew it well; it was not as productive as New England; fifteen bushels of wheat to the acre was an extraordinary crop; corn and potatoes did not yield the seed planted; rain fell incessantly five months of the year; the remainder was unblessed even with dew; that the Indians and whites residing there had the fever and ague, or bilious fever, the year about; that what little of human life was left by these causes of destruction, was consumed by musquitoes and fleas; that the Columbia river was unfit for navigation—fit only for an Indian fish-pond. Such a description of Oregon—the part of the American domain represented by traders, trappers, and travellers as most delightful, beautiful, and productive—was astonishing, unlooked for, and discouraging."

Speaking of Oregon our author proceeds as follows:—

"During my tarry here, several American citizens unconnected with the mission, called on me to talk of their fatherland, and inquire as to the probability that its laws would be extended over them. The constantly repeated inquiries were,—'Why are we left without protection in this part of our country's domain? Why are foreigners permitted to domineer over American citizens, drive their traders from the country, and make us as dependent on them for the clothes we wear, as are their own apprenticed slaves?' I could return no answer to these questions, exculpatory of this national delinquency, and, therefore, advised them to embody their grievances in a petition, and forward it to Congress. * * Their condition is truly deplorable. They are liable to be arrested for debt or crime, and conveyed to the jails of Canada! Arrested on American territory by British officers, tried by British tribunals, imprisoned in British prisons, and hung or shot by British executioners! They cannot trade with the Indians. For, in that case, the business of British subjects is interfered with, who, by way of retaliation, will withhold the supplies of clothing, household goods, &c., which the settlers have no other means of obtaining."

Now the tyranny here alluded to is not of a political character; it is purely mercantile. There is nothing to prevent Americans from supplying themselves with merchandise, if they think fit to do so. American factors, no less than English, would refuse supplies to neighbours who were hurting their trade. As to the hardship of being liable to arrest for debt or crime, it is obvious that the community would be much worse off if its members were exempt from it. Both Mr. Farnham and Lieut. Wilkes candidly allow that the great superiority of the Hudson's Bay Company as traders—for wherever they come they soon drive competitors out

of the market—is due, not more to their great capital, than to their intelligence, civilization, and probity. They are just, and even generous, to all with whom they deal. They take care, also, to preserve the fur animals within their domain from wanton destruction, whereas these animals disappear rapidly from the grounds hunted by the American trappers. The illiberal mercantile jealousy, therefore, which seeks to drive them from the banks of the Columbia, is extremely short-sighted; for the flourishing trade of Vancouver would quickly and inevitably wither in the hands of the rapacious adventurers who hope to seize it.

We shall conclude with a few words on the question of the right to the Oregon territory. The Americans claim the coast near the Columbia through the Spaniards, who were, they say, the first discoverers of it. But the Spaniards never took possession of that coast, nor made a settlement on it; and no jurist ever held that a mere right founded on discovery, could be transferred by treaty or otherwise. Again: how much sophistry lurks in the arbitrary application of a single name to an immense extent of territory! The Americans give the name of Oregon to a country extending eight hundred miles from north to south, and five hundred from east to west. Did the Spanish discoverers of the Straits of Fuca ever think of laying claim to so vast a territory? Titles to localities may certainly be founded on prior discovery, but if the nation discovering does not take possession, the title falls to the ground. If nations were to give attention in such cases to anything but vested rights, they would be perpetually involved in the chancery of war. The reasonable and equitable adjustment of the Oregon question would be this: let the disputing nations divide the territory between them, each taking the portion which it finds naturally most accessible; let us keep the maritime tract, and Jonathan is welcome to the other four-fifths.

On the Expediency of Restoring to the Church her Synodical Powers. By J. T. O'Brien, D.D., Bishop of Ossory. Seeley.

We have occasionally noticed the discussion to which this pamphlet refers, and therefore shall be brief on the present occasion. It is generally known that the Church of England has been virtually without any government of its own for more than a century; it has no legislative power whatever, and its executive power is consequently either sinking into desuetude or passing into other hands. Several zealous churchmen, both lay and clerical—the latter division including some of the most distinguished prelates—have appealed to Parliament to give the Church some power of self-government. The Bishop of Ossory is, we believe, the only divine who has yet formally objected to such a concession, and his argument is, that however desirable it may be, such a measure is neither prudent nor expedient, and is, under the present circumstances, pregnant with danger. In our former notices of this subject we did not disguise our belief, that the restoration of church government would be a matter of considerable difficulty; and one of our strongest reasons for urging attention to the subject was, that the difficulties were increasing, and must necessarily increase by delay. The case is not very dissimilar to that of the waters which accumulated behind the great glacier in the valley of Martigny; every year that the cutting of a channel through the ice was delayed, the task became more difficult and dangerous, but at the same time the chance of a ruinous flood became more imminent. The channel was cut when it was all but too late; it did, however, greatly diminish the damage which would otherwise have been wrought; and when the flood was past, the work was continued, to prevent a recurrence of such a disaster.

In the House of Lords, when this subject was discussed, the Archbishop of Dublin illustrated the weakness of the "not now" fallacy by the example of men who would not build a bridge over a stream when the water was low, because it was unnecessary, nor when the water was high, because the work was dangerous. The application of this analogy the Bishop of Ossory denies, but at the same time asserts that the water is now high, and that, therefore, the attempt to build a bridge must be adjourned until it subsides. We wonder that so acute a logician did not discover two assumptions in this argument which are equally fallacious; the first that the work is now impracticable, which nobody admits, and that the danger will pass away of its own accord, which everybody denies.

No one, at this time of day, would dream of reviving the Convocation with all its imperfections; and all are agreed that any synod or body which should legislate for the church, must truly represent it. But after having established this principle, the Bishop of Ossory enters into a discussion on the perils of electoral contests, and the probable abuse of power by a majority in a representative assembly: now if these arguments be good for anything, they tell against every species of representative government whatever;—unless indeed the Bishop means to say, that his clerical brethren would form worse constituencies than any of our boroughs, and that their representatives would be a more impracticable body than our House of Commons.
